Too Much for Drugs. Price rises in drugs and prescriptions are a source of endless and usually fruitless argument because of the medical revolution since the sulfas appeared in 1937. The average price of a prescription before Pearl Harbor was 93¢; by 1956 it was up to $2.62, and it is now $3.10. Prescription items used to be less than 10% of all drug sales; now they are more than 30%, and they add up to a big business of more than $1.5 billion a year. With bulk buying of drugs by hospitals and government agencies, and massive sales of non-prescription items, the U.S. drug bill for 1964 is approaching $5 billion.

Harris readily grants that the "lives saved, suffering averted, and acceleration of recoveries" are worth more than the billions spent on drugs. But as an economist he cannot resist the conclusion: "The cost of drugs is too high. It could be substantially less."

INFECTIOUS DISEASES

Typhoid Angus

The bacteria that cause typhoid fever live almost exclusively in sewage, and typhoid remains a major problem in Asia, Africa and parts of South America. In countries where water supplies are kept free from sewage contamination and where food handlers follow the basic rules of cleanliness, typhoid is a rare disease. When it erupts in a place that prides itself on good sanitation, as it did in the Swiss ski resort of Zermatt 18 months ago, it causes a violent flap. Last week there was a new typhoid flap in clean Aberdeen, Scotland (pop. 186,000). There were 324 confirmed cases (two deaths) and 55 suspected, with still more expected.

Aberdeen's medical officer, Dr. Ian MacQueen, was certain that he had found the explanation: "There is no shadow of doubt that this outbreak started from a tin of corned beef." The meat was in a 6-lb. can and had come from South America. In an Aberdeen delicatessen it was sliced on a machine that was also used to slice other meats. The infected machine spread the infection to these meats and to the customers who ate them. As the statistics of sickness piled up, the British government ordered a top-level inquiry to find out just where in South America the meat had come from and, hopefully, to learn how typhoid bacilli got into it.

Typhoid is no longer the dreaded, deadly plague of old, now that antibiotics can usually cure it. But while the inquiry went on, Aberdeen remained a beleaguered city.

If you are thinking of buying a watch this year, you should read this news from Switzerland

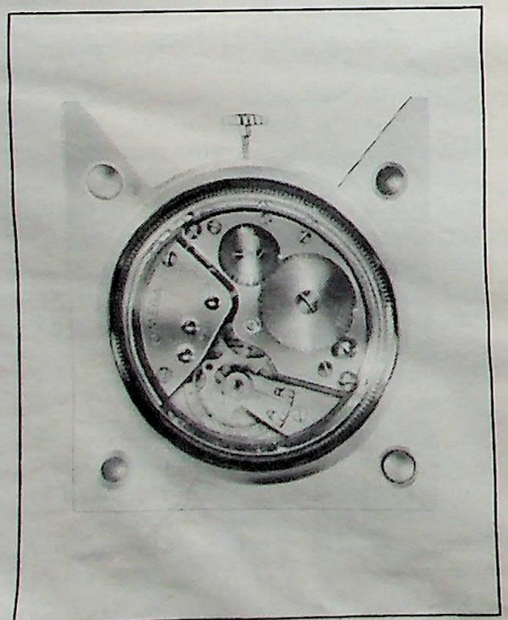
Omega becomes first manufacturer to capture all six Swiss wrist-watch accuracy records

Two further facts underline Omega's leadership in precision and beauty.

Omega now makes well over 50% of all Swiss Chronometers — "super" watches whose exceptional accuracy is officially certified.

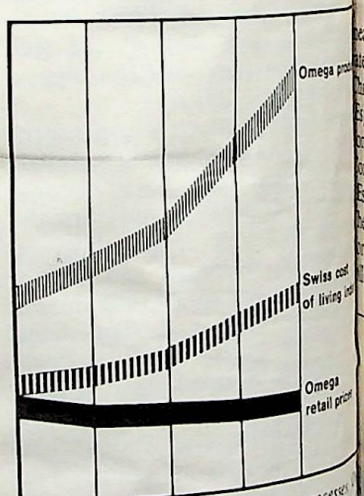
For the first time, four Diamonds International awards — the diamond industry's supreme styling prize — go to a single manufacturer: Omega.

The Swiss watch industry is headed in a new direction. The time is past when watches of extreme accuracy were made in small workshops, in small series.
Significantly, the manufacturer who now holds every single one of the six Swiss wrist-watch accuracy records is also the country's largest: Omega.
The annual accuracy contests of the Geneva and Neuchâtel observatories are to the Swiss watch industry what the Olympic Games are to the world of sports. The drama and the suspense are there, but they are subdued, discernible only to the watch specialist.
Competition movements are of the 30 millimeter variety, a type you can buy any day from your Omega Jeweler.
On-the-wrist conditions are simulated by testing in five positions, in refrigerator and oven, during 44 days.
Results are "refereed" by the observatories' quartz clocks.
Each observatory recognizes three records: for the most accurate single wrist-watch, for the most accurate group of wrist-watches and for the best performance by a watch adjusting specialist. The possibility of all six records going to one manufacturer had always been regarded as remote. Only a single watchmaker ever approached the perfect score, with three records: Omega, in 1955, 1959, 1960 and 1961.
It is therefore no coincidence that the ultimate success – six records out of six – should also have been scored by Omega.



Record setter. Omega's historic victories at the Geneva and Neuchâtel observatories were won with unglamorous competition movements like the one shown here.

Records mean extra seconds of accuracy. In some instances, Omega adjusters pored over their competition movements for more than a year. They experimented with new watch oils and new adjusting methods; they tested advanced engineering techniques. For they regard the observatory accuracy contests as the definitive testbench of watch research.



Despite costly manufacturing processes, Omega was able to hold retail prices to remarkable extent. The reason: constantly rising production.

Inevitably, the lessons learned in the latest accuracy contests will have a direct effect on the day-to-day production of Omega factories. The result will be watches of even greater accuracy.

Every second Swiss Chronometer an Omega Constellation. Last year already, Omega made more wrist chronometers than the rest of the Swiss watch industry put together. The lead is widening daily.
In 1961, new and more exacting procedures were adopted by the Swiss Institutes for Official Chronometer Tests, making the Chronometer rating

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

New Look of Precision. One of the four Omega designs that were recently honored in New York with Diamonds International awards – the diamond industry's top styling prize. This was the first time that four awards went to the same manufacturer.

meaningful than ever. For especially accurate watches, the Institutes reserve their Chronometer Certificate "with mention" (Especially Good Results). Omega Chronometers, which are sold under the Constellation name, invariably earn the "Especially Good Results" rating.
The test routine leading up to the Chronometer Certificate is similar to the one followed by the observatories – position testing at room temperature, in refrigerator and oven – but the duration is 15 days instead of 44.
Omega Constellation Chronometers thus frequently perform with a daily rate of two seconds or less, following "on the wrist" adjusting by a qualified watchmaker.

The key to accuracy: a sizeable production. To achieve such precision, even the most highly skilled craftsman requires a whole range of ultrasensitive instruments. Yet the myth of the "handmade watch" persists.
In industry, accuracy and durability are today achieved by furnishing the craftsman with the most sophisticated tools and instruments that money can buy. A manufacturer's production must be very considerable indeed if the investment in mechanical and electronic equipment is to become economically feasible. Only then can he afford the price of precision.

Omega creations presage New Look of accuracy. Watch styling, too, has its price. Working out of the Omega Styling Center in Geneva is a highly talented team of designers. Together, they probably represent the Swiss watch industry's dominant creative force. Time and again they have created prize-winning designs. Their latest triumph came in the international styling competition organized by the diamond industry. When the winners were announced in New York, Omega emerged as the first watch manufacturer ever to receive four Diamonds International awards in one year.

Making the most accurate AND the most beautiful. Significantly, the most accurate and the most beautiful watches are made by one and the same manufacturer: Switzerland's largest.

For many people, the choice of their next watch might well have been determined by the recent events in Geneva, Neuchâtel and New York.

Swiss Chronometer. Alone, the Omega operation today accounts for well over 50% Switzerland's production of "super" watches officially certified Chronometers.

Stars & B'ars

The art of animation has fallen on evil days. Once upon a time Walt Disney had a duck that laid a golden egg, but for many years now it has cost more to draw a paper performer than it does to hire a live one. In order to balance their books, most modern animators compromise their methods. They simplify figures, eliminate movements, primarize colors, standardize settings. Even so, they occasionally do exciting work. Of two feature-length cartoons in current release, one is about as good as such things get. The other, unhappily, looks like a TV reject.

Hey There, It's Yogi Bear is even cuter, kiddies, than the title attempts to suggest. The principal character, whose name and nature are distinctly insulting to the present manager of the New York Yankees, is a chubby and badly drawn bruin who looked reasonably ursine on TV but on the giant screen resembles an enormous and rather soggy cinnamon cookie. He lives in Jellystone National Park but talks like a bear from the Bronx Zoo. "Duh," he announces, "I'm smahtuh dan de avidge bayuh." To prove it he assembles a battalion of "trained picnic ants" and sends them to steal chocolate cakes from tourists. Then he runs off to rescue a

DAVID GAHR

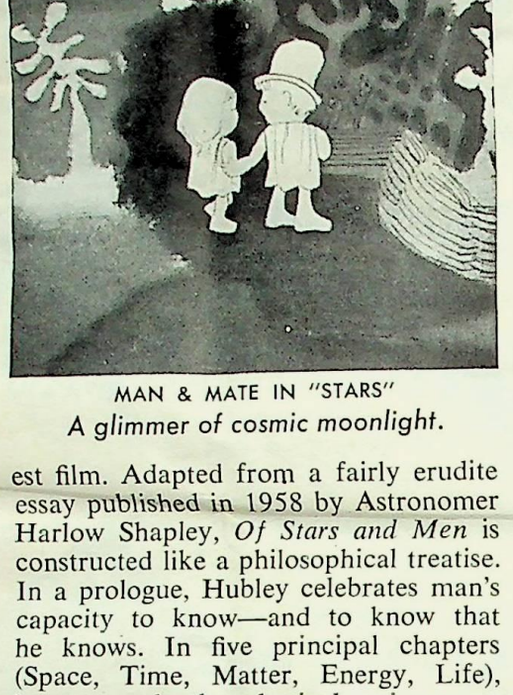
YOGI BEAR IN THE CHILLER
A soggy cookie in the trap.

nifty little beige bear named Cindy from the clutches of the Chizzling Brothers, who—oh, heck, who cares? Certainly not the people (Bill Hanna and Joe Barbera) who are unscrupulously luring the public into this bear trap.

Of Stars and Men, however, was made by a man who cares very much about what he has to say and how he means to say it. John Hubley learned his trade in Disney's shop, later developed a moneymaking style of his own (*Gerald McBoing Boing, Mr. Magoo*). But at 50 he aspires to be a serious graphic artist, a Matisse of animation.

Hubley's hubris is evident both in the theme ("To find man's place in the universe") and in the treatment of his latest film. Adapted from a fairly erudite essay published in 1958 by Astronomer Harlow Shapley, *Of Stars and Men* is constructed like a philosophical treatise. In a prologue, Hubley celebrates man's capacity to know—and to know that he knows. In five principal chapters (Space, Time, Matter, Energy, Life), he expounds the physical universe as man has come to know it. And in an epilogue, he imagines where man stands in the *novum organum:* a puzzled inflection of star stuff, a mote of mind that glitters for a moment on the grand galactic stream.

DAVID GAHR



MAN & MATE IN "STARS"
A glimmer of cosmic moonlight.

At times, Hubley handsomely transforms these ideas into images. His colors are pale and wash across the screen like slow surf in the moonlight; yet here and there in the watery depths, a point of richer color burns for an instant like a brilliant fish. Early in the film he engineers a spectacular ballet of electrons; later he pictures a cluster of great galaxies that lie asleep in space like a nest of glimmering, immeasurable crabs.

Nevertheless, a lot of things go wrong in Hubley's universe. Too often his art smells of the airbrush. Too often his narration reads like a high school science lecture. All the same it is well to remember that, for the present, the alternative to Hubley's unperfected universe is the witless world of Yogi Bear.

Real Life Revisited

Ring of Treason is a semi-documentary spy drama so set on realism that it takes one of Britain's most pedestrian episodes of peacetime espionage as a model, apparently to avoid drama, thrills or sex. The movie re-creates events leading to the 1961 conviction of Gordon Arnold Lonsdale, born Konon Trofimovich Molody, who was recently swapped back to the Russians in exchange for Greville Wynne. Still in a British prison for their association with Lonsdale are pub-crawling Chief Petty Officer Henry Houghton; his plump, middle-aged sweetheart Elizabeth Gee, who filched diagrams, manuals and Admiralty fleet orders; and a pair of personable American traitors, Peter and Helen Kroger, whose cozy home in a London suburb contai radio that got its programming di from Moscow.

Briskly acted and filmed, Tr telescopes the story to concentra the shambling, corruptible Hou He looses his charm on the navy's Gee, a lonely spinster who sits n a safe full of top secrets, dre about love, Monte Carlo and a two-seater sportscar. Their ro though, consists mainly of weeke London, and the extent of their debauchery is going to a music applaud the Crazy Gang. The makers warn at the end that may be a spy in this very the the very row where you're Such drab middle-class doings film shows may well prod enemy into a more exciting line of work.

A Thing of Booty

The Long Ships, a riotous viki saga, has impossible acting, a prep ous script, some eminently seew ship reconstructions, and more able bloody foolishness than m epic costing three times as much.

Oscar Homolka sets the tone a crusty old Thane of Skandia, a b rupt shipbuilder with a voice l rockslide. Searching for the lege Golden Bell, a thing of booty "a as three men, and cast by the m of Byzantium," Homolka's sons ard Widmark and Russ Tamblyn the Norse King's funeral ship as w his shapely daughter (Yugoslavia ba Loncar), and head south. A stands in their way is a mutinous a maelstrom and Sidney Poitie Moorish prince. He, too, dreams golden "Mother of Voices," but only the wail of his neglected Rosanna Schiaffino. Poitier capture vikings in a highly photogenic beside their shipwrecked hull.

From then on, the weapons c range from flotsam and jetsam t slapstick. Director Jack Cardiff is most ingenious in a triumphal that turns out to be an ambush avenues of Moorish troops st rigid attention, each with a quick

MERCHANDISING

e Supermarket's Big Change

The supermarket is more than a store. s the elegant agora of the new sub- ia, the font of everything from Kix Cheer, and the source of no small mount of corn—including the gag bout the housewife whose shopping art does $40 an hour. The American ousewife thinks nothing of spending an average $1,200 a year in the super- narket. Altogether, U.S. food stores do a $60 billion-a-year business, as much as the steel and auto industries wrapped together.

Supermarket business is still expand- ing, but it is not as super as before. Last year fewer new supermarkets opened than at any time since 1947. Sales of the ten largest chains rose only 3.3% above the 1962 mark. And the biggest of all retailers, the Great Atlantic & Pacific Tea Co., registered a decline.

Comeback on the Corner. The na- tionwide chains are built to the hilt and boxed in by several kinds of competi- tion. They are often outwitted by small- er, local supermarket chains—such as Florida's Publix, Texas' J. Weingarten Inc., California's Lucky Stores—whose managers are more sensitive to neigh- borhood tastes and do not have to clear decisions with far-off headquarters. The chains are also being nicked by a new phenomenon, the discount food store, where housewives pick their packaged goods from open packing cases instead of neat shelves, and pay prices generally 15% below those in the chains. Most of all, the national supermarkets are giving ground to the little man they had once almost obliterated, the corner grocer.

Though many of the struggling "mom and pop" groceries have gone under, the surviving independent grocers have become bigger and smarter. They have banded into groups, such as the mid-Atlantic region's Foodland Stores and Texas' Minimax. These buy in carload lots, rent computers to watch inventories, and hire experts to keep their books, plan their ads, remodel their stores. The "voluntary chains" increased their share of U.S. food sales from 29% in 1947 to 49% last year.

Not by Bread Alone. Much of the independent grocers' gain has come at the expense of the 4,500-link A. & P. chain, whose sales slipped 2.3% last year, to $5.2 billion. "Image" means much in the supermarket business, and A. & P.'s image sometimes looks old. It appeals to shoppers who fondly remember A. & P. for the bargains it offered during the Depression days. But it has less attraction for the affluent 25-to-40 age group, which buys half of the nation's groceries. To tempt this younger crowd, A. & P. belatedly started distributing Plaid Stamps in more than half of its stores. But that forced the company into a 2% price rise, which only irritated the longstanding, economy-minded customers.

Lately A. & P. has started up the comeback aisle. At the cost of lower earnings, it rescinded some of the price rises. Last year it brought in a 52-year-old president, Melvin Alldredge, who, unlike Chairman John D. Ehrgott, 68, has worked as an A. & P. store clerk and manager. And it has begun to stock more non-food items, from towels to toys, which carry markups as high as 42% *v.* only 16% for the edibles.

Also Decentralizing. Other national chains are diversifying beyond their bread-and-butter business. Second-place Safeway (1963 sales: $2.6 billion) has opened a group of Super S stores that sell sporting goods and small appliances instead of groceries. Third-ranked Kroger now operates 131 drugstores. Two weeks ago, Grand Union announced a 6% sales gain (to $667 million in 1963) but credited one-sixth of its revenues to its non-food discount stores.

Many chains are decentralizing to give more authority to their store managers, are paying them as much as $22,400 in annual salary-plus-bonus. Managers cultivate local trade with a host of gimmicks: some have opened soda fountains in their stores, and the Colonial chain offers chairs and tables for weary shoppers to rest beside the soft-drink dispensers. Stores are also staying open longer. Kroger two weeks ago started doing business on Sundays in Ohio, and Grand Union in Norfolk stays open 24 hours daily to accommodate the round-the-clock shipyard shifts.

Ironically, supermarkets are emulating the corner grocers. Chains such as Chicago's Jewel Tea Co. are experimenting with "pantries" that are one-fifth the size of usual supermarkets and are conveniently located in high-rise apartments. Bigger stores are also considering clearing their shelves of slow-moving items. They stock no fewer than 56 brands of pickles and 97 kinds of detergents, but about half hardly sell at all. The supermarketeers are now talking about making a higher profit with a smaller selection.

INVESTMENT

Charter Members in Space

Four minutes after the new stock went on sale last week at $20 a share, its price jumped to $27. Brokers throughout the U.S. were swamped with calls for it, and buyers even lined up in Paris. The chief underwriter—Merrill Lynch, Pierce, Fenner & Smith—set up a bank of 32 Teletypes in Manhattan to take orders. In Washington, one sobbing woman asked whether she could sue a broker who claimed that he had no shares; in Houston, demand was ten times greater than the supply. Why the commotion? The federally sponsored

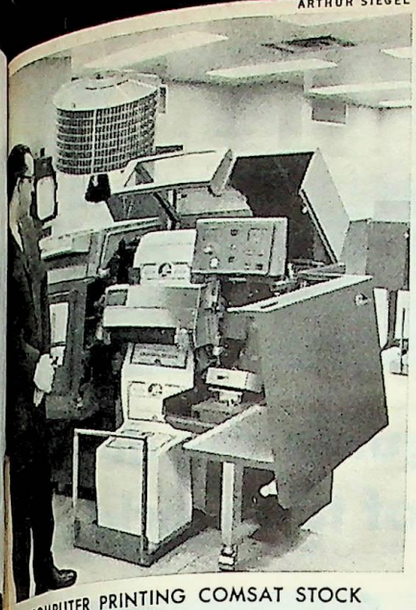
ARTHUR SIEGEL



COMPUTER PRINTING COMSAT STOCK
Interest from Paris and Moscow.

Communications Satellite Corp. had come on the market, and investors were eager to buy a place in space.

Few seemed to care that Comsat's officers had put red warning flags all over the issue. Chairman Leo D. Welch and President Joseph Charyk cautioned that Comsat was a chancy venture that would not loft a satellite for another year or a profit for at least three. But buyers were motivated by a sense of patriotism, a desire to become charter members in an exciting enterprise, and the solid conviction that any company backed by the Government and by American Telephone & Telegraph Co. was ultimately bound to succeed. Said one Manhattan investor: "I'm buying this stock for my grandchildren."

On top of the 5,000,000 shares that it sold a fortnight ago to A.T. & T. and other communications companies, Comsat last week disposed of another 5,000,000 shares to more than 500,000 individual investors—the biggest initial distribution in history. A few customers managed to get 50 shares, but most had to be content with ten or fewer. An IBM computer system printed and registered the entire issue, saving 25,000 man-hours of work. Sales were over the counter, with regular trading on the New York, Midwest and Pacific Coast stock exchanges expected to begin in July. The market held fairly firm—Comsat closed the week at $21.62—and the company was drawing attention in some surprising places. Next week Chairman Welch will fly to Geneva to negotiate with Russian officials, who are interested in tying up with Comsat in some way.

RAILROADS

Out of the Tunnel

People who play with trains have often been hurt, especially people who invest in railroad stocks. The Dow-Jones index of 20 railroad stocks needed a full 35 years to climb back to its 1929 high. But since it passed that mark last February, the rail average has been moving upward, reached an alltime peak of 208.95 three weeks ago. Last week, as the stock market generally fell in a long-anticipated correction, the rail average did better than the industrials, closed at 202.50.

All the signals show that the railroads are pulling out of their tunnel. They have been sped along by recently relaxed Government policies on rates and mergers, a refreshing enlightenment on the part of some labor unions, and the railroaders' own hustle.

Making Money. From a postwar low of $7.7 billion in 1961, revenues of the nation's 102 Class I railroads rose to $9.6 billion last year, are likely to top $10 billion in 1964. Helped by liberal depreciation schedules and favorable tax rulings, rail profits last year achieved a six-year high of $651 million, should climb at least another $50 million this year, if only because the Supreme Court's ruling against featherbedding will lower labor costs. Traffic is also rising. So far this year, the roads have carried 5% more freight than in the same period of 1963, and shortages of rail cars are cropping up in some places. Freight-car makers are busier than at any time in the last six years, and their backlogs of unfilled orders for new cars are rising.

New equipment and new ideas are partly responsible for the railroads' rise. Chrysler Corp., for example, recently started shipping its models on the new three-level freight cars instead of Great Lakes steamers. "Unitized" freight trains that carry only coal and move directly from mines to power plants save Chicago's Commonwealth Edison $5,000,000 a year. At the same time, the regulatory climate in Washington has changed. Switching from its policy of helping one form of transportation at the expense of another, the Interstate Commerce Commission has lately permitted railroads to reduce some rates to compete better against trucks and barges.

Two Live Cheaper. Probably the most meaningful change is the mellowing of attitudes toward mergers, which railroaders hope may eventually save them up to $1 billion a year. In the past two years the Government has approved two major mergers—the Chesapeake & Ohio and Baltimore & Ohio link-up, as well as the tie between Atlantic Coast Line and Seaboard Air Line Railroad. The ICC is considering 20 other proposed mergers, of which six are big. The Justice Department has raised serious objection to only one, the link-up between the nation's two largest railroads, the Pennsylvania and the New York Central. But the railroads are exempt from antitrust laws, and the ICC has the last word on mergers.

The greatest barrier to a Pennsy-Central merger has been labor's objection. Much of the barrier was removed last month, when the chiefs of 17 rail unions signed a job-protection deal with Pennsy Chairman Stuart Saunders and New York Central President Alfred Perlman. Terms: if the merger is consummated, the labor force cannot be reduced by more than 5% each year. An ICC hearing examiner will make a recommendation on the merger by year's end, and railroaders are hopeful that the ICC's eleven commissioners will give the two roads a go-ahead by 1966.

PERLMAN & SAUNDERS
Good signs in Washington.

ANTITRUST

Damaging Suit

In the three years since they were convicted of price-fixing, 29 electrical-equipment manufacturers have quietly agreed to pay some $200 million to settle damage claims in more than 1,000 customer suits. Though the price seems high, it was cheap enough for keeping the cases out of the headlines and out of the courts, where settlements might well have proved costlier. Last week the first damage case did reach a court, and the outcome shocked the electric companies.

A federal jury in the U.S. District Court at Philadelphia hit Westinghouse, General Electric, Allis-Chalmers and three other manufacturers with quite a bill. To Philadelphia Electric and two other complaining utilities, it awarded damages of $9.6 million; then Judge Joseph S. Lord III trebled the award to $28.9 million, as the Clayton Act requires. Most important, the jury found that the utilities were entitled to damages for having been overcharged as far back as 1946, even though the original electrical-conspiracy cases covered only the 1956-60 period. The ruling stemmed from a clause in the law that suspends the statute of limitations (four years in antitrust cases) if plaintiffs can prove both that price-fixing had been practiced long before the indictment and had been "fraudulently concealed."

Lawyers for the electrical-equipment companies offered an eyebrow-raising defense. They did not deny the price-fixing conspiracy but denied that it had been "fraudulently concealed." They contended, in effect, that customers knew about the fix but that high officers of the electrical-equipment companies

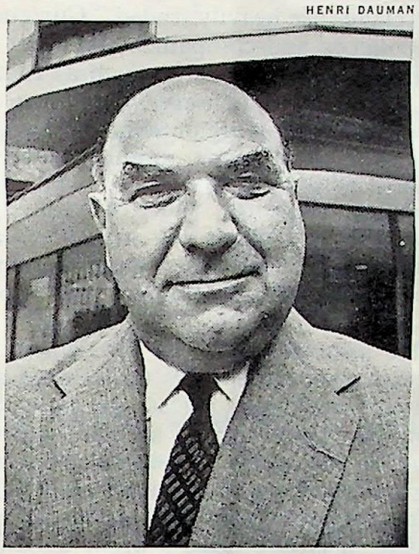
did not. The jury found this hard to accept.

Though the decision will not affect the damage cases that have already been settled, it may well prompt other customers to take their claims to court. Between 800 and 1,000 cases are still outstanding. Most are small, but at least two substantial claims will be brought by the Midwest's American Electric Power and Michigan's Consumers Power. The Philadelphia decision will be appealed by General Electric and Westinghouse, and probably by the other defendants. But the appeals alone could tie them up in costly litigation for years.

HENRI DAUMAN



WILLIAM ZECKENDORF
Taking a bath in hotels.

REAL ESTATE

He Webs But Seldom Naps

As head of Webb & Knapp, Inc., whose interests have spanned from Los Angeles' Century City to Manhattan hotels, rotund William Zeckendorf is known as a spectacular real estateman. His losses have also been spectacular. In 1962, Webb & Knapp dropped $19.6 million. Last week, filing an annual statement that had been delayed so that accountants could untangle Zeckendorf's web of multiple mortgages, the company reported a disastrous 1963 loss of $32.3 million.

While Zeckendorf reeled and dealed to cover his debt, the revenues he had expected to rescue him failed to materialize. Freedomland, a pale Bronx imitation of Disneyland, lost $5.4 million. Place Ville Marie, a skyscraper show place in Montreal, lost another $4.5 million, and Webb & Knapp (Canada) no longer controls it. New York's Roosevelt Field, a large shopping center and industrial park, lost $1.2 million. Zeckendorf also took a $4.5 million bath in his Manhattan hotels.

"Big Bill" has been working inordinately long hours auctioning off his properties. But he admits that "results fell substantially short of expectations." Among other things, he has sold off a valuable block-square plot in New York's financial district, part of his Southwest Washington redevelopment

Rolex watches

You know their names as you know your own. You know their faces from a thousand newspaper and magazine articles. You have seen them and heard their voices on newsreels and on your television screen. Their actions and decisions influence the pattern of our lives.

We cannot mention their names, or show pictures of them. It would not be fitting to do so, for they include royalty, the heads of states, great service commanders. But we invite you to look carefully at the next pictures that you see of them, at their wrists as well as their faces and clothes. You will notice that in almost every case they wear a wrist-watch. That watch will most likely have been made by Rolex of Geneva.

We are proud of the service given by Rolex watches to so many eminent men throughout the world. It is scarcely necessary to point out that the performance of these watches is, in the highest degree, accurate and dependable.

ROLEX
A landmark in the history of Time measurement

"I'm no match for a Bank of Tokyo Travelers Cheque."

Few things are. One shouldn't go anywhere in Japan without Bank of Tokyo Travelers Cheques. They're available at the offices of the Bank of Tokyo, or at its correspondent banks engaged as selling agents in Japan and abroad.

project, and a San Francisco site where Webb & Knapp intended to construct apartments. Last week he dealt off his right to buy Manhattan's Drake Hotel, and a British buyer was reportedly dickering for Zeckendorf's Chatham. Considering that his revenues from the Astor, Manhattan and Taft are being passed out to creditors, the only New York hotel that Zeckendorf appears to have free and clear is the Gotham.

Coming due this year are debts of $55 million—indeed, $31.9 million are already overdue. To cover them, according to last week's report, was a bare $1,000,000 in cash and $6,000,000 in accounts receivable. Up to now Zeckendorf's creditors carried him along in hopes of recovering their loans. How long will they continue to do so? On the American Exchange, Webb & Knapp was down to 37½¢ a share, a third of what it sold for last year.

Cashing in on crisis.

MONEY

The World of Deaknick

He lives in a Scarsdale mansion instead of a London flat, and never ever packs a shoulder-holstered Walther PPK automatic. But there is more than a soupçon of the fictional counterspy in trim, urbane Nicholas Deak, who is the James Bond of the world of money.

Born in Hungary 58 years ago, Deak holds a doctorate in economics, can talk money in five languages, used to work for the League of Nations. A naturalized American, he spent World War II as an OSS agent parachuting into Burmese jungles to search for Japanese prisoners. On a postwar assignment, he sneaked Hungarian boxcars past the Russian occupiers to help rebuild West Germany's railways. Deak still keeps in OSS trim with a vegetarian diet, daily sprints around his own suburban running track, and ski trips with his Viennese wife. From a paneled office (cable address: Deaknick) overlooking lower Manhattan harbor, he supervises more than 100 agents working for Deak & Co., one of the world's biggest dealers in foreign currencies.

Gamble on Change. Last week lines of tourists bought up pounds, francs and yen from Deak's Perera Co., busiest currency exchange in the U.S. and only one of Deak's skein of 20 currency "stores." The tourist trade is a small part of Deak's business; his plumpest profits come from the active shufflings of currencies in crisis. "Whenever countries are not stable," says Deak, "their currencies are heavily traded." Currency speculators and companies operating in inflation-ridden countries such as Brazil or Italy try to conserve the value of their cash by buying or selling "forward contracts" for funds, similar to commodity futures; a speculator who sold Brazilian cruzeiros short a year ago could have doubled his money. Deak trades in the contracts, gambling that fiscal and political changes will work his way.

He also collects rents for owners of foreign properties, buys up blocked accounts at bargain prices, or, on occasion, the inheritance of an heir who has trouble getting his money out of a foreign country. In such cases, Deak is in effect betting that he can get the money unfrozen later or turn a profit by using the funds inside the country. He has the right connections for it. Occasionally, governments buy and sell their own currencies through Deak, creating an artificial demand that boosts the exchange rate and balms national pride.

Constantly operating on the fringe of politics, Deak often gets subtle warnings of impending events. In 1962 millions of dollars worth of Indian rupees that Deak held were suddenly scooped up in Hong Kong, Beirut and Kuwait. They were purchased by agents of the Red Chinese, who used the rupees for folding money when they invaded India soon after.

Holding the Bags. Privately owned Deak & Co. issues no earnings reports. But Nick Deak happily admits that he has more than made good his boast to a wartime OSS comrade that he would open a small foreign-currency exchange, steadily expand and become a millionaire. His route to riches was, and is, tricky. Dealing in all currencies except four that are proscribed by the U.S. Government (Cuban pesos, Red Chinese yuan, North Korean won and North Vietnamese dongh), Deak always risks being caught with funny money. But he rarely loses.

Deak once sat atop a bundle of old Israeli pounds that had been called in by Israel and were thought to be worthless. He managed to dispose of them in —of all places—Arab Lebanon. What happened to the money after it reached Beirut? In Deak's business, one does not ask such questions.

PERSONALITIES

THIS business is like opium—it's in your blood, everything else dull," muses Paramount Pictures executive George Weltner. The habit proved profitable for him: last week, 62, he was promoted from exec v.p. to president. In something youth movement, he replaces Balaban, who at 76 becomes chairman; Paramount's founder, Adolph kor, 91, was named chairman emer Aging Paramount lost $2,800,000 1962 when several films were office flops. Last year it was back in black, and first-quarter '64 ea ($1,041,000) were almost twice as in the same period last year. W expects further improvement, thank such current successes as *Becket*, *Seven Days in May*. A small, frec man who resembles neither a mo mogul nor a matinee idol, Weltner chemist by training who began in darkroom during the early '20s. H did he reach the summit of Paramou star-ringed mountain? Says We with a grin: "Longevity, that's all."

BEN MARTIN

GEORGE WELTNER

HAMER BUDGE

HE is known to friends as "unbu able Judge Budge." As a Re lican Congressman from Idaho for years until he was defeated in 1960 consistently voted against Governm spending and public welfare measu stood with Southern Democrats on c rights. Now a state judge in Idaho admits to being far from expert finance. These may seem like unus qualifications for the newest member the five-man Securities and Exchan Commission, but last week Ha Harold Budge got the job. Pres Johnson appointed him, said sp sources, partly as a political favor House Minority Leader Charles Halle the judge's longtime golfing crony (judge calls Halleck "Pop," while leck calls him "Son.") He replaces M. Whitney II as the second Repu can member on the commission. I Republicans consider Budge "a hand," and he will have plenty of portunity to prove it: the SEC is dr ing up a program to implement 1963 study of stock markets, and rulemaking lies ahead in such cont areas as brokerage commissions.

"let's see what ASEA can do"

in HIGH-VOLTAGE POWER TECHNIQUE High-voltage power transmission brings power where it is required. It allows remote energy sources to be utilised economically and power to be exchanged between networks, providing peak-load and stand-by power without the erection of new power-producing plant.

Both high-voltage alternating current (HVAC) and high-voltage direct current (HVDC) can be used for transmitting power; each has its specific field of application where it is preferable. In both cases, ASEA is a world leader.

The world's first 400,000 volt HVAC system is over 80 per cent ASEA-equipped and ASEA are supplying a substantial part of the equipment for the first 735,000 volt, HVAC system *now* being built in Canada.

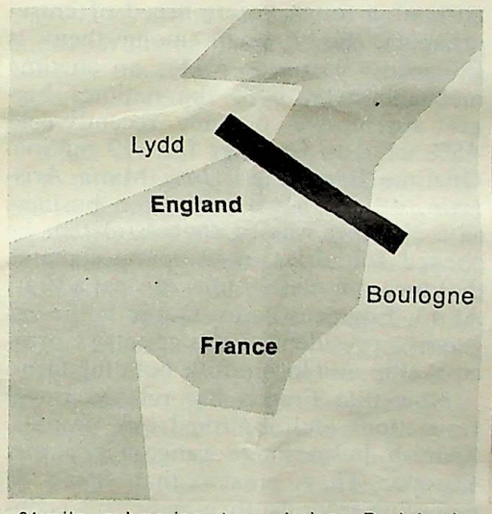
HVDC transmission technology is a product of ASEA research and development. The company is still, 10 years after the commissioning of the first installation, the sole supplier of all the vital transmission equipment.

The maps below indicate the progress of HVDC and its fields of application. These examples also give evidence of the truth that it is worthwhile to "see what ASEA can do".

a creative force in the electrical field **ASEA**

Head Office Västerås, Sweden. Represented in 65 countries.

60-mile submarine transmission. Power supply to the island of Gotland.

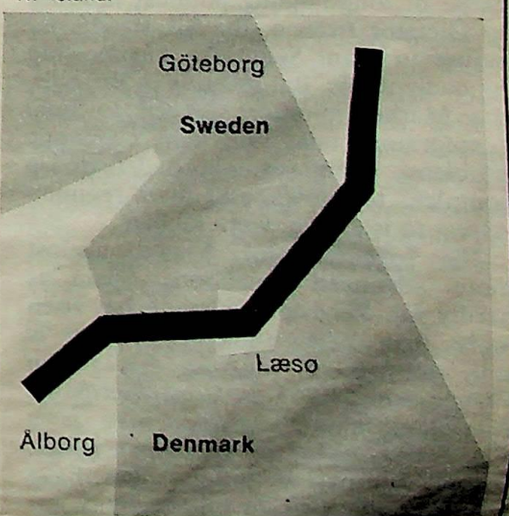


34-mile submarine transmission. Peak-loads at different hours in the two countries.

385-mile overland and submarine transmission. Water power plant on S. Island supplying the N. Island.

[illegible] overland and submarine transmission. [illegible] power plant on Sardinia supplying the Italian mainland.

Link between networks of different frequencies, 50 and 60 c/s.



114-mile overland and submarine link between the power networks on the European Continent and in Scandinavia.

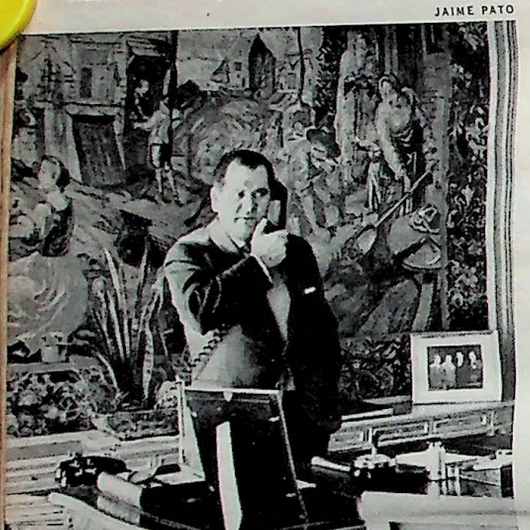
SPAIN

Closer to Europe

That arid square, that fragment nipped off from hot Africa, soldered so crudely to inventive Europe.

Thus Poet W. H. Auden once darkly described Spain, but today the "arid square" of more than 30 million people is growing ever closer to the rest of Europe. Franco long ago took economic power away from the old Falangists who helped him win the civil war. Now *El Caudillo*, who fancies himself an economist and contributes occasional articles to Madrid newspapers under the pen name "Hispanicus," is steadily giving more authority to a corps of knowledgeable and enthusiastic technicians. The young economists have

JAIME PATO



AUTOMAKER BARREIROS
Up from olives and citrus.

been raising both living standards and future hopes.

Last week that fact was acknowledged by the Common Market. Because of longstanding political hostility to Dictator Franco, the Six steadfastly refuse to grant Spain the membership he badly wants. But meeting in Brussels, the Market ministers agreed to hold "exploratory talks" on joint economic problems. Spaniards, who had feared a complete turndown and their regime's retreat to isolation, were jubilant.

The Takeoff Point. Viewed against more advanced neighbors, Spain is hardly fat. Per-capita income has risen more than 22% since 1961—but is still only $342, against $1,250 in France and $1,255 in West Germany. A skilled laborer's weekly pay is a slim $18 to $24. Last year's pay raises, provoked in part by bitter strikes, have not been matched by productivity increases, and there is the consequent danger of recurring inflation.

But Spain, like other European nations before it, has at least reached the takeoff point. The 8,344-mile national railway system is being overhauled at a cost of $1 billion. Unemployment has dropped from 8% in 1959 to 1.5%. About 400,000 men are working in neighboring nations, and the $193 million they sent home last year, along with tourist income, more than offset a chronic trade deficit.

Franco has relaxed regulations on foreign capital, now allows outside companies to control Spanish firms and remit their profits and dividends. Such firms as Leyland Motors, John Deere and Parke Davis have come in. Foreigners can now own Spanish stocks, have bought $200 million worth of them.

New Entrepreneurs. Spain's economists, led by liberal Commerce Minister Alberto Ullastres, 50, intend to keep statistics climbing with a four-year development plan. Under it, production and expansion have been carefully timetabled: $15 billion in public and private investment will be added to Spain's economy, and the gross national product, now $13 billion, is expected to rise 26%.

The emergence of Spain's technocrats has been matched by the appearance of a tough young breed of entrepreneurs. Best-known among them is Eduardo Barreiros, 44, a onetime mechanic who built the nation's biggest automotive company, recently sold 45% of it to Chrysler for $19 million. Onetime Bank Clerk José María Aristrain, 48, started a scrap-iron business as a sideline, was so successful that he opened foundries, now operates plants that turn out 60,000 tons of steel a year. At 43, Engineer Pedro Durán is the aggressive president of the country's principal ship and locomotive building firm.

Now that Franco has relaxed travel restrictions and abolished exit permits, Spanish businessmen range far across Europe. They preach that Spain is emerging from its olive-and-citrus economy and is on its way to becoming more than an appendage crudely soldered onto the inventive Continent.

WESTERN EUROPE

Almost Like Detroit

In Italy, Fiat Chairman Vittorio Valletta calls it *"un certo snobismo"*—a touch of snobbism. Other European auto executives describe it in terms of sophistication or selectivity. Whatever words they use, all agree that their business is being reshaped by a significant switch: in size and tempo, Europe's auto market is following the American way. Not only are Europeans buying more cars, but they are moving up to larger, costlier, more powerful models. Says John Andrews, Detroit-trained president of West Germany's Ford Taunus: "A few years ago, Europeans were primarily interested in basic transportation. Now they want styling, ... iness, convenience and power."

...el 24 (including station wagons), ...imler-Benz 16. No firm is quite so ...rsatile as the Glas company, a little-...own family business tucked in the ...avarian village of Dingolfing. Last ...ear it rolled out only 35,000 cars, but ...ffered 32 models, from the tiny Gog-...mobil to a sports car that is said to ...look like a genuine Ferrari."

The swing is away from knee-crunch-...e tiny cars and toward five-seaters ...at resemble U.S. compacts. The pop-...larity of such cars has hurt the small Volkswagen, cutting its share of the German market last year from 34% to 28%. Volkswagen's larger "1500" mod-...el is selling well enough to make up for some of the slippage, and France's Renault is reportedly readying a bigger sister for its Dauphine and Caravelle. Fiat recently introduced a 12-ft. "850" model whose chassis is almost a foot longer than the company's basic "600" job.

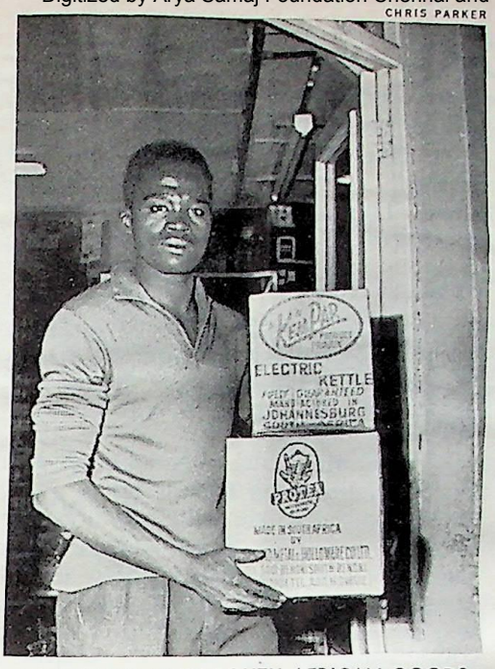
Popular European cars will not grow as big as American ones—taxes, in-...surance rates and gasoline prices (80¢ per gal. in Italy) are too steep for that. Some other American styling idiosyn-...crasies will also be avoided. Many Eu-...ropeans think that splashy chrome trim would only rust, and that tail fins would only make parking harder. But one latter-day American innovation has be-...gun to take hold in Europe: the two-...car family. Germany's NSU Motoren-...werke plugs its tiny Prinz-4 as just the thing the hausfrau needs to drive to the supermarket while her husband has ...his Mercedes at the office.

SOUTH AFRICA

Beating the Ban

International economic boycotts rare-...ly work, but few have fared worse than the boycott of South Africa by Russia and 17 African, Asian and West Indian countries. This week the United Na-...tions's Special Committee on *Apartheid* will begin a two-week meeting with the aim of persuading more nations to bar trade with South Africa. The world, ...says Committee Chairman Diallo Telli of Guinea, faces a choice between "vio-...lence on the one hand, economic sanc-...tions on the other"—a threat that black South Africans will ultimately revolt un-...less economic pressures force the gov-...ernment to change its ways.

The sanctions so far have neither de-...railed the boom of Africa's richest na-...tion nor diminished its role as a prime ...customer to the world. Since the boy-...cott began four years ago, British and ...U.S. investment alone in South Africa has risen 50% to $3.7 billion, South ...Africa's gross national product has in-...creased 20% to $8.6 billion, and the London Daily Mail's stock market index has nearly quadrupled. With exports of ...products as varied as wheat and mining ...machinery running at a record $1.5 bil-...lion rate, South Africa boasts an inter-...national payments surplus of $200 mil-...lion, could write off its few debts with ...the four months' gold production.



CHRIS PARKER

RHODESIAN WITH SOUTH AFRICAN GOODS
The price tags are irresistible.

Detours. A few South African companies, of course, have felt a boycott pinch. When Denmark stopped shipping small arms to South Africa in 1960, it also reduced its own imports by more than 50%. Clothing shipments from South Africa to Black Africa fell from $12 million in 1959 to $5,000,000 last year. The profits of South African Airways have dwindled because its planes, banned from the Black African airspace, must fly the time-and-money-consuming "*apartheid* route" over the Atlantic to Europe.

Black Africa, however, has done little to make the boycott stick. South African steel, autos and sugar find their way into most of the nations supporting the ban. Reason: South Africa's advanced technology, low labor costs and modest shipping charges result in price tags many Black Africans find irresistible. "My country," sighs Northern Rhodesian Prime Minister Kenneth Kaunda, "cannot afford to boycott South Africa."

A Question of Need. If a boycott is to work, it must be supported by the U.S. and Britain. Their purchases of such items as gold, copper and diamonds account for one-third of South Africa's trading income. They oppose the boycott, saying publicly that it would hurt black workers more than the white businessmen, but confiding privately that they need South Africa as both a supplier and buyer. The U.S. and Britain have banned arms shipments to South Africa, but in April British Labor Leader Harold Wilson, an Oxford-trained economist, questioned the wisdom of a full-scale boycott. "Sanctions which hit at the people without influencing its government would be futile and tragic," said he. "The imposition of a trade boycott is an act little short of war."

Wilson may also have had in mind a boycott's effect on British industry, which sells $500 million worth of goods yearly to South Africa. If such sales were blocked, thousands of British workers could lose their jobs.

MILESTONES

Married. Princess Desirée, 26, granddaughter of Sweden's Gustaf VI Adolf; and Baron Niclas Silfverschiold, 29, wealthy Swedish gentleman farmer; in a Lutheran ceremony attended by Scandinavia's Who's Who; in Stockholm.

Married. Theodore Chaikin Sorensen, 36, confidant, counselor and speechwriter for John F. Kennedy from 1953 to 1963; and Sarah Ann Elbery, 31, petite Boston schoolteacher; he for the second time; in Manhattan. They met in 1958 when both worked on Kennedy's senatorial campaign in Boston, and their friendship flowered when she took a job in Washington in 1961 and accompanied Ted on summer trips to Cape Cod.

Divorced. Xavier Cugat, 64, roly-poly king of Latin swing; by Abbe Lane, 32, wiggly-jiggly singer who joined "Coogie's" conga line in 1950; after twelve years of marriage, no children; on grounds of incompatibility; in Juárez, Mexico.

Died. Matthew Michael Fox, 53, Hollywood's own version of the wheeler-dealer, who in the early 1940s turned nearly bankrupt Universal Pictures into a $7,000,000-a-year profitmaker by luring away stars from other studios, made a further killing by selling old movies to TV, later gained control of Skiatron, which pioneered pay TV, and finally went international in 1948 by persuading the newborn Republic of Indonesia to make him its U.S. trade broker, a deal involving $150 million a year before it collapsed in 1950; of a heart attack; in Manhattan.

Died. Leo Szilard, 66, famed physicist, who with Enrico Fermi in 1942 triggered the world's first nuclear chain reaction and thus made possible the atomic bomb; of a heart attack; in La Jolla, Calif. A Hungarian-Jewish refugee from Hitler's persecutions, Szilard foresaw as early as 1939 the possibility of uranium bombs, persuaded Einstein to lend his famous name to a letter to President Roosevelt in which he pointed out the danger that Germany might beat the U.S. to such a weapon; once his advice was heeded and the bomb developed, Szilard looked with regret upon the monster he had helped unleash, worked incessantly for disarmament and peaceful uses for nuclear energy.

Died. Catherine Evans Whitener, 83, who at the age of 15 snipped off each bit of yarn as it came through the cloth of a bedspread she was making, thus inventing the tufted bedspread, something that has since become one of Georgia's largest industries as mass production built up tufted textiles into a $500 million-a-year business; of cancer; in Dalton, Ga.

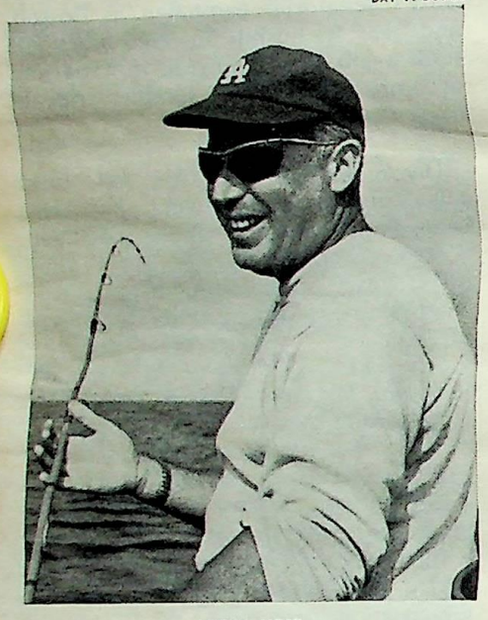
Fresh Off the Assembly Line

ARMAGEDDON *by Leon Uris.* 632 pages. Doubleday. $6.95.

Hmm. Bank balance down. Time to do another Big Novel. But what about? The marines in World War II? Did that one already. Maybe the Kaiser's war? Ancient history. The Israeli thing, and beautiful deep-chested broads with big bandoleers standing ankle-deep in the dirt of the kibbutzim? Ah, there's

DAY V. JONES



LEON URIS
Is English necessary?

a bestselling idea. Too bad, did that one too. What's left? Got it! Berlin and the airlift. It has flyers and wild blue yonders, and conflict with the Russkies, and a small band of far-seeing Army officers, and fräuleins, and bad Germans and maybe a few good ones this time, and . . .

Leon Uris' new novel is the predictable end product of an interior monologue just like that. And it must be conceded that Uris, who once publicly pronounced himself "the most outstanding U.S. writer of today," has succeeded astonishingly in his aim: into this big bad book he has packed away every conceivable stock figure, from the nice Russian officer (Igor) trapped by the system, to the beautiful whore (Hilde) who reforms and then softens the hard heart of the dashing American pilot (Scott, what else?).

Uris put in about three years of research and writing to produce this book. It reads as if it were not written at all but dictated, Napoleon style, at top speed to at least two secretaries at once, and the resulting manuscript corrected with a glass in one hand, a cigar in the other, and no place to hold the blue pencil. Even the title is a piece of mindless sensationalism: Berlin was not a battle, let alone the last one.

Uris piles up countless petty errors of fact, even of grammar ("It's a good thing English has nothing to do with writing" is another Uris pronouncement). The airlift and the gutty Berliners deserve a better chronicler.

Santa Claus of Loneliness

RAINER MARIA RILKE, THE YEARS IN SWITZERLAND *by J. R. von Salis, translated by N. K. Cruickshank.* 321 pages. *University of California.* $7.50.

"The Santa Claus of loneliness" was W. H. Auden's tag for his fellow poet, Rainer Maria Rilke. Rilke did not look like Santa Claus—more like the man who shot him. Beneath a nobly domed forehead, pale eyes glared out from a meanly featured face. This repellent countenance would on rare occasions be relieved by an unpleasant smile. Yet for all his unprepossessing appearance, he had the pride of Lucifer himself. He insisted on his aristocratic descent. Christianity may call all men sinners. Not Rilke. "Perhaps I am not a sinner," he would say.

Rilke was a solitary who spent, according to his French master, Paul Valéry, "eternal winters long in excessive intimacy with silence." Such a man does not leave the makings of a lively biography. But out of his elected silence Rilke drew such lyrics that men have searched the bare facts of his life for the sources of his mastery.

Inner Space. The facts are bare indeed. Born in Prague 88 years ago, he died of leukemia in Switzerland in 1926; the events in between are almost accounted for by the names of the countries he visited or lived in (Germany, France, Russia, Spain, Italy) and the handful of friends he made—the most important of them women. These ladies included the Princess of Thurn and Taxis and the fabulous Lou Andreas-Salomé, who was his elder by 14 years and who deeply impressed—besides the poet—Friedrich Nietzsche and Sigmund Freud. His love for Lou Andreas was a lifelong though mostly distant affair, interrupted briefly, as Biographer von Salis dryly observes, by his marriage to Clara Westhof. In an age that is congesting toward total togetherness, when even a Wordsworth can only wander lonely as a crowd, the solitary figure of Rilke commands something somewhere between awe and irritation. He sought *Weltinnenraum*—literally, "inner-world-space," the landscape of the mind that can be seen only by introspection.

Were it not for Von Salis, personal knowledge of this most private of men would be largely left to the colored memoirs of the ladies of his life. Von Salis, formerly professor of history at the Swiss Institute of Technology, was a young man when he knew Rilke during the last seven years of the poet's self-exile in Switzerland, and his partial biography has been a prim source of countless articles and o writings on Rilke since it was first lished in 1936. It has now appe for the first time in English, t lated by Norah Kelsall Cruickshank English poet.

Von Salis' book begins with the in the summer of 1919, after "five penetrable, sterile years, interrupted genuine life." War was intolerable a man who found civic peace too m He had been drafted into the Ger army, but the minute the war e he fled to Switzerland, "as anima when the closed season is over."

In Switzerland he attained a g civic asylum. Patronesses supplie lets and châteaux. He completed *Duino Elegies*, begun at Princess T and Taxis' castle on the Adriatic Trieste; she celebrated the event a ceremonious visit, during which poet recited the whole work to her.

Nameless Shame. Von Salis he such events to record: A visit abandoned chapel to put flowers altar or "a feast of reconciliation" a chat) with a tardy postman are t cal adventures. By common standa Rilke did not "live" at all. The e of his life took place within his po

In Rilke, says Critic Hans Egon thusen, "we see the conquest o originally Christian soul by an Christian consciousness." In one poem Rilke presents Christ's ima prayer in the Garden of Gethsema

I am alone with all men's grief
Which I essayed to heal through
And Thou art not.
O nameless shame . . .
Then they recounted that an ange
came.
Why an angel?
It was night that came
And played indifferently with
leaves.

But Rilke's hard-edged cynicism not to be equated with the curr

Romblon Island, Philippines.
Problem: Communications isolation.
Solution: A nationwide telecommunications network.

For the first time in the history of the Philippines all the major islands—from northern Luzon to southern Mindanao—will be linked in a major telecommunications network. And for the first time the Philippines will have national communications that meet international standards.

ITT Philippines, Inc., will supervise and coordinate installation of the network. Its backbone will be a troposcatter system supplemented by mainline microwave links and secondary VHF feeder links. All three will provide telephone and high-speed telegraph service. Crossbar telephone switching exchanges will be installed in 27 cities and toll exchanges in four regional centers. Local personnel will be trained to operate and maintain their new equipment.

Vast skills and resources enable ITT to provide equipment that best satisfies the particular requirements of this tropical network. The fact that this equipment will come from ITT System companies in the U.S.A., Australia, Belgium, and Germany testifies to ITT's worldwide capabilities. And helps explain why ITT is the world's largest international supplier of electronic and telecommunication equipment.

For information or service, contact your ITT distributor or write: ITT Far East and Pacific, Inc., 24 Des Voeux Road, Central, Hong Kong. World Headquarters: 320 Park Avenue, New York, New York 10022.

fashionable syndrome of despair. He believed in no hereafter, but he accepted death as a just price for the gift of life. He is the voice of all whose worship goes to no Creator but to Creation itself. When he came to write his will, Rilke included a lyrical conundrum in which life and death became one in the symbol of the rose, whose loveliness contains nothing.

Rose, of pure contradiction, delight in being no one's sleep under so many lids.

The complexity of his thought and art are more clear in the German, where *Lider* (eyelids) also suggest *Lieder* (songs).

The paradox followed Rilke in a final irony. Picking such a rose in his garden, he pricked his finger. The puncture did not heal, and from this small clue his doctor discovered that Rilke had leukemia in a rare, painful and eventually disfiguring form. "Life is a glory," were among his last words.

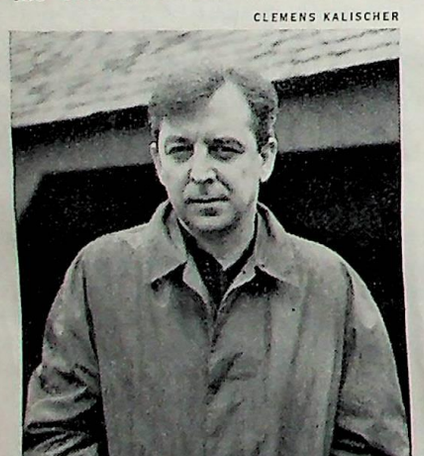
Southern Exposure

CANDY *by Terry Southern and Mason Hoffenberg. 224 pages. Putnam. $5.*

Since pornography is now available at every neighborhood bookshop and drugstore, the idea of satirizing the pornographic novel was bound to occur to someone. If done with Swiftian skill, it could be defended on moral as well as literary grounds, even though it could easily descend to the level of a vice crusader's wet-lipped discourse on the evils of vice.

Candy is as far from Swift as a French postcard is from Hogarth. Its heroine, Candy Christian, is that supposedly fictitious character—the girl who was ruined by a book. A glad-glanded college girl, she believes everything she reads or is told, and thus her pretty head is filled with every cliché in the current liberal establishment of ideas. Unhappily there is just one thing she can do for her country, for colonial freedom, for Zen enlightenment, for Freud, for minorities, and this she certainly does. For example, she takes the most improbable of her lovers, a cretin with a "radish-white" humped back, because he is so loathsome that he constitutes a superminority of one.

CLEMENS KALISCHER



TERRY SOUTHERN
Nobody called foul.

It is true that Candy, Mephesto the mad professor, Irving Krankheit the mad psychiatrist (author of *Masturbation Now!*), a mad Buddhist monk, and several other off-white slaverers at whom she throws herself, have as much fun as a barrel of impure-minded monkeys. But the result is not uproarious enough to require comparison to Byron (as one critic has suggested), unless you have something against Byron.

Candy, originally written for Paris' Olympia Press, which specializes in sheer lubricity, is not pornography. It may even be described as antisexual; all too often, at the crucial moment, everything goes askew, and Candy slips back into her filmy panties, crying "Good grief!" Its most conspicuous intent is to be more outrageous in detail than what it is satirizing, and these days, that is hard to do. In the effort, *Candy* ends up dirty as hell.

No reviewer has said so. It seems that there is hardly a literary critic on earth today who would risk seeming a prude in print.

The Ascetic Pagan

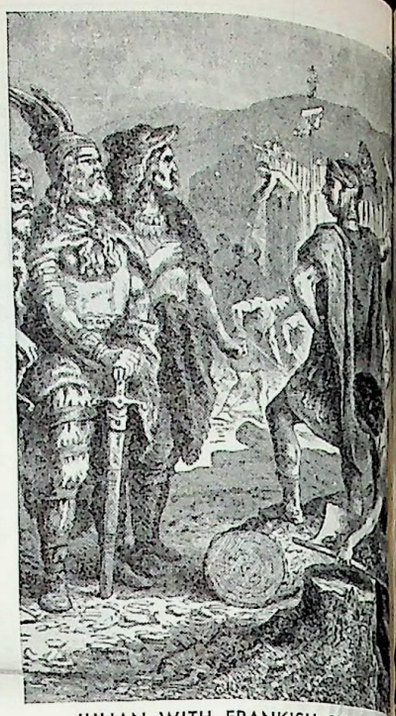
JULIAN *by Gore Vidal. 503 pages. Little, Brown. $6.95.*

No odder figure ever guided the destinies of the Holy Roman Empire than the Emperor Julian Augustus (circa 331-363), known as Julian the Apostate. Here was a recluse and a scholar who became a great military leader, an ascetic who preached the life of the senses, a fatalist who believed he would remake the world. More important, here was a man who did his best to write an end to Christianity before it had fairly begun. As the subject of biography he is endlessly fascinating. As the subject of fiction he has one major defect: he was an utterly irrational man.

Novelist Gore Vidal has obviously read his Robert Graves. His ninth novel (and his first in a decade) is an attempt to apply to Julian's life the same smooth blend of erudition and dramatic flair, of scholarship leavened with wit that set the urbane tone for *I, Claudius* and *Claudius, the God*. Vidal is a resourceful writer, and he has mastered the manner to perfection. Only his subject eludes him.

Secret Journal. The novel, which draws heavily on Julian's own letters (more than 80 have been preserved), is cast in the form of a secret journal presumably written by Julian and discovered in his tent the night of his death by a garrulous old counselor, one Priscus, who serves as a sort of chorus.

As Vidal sees him, Julian was the



JULIAN WITH FRANKISH CHIEFTAIN
Also, a few great orgies.

prototype of what a political leader should be—tolerant, intellectually curious, and equipped with a large sense of the absurdity of all humanity, including himself. It is probably no accident that, in some respects, he resembled John F. Kennedy, who Vidal thought had "the perfect temperament" for command.

Last Survivors. Julian's career was as spectacular as it was brief. Nephew of Constantine the Great, he was born in Constantinople and trained, by imperial edict, for a career in the church. But in the course of a visit to Nicomedia he came under the influence of apostate theoreticians secretly working toward a return to the old faith—or rather, to an idealized amalgam of paganism and philosophy that they took for the faith of the ancient world. Julian wanted to be a teacher, and might well have been if his half-brother Gallus (whom Vidal paints as almost a parody of the Roman voluptuary) had not been executed for misgovernment, leaving the Emperor Constantius and Julian as the last male survivors of the imperial line. When Gaul threatened by the Alamanni, Constantius reluctantly bestowed on Julian the title of Caesar and gave him the government of Gaul and the hand of his sister Helena.

In a series of remarkable victories (the most notable being at Strasbourg in 357), Julian secured the frontier and more at the Rhine. When Constantius died in 361, he became emperor. He died in battle against the Persians in 363, at the age of 32, having been on the throne for only 18 months.

Theories & Orgies. He was, by accounts, an inconsistent, witty, posing romantic who somehow contrived his own zest for life with a woolly Platonic pantheism, and who saw Christianity as a death-dealing force that was draining the life of the empire. In his brief reign, he made his best

of paganism (which owed much to Mithras-worship) the state religion and used his office to drive Christians from positions of state. He died, according to one theory (which Vidal accepts), from a wound inflicted not by the Persians but by an enraged Christian in the Roman ranks. His religious reforms died with him.

Vidal spent two years in Rome researching *Julian*, and fleshes out the story of this complex man with pages of theological philosophizing, descriptions of the campaigns and a few top-drawer orgies, including one in which 50 lascivious eunuchs rip the clothes off a herd of terrified teen-agers (male and female) "in the same way children tear wrappings from a gift, passionately eager to see what is inside."

Vidal himself is an energetic husker of wrappings. The weakness of his novels is that he seems uncertain, as is the reader, about what manner of animal he has discovered inside.

Also Current

THE CART AND THE HORSE *by Louis Kronenberger.* 212 pages. *Knopf.* $4.95.

Essayist Kronenberger is the coolest of U.S. society's critics; where others whack away with club and cutlass, Kronenberger sits back and throws darts, quietly but accurately. Among targets: "taste makers and pace setters" who, he believes, have failed to lead U.S. culture to greatness; the system that has seduced so many good writers and artists into working for corporations and their ad agencies, thus creating "a sort of debased intellectual class who, by way of their knowledge and skill, have become rather the writing hands of business, than outright businessmen"; and the great stress placed on the chap marks of education "with the B.A. a tollgate to a business career, the Ph.D. to an academic one." Essentially good humored and tolerant, Kronenberger charges other men with folly rather than outright evil, and recognizes that the very extremism that often makes the U.S. unbearable has helped to make it great. His conclusion: "We are a corrupted people but not a depraved one. We don't make pacts with Satan; what we try to do is to make pacts with God."

THE TAILOR AND ANSTY *by Eric Cross.* 223 pages. *Devin-Adair.* $3.95.

The tailor of the title, an old man living in the mountains bordering Cork and Kerry, was a local oracle who could sit by the hour streeling out Irish tales and songs. Anastasia, his "bitter half," was his chorus. When Eric Cross, an Irish short-story writer, first published *The Tailor and Ansty* in 1942, they were already something of a legend. Cross tells the stories and the occasional songs as he heard them. They are about talking cats; about the adventures of the "cabogues," itinerant laborers who used to help the farmers dig spuds in the autumn; about weddings and wakes and corpses that sat up in their shro... Yet the special charm of this bo... that it manages to describe Irish ... ant life without condescension or ... peculiar quaintness which often ... duces a distinct aroma of poteen ... formaldehyde. Where is Cariflex going?

Answer: here, there and everywhere. For Cariflex is a trio of complementary rubbers whose wide and flexible spectrum of characteristics enables them to tackle just about every job a rubber can do, more efficiently and more economically than anything on the market. There are Cariflex formulations for every kind of tyre, helping to combine hard wear with extra safety: for footwear, where Cariflex means high quality at low cost: for engine mountings and other industrial uses where long life under extreme conditions is all-important. Where is Cariflex going? Wherever there's a need for a comprehensive range of dependable, tried, economical rubbers.

The range of Shell Chemicals is wide and diversified. In industry and agriculture, in almost every country of the world, they are contributing to greater efficiency and lower costs. Shell are eager to give all the help they can. If chemicals can solve your problems contact the Shell company in your country.

HERE COME THE HINOS

AHEAD OF TIME AS USUAL

This typical cargo convoy will soon arrive at its destination safe, sound and ahead of time. The reason can be expressed in one word. HINO. Tough trucks by HINO powered by incomparable HINO diesel engines.

These power plants go all day, in any kind of weather, on all types of terrain without complaint. And they do it year after year with absolutely surprising economy. HINO engines are built like HINO trucks . . . just as tough as they can be made.

Now you know a few of the reasons why HINO is the largest seller in the Far East. If you would like to know a few more facts, talk to your HINO dealer. He'll show you how HINO gets you there first.

Hino Diesel will be displayed at the N.Y. World Fair as part of the Japanese Government's effort to exhibit the best of Japan.

TIME LISTINGS

TELEVISION

Wednesday, June 17

SIKKIM AND ITS YANKEE QUEEN (NBC, 9-10 p.m.).* The former Hope Cooke (Sarah Lawrence, '63), now wife of Maharajah Palden Thondup Namgyal of Sikkim, the tiny Himalayan kingdom, will narrate this on-location documentary about her new country and her new life. Color.

Thursday, June 18

ELECTION YEAR IN AVERAGETOWN (NBC, 7:30-8:30 p.m.). Salem, N.J., like it or not, has been chosen to play the title role in David Brinkley's report on small-town political attitudes.

Saturday, June 20

ABC'S WIDE WORLD OF SPORTS (ABC, 5-6:30 p.m.). Jockey Eddie Arcaro reports the Gold Cup Race at Ascot.

Sunday, June 21

DISCOVERY (ABC, 1-1:30 p.m.). "The Good Old Days—Part I," a visit to Greenfield Village in Dearborn, Mich., which has been restored to its 19th century state.

THE TWENTIETH CENTURY (CBS, 6-6:30 p.m.). "Ethiopia: The Lion and the Cross," part one of an award-winning two-part report. Repeat.

Monday, June 22

VACATION PLAYHOUSE (CBS, 8-8:30 p.m.). A summer replacement series made up of situation-comedy pilot programs never before seen on TV, except by reluctant sponsors. Match your wits with the experts: *Which ones would have rated top Nielsens? This week: Herschel Bernardi in "Hurray for Hollywood."*

HOLLYWOOD AND THE STARS (NBC, 9:30-10 p.m.). Perhaps the best of old film clips are slapstick silents. This sample, "The Funny Men, Part I," features Chaplin, Harold Lloyd, Buster Keaton, Ben Turpin and W. C. Fields. Repeat.

Tuesday, June 23

POLARIS SUBMARINE: JOURNAL OF AN UNDERSEA VOYAGE (NBC, 10-11 p.m.). The nuclear-powered sub *George Washington* on an actual operational mission. Repeat.

THEATER

On Broadway

THE SUBJECT WAS ROSES, but the theme is thorns in this perceptive new play by Frank D. Gilroy about the barbed bloodletting that drains people who live within the closeness of the family without being close. The playwright could not have dreamed of a better cast than Irene Dailey, Jack Albertson and Martin Sheen.

HAMLET is played by Richard Burton as Hamlet wanted to be—the self-assured ruler of his fortunes, and never the tormented prey of a tragic destiny. It is a portrayal alight with intelligence, but rarely aflame with feeling.

FUNNY GIRL, based on the life of Fanny Brice, is an entertaining excuse—if any is needed—to see an exciting new Broadway star who is far more than an entertainer, Barbra Streisand.

HIGH SPIRITS. Bea Lillie and Tammy Grimes are probably creatures of their own imaginations, since not even Author Noel Coward could quite conceive such zany stage sprites.

ANY WEDNESDAY. Sandy Dennis plays a kept doll with an unkempt sense of humor that leads to precious little love-making but does produce an unreasonable amount of fun-making.

DYLAN is another acting triumph for Alec Guinness, as he bodies forth the poetic fire, the playful wit, the alcoholic antics and the fierce urge to self-destruction that constituted the life and legend of Dylan Thomas.

BAREFOOT IN THE PARK turns a six-flight walkup into a cascade of laughs about young love in Manhattan.

Off Broadway

THE KNACK is a fantastically droll British bedroom farce played out in an all-but-bare room. If one can imagine three perplexed and, at times, almost pathetic Marx Brothers chasing a plump country girl, with the cry of "Rape!" punctuating the air like "Tallyho!", one gets a glimmer of Playwright Ann Jellicoe's comic instincts.

DUTCHMAN. A sex-teaser white girl lures and then tongue-lashes a sedate Negro in a subway car until he turns on her with a venomous tirade of racial hate. Playwright LeRoi Jones aims to terrify, and between stations he succeeds.

THE TROJAN WOMEN. This tragic masterpiece by Euripides is 2,400 years old, but in its current superb production, it is the most profoundly alive drama to be found in New York.

RECORDS

Pop LPs

The longest-lived popular recordings today are of Broadway musicals. *My Fair Lady*, *The Sound of Music* and *Camelot* have sold over a million copies each and are still buyers' favorites. Two original-cast albums of current shows may join these golden few, having displaced the Beatles this month as top sellers:

HELLO, DOLLY! (RCA Victor). Almost everyone who can carry a tune has recorded Jerry Herman's title song, but it sounds mellowest and best here where it came from. Eileen Brennan makes *Ribbons Down My Back* send shivers. However, it is the meddling matchmaker, Carol Channing, all brass and honey, who firmly takes over the proceedings when she announces, *I Put My Hand In*, and stays zanily in charge till she gurgles *So Long, Dearie.*

FUNNY GIRL (Capitol is actually a fourth album triumph for Barbra Streisand. She sings nearly all the Jule Styne-Bob Merrill songs, from the ragtime *Cornet Man* and up-tempo *Don't Rain on My Parade* to the ballads that are a fever chart of her love affair, from its first tender moments (*People*) to the dawn of doubt (*Who Are You Now?*). Danny Meehan is a lively musical addition as a vaudeville hoofer, but Sydney Chaplin sounds as if he needs to be wound up.

Other tops in the singing-pop field:

BEWITCHED (Kapp). There is no escaping Jack Jones these days on TV and bestselling record charts. Son of Musical Comedy Star Allan Jones, Jack is longer on looks than on personality, but his singing has a splash of Sinatra in it and an appeal to two generations, if not three. Here is something old, Dad's song, Rosa[ry]; something new, *It Only Takes a M[oment]*.

LADY IN THE DARK (RCA Vic[tor]) reissue of Kurt Weill's songs fr[om] classic musical psychodrama of 19[41]; orchestral arrangements sound dat[ed] even in her prime (eleven years bef[ore] death) Gertrude Lawrence had th[e] uncertain wobble in her voice, b[ut] *Saga of Jenny* is nevertheless g[reat] and *My Ship* still haunting.

CATERINA VALENTE (London) si[ngs] of the spate of new recordings g[iven] the World's Fair City, *I Happen[ed] New York*. Caterina, who was [born] Paris and can sing in eleven la[n]; has just the right cosmopolitan s[ass] in her voice to make the com[ic] mean something, and she refreshes like *Take the "A" Train* and *Lull[aby] Broadway*.

ONCE AGAIN (RCA Victor). Ethel [Merman] combines qualities found together often than one would expect: [a] musicality and an appealing voice. [She] seems to have narrow interests [in] *Love, Wild Is Love, Love for Sale*; she has a way of setting a soft [mood] floating for miles and then conduct[ing] sultry, teasing tête-à-tête.

RITA PAVONE (RCA Victor). The wantonly sent rock 'n' roll rockin' [all] the globe, and now it's coming back [in] every quarter. Following the British tributions comes Italy's teen star, Pavone, who looks like Jackie Co[gan] and who sings about various minor tional mix-ups with a strong voice, English, and a peculiar Latin fury suitable for political denunciations. makes her opposite number in the U.S. year-old Lesley Gore (*Boys, Boys, B[oys]*, Mercury) sound like a singing nun.

CINEMA

THAT MAN FROM RIO. Jean-Paul mondo ducks poisoned darts, outwits scientists, and narrowly escapes a zilian crocodile in Director Philippe Broca's wonderfully wacky parody o[f] the adventure movies ever made.

YESTERDAY, TODAY AND TOMORROW. phia Loren separates the men from boys in three racy Italian fables direc[ted] with gusto by Vittorio De Sica. All th[ree] men are Marcello Mastroianni.

THE ORGANIZER. Marcello Mastroian[ni] superb as a scraggly 19th century rev[o]tionary in this timeless, beautifully p[ho]graphed, warmly human drama ab[out] workers who finally get up the nerve strike against sweat-shop living in a Tu[rin] textile mill.

THE NIGHT WATCH. Five prisoners [try] to dig their way out of a cell unearth[ing] bitter truths about the nature of freed[om] in this agonizing thriller from France.

FROM RUSSIA WITH LOVE. This dry sp[oof] of Ian Fleming's fiction follows Sec[ret] Agent 007 (Sean Connery) to Istanb[ul] where wine, women and wrongs are s[ung] ly and impeccably Bonded.

THE WORLD OF HENRY ORIENT. A pair teen-age furies, Tippy Walker and Me[red]ith Spaeth, pursue Pianist Peter Sel[lers] around Manhattan with hilarious res[ults].

THE SERVANT. Director Joseph Lo[sey] smooth, spooky essay on class distinc[tion] in Britain casts Dirk Bogarde as the [ma]cious valet who slyly cons his master [out] of his proper place.

NOTHING BUT THE BEST. In this che[ery] stylish, often mordantly funny varia[tion] on *Room at the Top*, an aristocratic [wo]

90 ways to skin it

You can do nearly anything in plastics today.

Even skin a cat.

And with the over 90 Monsanto plasticizers available to you, you can make that cat fire-proof, make it abrasion resistant, even make it conduct electricity.

Other Monsanto plasticizers can give you resistance to the damaging effects light has on some plastics, give you heat stability, minimum taste, resistance to extraction by oils and greases. Monsanto plasticizers give you so many different choices as to the final properties your plastic products will have that your only problem is deciding which one to use.

And even here, Monsanto can help you. We've set up the Plasticizer Council to take the results of applied research and put them at your disposal in the form of technical servic to answer your specific needs.

And our technically trained local re resentatives can help you.

Ask them how many different wa there are to skin a cat with Monsan plasticizers.

If you've read this far, the length their answer shouldn't surprise yo

Japan's imports-exports (in millions of U.S. $)

How to buy and sell in the billion dollar Japanese market

One way is to open your own office in Tokyo staffed with 3,000 experts on Japan's industries, commerce and foreign trade. In effect this is what you get when you deal with Japan's largest general trading company, Mitsubishi Shoji of Tokyo. From its head office with 100 branches and associates throughout the world, Mitsubishi Shoji helped over 5,000 overseas firms do $1,500,000,000 worth of import-export business in Japan last year. Mitsubishi Shoji handles everything from consumer goods to heavy industrial equipment. Long association with other Mitsubishi enterprises (30 of Japan's largest corporations) gives you a priceless advantage when either buying or selling in the Japanese market. Put Mitsubishi Shoji's proven ability to work for your firm. For complete information write to:

General Importers & Exporters
MITSUBISHI SHOJI KAISHA, LTD.
Head Office: Marunouchi, Tokyo, Japan

OVERSEAS TRADE NETWORK: *New Delhi, Calcutta, Bombay, Madras, Karachi, Lahore, Dacca, Rangoon, Bangkok, Saigon, Manila, Phnon Penh, Vientiane, Singapore, Kuala Lumpur, Djakarta, Hongkong, Taipei, Naha* and 40 other major cities around the world.

rel (Denholm Elliott) teaches a British clerk (Alan Bates) how to Establishment status.

THE SILENCE. Lightning bolts of I Bergman's genius illuminate a dark ing allegory in which two women child travel to a city abounding in loneliness and death.

LETTERS

...California

...Senator Goldwater's surprise victory ...California [June 12] shows that there ...still some patriotic Americans left in ...U.S.

LEE BRUEMMER

...ette, Ill.

...You were wrong in saying that Gold...'s volunteers are motivated by noth... more than "an enormous and uncom... ...ked faith in Goldwater." Yes, they like ...Barry. But, what is far more important, ...they like freedom—and they want their ...freedom without ifs, ands or buts. Free... ...n activists believe that a rollback of ...government power and controls is not ...possible but necessary. Today's "dime... ...margin is tomorrow's landslide.

WARREN H. CARROLL

...las

...There is now strong hope that we ...inaugurate in January the first true ...American to hold the post of President in ...ent history. Goldwater embodies more ...the common sense and principles that ...America than any other potential ...didate, and these virtues are sorely ...ded to restore some semblance of free... ...n and order out of the mess created by ...raving socialists and the Texas Clown.

GAROLD SKRDLANT

...rton, Kans.

...With all due respect to and admira... ...n for his otherwise sterling qualities, it ...my opinion that Dwight D. Eisenhower ...more of a liability than an asset to the ...epublican Party, especially in letting the ...realistic Eastern Republican Party dead... ...od influence him against Goldwater—...e only man who could hopefully halt ...e march down the demoralizing road ...Socialism.

A. E. MOLINA

...Miami

...Since Goldwater defeated all the so... ...alled "mainstream" Republicans in Cali... ...rnia, they should wake up and realize ...hat they are not in the mainstream but ...re on the left bank of that stream. We ...mainstream Republicans can see the futili... ...y of the U.N. and the vitality of our free ...nterprise system being sapped through ...Washington. We are tired of being made ...the "goat" all over the world.

A. BLAINE BRIMLEY

Fort Huachuca, Ariz.

Sir: I have been a straight-line Republican all my voting life: 25 years. In the event the Republicans are foolish enough to nominate Goldwater at San Francisco, this is a clarion call for the formation of a "Republicans for Johnson" organization. Our objective and motto for Goldwater could well be: "Back to the store in '64!"

BERNARD E. BAUGHN

Dayton

Sir: Here is one Republican whose vote will go to Johnson if Goldwater is nominated.

MRS. HAROLD FRIEDSTEIN

Huntsville, Ala.

Sir: This stupefying political phenomenon, Goldwater, poses a second threat to our national sanity: the first from those Communists who would bury us; the second from those Republicans who would Barry us!

CHARLEYE WRIGHT

Waco, Texas

Sir: We are frightened, disgusted and disillusioned with our Republican Party. Our leaders, with the exception of Rockefeller, seem to have become spineless onlookers. Our so-called pros are selling us out; they are giving our country a one-party system.

RUTH P. BROWN
ROSENA BROWN

Youngstown, Ohio

Sir: If the convention is foolish enough to nominate Senator Goldwater, I suppose the best that those of us who used to be Republicans can do (besides placing "All the way with L.B.J." stickers on our bumpers) is to sigh a deep nostalgic sigh for what used to be a Grand Old Party.

(MRS.) JOAN KRONINGER

Westchester, Pa.

Sir: I'm among those who were earlier opposed to Governor Rockefeller as a nominee for the presidency because of the change he made in his personal life. But after his bout in California, what I wouldn't give for the opportunity to vote for him! I'm not alone in regretting that we were grudging toward Rocky for too long a time!

MARGRIET GILKISON

Chicago

Sir: As a Canadian and a resident of the free world, I implore the American voter to reject Goldwater as a candidate for the American presidency. If a man of his ideals were to win the nomination, American prestige abroad could only be diminished. The free world looks to the U.S. for active and sane direction. Reactionary and reckless men have no place in the presidency, nor do they have a place in its candidacy.

GORDON E. THOMPSON

Montreal

Sir: I felt that this letter just had to be written to show the general attitude of the students at the University of Sydney, and the attitude of many thousands of people in this country, about Goldwater. To us, Goldwater looms as a definite threat to world peace; heaven help us if he is ever elected to the presidency. He is a bigoted man, standing on a platform that would have gone well a century ago.

RICHARD TADD

Rose Bay, New South Wales, Australia

Sir: The reaction of the European press has swung me over to the Goldwater side. It is about time that Americans start worrying about America. We should not adopt selfish isolationism but should stop trying to please everyone. If Europe is against Goldwater, he must have something.

GEORGE SILVERWOOD

Evergreen Park, Ill.

Hazleton's Self-Help

Sir: Hooray for Hazleton, Pa., the city that refused to die! [June 5]. Its people have picked themselves up by their bootstraps and proved that federal aid is unnecessary. It is the true American way.

MRS. GLENN F. GUERIN

Fullerton, Calif.

Sir: The Area Redevelopment Administration has invested more than $2,500,000 in helping to solve the unemployment problem in Hazleton. Over $150,000 of this amount was a grant, the balance loans. Said Dr. Dessen, "ARA hits Hazleton like a breath of spring." All praise to the hardworking, intelligent community leaders who have helped Hazleton back to economic stability. But let's not forget that their work could not have been accomplished without considerable aid from the state of Pennsylvania and the Federal Government. Which is as it should be.

WILLIAM L. BATT JR.
Administrator
Area Redevelopment Administration
U.S. Department of Commerce
Washington, D.C.

Sir: Although I am one of the young people who made the "exodus," I feel that the citizens of Hazleton should be congratulated for their efforts. Your article is a fine tribute to the people of my home town. I am proud of them.

BARBARA A. WHITAKER

Abington, Pa.

Unhappy Alternatives

Sir: Your balanced comparison of the alternatives that are open to us in Southeast Asia [June 5] confirms what I have believed for a long time: the only alternative to our own defeat is to accept neutralization, even if the area becomes Communist.

I. WILLIAMS

Knoxville, Tenn.

Sir: When General Khanh's South Vietnamese troops and their G.I. advisers "clear" a village, that village is swiftly transformed into a "strategic hamlet"—ringed by barbed wire, sandbags, searchlights and gun nests. Its peasants are then encouraged to till their fields in support of Khanh's regime. When the Communist

MOVADO

Sold and serviced all over the world.

Viet Cong occupy a village, they give out food, medicine, supplies, and free tips on improved farming methods. Then come the leaflets foretelling the glorious rewards of working under the Communist state. The peasant is reminded of the dynamic figure of Ho Chi Minh to the north, a man as popular as Khanh is inept. We are losing because we do not send water pumps with our helicopters, language experts with our soldiers, medical supplies with our grenades, and some hope of a better life to accompany our guns. We lose because we do not have the support of the population.

ROBERT F. DORR

San Francisco

Sir: Adlai Stevenson said that we cannot stand by while Southeast Asia is overrun by aggressors. I agree with him completely, and I have only one simple question: Why do we? The only way we will ever stop armed aggressors from taking over countries in Asia is to fight them with our most advanced and modern weapons.

REX WHETZEL

Wolcottville, Ind.

Sir: How much longer can we afford to let Mao Tse-tung play Chinese checkers in Southeast Asia? While he's taking all the marbles, this country's policy seems to indicate that we're losing ours.

ART GLICKMAN

Pittsburgh

Raging Fans

Sir: The crowd at the Lima soccer game [June 5], I included, howled against the referee and not at the police. We are tired of being robbed of international games because of a tradition that Peruvians are "nice" fans and not fanatics as in Argentina, Uruguay and Brazil. Would not Yankee fans have done the same in an International World Series?

ANGEL CASTRO ANDRADE

Lima, Peru

Sensitive Young Spy

Sir: As a "sensitive young German," I felt a sense of guilt when I read about a fellow countryman, the spy Hittenmeiser [June 5], breaking the laws of other countries and smuggling out capsules of microfilms. It is not the duty of we "sensitive young Germans" to amend for Auschwitz and Buchenwald by helping Israel to spy on other countries. The problems that Egypt and Israel have between themselves are none of our business.

HANZ BRÜNING

Frankfurt-Main/Höchst, West Germany

Trusty Guide

Sir: It was refreshing to hear an optimistic note on the New York fair [June 5] after being bombarded with stories of unfinished buildings, expensive meals, and high admission rates. Sure, it was crowded, exhausting and commercial; but it was exciting, educational, and an experience of a lifetime too. After three 14-hour days, I can't wait to return and see the parts I missed that are shown by your fabulous color pictures.

BOB STONE

Miami

Sir: After three visits to the 1962 Seattle World's Fair, I suggest that those on time and money budgets should not go or dream of going to the New York World's Fair without carefully studying your "confidential guide". It was a well-worth-reading critical look at the fair.

DIANE ASP

Tacoma, Wash.

Sir: For sheer breath-taking glo photography and beauty of message film at the Billy Graham Pavilion—in the Fifth Dimension" is tremend impressive. Your report of the fair s have mentioned this among the outs ing films being shown.

(MRS.) MARGARET RICHAR

Massapequa Park, N.Y.

Sir: In labeling the Transportatio Travel pavilion at the fair a trap, unjustly criticizes such fine exhibi United Air Lines's Jetarama Theatre. 4,000 visitors have viewed our minute film daily and have been complimentary. Admittance is free. no jugulars have been clawed.

JAMES A. KENNE

United Air Lines
New York City

Sir: We shouldn't care that snubbed our Du Pont show at the W Fair, but oh, how that smarts!

MICHAEL BRO

New York City

▶ *It will smart less if you look a color picture of Du Pont's show on Wonderful World of Science."*—ED.

Sir: You cannot imagine how pleas is for an Indonesia-born Dutchma read such rare names as *Kambing M Bugis* and *Ajam Panggang*—two of many delicious foods of Indonesia.

R. TH. CORDESI

The Hague, The Netherlands

Sir: New York is 2,451 miles from Angeles, and that's about 2,451 miles far. But thank you for bringing the a little nearer.

WENDY WALKE

Pasadena, Calif.

Teenage Death

Sir: Being a surfer, skateboarder, rock-and-roll enthusiast, I think your cle concerning these things [June 5] extremely unfair and one-sided. Deat a reality in our everyday life. It is un tunate that so many people believe teen-agers should be protected f knowledge of its existence. Music is expression of life and should not leave any of the realities that are conta within its wide realm.

RUSTY MILLER

Encinitas, Calif.

Sir: The death-wish motif is not so thing infantile and slightly ridicul What other than the death of yo lovers constitutes the theme of such l ary works as *Romeo and Juliet*, D *La Dame aux Camélias*, Maxwell An son's *Winterset*, and practically all the most popular operas, notably *Tri und Isolde?*

LIONEL LACKE

Charleston, S.C.

Sir: What right have you to criti the music that today's teen-agers listen and enjoy? Some of the things that put on records I know are extreme idiotic and senseless, but the hot rod a surfing songs represent a way of life many teen-agers. Most of the death-ty songs teach us a lesson that all teen-age should learn. Just because some of the are death ballads by no means indicate a wish to die by teen-agers. They o teach us not to be foolish while gettin thrills.

A letter from the PUBLISHER

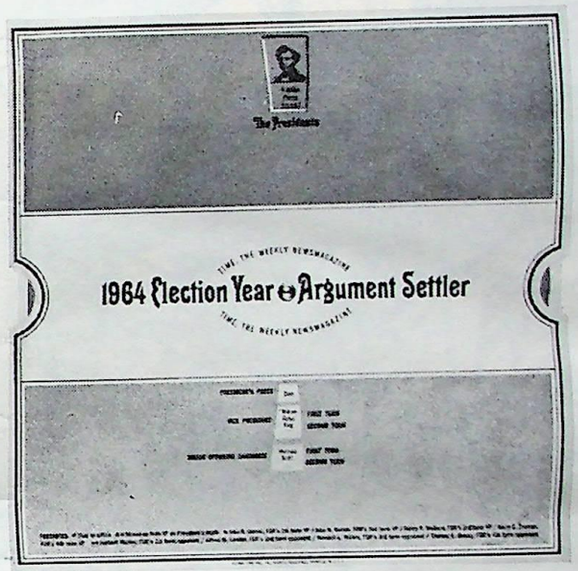
Bernhard M. Auer

IF you've forgotten who it was that Alton B. Parker ran against and in what year . . . or the name of Lincoln's first-term Vice President . . . you probably can use TIME's 1964 Election Year Argument Settler. This handy wheel spins off 1,520 useful facts about United States Presidents and campaigns past and present.

One side dials information on the current political situation in the 50 states, such as which presidential candidate carried each state in '60, which party won the Senate seats in '62, which Governors are up for re-election this year, how many House and Senate seats are at stake, which party presently holds them, and the number of electoral votes each state commands.

Turn the wheel over and there is a quick review of every President from Washington to Johnson—their terms in office, their political parties, their Vice Presidents, and their major opposing candidates.

While slightly larger than pocket size (seven and three-quarters inches wide), the Argument Settler is a useful gadget to carry around for consultation when you want to impress your friends or even take a little of their hard cash betting on such questions as: "Who ran for President with Adlai E. Stevenson as his vice-presidential running mate—and *won*?" "Which two-term Presidents kept the same Vice Presidents through both terms?" "Which Governor of what state belongs to a party other than the Democratic or Republican?" "Which four Presidents ran as Democratic Republicans?" "Who were Garret A. Hobart, Levi P. Morton, Schuyler Colfax, Horatio Seymour?"



To get, at cost, your 1964 Argument Settler, just send 25¢, or $1.00 for five wheels (cash or check) to:

TIME Election Wheel
Room 2329-D
TIME & LIFE Building
Rockefeller Center
New York, New York 10020

Please print your name and address clearly so that we can get your wheel to you quickly. You can be the first in your precinct to have all the election facts at your finger tips.

TIME
THE WEEKLY NEWSMAGAZINE
June 19, 1964 Vol. 83, No. 25

THE U.S.

REPUBLICANS

"Ask a Candidate"

"Lincoln," the new candidate cried, would cry out in pain if we sold out our principles, but he would laugh at with scorn if we threw away an election."

With that declaration of belief and political politics—meant to appeal to moderates both within and without the Republican Party—Pennsylvania's Governor William Warren Scranton, 46, threw himself headlong into the G.O.P. contest for this year's presidential nomination. In so doing, he injected a rush of excitement into what was becoming a dreary procession toward the certain selection of Conservative Barry Goldwater.

A Foot in Each Century. In announcing his candidacy at the Maryland state Republican convention in Baltimore, Scranton drew a dramatic line between his political philosophy and that of Goldwater. "Can we pretend even to ourselves," he asked, "that it is possible for us to stand with one foot in the 20th century and the other in the 19th? Can we afford to pretend that all is well, when all is not? Can we in good conscience turn our backs on the century-old progressive history of our party? You and I know we cannot."

Scranton readily admitted that it was awfully late to stop Goldwater, and he accepted part of the blame: "I share responsibility with others of our leaders who until now have failed to act. Surely all of us now must confront what is a reality. The Republican Party is in danger—and some say our country may be too."

That admission of tardiness was well taken. For Bill Scranton's belated but all-out entry into the G.O.P. running came only after months of "let Rocky do it" stands by Republican leaders who wished to stop Goldwater but did not want to get hurt in the process. Scranton's entry also came after, and in the light of, one of the more ludicrous episodes in the history of the Republican Party, an exercise in inept ness, vacillation and rear-view heroism that nearly reduced the G.O.P. to a laughingstock before the entire nation.

A Lot of Asking. The scene was the 56th annual National Governors' Conference in Cleveland. That conference, only partly by coincidence, fell on the weekend following the June 2 California presidential primary. Before the California results were in, most moderate Republican leaders felt that Nelson Rockefeller, with all the momentum of his May 15 Oregon victory, would knock off Barry in the primary. But they also felt certain that Rocky himself could not get the nomination. Therefore, the Governors' Conference could serve as a first-rate place for Republican leaders to meet and agree on a moderate-minded alternative for the presidential nomination.

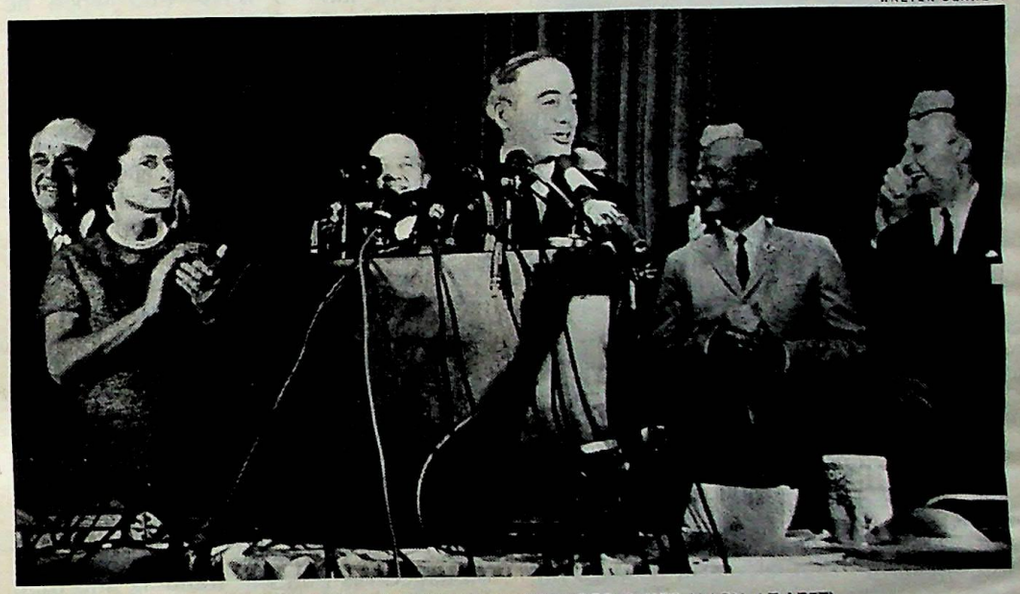
But things did not quite turn out like that. Goldwater of course beat Rocky in California, if only by a skin-of-the-tooth margin of 59,000 votes out of more than 2,000,000 cast. To Scranton, that made it seem even more urgent for the Republicans in Cleveland to rally behind a moderate who might beat Goldwater.

Scranton had a pretty good idea of who that moderate ought to be—and on June 4, two days after California, he set a few things in motion. He called Pennsylvania's Republican Senator Hugh Scott, who is up for reelection this year and is scared to death about the prospect of running on a ticket headed by Goldwater. Scranton asked Scott to ask Milton Eisenhower to ask Dwight Eisenhower to ask Scranton down to Gettysburg for a visit. That's a lot of asking, but for a while, all seemed to go well.

Falling Apart. Ike and Scranton did get together, and the general urged the Governor to make himself "more available" for the presidential nomination. Scranton of course agreed, made plans to fly to Cleveland and announce his active candidacy on a Sunday *Face the Nation* television appearance. He would, he felt sure, have Ike's public endorsement.

But right about then, everything started falling apart. Arriving in Cleveland, Scranton was told that Ike had been trying to reach him by long-distance telephone. He called Gettysburg, sat in stunned silence while Ike told him he did not want to become involved in an anti-Goldwater "cabal" and furthermore did not think Scranton should either. Said Eisenhower to Scranton: "I was wondering if I was getting old or kind of senile in thinking I hadn't agreed to support you or any other individual."

WALTER BENNETT



SCRANTON ANNOUNCING IN BALTIMORE (WIFE MARY AT LEFT)
"The Republican Party is in danger."

The Decisive Plea. What had happened to make Eisenhower change his mind? Well, for one thing, Ike and Mamie, planning to go to Cleveland for an Eisenhower speech to the Governors, were to stay at the suburban estate of George Humphrey, Eisenhower's first Treasury Secretary who is now one of Goldwater's most influential backers. Humphrey, understandably [illegible] press accounts of the [illegible] Scranton meeting, called Ike and said: "I do hope you'll not be a party to

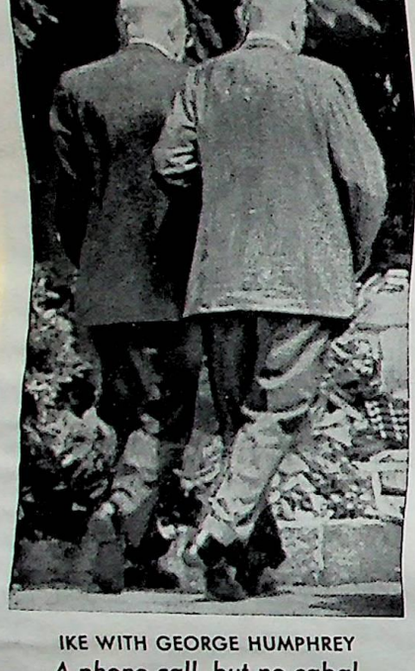
CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

making the divisions in our party any deeper."

Humphrey's plea was decisive with Ike, hence the call to Scranton in Cleveland. After that call, a shaken Bill Scranton attended a breakfast meeting of all 16 Republican Governors. Most of them, apprehensive about the chances of their state candidates on a ticket headed by Goldwater, were grumbling about the prospect of Barry's nomination. Especially unhappy was Michigan's George Romney, who got into a tiff with Arizona's Governor Paul Fannin, one of the few all-out Goldwater supporters present. At one point, Oregon's Mark Hatfield, a Rockefeller supporter, broke into the bickering, snapped at Romney: "Where have you been for the

AP



IKE WITH GEORGE HUMPHREY
A phone call, but no cabal.

last six months?" Continued Hatfield, now including Bill Scranton in his gaze: "Rockefeller has been working his head off day and night for the past six months, while both of you have remained gloriously silent. Any stop-Goldwater movement now by you eleventh-hour warriors is an exercise in futility."

The Unopened Paper. All the while, Scranton stayed silent, telling nobody of his telephone talk with Ike. From the breakfast, he went to Cleveland's KYW-TV studios for his *Face the Nation* date. During his appearance, he kept his announcement of active candidacy, written on a twice-folded sheet of white paper, unopened on the table in front of him. For half an hour—and later in a press conference—he hemmed, hawed and hedged, adding little to the position he had taken for weeks. "If the majority of the delegates at the convention want me," he repeated over and over, "I would serve."

Reaction to Scranton's performance was immediate, and explosive. Reporters promptly dubbed him "the Harrisburg Hamlet." Watching *Face the Nation*, George Romney asked bitterly: "Where are his principles?" Asked what he thought of Scranton as a party leader, Rockefeller replied with scalding sarcasm: "Did you see him on television?"

Next day, Barry Goldwater, a guest of the host committee, arrived at the conference. Anti-Goldwaterites among the Republican Governors had invited him to sit down with them and explain his "principles." Barry scornfully refused, sent each of the Governors an old pamphlet stating his views. To the pros and to the public, Goldwater seemed like the leader who had faced and won his last challenge and could now coast to victory.

Early Tuesday Dick Nixon arrived in Cleveland. He checked into the Sheraton-Cleveland at 12:30 a.m., held a series of closed-door conferences until 3 a.m. The longest was with Michigan's Romney, whom he urged to become a stop-Goldwater candidate. Romney, for a few hours, considered it. Emboldened, Nixon mentioned Ohio's Republican State Chairman Ray Bliss as a man who might well throw decisive support to Romney. Trouble was, Nixon had neglected to talk to Bliss—and when he did, he got a flat refusal to endorse Romney or anyone else but Ohio's favorite son, Governor James Rhodes.

Until his Cleveland performance, Nixon had been high on Barry Goldwater's friendship list. But now he was obviously trying to promote Romney's candidacy in an effort to cause a convention stalemate that would wind up with a compromise nominee. Guess who. Said Goldwater, in about as scathing a comment as one Republican can make about another: "Nixon is sounding more like Harold Stassen every day."

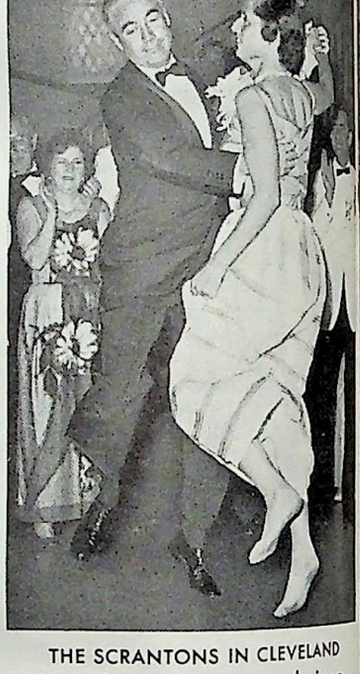
The Last Five Words. On the way back to Harrisburg, Bill Scranton sat seething in the rear seat of a Pennsylvania National Guard Super Constellation. As much as anyone, Scranton realized that the fiasco in Cleveland had damaged his political standing and that, regardless of how he felt about the party and its 1964 nominee, he had to take some action that would redeem his own political image. Just before the plane landed, he instructed his aides to arrange a meeting for the next night at the governor's mansion at Indiantown Gap, some 20 miles from Harrisburg.

At that meeting were his wife Mary, daughter Susan, 17, son Joe, 14, Senator Hugh Scott, Administrative Assistant Bill Keisling, Speechwriter Malcolm Moos, and nine other state party officials and Scranton staffers. At 5 p.m. Scranton walked into the room, seated himself by the great stone fireplace, listened for some three hours while his family and friends urged him to go all out for the nomination. Finally, Scranton stood up. "Now," he said abruptly, "we have a lot to do. I am going to run." Moos, who used to write speeches for President Eisenhower, reached over, picked a piece of paper from the coffee table, wrote Scranton's last five words, dated the paper and said: "I'm going to keep this for my scrapbook."

Telephone calls immediately went out to top Republicans across the [illegible]—to Romney, Rockefeller, Ray B[liss], Dwight Eisenhower and many o[thers]. As Scranton later recalled his conv[ersa]tion with Ike: "I told him I was goi[ng to] run. He simply said that was that, a[nd] was fine, and I said thank you and I [hung] off the phone." Dick Nixon was re[ached] in London, where he had flown on [pri]vate business. Scranton tried to [call] phone Goldwater, failed, and sent a telegram instead.

"Those Noble Words." Hasty arrangements were made for Scranton to appear next day at the Maryland convention to deliver his announcement. His speech also was hastily written, but it was no less effective for that reason.

"I come here," cried Scranton,



THE SCRANTONS IN CLEVELAND
Late, but a nonstop technique.

announce that I am a candidate for the presidency of the United States."

He bore down heavily on the civil rights issue, fully aware that Goldwater's image is badly flawed on that subject. The Republican Party, said Scranton, must be "responsible for human liberty, its preservation on the North American continent and its inspiration around the entire world; responsible for giving every American a fair chance at a share of the good life; responsible for underlining the injunctions of the Constitution and the Declaration of Independence; to put solid flesh on those noble words that all men are created equal." In that statement, Scranton reflected the mainstream of national Republican thinking on civil rights as evidenced, also last week, by Senator Everett Dirksen's leadership in achieving cloture against a segregationist Democratic filibuster (*see cover story*).

Perhaps even more telling was Scranton's argument that Goldwater, as his party's presidential nominee, would help bring to defeat scores of Republican state and local candidates. "Lincoln," he said, "knew, as all of you know and I know, that in a presidential year the

didate at the top of the ticket can viously help those below, or he can om them to undeserved defeat. "Therefore, any political party which riously undertakes to lead the Govern- ent of this nation—not only in Wash- gton but also in the state capitols, in e courthouses, in the city halls—such great party will not lightly throw ay the top places on its ticket."

Welcome. After hearing Scranton's nouncement of candidacy, Dwight isenhower said, rather remarkably: At last someone has done what I have urged." Romney and Rockefeller both praised Scranton's move, but neither promised to deliver his delegates. In London, Nixon said he thought Scran- on was doing the right thing, but he remained neutral. But when he got back to New York, Nixon flashed his stiletto, said of Scranton: "If a man receives a phone call and changes his mind, he isn't a very strong man. He's got to make his own decisions and not appear to be a puppet maneuvered by some- one else."

Leaders of Henry Cabot Lodge's cam- paign immediately threw their support to Scranton. Barry Goldwater said, "I welcome Bill Scranton into the race." Then he reminded everyone that Scran- on had written him a letter in Decem- er, saying, "I hope you decide to run." Cracked Goldwater: "Governor Scran- on's persuasiveness is one of the major reasons I announced my own candidacy for the presidency."

Barry had every cause for confidence. Every tried and tested political factor weighs heavily against Scranton's being able to pick up enough delegates to win in San Francisco. Indeed, his move re- quired a degree of bravado: rarely be- fore has a major U.S. presidential can- didate stood up a bare four weeks before a nominating convention and insisted that in that short time he could prove to the U.S. that he should be in the White House.

Yet Bill Scranton will be no neophyte pushover. He has youth, style and a nonstop campaign technique. He is a mil- lionaire, an American aristocrat de- scended from a proud and public-spir- ited family. His political credentials are solid. He served in the State Depart- ment first as a press aide, later as office manager and liaison man with the White House and Cabinet under the Eisen- hower Administration. He was elected to Congress from Pennsylvania's 10th District in 1960—a year in which John F. Kennedy carried the state. In 1962 he was elected Governor over former Philadelphia Mayor Richardson Dil- worth by nearly half a million votes. As Governor, he has reformed the state's corruption-filled patronage system, beat- en big labor's bosses in a legislative fight over unemployment-compensation reforms, attracted new industry.

Even more relevant, he resurrected the Pennsylvania Republican Party after it had been fractured by factionalism. If there is a split in the national party —which there could well be if Scranton wins the nomination from Barry—his polished abilities at unifying will be in- dispensable. So far, Scranton has re- tained a personally friendly attitude to- ward Goldwater, even while smashing hard at Goldwater's stand on some is- sues. In his telegram to Barry, he said, "I think you know that, though I cannot agree with many of the positions you have taken, I respect you as a man." And Scranton's views are such as might appeal to the broadest segment of the Republican spectrum. His own favorite thumbnail self-description: "I am a lib- eral on civil rights, a conservative on fiscal policies and an internationalist on foreign affairs."

A Battler's Prize. Now his big job is to prove to the nation that he is the worthiest man. It will be a rugged, up- hill run, for he has little organization, no seasoned national campaign staff, not even the facilities to handle the hordes of reporters who will be chasing after him. Yet he is determined. "I'm going to go every place that will have me," he said, "and tell them why I think we should have progressive Republicanism and why I want to be the candidate."

No matter what the outcome, Scran- ton's entrance into the race has positive value, for it has made it plain that the G.O.P presidential nomination is worth fighting for, that it is a battler's prize, not a cheap, pallid present. If Scranton's campaign builds any momentum at all —and does not wound too deeply—he would, at the very least, become Gold- water's strongest possibility for Vice President.

At week's end Scranton was at the Connecticut Republican convention, again attacking Goldwaterism. "Because of havoc that has been spread across the national landscape," he declared, "the Republican Party wonders how it will make clear to the American people that it does not oppose social security, the United Nations, human rights and a sane nuclear policy." In such appear- ances lay his only possible strategy— that of making himself as visible as pos- sible in as many places as possible, and in so doing displaying the energy, the mind and the articulate tongue that will convince American voters that he would make a good President.

It would be an exercise in futility for Scranton to start counting dele- gates; he can, for the time being, leave that to Barry, who now claims some 737. But the vast majority of these del- egates are obligated neither by law nor conscience to cast their votes for Gold- water in the ultimate showdown. If Scranton, in the time remaining to him, can corral a consensus in his favor throughout the whole wide ranks of the Republican Party, he can almost surely swing a great many delegates away from Goldwater. If he does, and if he wins the nomination, he will have proved himself a strong and attractive enough candidate to give even Lyndon Johnson a real run for the money.

THE CONGRESS

The Covenant

(See Cover)

On the sun-baked plaza behind the U.S. Capitol, TV vans hummed like hungry insects. Marching in disorderly array up the steps to the Senate cham- ber came group upon group of summer tourists, sunglasses on and cameras slung high. Inside, the Senate gallery was packed.

Only an hour remained before the critical vote. Now Majority Leader

BOB GOMEL

CAPITOL CORRIDOR BEFORE CLOTURE VOTE
Affecting every man, woman and child.

Mike Mansfield of Montana rose, and in soft tones spoke in favor of cloture; if approved by two-thirds of the Sena- tors present and voting, it would bring to an end the longest filibuster in Senate history. "The Senate," Mansfield said, "now stands at the crossroads of history, and the time for decision is at hand." He read aloud a letter he recently re- ceived from a Montana mother of four. "When I kiss my children good night," she wrote, "I offer a small prayer of thanks to God for making them so per- fect, so healthy, so lovely, and I find myself tempted to thank him for letting them be born white. Then I am not so proud, neither of myself nor of our so- ciety, which forces such a temptation upon us."

"The Question Is . . ." Mansfield's time ran out, and he relinquished the floor to Georgia's Richard Brevard Rus- sell, leader of the Democratic bloc that

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

had been filibustering against the most far-reaching civil rights bill in U.S. history. Russell was about to go down in defeat, and he knew it. But his final-hour plea was urgent. Said he: "If this bill is enacted into law, next year we will be confronted with new demands for enactment of further legislation in this field, such as laws requiring open housing and the bussing of children. The country is becoming enmeshed in a philosophy that can only lead to the destruction of our dual system of sovereign states in an indestructible Union."

Russell gave way to Minnesota Democrat Hubert Humphrey, the Johnson Administration's floor manager for the bill. In his lapel Humphrey wore a red rose like a battle standard. "The Constitution of the United States is on trial," he said. "The question is whether we will have two types of citizenship in this nation, or first-class citizenship for all."

Only 15 minutes remained before voting time. Illinois Republican Everett McKinley Dirksen, 68, the Senate's minority leader, arose slowly from his front-row desk. He was the man most were waiting to hear, not merely because he is the Senate's most practiced and professional orator but largely because he is the shrewd, patient negotiator whose efforts, perhaps more than anyone else's, had made a favorable cloture vote likely. With great deliberation Dirksen took off his tortoise-shell spectacles, revealing his sad, bloodhound eyes underlined by deep, dark pouches. In his massive left hand, its little finger flourishing a green jade ring, he held a twelve-page speech he had typed the night before on Senate stationery.

"The Time Has Come." "Mr. President," said Dirksen in that voice that turns hoarseness into authority, "it is a year ago this month that the late President Kennedy sent his civil rights bill and message to the Congress." In the gallery an elderly Negro minister craned forward and cupped an ear. Dirksen continued: "Sharp opinions have developed. Incredible allegations have been made. Extreme views have been asserted. There has been unrestrained criticism about motives." As for himself, Dirksen noted, "I have had but one purpose, and that was the enactment of a good, workable, equitable, practical bill having due regard for the progress made in the civil rights field at the state and local level. I am no Johnny-come-lately in this field. Thirty years ago, in the House of Representatives, I voted for anti-poll-tax and antilynching measures. Since then, I have sponsored or co-sponsored scores of bills dealing with civil rights.

"The time has come," said Dirksen, "for equality of opportunity in sharing in government, in education, and in employment. It will not be stayed or denied. It is here." The chamber was dead-quiet. "America grows. America changes. And on the civil rights issue we must rise with the occasion. That calls for cloture and for the enactment of a civil rights bill."

Dirksen jabbed an index finger at his colleagues on both sides of the aisle. His voice rose to a slightly higher pitch, taking on an extra tone of persua[sive]ness. The Senate, he said, had a [pe]nant with the people. For many [ye]each political party has given [m]consideration to a civil rights plank its platform. Were these pledges [m]much campaign stuff, or did we [m]it? Were these promises on civil [ri]but idle words for vote-getting [pu]poses, or were they a covenant [m]to be kept? If all this was mere [pr]tense, let us confess the sin of hy[po]risy now and vow not to delude [the] people again."

The Vote. It was precisely 11 [a.m.] the time set to vote. While Dir[ksen] was still talking, the presiding of[ficer] Montana Democrat Lee Metcalf, bro[ught] down his gavel. "Is it the sense of [the] Senate that the debate shall be bro[ught] to a close?" Metcalf asked and ord[ered] the yeas and nays.

"Mr. Aiken," intoned the tally c[lerk].

"Aye," voted Vermont's Republi[can] Senator George Aiken.

"Mr. Allott."

"Aye," said Colorado Republi[can] Gordon Allott.

A moment of pathos came when [the] clerk arrived at the name of Californ[ia] Democrat Clair Engle, who has und[er]gone two brain operations and has n[ot] appeared in the Senate since April. F[or] this occasion, Engle, smiling gallan[tly] had been wheeled into the chamb[er]. When the clerk called his name, En[gle] tried to speak, but could not. Fina[lly] he lifted his left arm, pointed at [his] head, and nodded his aye.

Another closely watched vote w[as] that of Arizona's Barry Goldwater, t[he] leading candidate for the Republic[an] presidential nomination. Goldwater h[as] long been critical of the civil rights b[ill], arguing that brotherly love cannot [be] legislated into the hearts of men. [Of] course, the bill attempts to do no such thing; it merely seeks to ensure to all Americans the equality under the law that is their birthright. In recent days Goldwater had indicated that he might wind up voting for the bill if it were amended according to his tastes. But that did not mean he would support cloture. He now answered the roll call with a brusque no.

On and on went the vote. When it reached Delaware Republican John Williams, it stood at 66 for cloture, 26 against. Williams' soft aye made the two-thirds majority required for cloture, and victory. "That's it," cried a Senator. Newsmen sprinted to telephones that had been held open. Mike Mansfield sagged in relief. Dick Russell, grim as death, scribbled fitfully on a yellow pad. Out of the cloakroom hobbled Arizona's Carl Hayden, 86, president pro tempore of the Senate and the man who stands next only to House Speaker John McCormack in the line of succession to the U.S. presidency. Although a longtime foe of cloture, Hayden this time had told Mansfield he might vote for it if he was really needed. He wasn't. "It's all right, Carl,

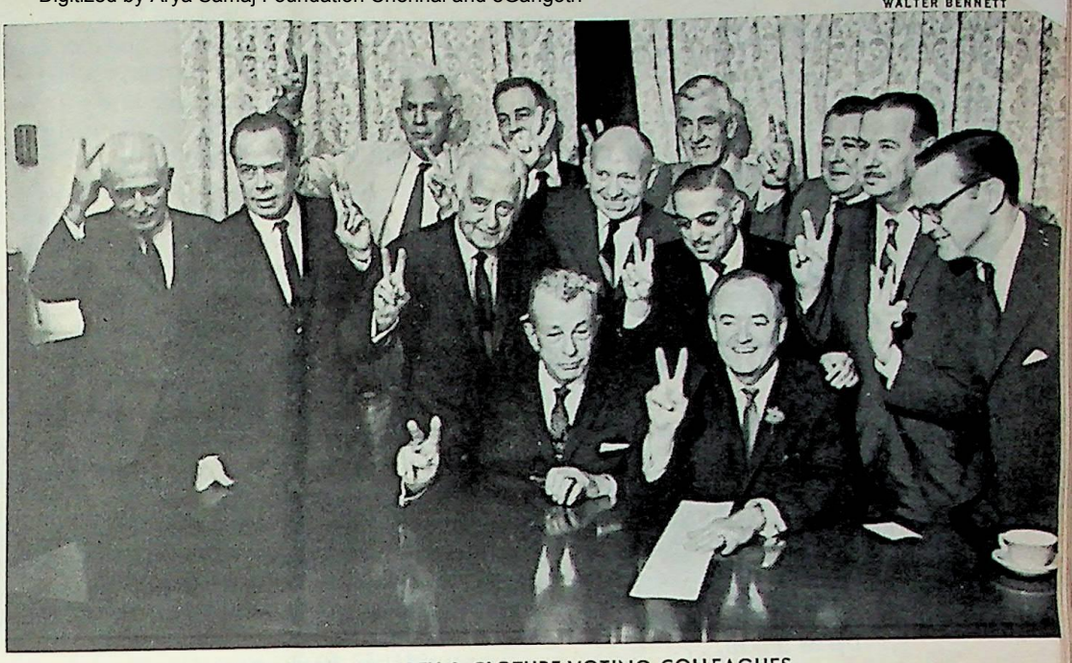
WALTER BENNETT



DIRKSEN, HUMPHREY & CLOTURE-VOTING COLLEAGUES
Throughout its legislative life, it was fraught with difficulties.

ed Mansfield. "We're in." Hayden
ed no.
At last the clerk read the tally. It
od at 71 for cloture, 29 against. With
r more votes than were required,
U.S. Senate for the first time in its
tory had invoked cloture against a
l rights filibuster. On the issue, all
Senators had taken their stand. And
so doing, they cleared the way for
ain passage of the bill.
The measure's previous life had been
aught with difficulties. No sooner had
taken over as President than John
Kennedy, who had campaigned on a
rong and effective civil rights pitch, let
be known that he would deal with
il rights through administrative, not
islative action. One obvious Kennedy
ar: that a civil rights bill sent to Con-
ess would prove politically harmful by
ematizing, once again, the fact that
apitol Hill Democrats were far more
eply divided than Republicans on the
ue.

Flesh on the Skeleton. For two years
ngressional Republicans chided Ken-
dy for his failure to present a civil
his legislative program. Finally, in
uary 1963, a group of House Re-
blicans introduced their own broad-
ged measure. One month later, Pres-
nt Kennedy sent his first major civil
hts message to the Hill. It was terribly
n, asking for federal court-appointed
ting referees to determine applicants'
alifications while their voting suits
re pending, an extension of the Civil
ghts Commission and little else.
The ink was scarcely dry on Ken-
dy's bill when the city of Birming-
m exploded in a tangle of firehoses,
arling police dogs and writhing Ne-
oes. The violence was ugly, and so
re the political implications. Soon
terward Kennedy announced that he
as sending to Congress a much tough-
r version of his bill.
That bill, the skeleton on which the
gislation presently before the Senate
as fleshed, was submitted June 19,
963. It called for: 1) a ban on dis-
rimination in hotels, motels, restau-
nts and stores, and authorized the
stice Department to bring suit to
force compliance; 2) power for the At-
rney General to file desegregation
its against public schools and col-
ges; 3) withholding of funds from
derally assisted programs where dis-
rimination was practiced; 4) establish-
ent of a Community Relations Service
help cities and towns over the rough
ases of desegregation; 5) strengthen-
g the President's Committee on Equal
ployment Opportunity by giving it
statutory basis.

The House Record. But even that
package was not nearly strong enough
r civil rights advocates in the House
f Representatives. Brooklyn's Demo-
atic Representative Emanuel Celler
ad his ten-man Judiciary subcommit-
ee produced a bill that fairly bristled
ith teeth. Where Kennedy had asked for voting rights protection for federal elections only, the subcommittee bill included all state and local elections as well. In public accommodations, the Celler group measure added a ban on discrimination in any business that "operates under state or local authorization, permission or license."

Both President Kennedy and Brother Bobby believed that this bill was too drastic to have a chance of legislative approval. In testimony before the full Judiciary Committee, also chaired by Celler, the Attorney General protested: "What I want is a bill, not an issue." Celler was willing to compromise a little, but not much—and in his drive, he got some vital help from House Republican leaders. In conferences with Celler and President Kennedy, G.O.P. Floor Leader Charles Halleck and Ohio's William McCulloch, the ranking minority member of the Judiciary Committee, pledged their support for a slightly watered-down version of the Celler package. They asked only one thing in return: that the President publicly acknowledge the G.O.P. contribution. Kennedy agreed.

That was last fall, just before the assassination. Lyndon Johnson took up where Kennedy had left off, gave Republicans full credit for their stand, and urged the House to pass the bill as a memorial to Kennedy. Halleck remained steadfast in his support, and in February the House approved the measure by a vote of 290 to 130. For the bill were 152 Democrats and 138 Republicans; against it were 96 Democrats and only 34 Republicans.

Critical Eye. Now it was up to the Senate—and even among Senators favoring civil rights there were some grave reservations. Everett Dirksen, for one, had been following the course of the House civil rights measure with a close and critical eye. Says he: "I kept annotating it and making a list of prospective amendments." In early February, just before the House passed the bill, Dirksen entered Washington's Sibley Memorial Hospital for treatment of a bleeding ulcer, took along his own dog-eared copy of the measure and began to rewrite it. He kept at it during a week's recuperation at Broad Run Farm, his redwood-and-field-stone ranch house in suburban Sterling, Va.

Discussing the period after the civil rights bill first reached the Senate, Dirksen recalls that "We sort of let the thing simmer and jell, waiting to see what would happen. We knew that we could expect a freshet of long speeches. We knew that for about 30 days nothing would happen."

Help from Hubert. In the interim, Dirksen met almost daily with his top legal aides—three experts on constitutional rights and administrative procedure—and the four men picked the House bill apart. After weeks, they had accumulated a sheaf of some 70 amendments, many technical, some substantive. This was the embryonic Dirksen "substitute package."

It was ready for unveiling in late April, and Dirksen explained it at meetings of the eleven-man Senate Republican Policy Committee. "I was trying," he says, "to condition them a little as to what I had in mind for this bill." There was some grousing, mostly from New Hampshire's Norris Cotton, Iowa's Bourke Hickenlooper and Kentucky's Thruston Morton, who were upset over the bill's equal-employment-opportunity section. To a certain extent, Dirksen agreed with them; his own Illinois has strong laws in this area, and Ev found that the bill might usurp states' jurisdiction. His amendment took away the Equal Employment Opportunity Commission's right to file suits.

By now Republican Dirksen and Democrat Hubert Humphrey were in almost constant touch. Early in the civil rights debate Humphrey knew that he had a hard core of 41 Democrats who

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

HENRY GROSSMAN

EV & WIFE LOUELLA
Up at 5 a.m. . . .

could be relied on to vote for cloture. Dirksen could count on only twelve to 14 Republicans. The total fell far short of the two-thirds vote that would be needed to shut off a filibuster. Slowly, carefully, patiently, Dirksen went to work on even more amendments, all calculated to bring more Republicans into the cloture fold.

By mid-May, recalls Dirksen, his amendment package was "in pretty tangible shape." At Dirksen's suggestion, Humphrey arranged for a bipartisan meeting between Senate and Administration leaders. The place: Dirksen's leadership office with the tinkling chandelier that once belonged to Thomas Jefferson. The participants: Dirksen, Mansfield, Humphrey, California's Republican Senator Tom Kuchel, Attorney General Kennedy, Deputy Attorney General Nicholas Katzenbach, and a sprinkling of liberals, moderates and conservatives from both parties.

In five conferences, agreement was finally reached on the package, essentially a rewritten version of the House bill. On May 26 it was introduced to the Senate by Dirksen as an amendment. Said he: "I doubt very much whether in my whole legislative lifetime any measure has received so much meticulous attention."

The Thrust. The bill contains sections dealing with discrimination in voting, public accommodations, publicly owned facilities, education, employment, and federally assisted programs. It also extends the Civil Rights Commission, sets up a Community Relations Service and provides a variety of enforcement powers ranging from court injunctions to jail terms of six months and $1,000 fines (TIME, May 29).

In many ways, despite other Senators' heavy involvements, it is Dirksen's bill, bearing his handiwork more than anyone else's. Dirksen's 70-odd amendments are less notable for their number than for their thrust. In essence, he has changed the bill so as to allow the states more leeway in controlling their own civil rights conflicts, and to bar possibly overzealous federal officials—such as an Attorney General—from charging in and initiating civil rights suits without first establishing a "pattern" of discrimination. On both sides of the Senate aisle, almost everyone agrees that Dirksen's proposed amendments vastly improved the House-passed bill.

Just what lay behind Dirksen's endless efforts to shape a workable civil rights bill? Although he voted for lesser civil rights measures in 1957 and again in 1960, there is nothing in his background to suggest that he is any sort of civil rights crusader.

The Essence. To Ev Dirksen, the answer to that question is simple enough. "I come of immigrant German stock," he says. "My mother stood on Ellis Island as a child of 17, with a tag around her neck directing that she be sent to Pekin, Illinois. Our family had opportunities in Illinois, and the essence of what we're trying to do in the civil rights bill is to see that others have opportunities in this country."

Last year Chicago Negroes, protesting that Dirksen had not committed himself on the civil rights bill, threw up a picket line around a hotel where Ev was scheduled to speak. Throughout his long political career—16 years in the House, 14 in the Senate—he has received little support from Negroes. He feels a certain bitterness about all this, but not enough to affect his advocacy of the civil rights bill. Explaining his support of that measure, Dirksen says: "I have looked at all the people who came into this office to see me—lawyers, contractors, businessmen, ministers, rabbis, priests. It was a constant walk-in. And I thought: something must be done. Civil rights can't and won't be put off. Do we duck it or come to grips with it? Suppose we don't do something? What will be around the corner in the way of national tranquillity?"

Even so, Dirksen was far from ready to accept what he thought was a bad bill—and the shouts of professional civil rights men bothered him hardly at all. "If the day ever comes," he said, "when, under pressure or as a result of picketing or other devices, I shall be pushed from the rock where I must stand to render an independent judgment, my justification in public life will have come to an end."

Thus Dirksen labored, and chipped, and carved, and chiseled toward what he considered to be a fair, realistic measure. For 87 days Democratic segregationists filibustered. But finally the hour for the cloture vote approached. On the morning of the big day, Dirksen arose at 5 a.m., half an hour earlier than usual, at Broad Run Farm. He joined his wife Louella in the kitchen for a breakfast of cereal and toast; then the pair went outside to Dirksen's beloved rose garden, where he clipped some long-stemmed beauties to take to his office. Shortly after 8 o'clock, D sen's chauffeur-driven Cadillac, a quisite of his position as minority l er, came for him. Dirksen kissed L la goodbye and, carrying his bu briefcase and the fresh-cut pink r stepped into the car for the 32 ride to Capitol Hill. As he arrived Senate chamber, Last-Ditch Filib Robert Byrd, a West Virginia D crat, was just sitting down after hour all-night speech.

Still, the Demonstrations. Even historic cloture vote was achieved gro demonstrations kept cropping across the U.S. In St. Augustine, there were riots, and the Rev. M Luther King Jr. was thrown int for trying to integrate a white re rant. In Tuscaloosa, Ala., a pitched tle broke out between cops and 50 gro demonstrators. In Canton, M bombs were hurled at a Negro h and church.

All this went to prove a vital p Many whites, resentful of the Negro olution, think of the civil rights bi an incursion into their own right isn't. At the same time, many Ne believe that the bill will end all troubles, that upon its signing they enter a bright new era that is free f prejudice. They are wrong too. C rights conflicts will continue this s mer and next summer and for sum stretching far into the future.

What the civil rights bill will d provide a broader legal basis for equality of opportunity. That is a is meant to do, and certainly that plenty. Ev Dirksen knows it well. W a good deal of Democratic coop tion, he practically wrote the thing.

ROSE GARDEN DINNER FOR ERHARD

Under swaying lanterns, a champagne toast.

THE PRESIDENCY

The Mortarcade

It was cap-and-gown week for thousands of college students (*see* EDUCATION), and right there under the hoods and tassels were Lyndon Baines Johnson (Southwest Texas State Teachers College, '30) and his Lady Bird (University of Texas, '33).

The President, whose mortarcade had already toured commencements at Michigan, Texas, the Coast Guard Academy and the Lyndon B. Johnson High School, stood under rain-dripping elms on the campus of Swarthmore College near Philadelphia to assail the "phantom fears" that a strong Federal government is a threat to individual liberty.

Government Liberates. Said Johnson: "We are told that this is the age of the oversize organization, of big business, big unions and big government. Does the Government undermine our freedom by bringing electricity to the farm, by controlling floods, or by ending bank failures? Is freedom betrayed when in 1964 we redeem in full the pledge made a century ago by the Emancipation Proclamation? The truth is—far from crushing the individual—government at its best liberates him from the enslaving forces of his environment."

Two days later Johnson drew some 175,000 people to the streets of Worcester, Mass., en route to another commencement address at Holy Cross College. There, he expressed again his lofty hopes for "the Great Society." Even if the cold war should end, Johnson warned, the world would find itself "on a new battleground as filled with danger and fraught with difficulty as any ever faced by man." The fight then, he said, would be "to build a great world society—a place where every man can find a life free from hunger and disease—a life offering the chance to seek spiritual fulfillment unhampered by the degradation of bodily misery."

Johnson also had the unusual experience of making a speech that his audience did not hear. At a centennial banquet at Gallaudet College in Washington, the only U.S. college for the deaf, Johnson spoke slowly, had his words translated into sign language by the college's dean of women, Elizabeth Benson.

No Dreams of G.M. Lady Bird, meanwhile, wrapped herself in the black and white robe given her two weeks before with an honorary degree at Texas, turned up at Harvard Memorial Church to give the baccalaureate address to 252 graduates of Radcliffe. She urged the girls to remain feminine. An educated woman, she said, "does not want to be a long-striding feminist in low heels, engaged in a conscious war with men." Nor should she hold "glamorous images of herself as ambassadress or dreams of glory as she takes over the presidency of General Motors." Instead, advised Mrs. Johnson, a woman should be "preeminently a woman, a wife, a mother, a thinking citizen. If you can achieve the precious balance between woman's domestic and civic life, you can do more for zest and sanity in our society than by any other achievement."

Even the White House bulged with graduating seniors. The Johnsons entertained 121 high school graduates designated as "Presidential Scholars," let them wander through the public rooms and over the lawns for nearly five hours. Lynda Bird presided over a hamburger picnic while the Kingston Trio supplied an upbeat and Lyndon and Lady Bird stretched out on the cool grass to watch.

In nonacademic activities, the Johnsons last week:

▶ Entertained Denmark's lively Prime Minister Jens Otto Krag and his actress wife Helle with a state dinner and dance. Luci Johnson, 16, enjoyed her first state party so much that she stopped the dance in a shoulder-shaking demonstration of the frug with Ricky Keaton, 17, son of a Houston electrical contractor. While guests applauded, a beaming Lyndon clapped out the beat. Luci and Keaton later drove off for a spin in Keaton's red sports car.

▶ Paid West German Chancellor Ludwig Erhard the compliment of receiving him at the first state dinner ever held in the White House Rose Garden.

Some 140 guests sat at small round tables as lanterns mounted on bamboo poles swayed in the soft breeze. In the background, across the south lawn, night lights played over the Washington Monument and the Jefferson Memorial. Ballerina Maria Tallchief and her partner, Jacques d'Amboise, performed on a temporary stage. Guests included Actresses Janet Leigh and Mitzi Gaynor. Said Johnson in a champagne toast: "There can be no real and lasting peace in Europe until Germany is united, united by self-determination in peace and in freedom."

Up from Poverty

Even by Texas standards, Lyndon and Lady Bird have long been considered wealthy. Last week the Washington Evening Star made a detailed attempt at estimating the Johnson family's financial worth, arrived at a tidy figure of more than $9,000,000.

Listed were the following assets in Texas, most of them held by the Texas Broadcasting Corp.,* in which Lady Bird, Luci Baines and Lynda Bird hold 84% of the stock:

▶ Austin radio station KTBC and television station KTBC-TV, which holds an area monopoly in one of the nation's largest cities with only one television station. Estimated value of the Johnson interest: $5,000,000.

▶ A 29% share of Waco's KWTX and KWTX-TV, operating in another lucra-

* Before Johnson became President, it was the L.B.J.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

tive market, plus KWTX's sizable holding in a radio station in Victoria and television stations in Bryan and Sherman: $870,000.

▶ Proceeds from the 1961 sales of stations KRGV and KRGV-TV in the Rio Grande Valley city of Weslaco: $1,400,000.

▶ The 400-acre L.B.J. Ranch near Johnson City: $150,000. A 6,300-ft. landing strip, capable of handling commercial aircraft: $100,000.

▶ Other ranchlands in central Texas, including the 1,800-acre Granite Knob Ranch, the nearby 800-acre Lewis Ranch, half of the 4,500-acre Haywood Ranch near Llano, and 1,700 acres along the Pedernales River near the home ranch: $600,000.

▶ Some 25 acres of choice residential land in an Austin suburb, originally held in Lyndon's name, later shifted to the company: $600,000.

▶ A twin-engined Beechcraft family airplane: $200,000.

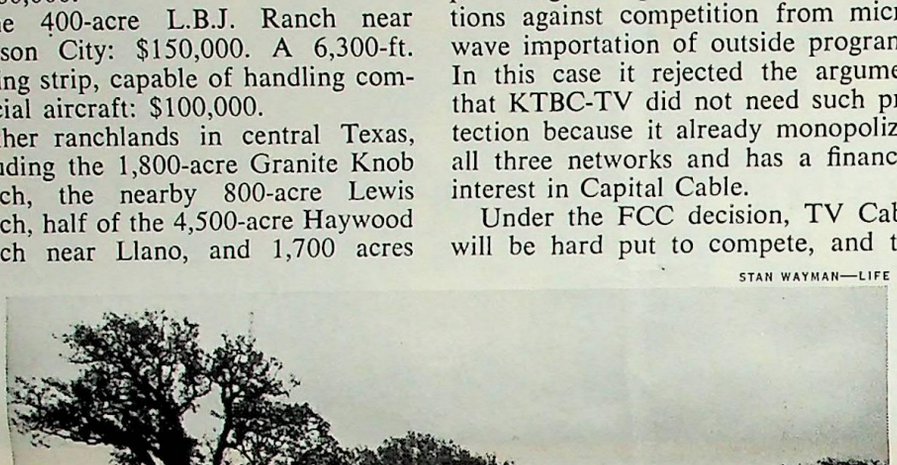
In addition, the Star cites unestimated holdings in cattle and corporate stocks. It reports the "widespread impression in Austin" that the family controls the Brazos-Tenth Street Corp., which owns some $300,000 worth of stock in four Austin banks. The Johnson City Foundation, which has been recognized as a charitable institution for tax purposes by the Internal Revenue Service, holds another $137,000 worth of stock in four Austin banks.

The Johnsons turned over administration of their financial interests to two trustees when Lyndon became President, can resume control when they leave the White House. Their prospects are bright. Texas Broadcasting holds an option to buy, for less than $1,000,000, a 50% interest in Capital Cable Co., a community-antenna television system that brings programs from San Antonio stations to Austin, carries them into homes by wire. Capital Cable is faced with competition from TV Cable Co., which does the same thing, but more cheaply, by using microwaves to relay the signals from San Antonio.

The microwave technique, however, puts TV Cable under the jurisdiction of the Federal Communications Commission—and the FCC recently ruled that TV Cable must delay any network program for up to 15 days whenever requested to do so by the Johnsons' KTBC-TV. The FCC has a general rule providing such protection for local stations against competition from microwave importation of outside programs. In this case it rejected the argument that KTBC-TV did not need such protection because it already monopolized all three networks and has a financial interest in Capital Cable.

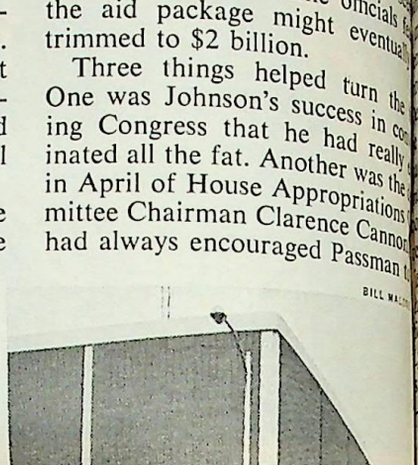
Under the FCC decision, TV Cable will be hard put to compete, and the Johnson TV monopoly in Austin will be maintained. What is more, Capital Cable, under these conditions, will likely be worth $5 million to $10 million within a few years.

STAN WAYMAN—LIFE



HEREFORD CATTLE ON L.B.J. RANCH

Even by Texas measure, a tidy sum.



KTBC BUILDING IN AUSTIN

FOREIGN AID

A Bikini Is Better Than Nothing

Considering the way Congress mauled John F. Kennedy's last foreign aid bill—appropriating only $3 billion out of an Administration request for $4.5 billion—Lyndon Johnson decided to try a different approach. He sent up a "preshrunk" program of $3.4 billion, the lowest asking price in foreign aid's history. His aides compared it to a bikini—skimpy, but just enough to cover the vital areas.

Last week Johnson's strategy paid off. By a vote of 230 to 175, the House approved a bill authorizing the expenditure of virtually every penny he asked for, plus an additional request of $125 million in emergency aid to South Viet Nam. Not since 1947, when Harry Truman launched the foreign aid program by seeking funds to help Greece and Turkey fight Communism, had a President's full request been authorized by the House.

Barebones Request. Johnson was jubilant, congratulated the House for a "wise and prudent action." Said he: "This is no time to be cutting a carefully drawn measure." Even so, it looked at first as if Congress might cut ribbons. Veteran Ax Wielder Otto man, the Louisiana Democrat heads the House Appropriations committee on Foreign Operations that the President "would be very to get $2.5 billion." Congress so rebellious that some officials the aid package might eventua trimmed to $2 billion.

Three things helped turn the One was Johnson's success in co ing Congress that he had really inated all the fat. Another was the in April of House Appropriations mittee Chairman Clarence Cannon had always encouraged Passman

Cannon's successor was Texas Dem crat George Mahon, who has v against aid only once in his 30-year gressional career. The third was the formance of Defense Secretary Ro McNamara in preliminary hearings fore Passman's subcommittee.

McNamara faced Passman in M but the full text of his testimony was made public until last week. He wa a determined mood. Last year he quested $1.4 billion in military aid, only $1 billion. This year he started with a barebones $1 billion request was bent on getting every penny. W ever Passman slipped a question fact into his long, loaded questions, Namara cut in, requested permissio "clarify" the record. In a typical change involving the adequacy of tary assistance to Greece and Tur McNamara snapped, "There is absolut no question but what the Greek Turkish forces are deficient in equ ment, and no amount of verbal tortion will change that fact." Protest Passman, "I am not using any ver bal distortion." McNamara shot back "You look at the record."

The Real Test. On the floor of the House last week, the authorizing bill sailed through with unprecedented ease. "I would not call this a debate," said New Jersey Republican Peter Frelinghuysen, as one Representative after another rose to sing the bill's praises. "It's just a discussion."

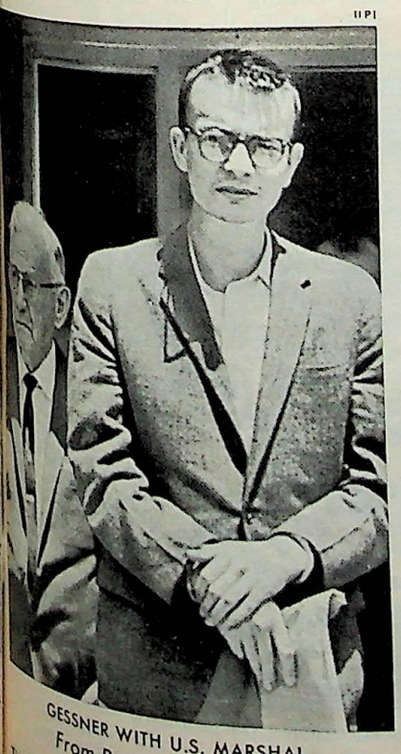
ESPIONAGE

"I Gave Them All"

Despite his near-genius IQ of 142, ...gling, bespectacled George John ...ssner, 28, had never managed to ...e much of a mark anywhere. Last ...k he finally succeeded, but the mark ...ed out to be black. In a Kansas ..., Kans., federal district court, Gess... was found guilty of selling informa... on U.S. nuclear weapons to the ...ssians, thus became the first person ...victed under the espionage provi...ns of the 1954 Atomic Energy Act.

Princely Payoff. Gessner had worked ... nearly seven years as a nuclear ...apons technician, had ample oppor...ity to gather information of interest ... Moscow. At 17, he enlisted in the ... Force, was assigned to guided mis... work at Patrick Air Force Base, ... Discharged four years later, he ...ored as a civilian on Titan and Atlas ...ssile projects, in 1960 joined the Army and worked on nuclear weapons at Jackson, S.C., and Sandia, N. Mex. Ten months after joining the Army, Gessner deserted and crossed over to Mexico.



UPI

GESSNER WITH U.S. MARSHAL
From Russia, the kissoff.

One of his first stops was the Soviet Embassy in Mexico City. There and in later meetings in two parks with a couple of Soviet colonels, he handed over detailed descriptions of the Mark VII nuclear weapon, the 280-mm. atomic cannon and an 8-in. nuclear gun. For his trouble, he was given $200 and told to use the money to travel to Cuba.

Gessner never made it to Cuba. He needed a passport to get out of Mexico, but by the time he was able to get one, the Russians had decided he would not be of much further use. His final kissoff was a princely 100 pesos—$8. Gessner drifted south, was arrested in Panama City by cops because he had no registration papers. U.S. authorities quickly took custody of him as a deserter.

Sent up to Fort Hood, Texas, Gessner at first refused to tell interrogators just what he had been up to in Mexico City. Finally, according to former Army Counterintelligence Agent William V. Benson Jr., he broke down after a visit to the post chaplain, gave Benson a tape-recorded confession. "I gave them all," said Gessner of his dealings with the Russians. "I knew these weapons were going to be used on little children." At one point, Benson asked Gessner about a particular weapon. "This is not important. Julius and Ethel gave it to them in 1948," said Gessner. "Julius and Ethel?" asked Benson. Replied Gessner: "Julius and Ethel, yes, my predecessors." Federal Judge Arthur J. Stanley later ordered the references to the Rosenbergs, who were electrocuted in 1953 for giving nuclear secrets to the Russians, stricken from the record.

Loathsome Disease. Though Gessner was indicted for espionage in March 1962, his trial was delayed until last month by four hearings on his mental competence. During the 14-day trial, Gessner's attorneys summoned psychiatrists and former barracks-mates to testify that he was a heavy drinker and an unstable character. But psychiatrists called by the Government said he was capable of controlling his conduct. Declared Justice Department Attorney Paul C. Vincent, "I agree he was sick. He was suffering from the most loathsome disease—disloyalty. He betrayed his country."

The Government argued that the information Gessner sold could help the Russians to develop a new weapons system and to gauge U.S. nuclear capabilities. "After you have heard the evidence and had time to realize the enormity of the offense and its possible consequences," said U.S. Attorney Newell George, "I believe you will decide the death penalty would, indeed, be merciful." After four hours and 14 minutes of deliberation, the jury found Gessner guilty, but declined to send him the way of his "predecessors." His sentence: life imprisonment.

MARINA OSWALD
For the big shot, anyone notable.

INVESTIGATIONS

The Man Who Wanted To Kill Nixon

When the full report of the Warren Commission is published, perhaps by month's end, it may well reflect the theory that Lee Harvey Oswald had an obsessive yen to kill—not just John F. Kennedy, but any notable person. According to that theory, Kennedy was no more than a famous target to Oswald.

The theory helps explain why Oswald apparently took a potshot at General Edwin Walker in Dallas in April 1963. Walker, a right-winger, espoused views that were frequently diametrically opposed to Kennedy's. So why, if political causation was the answer, should Oswald shoot at both Kennedy and Walker? The presumed solution: both were highly publicized, controversial men who happened to be within range of Oswald's rifle.

There was still another potential target. In Washington last week the Warren Commission took further testimony from Oswald's widow, Marina. The commission had gathered much information since Marina last testified, and found that she had made some omissions. During a four-hour questioning period, Marina told the commission that on a night in mid-April 1963, her husband walked into a room with a pistol and announced that he was going to kill Richard Nixon. The former Vice President was to speak in Dallas within the next few days. Marina said she dissuaded her husband. As it turned out, Nixon's appearance was canceled, and he never got to Dallas.

In an interview with the Dallas Morning News, Marina insisted last week that Oswald did not hate President Kennedy or Governor John Connally, whom he wounded, but that "he wanted to be a big shot." And, she added with a tone of regret, she would never have married Oswald if they had met in the U.S. instead of the U.S.S.R.

LAOS

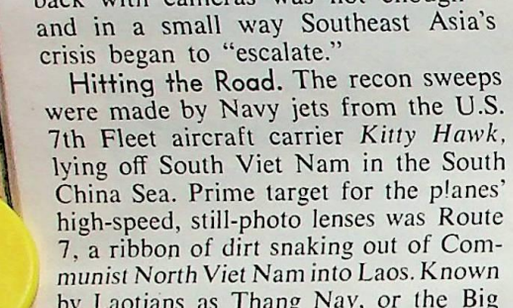
Escalation in the Air

The U.S. last week became involved in a minor but significant air war with the Communists in Laos.

When the Red Pathet Lao overran Laos' embattled Plain of Jars last month, the U.S. replied by sending unarmed jets swooping low over Pathet Lao territory. The purpose was partly to photograph troop movements, partly to demonstrate U.S. resolve to stand firm in the Red-threatened little kingdom. But last week, after Communist gunners shot down two American planes in two days, the U.S. decided that shooting back with cameras was not enough—and in a small way Southeast Asia's crisis began to "escalate."

Hitting the Road. The recon sweeps were made by Navy jets from the U.S. 7th Fleet aircraft carrier *Kitty Hawk*, lying off South Viet Nam in the South China Sea. Prime target for the planes' high-speed, still-photo lenses was Route 7, a ribbon of dirt snaking out of Communist North Viet Nam into Laos. Known by Laotians as Thang Nay, or the Big Road, Route 7 has long been used by North Viet Nam's Reds to truck men and guns to the Pathet Lao (up to 400 vehicles a day), in open violation of Laos' neutrality accords. To get close-

U.S. NAVY



U.S. RF-8A RECONNAISSANCE PLANES

ups of the latest influx, the supersonic reconnaissance craft flat-hatted in at virtually treetop level, at slowpoke speeds of perhaps 450 m.p.h., and often from the same predictable angles.

The Communists fired on the jets from the start, and with practice soon found the range. One day at noon, while maneuvering his RF-8A over the vicinity of Ban Ban, a collection of 300 thatch-roofed huts on Route 7, Navy Lieut. Charles F. Klusmann, 30, of San Diego felt ground fire thumping through his craft, ejected himself seconds before the plane tumbled to earth. An American search helicopter out of Vientiane spotted the downed pilot at the edge of a clearing, but it was driven off by Communist fire that wounded the chopper's copilot. The Pathet Lao radio later announced that Klusmann had been taken prisoner.

Punitive Punch. For the first time, Washington then ordered armed jet fighters to escort the recons, but disaster nearly repeated itself. Again over Ban Ban, a Navy F-8A Crusader escort, flown by Commander Doyle W. Lynn, 37, of La Mesa, Calif., was shot down by the Reds. Lynn likewise bailed out, but after a harrowing night in the tiger-inhabited jungle, he was rescued by a U.S. helicopter.

Back in the Pentagon, flustered brass described the Red gunners as lucky, hastened to explain that jets are terribly vulnerable anyway. "Hell," said one Navy man, "a kid standing at the end of the runway with a baseball bat can knock down a jet if he gets the ball into those turbine blades." But the Reds weren't using baseballs. Western military experts guessed that the U.S. planes had been hit by Soviet-designed ZPU-2s—twin, 14.5 mm., heavy ma- guns mounted on an armored ca- operated from a fast-turning swivel U.S. officials suspected that the were operated by North Vietna crews, but the Laotian Reds may have been trained to operate them

In Washington, the Administ- decided on a little more escala- From a base in the Philippines, F-100 U.S. Air Force jet fighter-b- ers took off, headed over the nor- sector of South Viet Nam, then u- up the Laotian corridor. Their mi- to deliver a punitive punch to the- assing antiaircraft guns.

Power Demonstration. The a- ers' arrival around breakfast shortly after sunrise, must have c- as a distinct surprise to the Comm- gunners. Instead of taking evasive tion, as the reconnaissance craft always done, these jets bore d- dropped rockets and bombs, whisked away. Behind, they left a munist antiaircraft emplacement molished in smoking ruins.

The demonstration of U.S. po- brought shocked outcries from Communists. Red Chinese Pre- Chou En-lai warned that "Laos close neighbor of China." Declared min Jih Pao, Peking's Communist P- organ: "The United States will n- with an even more powerful rebuff." ghts would be resumed whenever nec-
ssary. After a session with the U.S.
mbassador (*see following story*), Sou-
nna agreed.

At week's end the flights were again
nder way after Souvanna Phouma re-
orted "important movements of Path-
Lao and Viet Minh troops." The
eutralist Premier told a press confer-
nce that the aerial reconnaissance had
oduced some "interesting photos"
owing the presence of North Viet-
mese troops in Laos. One photograph
as a Communist truck convoy en-
ering Laos only a short distance from
the North Viet Nam border.

Call for Aid. The government, mean-
hile, scored a blow of its own. Ac-
ording to Pathet Lao broadcasts, six
U.S.-supplied, converted trainer planes
f the Laotian air force bombed and
trafed the Pathet Lao headquarters
illage of Khang Khay, destroying the
ffices of Pathet Lao Chief Prince Sou-
phanouvong and Red China's "econom-
c and cultural mission," killing one
hinese and injuring five. It was the
rst time that the Chinese Reds had
dmitted having a delegation with the
athet Lao.

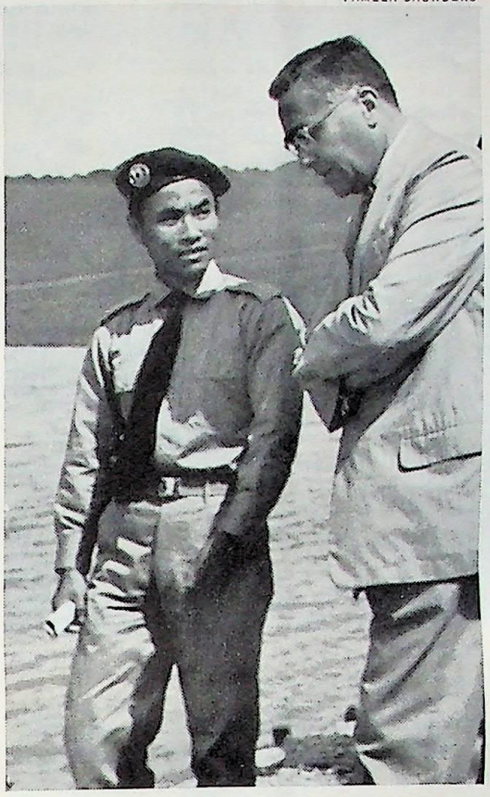
In the Laotian ground war, the Com-
unists renewed their pressure on Neu-
alist positions west of the Plain of
rs. Under the command of game lit-
e General Kong Le, the Neutralists
ought back as best they could. From
s ramshackle, mountainside head-
uarters southwest of the Plain, Kong
e directs an army reduced to some
,000 troops, but has been reinforced
y thousands of anti-Communist Meo
ribesmen who have fled Pathet Lao
reas. Last week, during a visit to Vien-
ane, Kong appealed to the nations of
he non-Communist world to help Laos
emain neutral, urged the U.S. "to help
s more and send more jet bombers
nd fighters to destroy all enemy po-
itions." Not that Souvanna's coalition
overnment is requesting such aid. "We
ave asked the Premier many times for
oreign troops," said Kong Le "but
here was no answer."

The Circus of Dr. Unger

The shiny black Checker limousine
rimmed along Vientiane's pitted streets
ike a water beetle supported by surface
ension. There was plenty of tension
n the Laotian capital, but the burly,
rush-browed man in the car did not
how it. U.S. Ambassador Leonard Un-
er was at his unflappable best as he
oordinated the search for two downed
merican aviators and pressed the case
or fighter escort to accompany con-
nuing U.S. reconnaissance flights over
he Plain of Jars. The ambassador
topped by a cocktail party to talk with
a rightist leader, then dropped in on
Premier Souvanna Phouma for a little
ernteel arm twisting.

For a diplomat who thrives on crisis,
ife in Laos is a circus in which the
performer must star in every act from
ightrope walking to elephant riding.

PAMELA SAUNDERS



KONG LE WITH AMBASSADOR UNGER
Riding more than elephants.

The tightrope is symbolic and means dealing with the tenuous Laotian coalition government. The elephants are real and are usually ridden at every Laotian *boun* (festival). Len Unger finds the *boun* a boon for he is an excellent elephant rider.

Victory & Puck. Through two years of duty in Laos, Unger, 46, has demonstrated what one State Department admirer calls "that uncanny ability to keep several balls in the air at the same time." Born in California, Unger was educated at Harvard (B.A. in geography, 1939), experienced his first diplomatic crisis during the Trieste negotiations of the 1950s, and graduated to Southeast Asia in 1958. In the international cat's cradle of Bangkok he learned not only to speak Thai (which is related linguistically to Lao) but also how to keep cool in a hot climate.

Since 1962 Unger has handled three major and countless minor crises in Laos, ranging from the assassination of Foreign Minister Quinim Pholsena through bullet-spanging dustups between rightists and Pathet Lao forces. At the same time, he has managed to play endless rubbers of bridge with Prince Souvanna, and tries to get in half a dozen sets of hard-slamming tennis a month. When trouble appears, Unger as likely as not will send his children out riding along the banks of the Mekong River on their Laotian ponies, Victory and Puck, to show family calmness. He accepts the topsy-turvy Asian world with wry good humor. "Any time you're really in trouble here," he says, "the telephones don't work."

Cards on the Table. By that standard, the bells cannot have been ringing in Laos last week. "It's been a very rough spell," Unger said during one of his rare breaks. "It's not good enough to sit here and try to put out fires from day to day. I wish we had more time for constructive thinking for the long run." As he explained the current crisis: "The Pathet Lao attacks in the Plain of Jars represent a flagrant land grab. We don't intend to see the whole country gobbled up."

Beneath his affability, Unger is a hard operator. When Premier Souvanna Phouma last week balked at allowing U.S. fighters to accompany reconnaissance flights, Unger called on his old bridge partner. Just what cards he used were not revealed, but one rumor had it that Unger warned Souvanna to either accept the armed escorts or get set for more drastic U.S. intervention. By week's end, Souvanna seemed once again to be seeing eye to eye with Unger.

SOUTH VIET NAM

Pause in the War

The big question in South Viet Nam was: "Whatever happened to the war?" Communist terror against civilians continued. But in military operations, it was the sixth consecutive week of only scattered and brief engagements, which the Viet Cong broke off with surprising readiness. One explanation: the guerrilla commanders, concerned by threats of stepped-up U.S. intervention, had ordered a temporary slowdown. Besides, it was the rice-planting season in the Mekong Delta, and many a part-time guerrilla was needed at home.

In Saigon, Premier General Nguyen Khanh addressed 70 leaders of South Viet Nam's multitudinous, microscopic political parties (31 at last count), pleaded with them to close ranks behind his government. Of continuing concern were relations between the country's wary Buddhists and Catholics. Last week 25,000 Catholics staged a unity march in Saigon, which was orderly except for a militant minority that carried banners urging U.S. Ambassador Henry Cabot Lodge to GO HOME. Many Catholics believe that Lodge was instrumental in the U.S. decision to curtail aid to Catholic President Ngo Dinh Diem prior to Diem's overthrow and murder. However, others in the crowd tore down the anti-Lodge signs.

Later, 2,000 Buddhists marched to a Saigon pagoda to mark the anniversary of the immolation of Thich Quang Duc, the aged monk who was the first to burn himself alive in last summer's wave of anti-Diem Buddhist sacrifices. Hours before the service, a towering statue of Buddha on the banks of the Saigon River suddenly blazed up in flames. Within minutes, an awed crowd had gathered, murmuring that surely a miracle had occurred to commemorate Thich Quang Duc's sacrifice. As it turned out, however, the statue was made of highly inflammable plastic and had been accidentally ignited by a worker's acetylene torch.

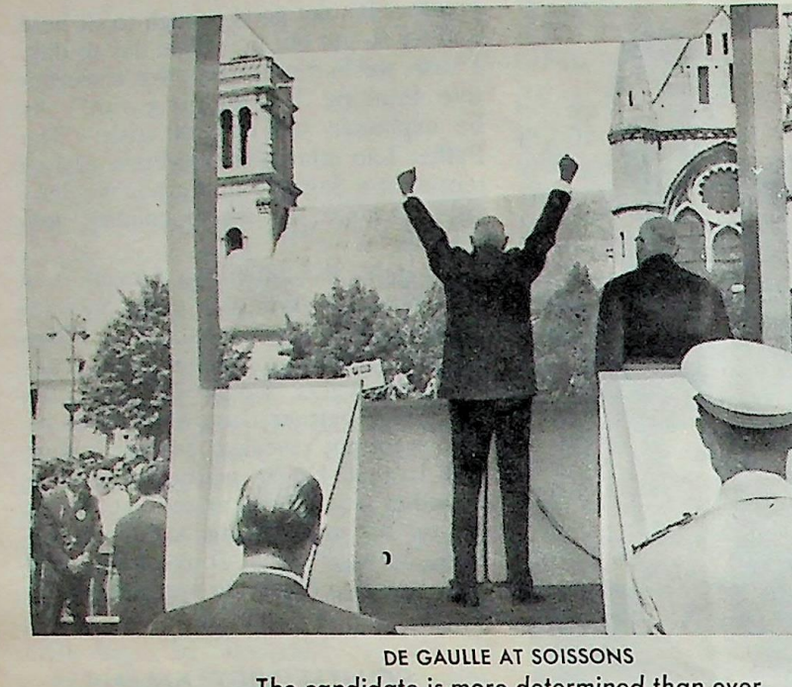
PARIS-MATCH



DE GAULLE AT SOISSONS
The candidate is more determined than ever.

FRANCE

So That Tomorrow Will Be like Today

Charles de Gaulle has toured his country 21 times since 1959, and as a result Frenchmen everywhere have grown accustomed to the towering figure mingling with crowds. But last week, as he set off on his latest trip, a junket through Picardy, there was an unusual air of curiosity: at 73, and recently out of the hospital after a prostate operation, how would De Gaulle stand up to four days of speeches and handshaking?

Perhaps as one concession to his convalescence, he did not travel in his usual speedy Citroën limousine; instead, he decided on a two-car diesel train, which could move him in greater comfort to the rural reaches of France's north. At his first scheduled stop, Soissons, a mighty cheer went up as he stepped before the throng at the Hôtel de Ville. He knew as well as they that the Picardy farmers had been protesting angrily against low agricultural prices, so he permitted himself a moment of what for him was considerable levity. Apologizing for having canceled an earlier trip to the region because of his illness, De Gaulle smiled: "You know that some said I did not come at that time because I was afraid of you! As has become evident since then, it was not at all for that reason."

What was also quickly evident as De Gaulle proceeded through the towns and villages was that his skill and spirit were hardly diminished by either age or illness. He plunged happily into thickets of outstretched hands, ignoring the blazing June sun to deliver elegant little speeches, without notes and without hesitation. Caught in a rainstorm at Beauvais, De Gaulle stood through the Mayor's long speech without hat or raincoat as streams of water ran down his grey suit. Did this mean that De Gaulle would be able to go ahead with his ambitious ten-nation swing through Latin America next fall? His doctors and other aides were watching, ready to recommend a drastic cut in the itinerary—or even cancellation—at the slightest sign of flagging strength.

For the audiences of Picardy, a greater question was whether his illness would force De Gaulle out of the 1965 presidential race. To that question, he gave a relatively direct answer: "I am more determined than ever to serve my country to the extent that I can, so that things will remain tomorrow as they are today." As his trip through Picardy ended, it seemed clear that this was just what an overwhelming majority of Frenchmen wanted too.

Un Bonjour de L'Etrangleur

A man and a boy stood deep within the Bois de Verrières just south of Paris. Above the boy's head, a giant oak reared away into the predawn darkness. "Tell me," he asked the man, "are there wolves here?" The man placed a reassuring hand on the nape of the boy's neck. "No, my little Luc, there are no wolves." Slowly the man's hand tightened . . .

The body of Jean-Luc Taron, aged 11, was found face down beneath the oak tree at 5:30 on the morning of May 27. The back of the neck was severely bruised, and the boy's nostrils were filled with loam, indicating that the murderer had used the soft forest floor for two purposes: to smother the cries of his victim, and to bring about death by suffocation.

To Chief Inspector Jean Samson of Paris' First Mobile Brigade, it appeared to be one of those senseless, psychotic murders committed by a madman who quickly gives himself away or else fades into the anonymity of the city and is never caught. But within a day of Jean-Luc Taron's murder, the case took a bizarre turn, and before the week was out Paris had been half-hypnotized with horror. For Jean-Luc's killer was a brazen publicity seeker, who taunted the cops and the newspapers with a ba... of telephone calls, special-delivery ... ters and threats of another child m... unless he was immediately paid $... 000 in advance ransom.

Afterward, ...you will no longer hear about me. Re... ...member: ransom or death. *Un bonjour* ...*l'étrangleur* [Good day from the ...strangler]."

SOUTH AFRICA

Avoiding Martyrdom

To some South Africans it seemed ...that world opinion had finally taken ...effect on their nation's stubborn racist ...policies. Eight men accused of member... ...ship in the revolutionary *Umkonto we ...Sizwe* (Spear of the Nation) group had ...been convicted of sabotage, a crime ...that carries the death penalty. But last ...week the eight—six black, one white ...and an Indian—were sentenced to life ...imprisonment. Another white defend... ...ant was acquitted but immediately re... ...arrested on other charges.

Black leaders elsewhere in Africa de... ...nounced the life sentences as inhuman, ...but the fact remains that the outcome ...could have been worse. The defendants, ...while pleading their "moral" innocence, ...admitted a great many of the charges; ...nine other South Africans, tried in a ...similar case last year, had been sen... ...tenced to death. But this time the gov... ...ernment evidently decided that death ...sentences would have created super... ...martyrs who, from the grave, could ...have rallied South Africa's often dis... ...pointed blacks and coloreds as well as ...many white liberals.

Bombs for Christmas. Foremost among the convicted Spearmen were Nelson Mandela, 45, the "Black Pim... ...pernel," who led South Africa's Special Branch cops a merry chase before his capture two years ago, and Walter Sisu... ...lu, 52, bearded official of the banned African National Congress. For more than nine months, a stream of 186 wit... ...nesses passed through Pretoria's red brick Palace of Justice, documenting in 2,550,000 words of testimony the government's charges that Umkonto had planned a systematic, 18-month campaign of sabotage aimed at undermining *apartheid*.

When cops descended eleven months ago on Umkonto's "headquarters," an isolated farm at Rivonia north of Johannesburg, they found 106 maps of selected sabotage targets—among them police and power stations, post offices, homes of African officials. One prosecution witness who claimed to be an Umkonto defector said he had blown up power-line pylons in Natal and government offices in Durban, sent bombs wrapped as Christmas presents to government officials (none apparently exploded). Wary of its world image, Umkonto was careful to order its saboteurs not to kill, in fact forbade them even to carry arms.

Operation Comeback. State Prosecutor Percy Yutar, working from a captured 19-page document titled "Operation Comeback," charged that the defendants had mapped detailed plans for a Communist-backed "war of liberation" modeled on guerrilla campaigns in China, Cuba and Algeria, to be followed by an air and sea invasion of African shock troops trained in closely guarded camps near Dar es Salaam, Addis Ababa, Cairo and Algiers. He also tried to prove that Umkonto was the "military arm" of the supposedly nonviolent African National Congress.

ERNEST SHIRLEY

"BLACK PIMPERNEL" MANDELA
The struggle is bigger than the law.

Though the defense readily admitted that Umkonto had accepted Communist as well as other outside aid and did not deny the charges of sabotage, Mandela and Sisulu adamantly insisted that Umkonto had no tie-in with the A.N.C. They argued that the Spear had been honed only when black South Africans concluded that peaceful means of achieving equality had failed. "The whites chose to turn South Africa into an armed camp," said Sisulu. "I do not see how I could have done otherwise than I did. It is inevitable that in any civil war fought in this country, victory will go to the oppressed."

Black, Not Red. Umkonto Leader Mandela, once a celebrated Johannesburg boxer, admitted planning sabotage but insisted that he acted as a black, not a Red. His inspiration, he argued, had come not from Moscow or Peking but from the Zulu and Xhosa chieftains who fought long and skillfully against the technologically superior Boers a century ago. "This," he said in a dramatic peroration from the dock, "is the struggle of the African people, inspired by their own suffering and experience. It is a struggle for the right to live. I have cherished the ideal of a democratic and free society, in which all persons live together in harmony and with equal opportunity. It is an ideal which I hope to live for and achieve. But, if needs be, my Lord, it is an ideal for which I am prepared to die."

Now he will have to live for it in jail. After the sentencing, a crowd held in check by police dogs and armed cops gathered outside the Palace of Justice to watch the prisoners being led away. Two Black Marias purred through the square, then accelerated swiftly toward Pretoria Central Jail. From there, the black and "colored" prisoners would be ferried to Robben Island, a former leper colony off the Cape of Good Hope, while the white man would stay in a white prison. As the trucks pulled away, white, black and brown arms flashed briefly behind the bars in the clench-fisted salute of the African National Congress. From the crowd came a ragged cry: "*Amandla nga Weto* [Strength is ours]."

SWEDEN

The Idealist

During his 15-year career as a Soviet spy, Swedish Air Force Colonel Stig Wennerström sold the Russians some 160 of his nation's top defense secrets. The suavely handsome aviator, who held the secret rank of major general in the Red army, also spied on NATO, and during a five-year stint (1952-57) as an air attaché in Washington handed his bosses information on the Polaris submarine, the Strategic Air Command, and U.S. nuclear weapons, which he was abie to inspect on the assembly lines. Since his arrest a year ago, Wennerström, now 57, has admitted most of the charges against him, but claimed to be an "idealist" whose only motive was "to preserve the peace and power balance of the world."

Last week, in Department Eight of Stockholm Magistrate's court, Wennerström was convicted on three counts of "gross espionage." He was stripped of his rank—his Swedish colonelcy, that is—ordered to pay the state $98,000 of some $200,000 that he received for his

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

espionage work, and sentenced to life imprisonment. In Sweden this means that he will technically be eligible for parole in ten years. The full details of his career may never be known. The government allowed only 900 pages of the 3,700-page trial transcript to be published; nearly half of the court's 190-page judgment, also, was classified. If it contained any information that the Russians did not already have, it was through no fault of Stig Wennerström.

COMMUNISTS

The Reluctant Satraps

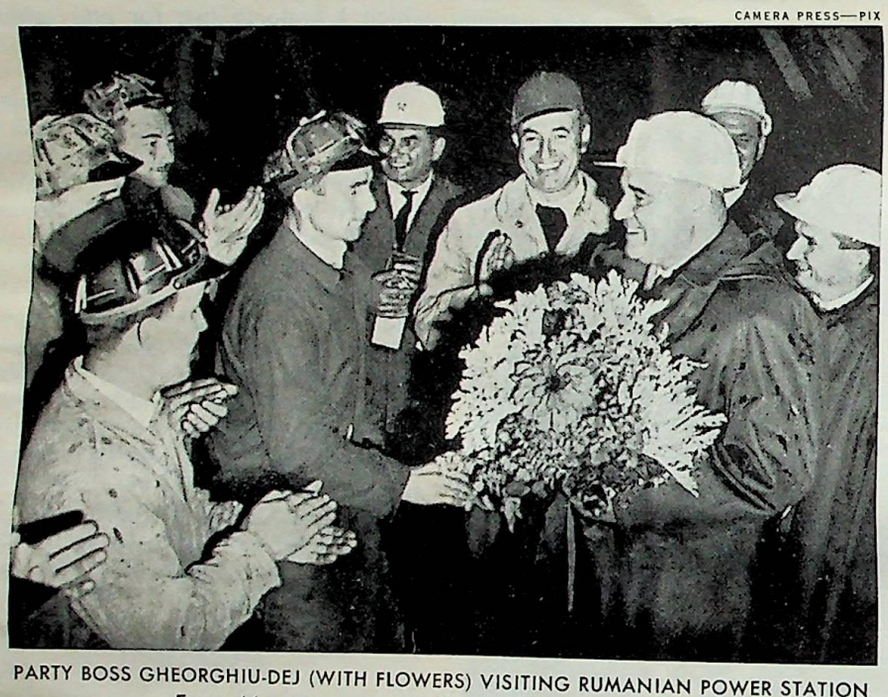
The word satellite is still the way to describe Eastern Europe's Communist states—but just barely. With ill-concealed pleasure, they are asserting their growing independence from Moscow. Back from Bucharest, Patrick Gordon Walker, the British Labor Party's foreign affairs expert, says: "In Eastern Europe at the moment, Khrushchev has about six De Gaulles on his hands."

Right now, Rumania is being the most "Gaullist" in its efforts to set a national course of its own. After signing a trade agreement with the U.S., Bucharest sent representatives to Geneva last week, inquiring about the possibility of membership not only in the West-sponsored GATT trade organization but in Washington's World Bank and International Monetary Fund as well. Reportedly the Hungarians and Bulgarians put out similar feelers. In Geneva, two Rumanian envoys made contact with Common Market bureaucrats, but dropped a scheduled "working lunch" when word leaked out prematurely.

Raw Provider. While Bucharest is changing Russian street names, dropping the Russian language as a compulsory subject in schools and closing the city's Russian bookstores, Rumanians and Soviet ideologues exchange insults. When Radio Moscow called Rumania "intentionally perverse" in its new economic relations with non-Communist countries, Radio Bucharest replied acidly: "Is it necessary for a country to stop developing its own resources in order to get a certificate of good behavior in the socialist camp?"

Behind the quarrel lies Russia's conception of Rumania's role in COMECON, which in 1960 prescribed a division of tasks among Eastern Europe's Communist nations that would have left East Germany and Czechoslovakia as the chief industrial producers of Eastern Europe's Communist world. Under this plan, Rumania, with its oil and farm produce, would have remained largely a provider of raw materials. Rumanian Communist Boss Gheorghe Gheorghiu-Dej, wanting industries of his own, said no to Nikita. Looking outside the Soviet bloc, he proceeded to purchase iron ore from India and turned to an Anglo-French consortium for a $40 million steel-rolling mill plant at Galati, in the heart of Rumania's budding industrial region. Soon Rumania's trade with the West rose from 15% to 40%. Now there are signs that, in order not to leave the field entirely to the West, Moscow is finally ready to send the Rumanians some heavy machinery too.

CAMERA PRESS—PIX



PARTY BOSS GHEORGHIU-DEJ (WITH FLOWERS) VISITING RUMANIAN POWER STATION

From Moscow, no certificate of good behavior.

A Turn to Tito. What Khrushchev really wants from the Rumanians and the other "fraternal countries" is a mammoth conference in Moscow next fall to demonstrate Communist loyalty to the Soviet Union and denounce Peking. The satellites resist this because they fear, probably with reason, that if Khrushchev can clearly establish his mastery over Peking, he will then try to re-establish his mastery over Eastern Europe. In this dilemma, Moscow last week turned, ironically, to Yugoslavia's Tito, the man who by his defiance of Stalin in 1948 made himself the very symbol of "national Communism." Tito knew that only some 50 of the possible 90 major Communist parties in the world were willing to follow the Moscow line against China. Rumania, Czechoslovakia and Hungary might go along with the idea of a conference, but would hardly support a dramatic expulsion of China from the Communist ranks.

Coolly, Tito sat down with Khrushchev, and then agreed to a communiqué that spoke of "friendship," "unidiality," even of "monolithic unity" among Communists. He probably promised to seek support for Moscow among the Communist parties in nonaligned lands of Africa and Asia. There was no sign that Tito was ready to help curb the satraps' growing independence from Muscovy, whose rule in Eastern Europe remains of course predominant but is never likely to be quite the same again.

A Sop for Walter

Adhesive to Moscow through thick and thin is East Germany's Walter Ulbricht, who has waited all these years for a peace treaty that would persuade him to order the U.S., Britain and France out of West Berlin. The persuasion never came, because Khrushchev was confronted by the West's readiness to fight for its rights in Berlin. How to keep Walter reasonably happy? After a round of "fraternal meetings" with Ulbricht in Moscow last week, the answer came with announcement of a 20-year "friendship pact" between East Germany and the Soviet Union. The document pledged mutual assistance in case of aggression and spoke vaguely of West Berlin as "an independent political unit" but specifically upheld the Potsdam Treaty, which had established the Western presence in Berlin. To avoid any misunderstanding, Moscow has made it clear to Washington that the new treaty did not affect the West's position—and was therefore meaningless.

CYPRUS

Knocking Heads Together

Plucked from a conference table in Geneva, U.S. Under Secretary of State George Ball last week flew to Athens and Ankara as a special envoy of President Johnson. His job: to damp down the latest Cyprus crisis caused by the sudden massing of Turkish troops at the seaport of Iskenderun.

In Athens, Ball conferred with Greece's Premier George Papandreou, then jetted on to Ankara where Turkey's Premier Ismet Inönü was already in receipt of a blunt message from President Johnson asking him to cancel at once any decision to land Turkish troops on Cyprus. Ball warned both leaders that the U.S. is tired of having to prevent local wars at the last minute. The knocking of heads together had a surprisingly pacific result. At week's end, Inönü accepted an invitation to come to Washington next week for talks with Johnson, and Papandreou is expected to follow suit before the month is out.

NEHRU FUNERAL BARGES ON THE GANGES
Vanishing in wind, water and dust.

INDIA

Close to the Soil

Although he had already succeeded to the leadership of India, Prime Minister Lal Bahadur Shastri could not begin to govern until all that was mortal of Jawaharlal Nehru vanished in the wind, water and soil of India.

Leaving Delhi last week, a special train crawled slowly through a yellow pall of summer dust. In one coach, draped with red roses, jasmine and heaped with red roses, jasmine and white lotus blooms, stood a large silver-and-copper urn holding Nehru's ashes.* Approaching Allahabad, Nehru's home town, late that night, the urn was carried in procession through the predawn coolness to the riverbank and loaded aboard a white-painted amphibious truck." The boat moved out to a spot where the muddy brown current of the sacred Ganges is joined by the green water of the Jumna River. Airplanes circled overhead, and one dived down to shower rose petals. Small craft crowded close as Nehru's tall, handsome grandsons, Rajiv and Sanjay Gandhi, lifted the urn. Thousands waded into the river in a frenzy of mourning—one luckless woman ventured too far, was swept away and drowned.

As the boys emptied the wide-mouthed urn over the water, a single cannon boomed a farewell salute, the military band fell silent, and the vast crowd roared, "*Nehru amar hai!* [Nehru is immortal]." The remainder of the ashes were scattered all over India, from the beautiful green Vale of Kashmir, which Nehru loved, to the cotton fields around Ahmadnagar Fort, where he had been imprisoned by the British. It was now clear that Nehru had known for months that he lived close to death. On a scratch pad on his desk, Nehru had neatly written the elegiac lines of Robert Frost:

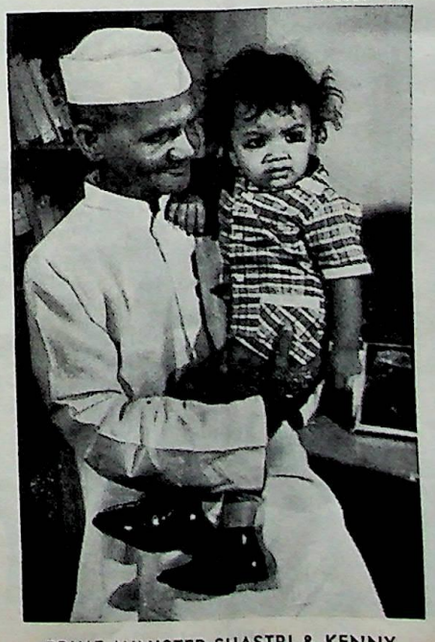
The woods are lovely, dark and deep,
But I have promises to keep,
And miles to go before I sleep,
And miles to go before I sleep.

* This urn was filled with charred pieces identified as bone, while seven smaller urns contained all other ashes, those of Nehru's body as well as the wooden funeral pyre.

Vigorous Turn. With Nehru gone, the gaze of India and the world turned to his successor. Flying back to New Delhi from Allahabad, Shastri was officially installed as Prime Minister and turned vigorously to the tasks before him. A conciliator by nature, he hoped to bring his principal rival, Morarji Desai, into his new Cabinet. Spare, ascetic ex-Finance Minister Desai demanded that he be given a post that would, in effect, make him deputy prime minister and No. 2 man in India. When Shastri countered with the offer of the No. 3 position in the Cabinet, just under that of veteran Home Minister Gulzari Lal Nanda, Desai bitterly refused because he felt "it is not consistent with my self-respect."

Almost all posts in the somewhat lackluster Cabinet were filled by holdovers from Nehru's day, including such familiar leaders as Defense Minister Y. B. Chavan and Railways Minister S. K. Patil. The most important newcomer is Nehru's gifted daughter, Indira Gandhi, who became Minister of Information, may later be promoted to Foreign Minister. That post, as well as the Ministry of Atomic Energy, Shastri kept for himself for the time being.

BALDEV—PIX



PRIME MINISTER SHASTRI & KENNY
Recalling Gandhi.

The first Cabinet meeting centered on Shastri's most pressing problem, India's soaring food prices, which have risen 8.5% in the past year. Finance Minister T. T. Krishnamachari warned that the government may have to enter the food-distributing business, and Shastri is known to be considering the imposition of price controls.

Deep Offense. In his first nationwide broadcast, the new Prime Minister promised to overhaul the nation's creaky, corrupt bureaucracy. While reaffirming Nehru's policy of nonalignment, Shastri pointedly quoted only one foreign leader, Lyndon Johnson, who had said that the world's best tribute to Nehru would be peace. Shastri held out a warm hand of friendship to neighboring Pakistan, regretting that the two countries have been so long at odds over Kashmir, and praised Pakistan's recent peace proposals as showing "wisdom and understanding." As for Red China, Shastri declared that Peking "has wronged us and deeply offended our government and people," but he also expressed a vague hope for negotiation.

As Prime Minister, Shastri will continue to live in his small bungalow at 1 Motilal Nehru Place (a street named for Nehru's father), although living quarters for his family and his many relatives will be expanded by taking over a bungalow next door. Nehru's white-walled residence will probably become a museum. Shastri was garlanded by visitors on his wide lawn and posed for pictures with his grandson Kenny, riding on his shoulders. The child had been called Kennedy from birth in honor of the late U.S. President, but after the Dallas assassination the family decided it would be more decorous to give him the nickname of Kenny.

Despite all of India's gigantic problems, Shastri seems to be off to a fair start. His opponents in the Congress Party, ranging from Morarji Desai on the right to Krishna Menon on the left, are likely to give him several months' grace before they start rocking the boat. And after 17 years of Nehru's aristocratic rule, the mass of the Indian people appear to regard Shastri as representing a return to the homey, close-to-the-soil leadership of Gandhi.

PANAMA

Verdict: The U.S. Was Not Guilty

In the wake of the Canal Zone riots last January, Panama accused the U.S. of violating the U.N.'s Universal Declaration of Human Rights. This violation, Panama charged, was committed by the U.S. Army when it fired "on the defenseless Panamanian population" and denied Panamanians "the right of freedom of peaceful assembly and association." The Panamanian government asked the Geneva-based International Commission of Jurists, an unofficial but highly respected group of international lawyers, to investigate the case.

Last week the I.C.J. made its report. Verdict: not guilty. The U.S. violated no one's "human rights." Indeed, the Panamanians themselves, whatever their legitimate grievances, were considerably to blame for the four days of violence in which 26 were killed, 400 injured.

Careful Preparation. A three-man committee—Professor A. D. Belinfante of Holland's Amsterdam University, Judge Gustaf Petrén of Sweden, and Navroz Vakil, a Bombay attorney—spent 14 days in Panama last March and conducted 100 hours of hearings.

The committee found that the flag-raising march on Balboa High School by some 200 Panamanian students "appears to have been very carefully prepared and not a spontaneous movement," that Panama's President Roberto F. Chiari may well have known about it in advance and that, in any event, the Panamanian government did absolutely nothing to stop the subsequent rioting. For four days, from Jan. 9 to 13, said the committee, Panama's peace-keeping National Guard was curiously disarmed and "purposely kept away" from the trouble spots. Said the committee: "There was no evidence before us that any attempts were made by the authorities of the Panamanian Republic to assuage, calm or otherwise control the crowds."

Long, Hot Wait. As for the U.S., American students at Balboa acted badly, and Canal Zone police were less than gentle with the crowds in the early stages. Nevertheless, U.S. G.I.s withstood heavy gunfire along the border of Panama City for one hour before firing back, first with shotguns, then with rifles. In Cristobal, at the other end of the canal, U.S. troops were under fire for nearly two days before retaliating—with shotguns only. "By then, three U.S. soldiers had been killed and twelve had been wounded."

Concluded the committee: "The tempo and violence of the disturbances were such that there is little doubt that they held out a real threat to life and security, which could only be met by strong measures. In these circumstances, Zone authorities and U.S. military forces were entitled to use force."

Another Payoff

The polls closed more than a month ago, but Panama's politicians are still paying off election debts. And for some the only way is bullets and blood.

Four weeks ago, Aquilino Boyd, Panama's fire-breathing Ambassador to the U.N. who doubles as a federal Deputy, shot and wounded a newspaper editor in revenge for an uncomplimentary story about his re-election attempt. Last week another prominent Panamanian was involved in a shooting vendetta—on the receiving end. Lying in a Panama City hospital with severe bullet wounds was Roberto ("Tito") Arias, 45, moneyed husband of British Ballerina Dame Margot Fonteyn, nephew of just-defeated presidential candidate Arnulfo Arias, and proud possessor of a long and varied career in his own right.

Bag & Gun. After marrying Dame Margot in 1955, Tito twice served (1955-58, 1960-62) as Panama's Ambassador to the Court of St. James's. But it was what he did during his undiplomatic moments that made him interesting. Five years ago, angry at the then President, he launched a low-comedy invasion of Panama with seven men and a couple of boatfuls of arms. The invasion failed, of course; Dame Margot, who was along for the ride, was expelled from the country, while Tito scampered into the Brazilian embassy until the storm blew over. Since then, he has been linked with various gun-running efforts and last year, still another caper—alleged whisky smuggling—landed him in a Panama jail for three days until charges were dropped.

All that ancient history didn't bother the voters, who overwhelmingly elected Tito to the National Assembly last month. Running with him as an alternate Deputy was one Alfredo Jim[énez], 33, an old crony who campaigned ergetically for both Tito and Ar[nulfo]. In return, he fully expected to be c[alled] from the elected alternates to sit Tito whenever he is away. Since often, Jiménez was counting on e[arning] a near full-scale $12,000 annuall[y]. Tito chose someone else as his alt[ernate], and Jiménez was left holding the and a gun.

At a Traffic Light. One day last as Tito's chauffeur-driven lim[ousine] halted for a traffic light in P[anama] City, Jiménez leaped from a near[by] crying, "I won't let you doub[le] me!" Jiménez then pumped fo[ur] lets into Arias' neck, right shoulde[r] right side.

Rushed to a hospital, Arias [was] went two lengthy operations. [Dame] Margot went on with her show in [Eng]land, took the curtain calls and [then] flew to Panama. At week's end, do[ctors] were hopeful of saving Tito's life [but] one bullet may have damaged his s[pinal] cord, possibly paralyzing him from neck down. And Jiménez? The [far-]reaching frustrated police is that [he's] hiding out in the home of another [pol]itical pal, one who has legislative im[mu]nity, and is thus quite beyond their re[ach].

BRAZIL

Crossing Out the Ex

"The President of the Republic, [un]der the authority bestowed upon [him] by Article 10 of the Institutional [Act] resolves to cancel the legislative m[an]date and suspend for ten years the [po]litical rights of Senhor Juscelino [Kub]itschek de Oliveira." With that [terse] statement, the new government of Br[a]zil last week ostracized the count[ry's] former President on grounds of corr[up]tion and Communist-coddling. The g[ov]ernment accused Kubitschek of a w[ide] variety of offenses—land manipulati[on]

LIFE EN ESPANOL

CONFISCATED SCOTCH IN RIO

cepting kickbacks from contractors, king deals with the Reds for political port. So long as the suspension lds, Kubitschek may not run for sident or any other office, hold a gov- rnment job, or even vote.

Within an hour of the announcement, ndreds of people jammed the street side Kubitschek's beach-front apart- nt in Rio. "He'll return! He'll re- rn!" they chanted. In Kubitschek's partment, supporters hoisted the ex- sident to their shoulders and carried m to the window. Fans and foes alike lied to Kubitschek's side. "Abusive, nstrous and violent measure," said eraclito Sobral Pinto, president of the razilian Bar Association and longtime tic of Kubitschek. "The real loser," id Archbishop Dom Helder Câmara, as not Kubitschek but Brazil."

Kubitschek's PSD party immediately ithdrew its support from the govern- ent majority bloc in Congress, reduc- g the bloc to a minority with only e-third of the votes. The govern- ent's extreme action also drove the SD back into its old alliance with the abor Party of deposed President João oulart. Through it all, the revolu- ionary government of Humberto Cas- llo Branco stood its ground, stolidly ent ahead with still another "purge" st that may run to 500 names.

TRADE & COMMERCE

The Great Leveler

"This evil thing," said a harassed Ar- entine official, "is like a huge centi- ede, a giant having 100 heads and housands of feet, favored by the vast xtent of our frontiers, by haphazard egislation piled up over the years, by a ack of definite means of combatting it." Communism? Not this time. The official was bemoaning a corrupting force that antedates even Marx—the legion of Latin American smugglers who, to the policeman's dismay and consumer's de- ight, control some 20% of Latin Amer- ica's import trade.

In Buenos Aires last week, customs officials were auctioning off a $100 mil- lion hoard of contraband—1,500 cars, mountains of nylons, radios and TV sets —confiscated over the last few years. It was only the merest drop in a very deep bucket. By conservative estimate, Argentine smugglers will do a $300 million business this year, while their counterparts in Brazil will gross an even handsomer $400 million. Total sales for all Latin America are well over $1 billion annually.

Camels with the *Corvina*. Latin Americans may differ on politics, on soccer stars, on blondes *v.* brunettes. But smuggling is the great leveler and common denominator. Domestic industries cannot supply the varied needs of the developing countries, and protective governments aggravate the shortages by slapping prohibitive tariffs on imports. The official purpose seems noble: to help fight inflation, make domestic goods more competitive, and generally steer economies along tried and proven channels. In the Dominican Republic duties average 70% of value; in Colombia they run up to 150% on some items, while Argentina charges 200% on such treasured goods as steak sauce, toys and perfume.

So almost everybody smuggles, from big-time professionals to the lowly fisherman who returns with a case or two of cigarettes along with his *corvina*. Last month customs men in Buenos Aires decided to have a look at a returning Argentine courier's suspiciously bulky duffel bag, all duly marked and sealed as a "diplomatic pouch." It contained 124 blue mink pelts. And then there is the army of "ant smugglers," the ordinary travelers who sneak everything from gems to Japanese cameras across the porous borders in their bulging luggage.

In Brazil, where smugglers bring in an estimated 250,000 transistor radios each year, one Japanese model that retails legally for $46 costs $7.50 at your friendly smuggler's outlet. Guatemalans smuggle almost anything made in Mexico; Costa Rica's national lottery is pretty unexciting, so Costa Ricans slip in big wads of tickets from Panama, where the payoff is bigger. In Chile Camay soap rates high, since local brands are sudsless—and expensive. Scotch whisky is a durable favorite everywhere. (Enterprising Argentine distillers now produce under license a domestic brand labeled "Old Smuggler," but it cannot quite pass the hangover test, and customers still prefer the imported stuff.) U.S. autos bring a 300% markup on the legal market in Argentina, and there is a thriving undercover import business in crates marked "agricultural equipment." An even more sophisticated wrinkle is smuggling airplanes: near the seaside resort of Mar del Plata, Argentine police are currently investigating a shipment of planes—53 contraband Cessnas and Pipers—smuggled in piece by piece. At a rough estimate, the haul would have been worth $1,000,000 to the smugglers.

Diamonds in Chocolate Bars. By ground, sea and air—they come. The Chilean navy recently fought a noisy battle with the crew of a freighter loaded with a contraband cargo of cigarettes, whisky and, of course, soap. In Venezuela police found themselves confiscating the same launch three times—the smugglers simply kept buying it back at auction. In Argentina one crafty operator kept police baffled by using two planes with the same markings and registration—one for smuggling and one for legitimate freight. Other pros ship Scotch in gasoline tankers, diamonds in chunky chocolate bars, cigarettes under false truck floor boards.

To cope with the smugglers, Peru, Colombia and Ecuador are strengthening their border patrols. Practically every nation is tightening customs regulations. Argentina has gone so far as to bar all imports of furs, Scotch, cigarettes, toys, nylons and sporting equipment. But since no one took the trouble to check the stocks at the time of prohibition, storekeepers have inexhaustible inventories left over—naturally—from before.

To the glass of fashion, it was indeed the mold of form. When **Amanda Jay** ("Ba") **Mortimer**, 20, pacesetting daughter of Best-Dressed Mrs. William S. Paley and Manhattan Socialite Stanley Mortimer, married Law Student Shirley Carter Burden Jr., 22, on Long Island, Women's Wear Daily styled it in advance as "the wedding of the year." Ba wore white organza by Mainbocher; Ma, coral plaid taffeta by Dior. But it was more than that, and the reception at the estate of CBS Chairman Paley proved a crossroads of several worlds: Mr. and Mrs. Winston Guest, Actress Lauren Bacall, Mr. Kenneth (the hairdresser), Columnist Joseph Alsop, Publisher John Hay Whitney, Hollywood's Mike Romanoff, and Douglas Fairbanks Jr., who flew in from London to be one of 19 ushers. Said Paley when the affair was over: "I wish we had a wedding every week. What are we going to do next week?"

Hello muddah, hello faddah,
Here I am in old Vancouver,
And some B.C. beats are swinging,
They are picketing the nightclub where I'm singing.
With them long beards, strumming gui-tars,
Sounding like a bunch of cheetahs,
They say funny folk songs all stink,
*Waving placards, "**Allan Sherman** is a Folk Fink."*
Now I ask you, Joanie Ba-ez,
Petie Seeger, Burlie I-ves,
Won't you come and buy my tickets?
Who is phony? Is it me or is it just the pickets?

• • •

"All I want is for everyone to let me be a normal girl again," said Piccadolly **Christine Keeler**, 22, last December as she marched off to London's Holloway Prison to serve nine months for perjury in the trial of one of her lovers, Aloysius ("Lucky") Gordon. But six months of playing Bertha the Sewing Machine Girl, making blouses in prison, have given the past mistress of art photography notions of graduating to Vistavision. Out of quod last week, three months early for "good behavior," Christine announced, "I'd like to go into films. I know I've no experience, but I've got to begin somewhere."

• • •

He was engaged to marry pretty Olympic Skier Barbi Henneberger when she was killed in the April 12 Alpine avalanche that also took the life of U.S. Downhill Ace Bud Werner. And the memory of that tragic day is not growing any dimmer for **Willy Bogner Jr.**, 22, son of the Bavarian stretch-pants manufacturer and a fledgling moviemaker. He has been indicted by a Swiss state prosecutor for homicidal negligence in Barbi's and Werner's deaths. Such cases usually receive light sentences, but, for the sake of assigning responsibility, the state expects to prove that in his eagerness to complete a documentary in which the two skiers were starring, young Bogner, as producer of the film, ignored government notices and broadcasts warning of dangerous conditions.

What does KLM want with a pile of crushed cherry stones?

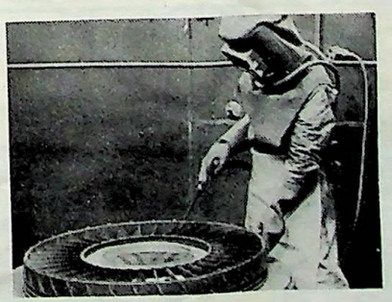
Believe it or not, crushed cherry stones are one of the few things that will fetch the carbon off jet rotors without scratching the surface underneath.

Sand is too coarse, pumice too fine - KLM found that crushed cherry stones are just right.

Now you might not think that a few scratches would make all that much difference.

They don't.

It's just that KLM likes to keep all its engines in perfect shape.



Not that 'sandblasting' with crushed cherry stones is a new technique. KLM was using it to clean the engines of NATO jets years before the first jetliners went into service across the Atlantic.

We just thought you would like to know. KLM is careful.

That's why many experienced travellers believe that the dependable Dutch have made KLM the most reliable of all airlines.

NEWSPAPERS

Carping about a Candidate

Until Governor Scranton's belated entry into the Republican presidential race last week, most U.S. newspapers correctly assumed that Barry Goldwater had the nomination sewed up. And most, large and small, didn't like it. Seldom has a presidential candidate—especially a potential Republican leader—evoked such dissatisfaction, dismay and wrath from the cartoonists and editorial writers of the U.S. press.

"It is shocking to realize," said the Denver Post, "that Goldwater's philosophy is now about to become the official political philosophy of Republicans all over the nation." The Post envisioned the consequences: "The repudiation and ultimate destruction of the Republican Party in the United States."

Other newspaper prophets projected much the same future. GOLDWATER'S WIN COULD DISMEMBER HIS PARTY, read the caption above an editorial in the Louisville Courier-Journal. California, predicted the Detroit News, "has all but assured the party of disaster in November." This conclusion was also drawn by the New York Times: Goldwater's nomination, said the Times, "would be a disaster not only for the Republicans but for all who believe that a vigorous two-party system is necessary to the political health of America."

Difficult Office. The Miami News abandoned hope: "With Senator Goldwater in command of the Republicans, the choice is between moving the country ahead with the Democrats or regressing with the Republicans." The liberal St. Louis Post-Dispatch banked on the possibility that Goldwater might prove too gamy for national consumption. "He arouses a certain degree of delirium among extreme conservatives," said the Post-Dispatch, "but there are not enough of them to win an election."

"If Goldwater is nominated," said the Chicago Sun-Times, "we predict that he will not carry more than two states—not necessarily Maine and Vermont." The Washington Star published a declaration of its own pride at having opposed well before California "a candidate so manifestly unsuited to the high and difficult office he seeks." Said the Nashville Tennessean: "What little identification with the 20th century the Republican Party has been able to achieve was shattered by the galloping hooves of Senator Goldwater's horseback program." Noting his victory in California, the New York Herald Tribune said: "We didn't want him to win. We don't pretend to be happy that he did. But we salute him for it."

The Trib was joined by the Los Angeles Times. Having urged its readers to spurn Goldwater in the California primary, the Times then bowed to the primary's unpalatable result: "The Times congratulates Goldwater, both for his victory and for the determination to rebuild a unified party. There is no place, now, for anger or abuse."

Healthy Development. Perhaps not. But anger and abuse were just about the only editorial commodities around. Papers that could look upon Goldwater with approval were in the minority. Leading it were the Wall Street Journal and the New York Daily News. "What, pray," asked the Journal, coming to Goldwater's defense, "is so antediluvian about saying that the pendulum . . . between individual freedom and State authority has swung too far to the latter? Plainly, it has." Said the Daily News: "Goldwater's victory in the convention next month would guarantee U.S. citizens a clearcut choice in November, as between conservative and liberal government. That is an option which American voters haven't had for a good many years and we think it's a highly healthy development."

"We will not embrace the civil rights

Another Voice in Atlanta

If Atlanta's jointly owned dailies, morning Constitution and the eve Journal, were to go out of busi tomorrow, their disappearance w gladden the heart of many a Geor But none would rejoice more than Ja C. Davis, 69. After 16 years in the U House of Representatives, Davis defeated for re-election in 1962 i campaign that drew enthusiastic pa cipation from both the Journal a Constitution. Lacking the power to d der his tormentors into silence, ex-C gressman Davis last week did the n best thing. He founded an opposition da ly, the Atlanta Times.

These days it takes a generous s ply of gumption and money to laun a daily in the face of established opp sition. The last time anyone had n nerve to try was in Phoenix, Ariz., wh after two years, the upstart competit have yet to find their place. But Atl ta's new paper looked uncommonly h for a journalistic juvenile. The Time 128-page debut issue thumped on 17 000 doorsteps, a neatly balanced, e pleasing display of big pictures and a ple white space to break up the bu type. The paper's management claim a solid circulation, after the souve hunters dropped out, of 140,000. T starting bankroll was impressively larg $3,000,000 raised by a public stock i sue to which some 41,000 investors, Georgians, subscribed.

Such backing certainly suggests th the paper has plenty of well-wishers, an it is just this point that Publisher Dav means to prove.

Central Weakness. In the opinion o many Georgians, the Journal and the Constitution are a disgrace to all red-blooded white Southerners. Roy V. Har ris, a rallier of the state's racists, usually refers to the Constitution's publisher a "Rastus" Ralph McGill. While in office Congressman Davis frequently castigat

Digitized by Arya Samaj Foundation Chennai and eGangotri

the papers from the House floor. the mud throwing of this collection little peewees," he said in 1961, mounts to about as much as a flock grassbirds* in a fence corner chatter- at an eagle."

As measured by some familiar Dixie ndards, Atlanta's two existing dailies ve earned such opprobrium. Both are beral in outlook, and have long held at it is morally wrong to discriminate on the basis of race. The Constitution was one of the first and is still one of the few Southern papers to accept the 1954 U.S. Supreme Court decision on public school integration. Both papers continue to champion the role of reason. Only last month Constitution Editor Eugene Patterson argued that "the central weakness of the old Southern segregationist position" is its effort "to justify wrong instead of trying to rectify it."

Expected Tolerance. It was this sort of talk that started James Davis on his campaign to vary Atlanta's newspaper conversation. He found some willing segregationist cohorts, among them Ross Pickett, who is now Georgia's Republican national committeeman, and Lester Maddox, proprietor of an Atlanta fried-chicken joint called the Pickrick. From the Journal, Davis and companion lured Associate Editor Luke Greene, who had served 24 years on that paper without ever quite approving its editorial approach. "I have always been a conservative," said Greene, who was appointed Times editor.

The Times has pointedly avoided distinct declarations of policy on the race issue. "We are not setting out to be any form of extremist newspaper or trying to do anything that would create turmoil," said Editor Greene. "But I don't think we will go along with a lot of the tactics of the integration newspapers. It can be assumed we will not embrace the civil rights bill." The Times promised "to be conservative—responsibly so. We will be independent, free of any party affiliation, and seek at all times to reach decisions that embody character, discretion and sound judgment."

No Reason for Mixing. At the Journal and Constitution, the birth of the Times was greeted, strangely enough, with total silence. Neither paper printed a line, as if they considered the newcomer beneath notice. "We've got our newspapers and they've got their newspaper," said Bill Ray, executive editor of both the Journal and the Constitution, "and I don't see any reason for mixing them up."

Perhaps Atlanta's old dailies could afford to be lofty, with their circulations at a new high: 203,000 for the Journal, 258,000 for the Constitution. They were figures, however, on which Atlanta's new publishers had very definite designs of their own.

*Pisobia melanotos, commonly known as the meadow snipe. Davis' colloquialism salutes the bird's tendency, when alarmed, to take refuge in tall grass.

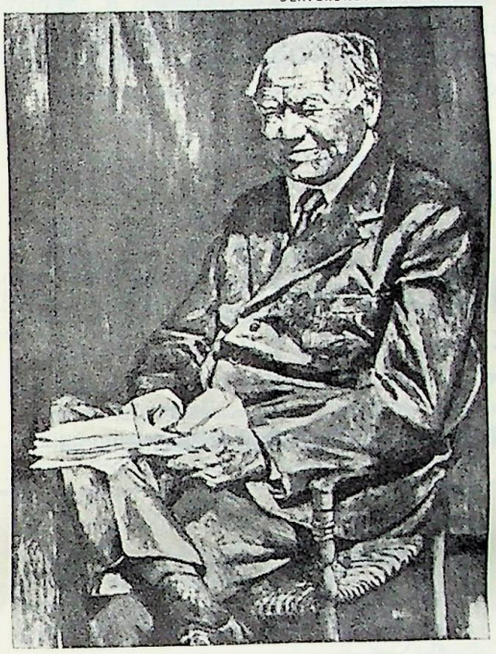
PUBLISHERS

Larger Than Death

He spoke with neither resignation nor despair. But there was pride in a long lifetime of accomplishment, and his voice rang with the dauntless curiosity of an old man facing the diminishing future. "This is my final word," said William Maxwell Aitken, the first Baron Beaverbrook, at his 85th birthday party (TIME, June 5). It was, indeed, his valedictory. Last week at Cherkley, his gloomy Victorian estate in Surrey, the Beaver's heart, which had endured so long despite bouts with asthma, sciatica and gout, finally failed.

From longtime admirers and antagonists tributes flowed in for the man who

BEAVERBROOK ART GALLERY



SUTHERLAND'S BEAVERBROOK
Faith was a battle flag.

put a unique and inexpungeable stamp on British history. "I am deeply grieved at the loss of my oldest and closest friend," said Winston Churchill. "The Daily Telegraph," said that paper, "found itself on the opposite side of almost every major argument in which he and his newspapers engaged. But there was never any disputing the deep impact which he had upon his times." Wrote the Times: "He was that increasingly rare phenomenon in a standardized age, a personality quite uncramped by convention or inhibition."

Dragooning a Voice. "Journalism is the most fascinating of all professions," Beaverbrook once wrote, "and if I had my time over again, I would give my whole life to it." But nearly half his life lay behind him when he bought the London Daily Express in 1916, not to turn journalist but to dragoon a public voice for his political ambitions. The self-made Canadian multimillionaire aspired to nothing less for himself than a tenancy at No. 10 Downing Street, nothing less for England than perpetuation of the British Empire. Both dreams went glimmering. He could take a strong hand in changing British governments, and did three times, but he never headed one himself. He could thunder the cause of Empire in the pages of the Express, but the cause was doomed.

There were compensating rewards. The Express, a pale failure when Beaverbrook bought it, grew under his kinetic stewardship into a popular giant of 4,300,000 circulation; its pages provided all Fleet Street with daily lessons in the craft of journalism. When World War II began, Britain's Finest Hour was also his; as Churchill's Minister of Aircraft Production, he put up the cloud of Spitfires that saved the day. These and other accomplishments invested him with the quality of living legend. "Positive, bee," wrote a columnist in a Canadian paper, "comparative, Beaver; superlative, Beaverbrook." Sir Beverley Baxter, M.P. and once an Express managing editor, called him a cross "between a magician and an avalanche."

No Cease-Fire. Neither praise nor censure concerned the Beaver much. "Fire and be damned! That's what I believe," he told a recent visitor. It was an article of his faith, one that he carried like a battle pennant every foot of the way that led from the Presbyterian minister's manse in Newcastle, New Brunswick, where he spent his youth. Conscious of his place in Britain's history, he wrote a dozen reminiscent books as an obligation to posterity, and had two more in progress when he died. "I belong to the past," he had said recently.

But he could not bring himself to cease firing. And, like the activist he was, he overruled three times his self-announced retirement—the first time in 1927—and stayed on as master of the Express to the end. "My son," said Beaverbrook recently, "will do better after I am gone."

How to Capture a Press Lord. Son Max Jr., 54, will have his hands full, even though the four papers* he inherited are carefully insulated from Britain's crippling death duties by a private trust set up years ago. "It won't make any difference to the papers," said their new proprietor of his father's death. "They will continue with the same policies. I will be at the head of them." Then he added that he was renouncing the crest that would otherwise have passed to him on his father's death. "The title was earned and won by my father," he said. "Certainly in my lifetime there will be only one Lord Beaverbrook."

It was, in a way, the same sort of solution chosen by Artist Graham Sutherland when the Beaver commissioned a portrait ten years ago. How to capture the essence of the intransigent press lord? Sutherland finally settled for painting his subject just as the Beaver's friends and enemies had seen him: a little larger than life size.

* Besides the Daily Express, they include the Sunday Express, which is a separate paper, the London Evening Standard and the Glasgow Evening Citizen.

A9 - A New Semi-Automatic Welder

Already an established favourite in the semi-automatic welding field in Europe the A9 offers low-cost welding on many thin plate jobs.
Employing the short-circuiting arc principle it welds with high speed and maximum economy thin plates of steel, stainless steel, copper, bronze or aluminium in any position. A unique and easily handled lightweight welding gun which is compressed air driven and a special rectifier, the LBA 200, maintain a constant wire feed speed and arc voltage. Gas used is CO_2, argon or mixtures. For further details write:

The equipment is compact and manoeuverable and ideal for production line work in automobile and similar industries.

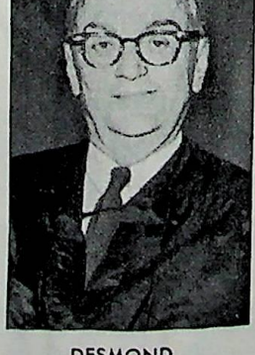
CRIMINAL JUSTICE

A Dearth of Defenders

To a television viewer sated [with] Perry Mason, Sam Benedict, Defe[nder] and assorted colleagues, the supp[ly] first-rate criminal lawyers may ap[pear] plentiful enough. But outside the [glow] of the TV camera, the breed is in [dan]ger of dying out. Such noble co[ncepts] as "right to counsel, fair trial, and [due] process" will become meanin[gless] warned New York State Chief J[udge] Charles S. Desmond last week, [unless] more lawyers are willing to repr[esent] criminal defendants. Addressing [a] ton University's graduating law c[lass] he called on law schools to stop p[ush]ing students "at the two admired [ends] of Wall Street law practice and c[lerk]ships to appellate judges." He [urged] that the schools instead expand [their] criminal courses and Legal Aid ac[tivi]ties to give "students at least a s[ense] of real criminal court work."

Judge Desmond's complaint is [em]phasized by some compelling testim[ony]. In the current *Atlantic*, Chief Ju[dge] J. Edward Lumbard of the U.S. C[ourt] of Appeals in New York writes that [in] his busy jurisdiction bail bondsm[en] steer paying defendants to "a law[yer] who will kick back to them a subst[an]tial part of the fee." Often this "[ig]and incompetent" court hanger[on] falsely claims that he can "fix so[me]one" for a higher fee. Since he "sel[dom] knows any law or reads any cases," [his] arguments in court are "so transparen[t]ly hollow that it is not easy for m[ost] juries to sympathize with his client."

Actually, things can be better [in] the 60% of criminal defendants—up [to] 75% in New York City—who can[not] afford a lawyer. In many cities, the [in]digent can rely on a growing publ[ic] defender system or on agencies [like] New York City's pioneering Legal Aid Society. Yet the city, paying less than half the society's costs, puts up only $250,000 a year *v.* $4,400,000 for the district attorney staffs that prosecute most of the society's clients. Indigents often fare even worse elsewhere, [as]



DESMOND

LUMBARD

Contradicting the TV image.

NEW-STYLE COURTROOM IN TACOMA
Folding away the Murphy bed.

lumbard. "The judge usually picks out some lawyer who happens to be in the courtroom," typically a novice just admitted to practice. "After a few minutes conference, the defendant is advised to plead guilty, and he feels he has no choice but to do so. Everyone who participates in these proceedings knows that this is a farce."

To remedy the situation, Judge Lumbard would require criminal-trial training for admission to the bar. And he would try to keep lawyers interested in criminal cases by allowing them occasionally to prosecute as well as to defend—a long-admired practice that has helped keep many outstanding British barristers active in criminal law.

THE COURTS

Room with a View

In many ways, the traditional U.S. courtroom seems only too well designed for blind justice. Jutting into the room like an oversize Murphy bed, the judge's bench often obstructs the view of jury members so much that they cannot see exhibits that lawyers show the judge. Equally bad, the jury has only a side view of the witness stand and cannot see the fullface expressions of witnesses under questioning. The judge is even worse off: only by craning his neck can he see anything but the back of a witness' head, and he must swivel a full 90° to catch jury-box dozers.

A drastically different design (*see* diagram) is now being tested in a Tacoma, Wash., federal district court. Breaking with a pattern that dates back to the Middle Ages, Judge George Boldt, 60, moved his bench into a corner, put the witness stand in his old spot, stationed the jury box so that jurors can look directly at the witness, and gave the attorneys a lectern at which to stand while speaking and questioning witnesses.

After a thorough tryout, Judge Boldt pronounced his new courtroom "greatly preferable" to the old design on a number of counts. Because the jury box and bench are far apart, he found that he could confer with attorneys off the record without having to dismiss the jury —a time-wasting maneuver in other courtrooms. He also noted a "calmness and ease" during trials because "everybody could see and hear without strain." He liked especially his more direct view of the witness stand ("I can practically take a head-on look") and his eye-line relation to the jury ("The judge can look from one juror to another, and each juror understands that he is being spoken to individually"). So many of Judge Boldt's colleagues are enthusiastic about his new courtroom that the General Services Administration, which bosses the construction of new Government buildings, is considering adopting the design for future federal district courts.

STATUTES

No Right Not to Work

What do stubborn children, fortune-tellers, jugglers, gypsies, practitioners of *hoomanamana* (Hawaiian black magic), sleight-of-hand artists, common fiddlers and persons who paint their faces have in common? Under the varying laws of the 50 states, they are all vagrants and punishable by fines of up to $1,000 and two years in jail. Almost without exception, such charges would be laughed out of court. But vagrancy laws are so vague that they apply to a great many other people too—and when they are used, or when the police even try to put them to work, they are no laughing matter.

Vagrancy laws got their harsh nature in harsh times. After the Black Death decimated 14th century England, such a statute was enacted to keep workers from roaming about to take higher paying jobs and to require all able-bodied men to work. The notion that everyone should work appealed to the moralistic settlers of Colonial America who so

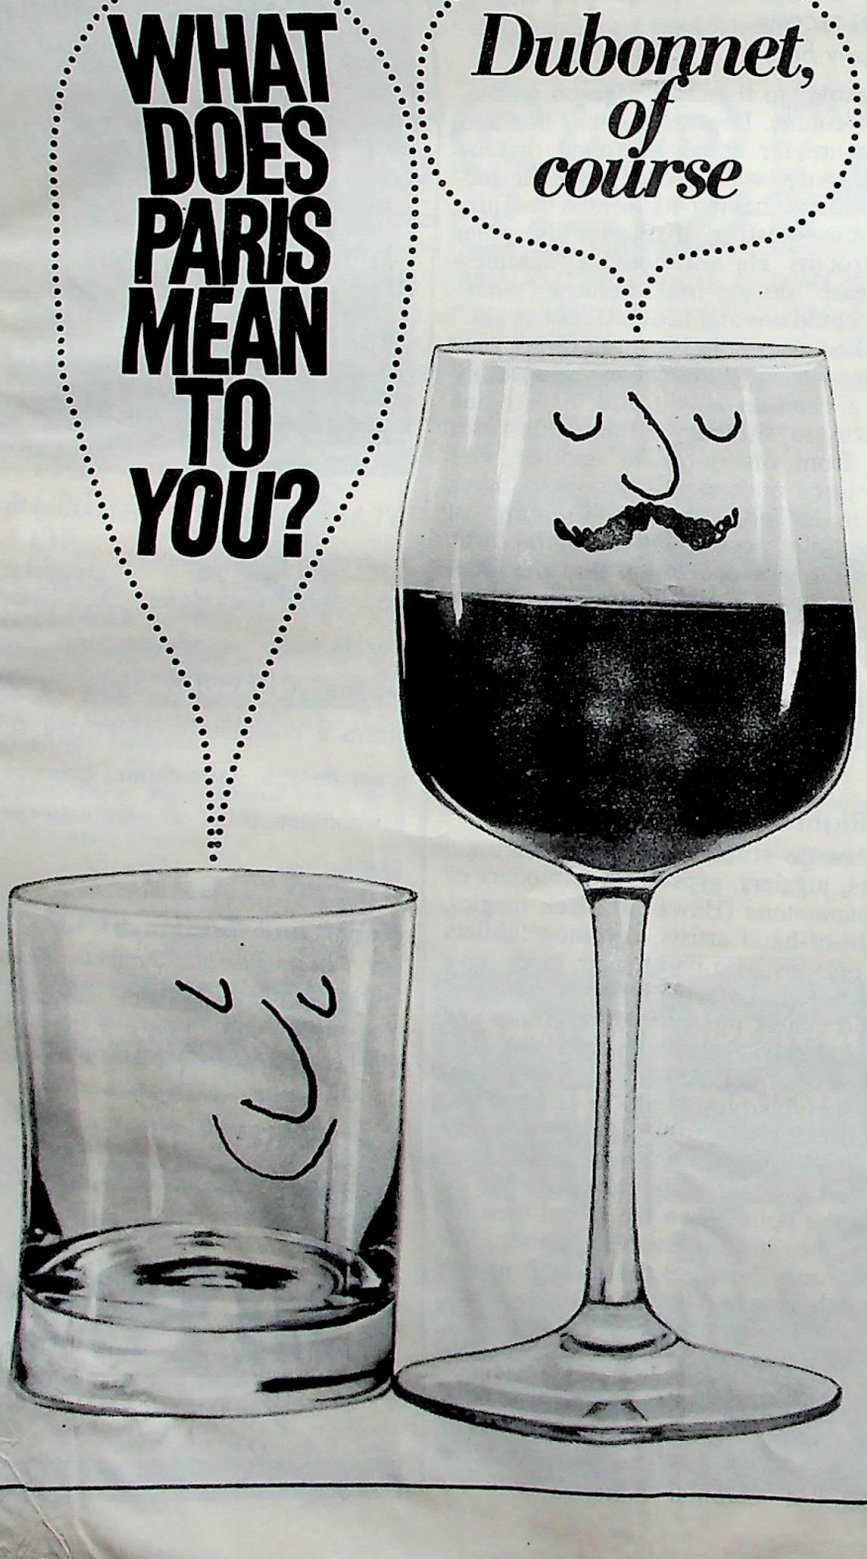
DUBONNET IS A PRODUCE OF C.D.C. EXPORT DIVISION 30 AVENUE KLÉBER PARIS



E. Du. 148

preserved the duty-to-work concept
the ancient attitude still persists—
one who is drifting about and re
to work must be a criminal and sh
be locked up.

Elastic Uses. Such a presumptio
guilt conflicts with modern U.S. l
concepts. Yet when a person is bo
for vagrancy, it is, in effect, up to
to prove his innocence, and for
drunks and down-and-outers who
the great majority of vagrancy ar
this can be difficult. Since vagran
regarded in all states as either a
offense or misdemeanor, defendan
usually given no chance to con
lawyer and prepare a defense. The
summarily tried by police court
magistrates in procedures that often
only seconds.

In addition to bagging bums, p
use vagrancy laws as catchalls
which to hold crime suspects during
vestigations, to keep tabs on illicit
tivities, to chase undesirables ou
town, and to pester criminals on w
they have been unable to pin a rap
general, the attitude is that the laws
there to use when no other law
serve. New Orleans uses vagrancy l
to jail gamblers. St. Louis police
in prostitutes for vagrancy "just to
them know we have them under sur
lance." In Philadelphia a man who
sisted on making love to his wife th
and four times a night was jailed
vagrancy because, as a social wor
explained, "the magistrate couldn't th
of anything else, and he couldn't lea
him there with that poor girl." In Ma
hattan two weeks ago, Gambler Fra
Costello was arrested for vagrancy wh
dining in a theater-district restaura
Dinty Moore's. Costello's lawyer ch
lenged the charge, and a judge quick
dismissed it after the arresting offic
admitted that he had not heard anyo
offer 73-year-old Costello a job a
Costello refuse to take it.

New Trend. The ease with whi
Costello beat the rap shows the weak
ness of vagrancy laws. Yet precisely
because the prosecution usually back
off so fast on such charges when th
accused is prepared to fight, vagran
laws are seldom tested in court, whe
they would almost certainly be ruled
unconstitutional.

Do the police need such vague an
questionable aid? Many jurists who op
pose the vagrancy laws on principle, h
have no desire to reduce police efficie
cy, point out that crime-conscious U.S.
communities are only too willing t
write strong new measures—such as
New York's stop-and-frisk law (TIME,
March 20)—to give police the powers
they say they need.

Spearheading the drive to replace the
old laws with sensible, precise new ones
is the prestigious American Law Institute. Its new model penal code would
permit police to arrest loiterers behaving in an alarming manner, but would
make sure that the offender was arrested
for what he did and not for what he was.

"AMERICAN EAGLE" CROSSING BOW OF "CONSTELLATION"

A good start at self-selection.

SKIPPER COX

SPORT

YACHTING

Giving Them the Bird

As of now, the *Eagle* screams.

In the first week of America's Cup trials on Long Island Sound, the Aurora syndicate's brand-new *American Eagle* sailed off across the starting line seven times—and seven times came home victorious. It was all just practice as far as the New York Yacht Club was concerned. The boat that will defend the 113-year-old America's Cup against Britain's *Sovereign* or *Kurrewa V* will not be picked until after the final trials off Newport in August. But in the meantime, *American Eagle* was doing a pretty good job of "selecting" herself. In the New York Yacht Club's annual spring regatta, she whipped both *Columbia* and *Constellation*, the other highly touted new twelve. Then, in head-to-head races, she beat them both again and took two straight from Ted Hood's *Nefertiti*. Finally, to top off her week, she really rubbed it in against *Constellation*—by the embarrassing margin of 5 min. 31 sec.

Strong & Straight. Blue-water yachtsmen had expected *Eagle* to be good—but not that good that soon. *Eagle* was only 18 days old when she won her first race. Her architect, A. E. ("Bill") Luders, 55, had never designed a 12-meter racing yacht before. Her skipper, William Cox, 51, was supposed to be a small-boat sailor at heart, had not handled a twelve in 27 years. And her young crew was so nervous that when they tried to set a spinnaker, they dropped the pole bang onto *Eagle's* deck.

But all that seemed academic once *Eagle* started racing. Aiming for an all-weather boat, Designer Luders had purposely given *Eagle* a low center of gravity to make her point higher in high winds, a shortened keel to lessen drag in light air. In gusty, 15-knot breezes, she stood straight as a shark's fin; and she ghosted gently through pockets of virtual calm, finding momentum where none seemed possible. In all of the seven races, Skipper Cox outmaneuvered his rivals at the start, pouring backwind into their sails and slipping out in front. And when it came to tacking duels, he and his crew strutted some impressive stuff. In one contest, on the second day of the trials, *Constellation* tacked 17 times in 20 minutes. *Eagle* covered so efficiently that she gained an average of 2 sec. on each tack.

Don't Blame the Boat. The other boats were still far from disgraced. *Columbia*, gem of the 1958 America's Cup but badly outclassed in the 1962 trials, regained enough of her glitter under New Skipper Walter Podolak to beat *Nefertiti* and *Constellation*—the Californian's first victories in America's Cup competition. *Constellation* herself, with a record of two victories and five defeats, was still in the running. The only real disappointment was Ted Hood's *Nefertiti*. Glamour boat of the 1962 trials, the beamy Marblehead yacht got all the way to the finals before losing out to *Weatherly*, and many experts felt that *Nefertiti* was the better boat, credited *Weatherly's* victory mostly to the remarkable helmsmanship of Skipper Bus Mosbacher.

This spring, Designer Hood shaved *Nefertiti's* keel to get more speed in light air, and he was a mite discouraged by his boat's record of four losses, only one victory. "It's too early to start blaming the boat," he insisted. "Our tactics need sharpening. Twice in a row, we overstood the windward marks. Several times we used the wrong spinnakers. We're just making mistakes."

American Eagle's rivals hope it will be a different story in the next series of trials in July. A dour Connecticut Yankee who started racing "dog boats" off Martha's Vineyard when he was twelve, Bill Cox is an old hand at judging tides and winds in protected waters, knows Long Island Sound as well as his own bathtub. He will lose that advantage when the twelves move to wide-open Rhode Island Sound. There, 6-ft. swells are common, and the boats sometimes race in 40-knot winds. But if he was worried, Cox did not show it. "The boat is great," he said. "This crew is the best any 12-meter ever had."

GOLF

No Substitute for Swinging

If there is anything Tony Lema likes better than champagne, it is money—understandable, considering the price of champagne. Unfortunately, he has not yet found a way of making money without working, which for Tony means playing golf. Not that he hasn't tried: last year's No. 4 money winner (with $67,112) took five weeks of vacation this spring, spent most of it lying around the house, contemplating ways to get rich quicker. All that happened was that his golf game went to pot. But last week Tony finally staggered home $20,000 to the good in New York's Thunderbird Classic and made a solemn resolution. From now on, when Lema hears that Arnie Palmer or Jack Nicklaus is taking a week off to rest up for some big tournament like this week's U.S. Open, he will grit his teeth and swing away. Exercise, not rest, is Champagne Tony's new prescription for success.

In Among the Pines. At that, he almost didn't make it in the Thunderbird. With 15 holes to go, Lema was 12 under par, seven strokes ahead of burly Mike Souchak. A sudden thundershower made the pros dive for their umbrellas—and almost literally Tony landed on his nose. He lost a stroke at the sixth hole, another at the eighth, two more on the 480-yd. ninth when he bombed his drive under the branches of a low-hanging pine tree (*see cut*) and barely managed to salvage a bogey. ("I just crawled in there on my hands and knees, said a quick prayer, and backhanded the ball," said Tony.) But the real disaster occurred at the 14th hole, a dinky (139 yds.) par three. Tony's No. 8 iron landed off the green; a chip and three putts later, he found himself trailing Souchak by a stroke. I

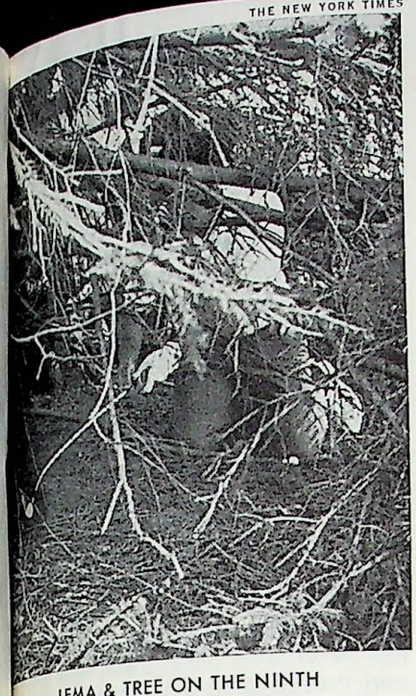
THE NEW YORK TIMES



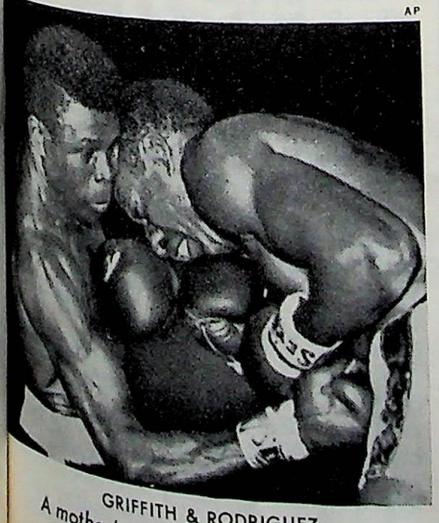
LEMA & TREE ON THE NINTH
A quick prayer and a backhand.

actually seemed relieved. "That took the pressure off," he said later. "I had been leading for so long that I was choking to death." He then birdied the par-four 17th to square the match.

It was still raining by the time the players reached the 18th green. Huddled under an umbrella, Lema watched Souchak line up a 25-ft. birdie putt—and push it 4 ft. past the hole. Tony's approach was 8 ft. from the pin. For nearly a minute he stood motionlessly over the ball, putter poised—and abruptly walked away. "I couldn't bring the club back," he said. "I stood there, looking at that thing, thinking, My God, this is a $20,000 putt—and I just couldn't hit it." Finally, Tony addressed the ball again. And this time he punched it squarely into the center of the cup for the winning birdie.

Bring on the Bubbly. The Thunderbird victory was Lema's first since January, and tripled his year's official winnings to $31,684—not quite the $49,006 he had last year at this time, but still worth a bubble or two. Within minutes, waiters were wheeling case after case of Moët et Chandon champagne into the press headquarters. At week's end, once again at the top of his game, Lema knocked in six straight birdies in Michigan's Buick Open, had a two-stroke lead at the end of 54 holes, and started dreaming about the blast he will throw if he wins the U.S. Open. "Champagne won't be enough," he said. "I win that and I'll spring for the hors d'oeuvres too."

AP



GRIFFITH & RODRIGUEZ
A mother's scream and another split.

PRIZEFIGHTING

Anything Goes

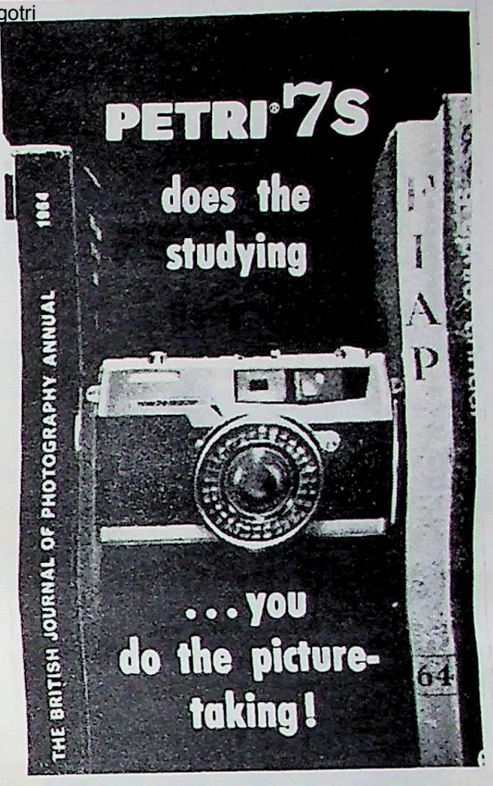
The heavyweights are everybody's heroes, with their tomato-red Cadillacs and gold-lamé sport coats, their 18-in. biceps and sledge-hammer fists. When they fight, the whole world watches. So what happens? One punch, and it's goodbye Charley, let's do this again next year. It doesn't even seem to matter where the punch lands: Cassius Clay taps Sonny Liston on the arm, and Sonny takes the pipe sitting on his stool.

Humbug. For old-fashioned prizefighting, nothing beats the welterweights. Take Emile Griffith and Luis Rodriguez, both 146 lbs., soaking wet. Griffith, a soft-spoken Virgin Islander, makes ladies' hats; Rodriguez, a Cuban refugee, sings Yiddish songs in nightclubs. But when they meet in the ring, as they did for the fourth time in Las Vegas last week, anything goes.

Rarely have two fighters been so evenly matched. Twice before, they had traded the welterweight title on controversial decisions, one of them split; and in 40 rounds neither had been able to knock the other down. But they insisted that things were going to be different this time. "I am the matador," boasted Challenger Rodriguez, 26, "and I will kill the black bull." That brought accusations of race-raking, to which Rodriguez retorted: "I should call him maybe the blue bull?" Champion Griffith, 25, shrugged it off: "I'll knock him out in five."

Both should have known better. For 15 frantic rounds, Griffith and Rodriguez pummeled, wrestled, gouged and butted each other—amid bloodcurdling screams from Griffith's mother, who was sitting at ringside. In the third round, Referee Harry Krause penalized Rodriguez for punching below the belt, and Rodriguez' manager, Angelo Dundee, chased Krause clear across the ring. "What are you doing, Harry?" he yelled. "Remember the other guy is fouling, too!" How could he forget? In the clinches, Griffith raked Rodriguez' face with the laces of his glove. Luis retaliated by throwing uppercuts with the top of his head. Three times the two fighters kept slugging after the bell.

Referee Krause scored it 69-67 for Griffith; Judge David Zenoff had it 71-70 Rodriguez; Judge John Romero 70-68 Griffith. By the narrowest of split decisions, Griffith had kept his crown. Said Luis: "If I can't win this title back, I'll just have to win the middleweight championship instead."



It's an unbeatable combination that assures better and more enjoyable photography. Long years of research and development have prepared the Petri 7S to serve you with the quality, dependability and durability you demand — and deserve. A precision exposure system fully coupled with the Petri invented circle-eye lens gives proper exposure every time. You just sight and shoot! Then a super-fast color-corrected lens does the rest. With one flick of the thumb on the newly-designed film advance lever you advance one frame of film and cock the shutter at the same time. You're ready to shoot again!

BROADWAY

Gilroy Is Here

For too long, it was more than a little disturbing that Edward Albee was the only new, young, serious dramatic voice on Broadway. But now another one, considerably lower and more firmly pitched, is being heard. The play is

DAVID GAHR

PLAYWRIGHT GILROY
Pulling burlap to threads.

called *The Subject Was Roses*. And the playwright, Frank D. Gilroy, has developed his skills so thoroughly that his presence seems obviously durable.

He is a writer of remarkable finesse, for in outline his play is plotless and drab. The only son of a Bronx couple comes home from World War II, and with eyes of new maturity recognizes that although his parents love him, he has no home at all, since their marriage has long been an unsuitable alternative to death. But Gilroy's plain, familial triangle rings with insight and trenchancy. His people live. His ear is as good as Harold Pinter's and, like Pinter, he can put two or three people in a room, start them talking and sustain long successions of commonplaces that never subside in their fascination. Pulling all this burlap to threads, he reweaves it into a fabric that is still coarse but made to last.

Concrete Characters. Sharply handsome, touched with grey at the temples, neatly dressed, educated in the Ivy League and trained in television, Gilroy must trouble the sight of all the pale poets who feel that wine, whiskers and Paris are the only stimulants of art. He works in a little $30-a-month office on the main street of Goshen, near his home in Orange County, N.Y., where he lives with his wife and three sons. He looks out his office window over a Civil War statue and creates dramatic characters that are no less concrete but nonetheless alive. Some people tell him that his meticulous realism is about that far behind the progress of modern playwriting.

"I haven't set out to reverse any trends," he answers. "The stories I have told so far tell best in a realistic way. I have nothing against the avant-garde. I feel little tendencies in myself bubbling in that direction. I thought I had darned well better be able to present living persons on the stage before I tried to distill and abstract them."

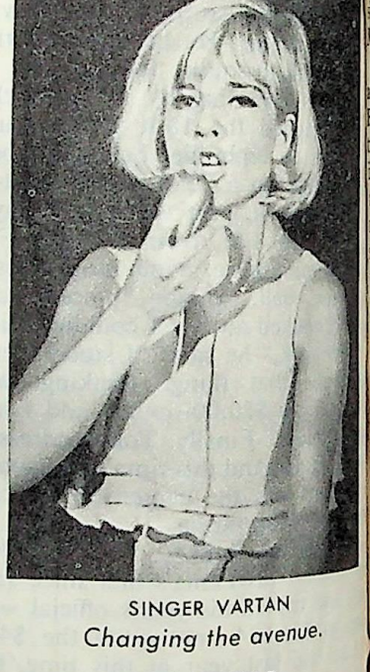
His new play, he says, "is frankly autobiographical." The father (played by Jack Albertson, a vaudeville comic who had never before done a serious dramatic role and whose stunningly right performance is worth a visit in itself) is a coffee importer. Gilroy's father, now dead, was a coffee importer and one of the best tasters in the business. As a youngster, Gilroy used to go down to Front Street and watch his father tasting coffee, noting how all the phonies present would form their own opinions from his father's grunts and grimaces.

Margin Time. The family lived in a Bronx apartment house, where "we were often the only Gentiles." Frank went to De Witt Clinton High School on the 12:30-to-5 p.m. shift, did no work, barely got through, and had no intention of going to college. He was drafted into the Army in 1943, where he noticed that "the people who had the best jobs were people who had been to college." This sparked in him a sudden passion for higher learning. After the war, he applied to 40 colleges, asking them to gamble on him despite his high school record. All but two rejected him. Davis and Elkins College of Elkins, W. Va., was willing to admit him—and so was Dartmouth. He went to Dartmouth and graduated *magna cum laude*.

For unbearded writers, television is the modern garret. They starve there, but only spiritually. Young playwrights dip their fingers into its honey pots; then, if they have substantial spines, they retreat for desperate months of "margin time," writing their "own work" until money is needed again. After Dartmouth and a year at the Yale School of Drama, Gilroy made what he describes as "an all-out total assault on TV." He conquered. He has been all over the channels from *Studio One* to the *Kraft Theater*. With some movie work as well, he eventually had enough excess cash to take time off in 1957 to write *Who'll Save the Plowboy?* for off-Broadway production, an award-winning somber tale of a life saved in combat only to rot in peace.

Building Terms. *The Subject Was Roses* has a somewhat uncertain future. It opened three weeks ago to clamorous raves. Gilroy was welcomed as "a major playwright." Walter Kerr said "quite the most interesting new A can play to be offered on Broadway season." Yet it is playing to audi that could fit into a few lif Broadway cries out for excellence often sinks it when it comes

Curiously, however, the play well build to a long and finan successful run. With just one m set and three actors, it can break merely by taking in $12,000 a we 27% of the theater's capacity. It grossing even that much yet, b audience—which began with a pi advance sale of $165—is promi growing. Broadway pros would folded it, but Gilroy and his producer, Edgar Lansbury, are mined to take the gamble that the will more than recover its present es. "All these Broadway experts like to write us off as an artistic su only," Gilroy says. "I want to be to talk to them on their terms."



SINGER VARTAN
Changing the avenue.

SINGERS

Cabbage Number One

Once upon the Champs-Elysées, ery girl had bee-stung lips and hi and hair that could tumble into a vilion of sex. With a kind of languor felinity, all those women looked the perfect tense of the verb a The storied avenue might as well h been called the Rue Bardot.

Now it is the Rue Yé-Yé. The v satile Parisiennes have changed. Th looks parade where one held do nance before, since the new fem icons of France are three competi teen-aged rock-'n'-roll singers whos fans scream the French translitera of "yeah, yeah" at them whenever th sing. One called Sheila wears bows her hair and is imitated by women w really see themselves as hoydens demolished. Another, Françoise, is lon and lissome, with a long mane, lon shanks, and good possibilities in

...nce reserve their special attention
...r 19-year-old Sylvie Vartan, a beau-
...l blonde in the rinsed and leggy
...ench tradition, with a mouth like a tu-
...and the look of a middle-aged child.
...e is their *Chouchou Numéro Un.*
...Gas & Johnny. Cabbage No. 1 is ac-
...ally Bulgarian. She arrived in France
...eight. Her brother was an arranger
...r RCA Victor in Paris when, four
...ears ago, he arranged for his little
...sister to cut a record called *Panne d'Es-*
...sence, an adaptation of the American
...rock-'n'-roll song *Out of Gas.*

Since then she has sold millions of records, singing rock-'n'-roll with suitably dreadful turgidity and ballads with a rather lovely, sultry small voice. She made numerous concert tours with Johnny Hallyday, the French Presley, then became engaged to him, and now lives in his eight-room Paris apartment. The French army recently drafted Johnnie and took him away. Now all she has at home is her cocker spaniel, Molière.

Saving Fox. People throw old fruit at her sometimes when she sings, for French rock-'n'-roll crowds come in two forms, the idolaters, who are mad insane, and the snarlers, who are mad angry. "They hate us, they really despise us," says Sylvie. "They hate the way we sing, but mainly they can't accept the fact that young people are big successes. They are nasty. They organize leagues. It's terrible."

Sylvie Vartan's escape flue is already open. She is making a movie for 20th Century-Fox, an adaptation of Marcel Achard's *Patate*, with Jean Marais and Danielle Darrieux. The chances are that she will make it as an actress. And with her considerable grace and nicely mannered charm, there should be no doubt that she will be lending style to the women of the Champs-Elysées for much time to come.

TV

Pooling, Cronking & Brinking

The "numbers game" system of covering elections, in which networks vied with each other to see who could hire the most poll watchers, reached an apogee of absurdity in the California primary. In small precincts, three "reporters" often found themselves struggling to see over the shoulder of one kind old lady counting votes. It was too silly and needlessly expensive. Last week the three networks and the wire services agreed to set up a joint Network Election Service that will divide the chores, pool the results, and present the same vote count to a viewer no matter what channel he is watching.

Numbers are only numbers, but analysis is war, and there will still be plenty of competition with the networks still cronking, brinking, and computing at one another in 16-in. cannon tones.

JAL

Enjoy unique JAL service on two routes to Europe

Here's flight to Europe at its most delightful—by Japan Air Lines direct from Tokyo over the Pole or via JAL's "Silk Road" through India and the Middle East.

Either way, you fly relaxed in the serene atmosphere of your Courier cabin as gracious JAL hostesses pamper you with service in the Japanese manner—service that makes JAL unique among the airlines of the world.

Two routes to Europe... transPacific to the U. S. A.... throughout the Orient from Japan to Djakarta. Only JAL, the Orient's largest airline, flies all these routes. Ask your travel agent to book you *"amid the calm beauty of Japan at almost the speed of sound."*

COLLEGE

That's Good Advice

"I happen to believe in commencement ceremonies," confessed University of Kentucky President John Oswald, generously, as he gave the commencement speech at Indiana's DePauw University. If commencement speeches do have value, it must—to judge from their customary content—be that of good advice. Last week, graduates got good advice by the chapelful, by the auditoriumful, by the stadiumful.

Yes But No. At Brigham Young University in Utah, Globetrotter Lowell Thomas took for his theme the merits of skiing; at the University of Delaware, Ralph W. Tyler, Stanford Behavioral Scientist, warned students against "outdoor sports and other leisure pursuits which provide self-gratification but have little constructive value to society." Poverty Planner Sargent Shriver called on Boston College and Wesleyan University seniors to aid the economically poor; University of Chicago Chancellor George Beadle urged his own graduates to help reduce "cultural poverty"; Senate Democratic Whip Hubert Humphrey said, at the University of Massachusetts, that those who really need help are people who suffer racial discrimination.

Adlai Stevenson agreed with that and invited Maine's Colby College students to get jailed, if necessary, since "a jail sentence is no longer a dishonor but a proud achievement." At Marquette, Attorney General Robert Kennedy, on the other hand, warned "the concerned generation" not to let zeal carry them as far as jail. Secretary of State Dean Rusk, while approving all these domestic good works, told Smith girls that foreign policy is "as close and important as your friends and family, as everything you cherish."

Is That Clear? While Barry Goldwater inveighed against Big Government at Pennsylvania Military College in Chester, Lyndon Johnson argued at Swarthmore that Big Government would achieve the "Great Society." At the President's next stop on the academic circuit, Holy Cross College, he offered the hope that science might "bypass the politics of the cold war." Lady Bird thought it more important to stress peace of another kind, and told Radcliffe seniors to "avoid a conscious war with men" and to use their brains to become "not a superwoman, but a total woman, a natural woman."

Yet doing what comes naturally, warned Kentucky's Oswald, has resulted in the population boom that inflames "the ills of mankind." Was that a gentle recommendation of birth control? Maybe so, but Psychiatrist Frank Ayd, the father of twelve children, told graduates of Roman Catholic Xavier University in Cincinnati that the choice is between sacrificial abstinence and the "almost Hitlerian precept" of artificial contraception.

Arnold Nash, professor of religion at the University of North Carolina, said in a baccalaureate sermon at Vanderbilt University that graduates should "view the universe as an ordered place with a purpose," not see life as "just one damn thing after another." But Vanderbilt Chancellor Alexander Heard, making the commencement address there, saw a world in revolt, "a world running wild with no place for minds standing still." Chicago Advertising Executive Lee King, at Northwestern, said that "our deadly malady is a disappearing supply of the creative resource," while at Pomona Ambassador (to Mexico) Fulton Freeman saw students "coming into creative citizenship at a fascinating moment in history." Columnist James Reston, at Brandeis, deplored "poverty beyond understanding or excuse," and Internal Revenue Boss Mortimer Caplin, speaking at St. Michael's in Vermont, sternly disapproved "the excesses of expense-account living."

Avoid becoming second rate, cautioned Corning Glass Board Chair Amory Houghton Jr. at Michigan's bion College: "It is one of the all-encompassing, intoxicating fe you'll ever come up against." Take not to be pushy, either, added C B. Hoover, Duke University econo who spoke at Duke. If anyone rea that "you are grooming yourself leadership, you will be considered insufferable prig which you would And thus was Youth once again inf with the distilled wisdom of Age Experience.

...ered fantastic new forms for it—fabric ... from hair-thin steel wire, watch-...s of incredible delicacy.

...protect the growth of their vital tim-...dustry, Swedes are finding new ways ...wood. Examples: prefabricated houses, ...on leather and special veneers, ex-...ble clothes and blankets for hospitals.

...dish research goes beyond improving ...d. The Swedes *invented* ball-bearings ...afety matches. They pioneered the ...pment of marine beacons and com-...ed-air equipment used to tunnel through ...ains. They found 30 of the 102 elements ...e atomic table.

WANTED: MORE POWER

...rumming along at her present brisk pace, ...den needs more and more power to ...g growing. Some of it comes from her ...rways. Local production of hydro-...city more than doubled between 1950 ...1961.

...t electricity cannot do every job, and it ...t always the best choice for the jobs it ...do. Suddenly Sweden discovered a pro-...research couldn't solve: a shortage of ... Today oil—all of it imported—supplies ...of the country's need for energy.

10 Amazing fact: Sweden is *third in the world* in per capita consumption of oil. She is outstripped only by America and Canada.

HIGHEST INDIVIDUAL INCOME IN EUROPE

11 Business is booming in Sweden. Her individual income is now the highest in Europe. But industrial development has not—as elsewhere—crowded out the old crafts and traditions.

12 Go to a Swedish home for dinner and chances are the house will be lit entirely by candles. Not because there is no electricity, but because Swedes prefer it that way. In this cold land where day ends at two o'clock on winter afternoons, the word for candle, "ljus", is also the word for light.

SHELL AND WORLD OIL

Sweden is having to rely more and more on oil (demand is up 11% annually) as a cheap, sure source of power. So is the rest of the world. Oil is one of the fastest growing sources of energy, and demand is expected to double within 15 years.

Meeting this demand has to be an international operation because no other commodity is moved in such tremendous volumes, across so many frontiers, broken into so many products, planned so far ahead. It needs a complex, world-wide organisation—the kind Shell has built up over the years.

FACTS AND FIGURES

For Shell, getting oil to the markets means operating over 11½ million tons of tanker shipping, and 32,000 miles of pipelines over the great land routes. Establishing marketing companies in over 100 countries. Doing business in nearly every major language. And encouraging 6,000 research men to find new and useful products—new fuels, plastics, resins, fertilisers and insecticides.

YOU CAN BE SURE OF SHELL

Shell is dependable because it is in the whole oil cycle. It looks for oil, finds it, raises it, transports it, breaks it down into products, and gets them to market as regularly as a metronome. In doing so, it averages about 1¼ US cents profit per gallon on its sales.

Shell is useful. It gets the right product *to* the right place at the right time. **It serves consuming countries by finding dependable energy, producing countries by finding dependable markets. Year after year.**

FIRESTONE DOES IT AGAIN

Beats all competition . . . wins Indianapolis 500-Mile race for 41st consecutive time

That's a winning record no other tire manufacturer can ever hope to match. But, the real winner is YOU!

Tire performance requirements at Indianapolis will always exceed those of the most demanding passenger car owner. In this world-famous race, cars run 200 laps on the 2½-mile brick and asphalt oval track at speeds up to 180 miles per hour. Only the strongest and safest tires in the world can survive this tire-torturing test. Out of this unparalleled racing experience Firestone has developed safer tires for your car.

Firestone De Luxe Champion tires are built with Sup-R-Tuf, Firestone's new miracle rubber that gives you from 2,000 to 10,000 extra miles per tire. You g extra safety, too. Firestone's exclusive Super-Weld co struction locks the toughest tread possible to the supe strong cord body with an inseparable bond.

See your Firestone distributor or dealer for Firesto tires that are Safety Proved on the Speedway For Yo Protection on the Highway.

FREE We have an enlargement of the winners of th Indianapolis 500-Mile Race on Firestone tire which we will send you upon request. Write to Firesto International Company, Akron, Ohio, U.S.A.

SCULPTURE

In Abstract Memoriam

Dag Hammarskjöld was more than the late Secretary-General of the United Nations. He was a man of feeling, a poet, who wrote of a small sculpture that he kept in his office: "Shall my soul meet so severe a curve, journeying on its way to form?" The question was answered at Ndola, Northern Rhodesia, on Sept. 18, 1961, when his airplane crashed during a tour of the chaotic Congo. The sculpture was by Barbara Hepworth, 61, Britain's top woman artist. Last week another Hepworth bronze appeared at the United Nations.

Abstract as an apple, its tensile curves suggest nothing but nature as they wind around its 21-ft. height—an ideal counter to the squared shimmer of the Secretariat Building's façade. Symbolically, the bold bronze seems a play on the Swedish diplomat's name—a hammered shield. Inside the pierced circle of the design, Sculptress Hepworth has inscribed: "To the glory of God and the memory of Dag Hammarskjöld."

MUSEUMS

A Gift Is Now a Gift

Giving art to museums used to be pure eat-your-cake-and-have-it. A collector could sign away his Rembrandt, Van Gogh or Gignoux (yes, who?) to his favorite museum, deduct its value from his income tax, and leave it right over his fireplace until his death. As of midnight June 30, the Indian giving is over, thanks to the Internal Revenue Service.

The revenooers are shutting the life-interest loophole. In the future, no deduction may be taken until the art work is physically ceded to a museum or charitable institution. But most museum directors are not alarmed by the new law, even though donations may be delayed for years. For the IRS has increased the incentive to give now, adding 10% to the former 20% deductible from gross income. At 30%, museums stand on an equal footing with hospitals and educational institutions in soliciting gifts. And some museum directors pondered whether they might still not rent back donated paintings to givers at $1 a year.

The Art Dealers Association of America, which is the country's unofficial evaluator of art-worthiness, reported that donors squeezing under the deadline had increased demands for appraisals tenfold. Just under the wire the Philadelphia Museum got a Picasso, the Boston Museum of Fine Arts three 18th century American portraits. Manhattan's Metropolitan received a score of donations, compared with none for this time last year. No one was telling what the last-minute nongifts were: they are still over the fireplaces.

Unburied Cross

A work of art is often a synopsis of its time. Versailles tells of 17th century French rationalism in its orderly façades and the geometry of its gardens. Michelangelo's sculpture reveals in its robust anatomy the renaissance of man's faith in himself. Yet few objects compact so much of a world into a microcosm as the Romanesque cross recently acquired by Manhattan's Metropolitan Museum of Art.

The Met first heard of the cross eight years ago; it had been stashed away in a Swiss bank vault by an Austrian collector. It was carved of seven pieces of walrus tusk, a distinctly North European material; and such traits of style as "damp fold" garments that cling smoothly to the anatomy—Met Associate Curator of Medieval Art Thomas P. F. Hoving deduced that the cross was from 12th century England.

Backwards Latin. Rippling across ivory everywhere are images that dramatize early theology. The tusks of the cross an undulating vitality, reflected in the budding motif of the Garden of Eden's Tree of Life, then supposed to be the material of the original cross of Calvary. Taking these themes, the cross dramatically telescopes history, showing Adam and Eve, the primal parents of man, at the base of the cross as they are at last raised from the dead by the Crucifixion. They seem to emerge from their eons-long sleep in a mood of joyous bewilderment as they clutch at the Tree of Life's roots, while Christ ascends above them, already on his way to heaven.

The next clue lay in the cross's figures and more than 60 inscriptions in Latin and Greek, mostly serving an ugly propaganda purpose. Rather than celebrate Christ's ascension, hexameters such as "synagogue falls after vain and stupid effort," rail against Christ's "assassins." The Jews, shown in the conical caps that they wore in medieval times, jostle and mock Christ. The placard over the missing figure of Christ reads "Jesus of Nazareth King of the Confessors" instead of "Jews." And it is written in backwards Latin rather than properly in Hebrew, to emphasize the rejection of Christ's origins.

Home Crusades. The anti-Jewish polemic was not uncommon to the militant and quite intolerant 12th century British church, which had already sent two crusades against infidels, and under Richard the Lionhearted was raising a third. Zealous Christians, certain that the Last Judgment was just around the corner, and eager to pay back the pagans, were just as ready to take revenge on the Jews of Britain as they were to recover Jerusalem from the Moslems.

One monastery in England particularly led outbreaks against the Jews. It was the abbey of Bury St. Edmunds, the holy tomb of the royal martyr killed in 870 by pagan Danes when he refused to recant Christianity. Stylistic links between the cross and the richly illuminated Bury Bible, created during the 1130s, led Curator Hoving to the abbey.

An Hooly Monke. While medieval monasteries waxed rich in land holdings, Bury St. Edmunds had fallen deeply into debt to Jewish moneylenders by the end of the 12th century. Then a strong, stubborn monk, appropriately named Samson, became abbot shortly after a young boy was found murdered. The Jews were blamed. Eight years

later 57 Jews were massacred in the town. Samson got the King to expel the Jews from Bury St. Edmunds, and shortly cleared the abbey's debt, wresting back the glory that the monastery once enjoyed.

The abbot was the embodiment of a militant monk. History records that he begged the King to go on a crusade. Hoving concludes that Samson might well have commissioned the cross. Perhaps he was the abbot whom Chaucer mocked in his *Prioress's Tale* for his false piety over a murder:

This abbot, which that was an hooly man,
As monkes been, or elles oghte be.

Concludes Hoving more mildly of Samson's cross: "It expresses what was in the wind throughout the entire Christian world during the late 12th century, for the cross is symbolic of the crusading spirit, both good and evil."

PAINTING

Soviet Art in London

Eric Estorick, Brooklyn-born manager of London's fashionable Grosvenor Gallery, has a quixotic goal: he wants to bring modern Russian art to the West. In four years he has journeyed 15 times to Russia, searching for paintings and cajoling authorities for permission to export the works. Last week he put his acquisitions on show, the first major commercial exhibit of Soviet art in the West since 1922, when the young Russian revolutionary regime sent to Berlin and Amsterdam works by Kandinsky, Pevzner and Gabo—who all later went into exile.

Estorick's modern artists seem mostly pre-Kandinsky in style. Hardly a trace of surrealism, cubism or abstractionism shows; the most obvious influence is French impressionism. Yet, except [for] Lenin Prizewinner Aleksandr Deinek[a] husky peasant girls, which Estorick pr[o]ably bought for diplomatic reasons, [the] show is not a dismal display of [the] Russian Tractor Style. Instead, the [ba]of the exhibition is heavy with still li[fe] and landscapes, competent, vague Western, strangely empty of inventi[on]. Perhaps half a dozen of the 82 arti[sts] are important.

One is Anatoly Nikitch, 46, who [will] show at the Venice Biennale this seas[on]. His seven still lifes are perfectly b[al]anced compositions and painters' pai[n]ings; in one, provocatively, a postca[rd] by France's Bernard Buffet is visib[ly] stuck to a background wall. Pavel N[i]konov's somber *Still Life with Pes[tle] and Mortar*, with its Braque-like gre[ys] and browns, and Aleksei Tyapushkin's still life with flowers on table are als[o] painterly achievements. Sculptor Ernst Neizvestny, who was personally scolde[d] by Khrushchev for his modernism, draws dynamic nudes.

The only painter who might be mus[ic] at home in any Western city's moder[n] museum is Oskar Rabin, an outcas[t] painter who enjoys no official patronag[e] at home. Rabin's four fantasy cityscapes are semiabstractions: a *City and Moon* balances glowing oval shapes against the dark grid of hazy architectural forms; an *American Landscape* shows giddy skyscrapers in a land he has never visited. Visions of London and Paris both depict painfully precise, oversized postage stamps (one with Queen Elizabeth) that boldly refute the perspective.

Singularly absent are the spunky, [if] not necessarily accomplished, avant-gardists who are much whispered about in Russia. As Entrepreneur Estorick puts it, "We don't want to make martyrs of these guys."

10 minutes before 'take off' at the Lufthansa flying school

The student pilot is getting his instructions for the next flight. Soon he will be circling the airfield. And then preparing to land.
In fact, he won't have left the ground at all.
His machine is a Linktrainer, and it is in the Lufthansa flying school at Bremen. All the instruments of a real plane are duplicated in the Linktrainer. Every Lufthansa student "flies" in it for at least 100 hours. He also does 250 hours in a flying schoolroom, in the air. And gets 1700 hours' teaching *in navigation, mechanics and a* dozen other subjects.
Only then is the Lufthansa student ready to spread his own wings. And only after a further 5—7 years' flying experience can he become a Flight Captain.

Next time you see a Lufthansa pilot, remember that he has gone through one of the toughest schools on earth. And in the sky.

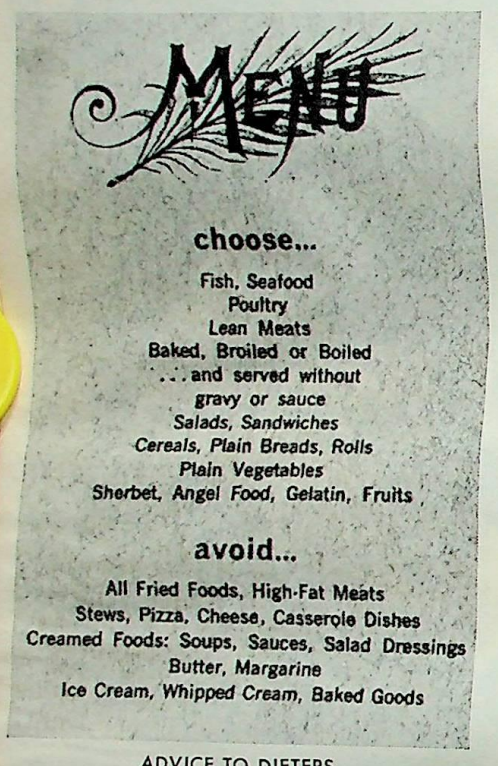
CARDIOLOGY

Four Fats in the Blood: Which Cause Heart Attacks?

Every week for the past year, more than 1,100 couples in five U.S. cities have selected a seven-day supply of food from a carefully drawn list and then sent their orders to Washington. Processed by a computer, the orders go back to shipping offices in the five cities, and the food is delivered. Container labels give no clue to the precise ingredients in such items as salad dressings, cake mixes and milk concentrates.



ADVICE TO DIETERS
What does the computer say?

The computerized menus represent no attempt to automate a housewife's traditional chore. They are part of a serious and important study, financed by the U.S. Public Health Service, designed to discover whether American men still in their prime can be saved from fatal heart attacks by changes in their diet.

The computer's coldly calculated answers promise to help cut through the growing confusion about fats and the heart. Today, almost every time some authority sounds off on the subject, the effect is to multiply the contradictions. Last week the American Heart Association suggested that although the proof is not yet conclusive, the weight of evidence indicates that a lower-fat diet, with proportionately more polyunsaturated* vegetable fats, will help to save lives. But the Food and Drug Administration had just threatened action against manufacturers who label shortenings and cooking oils as polyunsaturated, thus implying that they are good for the heart and arteries.

Easy to Measure. Atherosclerosis that narrows or closes the heart's coronary arteries with slushy, fatty deposits is the greatest killer in the U.S., where it claims 500,000 lives a year, twice as many as cancer. The death rate from prime-of-life heart attacks goes up, roughly, with the concentration of fats in the blood. Most biochemists divide these circulating fatty substances into four groups: cholesterol, fatty acids, phospholipids, and triglycerides, some of them "free," some of them combined with proteins or with one another.

It is not yet certain which of them are the most important in causing atherosclerosis. But cholesterol has received the widest publicity, largely because it is the easiest to measure and thus becomes a handy guide to arterial and coronary health. Among peasants in India, starved of protein and of fat, a cholesterol level of 125 milligrams per 100 milliliters of blood is common. It is about the same for fish-and-rice-eating Japanese. Among Americans living high off the hog, it hits 250 before a doctor begins to worry. And among men with coronary-artery disease, it may go to 500 or more.

The squishy, fatty nature of the deposits in clogged arteries has been recognized for more than 200 years, and the presence of cholesterol (from the Greek for bile solids) in the deposits has been known for more than a century. Presumably the cholesterol is deposited from the blood. Just how or why, no one knows. But high levels of circulating cholesterol go with a high incidence of heart attacks in men 45 to 65; doctors have spent years trying to figure out why the cholesterol piles up.

Animal v. Vegetable. The simplest explanation would be that the cholesterol comes from food. Eggs are a common source: their yolks are packed with the stuff. So are some meats. But the obvious explanation is only part of the truth. The high-blood-cholesterol man does not derive his cholesterol entirely or even mainly from his food. He manufactures most of it himself. And fat, it was found, is a prime raw material for his liver and other organs to use in making cholesterol.

This discovery soon proved to be another oversimplification. Most vegetable fats and oils cause little or no rise in blood cholesterol. So the line was drawn between animal and vegetable fats. But even that line was uncertain; it had to weave around to leave hard or saturated fats on one side and polyunsaturated fats on the other. The blubber of whales and the oil of seals and other marine mammals is polyun- rated, so Eskimos can eat them and keep their cholesterol low. Also unsaturated are the oils of fish. Th of chickens and turkeys (unlike th ducks and geese) is mainly neutr

Richest of all in polyunsaturates vegetable oils from corn, cotton safflower, soybeans, and (if not cially hydrogenated) peanuts and olives. Virtually all contain fats different degrees of saturation. Wh important, say many heart-disease tors, is the proportion of polyun rated to saturated.

Prudent Diet. Until 50 years Americans consumed on the ave only about 25% of their calories form of fat. They also got a great of physical exercise, which tends to fat from piling up either on the ri in the blood. By 1950, though, York City's late Dr. Norman Jo estimated that fats made up at 40% of the average American's ories, and nearly all of them were saturated fats.

Dr. Jolliffe started the Anti-Coron Club, with 700 men aged 40 to pledged to cut their fats to 30% or of total calories, to trim off all vis fat from meats such as beef and la and to use whole milk, butter, pastr cheese and creamy desserts only treats on special occasions. After se years, there is no doubt that Anti-C onary members have lower blood-c lesterol levels than before, and evide is piling up that they have won con erable immunity to heart attacks.*

It was all very well to get 700 hig motivated men in New York City to

* Amid a plethora of diet books, a new e tion of Jolliffe's *Reduce and Stay Reduced the Prudent Diet* (Simon & Schuster, $4. is the biggest seller.

Dr. Jolliffe's "prudent diet," but
the mass of American men be in-
to do the same while still appar-
healthy? Now the National Diet-
Study, headed by Cleveland's Dr.
H. Page (TIME Cover, Oct. 31,
is seeking an answer. Backed by
U.S. Public Health Service, the
aims to find out 1) whether men
voluntarily restrict their diets now
the sake of a possible health gain
future, 2) whether the prescribed
will effectively lower blood cho-
, and 3) if so, which of several
is best for the purpose.

Blood Will Tell. In the test cities, the
Bureau mailed invitations to
8,000 men; in each city, about
replied and attended a selection
ing. Those chosen had to be in ap-
good health, with no history of
-artery disease. They had to be
ried, and have a stable job and a
with a food freezer. They gave
samples for cholesterol measure-
before they started on their diets,
have given them every two months

In each city, the D-H food center de-
its computer-selected lean meats,
meat specialties such as "grillettes,"
sage and chicken à la king, and
defatted milk substitutes, cheeses,
ads, creamless ice cream—and
garine. Volunteers buy many sta-
fish, fowl and fruits in the open
ket. Just how many different diets
being tried in the study is still secret.
The volunteers were asked to eat out
two meals a week, and then to
and choose carefully from the
u or whatever a hostess serves. Do
boys cheat? Not much, say the
w-it-all computers, which not only
ect menus but tabulate the results of
quent checkups. Bimonthly blood-
olesterol levels would tattle on any
ret gorgers. Most of the men have
t weight—five to eight pounds on
average.

Whatever the precise composition of
secret diets, they are based on far
re sophisticated nutrition science
an simply cutting down on fats and
osting the proportion of polyunsat-
ates. For one thing, it probably does
good to cut down fats and make
the calorie deficit with carbohy-
ates: the Rockefeller Institute's Dr.
Edward H. Ahrens Jr. has shown that
e effect of this maneuver is to boost
triglycerides in the blood. And more
d more heart researchers are coming
believe that the triglycerides are at
ast as important as cholesterol, and
rhaps a better clue to the risk of a
art attack. Oakland's Dr. Laurance
insell has found that some people
ve high triglycerides and normal cho-
sterol, while others have high choles-
rol and normal triglycerides.

Microscopic Giants. Dr. Margaret Al-
brink, now at West Virginia University,
began a triglyceride study in 1955 when
she was at Yale. She says it is the tri-
glyceride level, and not the sheer volume
of cholesterol, that determines whether
the cholesterol will circulate in harmless
little molecules or form "giant" (though
still microscopic) particles of the kind
that clogs up arteries. Adds Dr. Al-
brink: "The single most important thing
that influences the triglyceride concen-
tration is excessive weight gain after
25. Triglycerides increase with too
many calories, while cholesterol in-
creases with too much fat."

With so much emphasis on what to
eat and how much, some authorities
despair of getting the public to recog-
nize that heart disease has no single,
simple cause. Hereditary susceptibility
is a factor, and so is high blood pres-
sure. Says Dr. Paul Dudley White, lean,
beanpole dean of cardiologists: "We're
trying to establish the degree of re-
sponsibility for a number of different
factors. For instance, muscular metab-
olism, and the effects of vigorous exer-
cise." Dr. William B. Kannel, assistant
director of a ten-year-old study of more
than 5,000 men and women in Fra-
mingham, Mass., says: "Cigarette smok-
ing triggers a great amount of coronary
disease. If we could abolish smoking,
we could reduce the deaths from coro-
nary disease in Framingham by 40%.
The risk is related to how much you
smoke, but not to how long you have
smoked. Those who stop smoking have
as good a chance of escaping heart
disease as nonsmokers."

Everywhere, eager researchers are
trying to pin down the importance of
stress and how it affects the heart. The
University of Oklahoma's Dr. Stewart
Wolf led a team of cardiologists into
the little Pennsylvania town of Roseto,
where 95% of the 1,600 inhabitants
are descended from a single group of
immigrants from Italy. They eat heavi-
ly, including plenty of saturated fat,
and drink a lot of wine. Nearly all of
them are overweight. But to their sur-
prise the doctors found that in seven
years no Roseto men under 47 died of
heart attacks, and in later life their
rate was barely half that in neighbor-
ing towns. Perhaps, the investigators
say, the explanation is that these people
are "gay, boisterous and unpretentious,
simple, warm and very hospitable . . .
mutually trusting (there is no crime in
Roseto) and mutually supporting."
When Rosetans leave home to live in
the big cities, their heart-attack death
rate goes up to the U.S. norm.

Red Cells Merge. Basic to any under-
standing of the role of stress, says San
Francisco's Dr. Meyer Friedman, is
the individual's personality. Does he
seek out stresses? And does his body
react to them in a way that will eventu-
ally kill him by clogging his coronary
arteries? Dr. Friedman thinks so.

A driving go-getter, he says, cannot
clear his bloodstream fast enough of
the triglycerides which accumulate after
a high-fat meal. Unlike the more placid
man, the go-getter uses too much of
his body's heparin to break up the fat.
There is not enough heparin (nature's
anticoagulant) left to keep the red
blood cells apart: "If, after every meal,
a man has too many fat particles going
around and red cells sludging and ob-
structing small blood vessels, the heart
may be temporarily so embarrassed
that this man will have a heart attack
without a clot. This may explain why
30% to 40% of all autopsies after
heart attacks reveal no clot."

In the D-H study, now beginning its
second year, some volunteers will be
given more freedom to buy their own
lean meats. Next summer, the com-
puters will render their verdicts on this
and other variables in the volunteers'
diets. Then the PHS will decide wheth-
er to launch a ten-year study of 100,000
men to settle, once and for all, the
vexed questions of fats and the heart.

MODERN LIVING

FASHION

On the Beaten Track

Having already surrendered their long black tights to suburban housewives, seen their burlap skirts turn up as dormitory curtains, their madras shirts as bedspreads, and their turtleneck sweaters on Sean O'Casey, far-out females from coast to coast stood dismally by while the squares got beat and left them, pad-ridden, behind. Common zens told them to cling fast lest sandals, too, go the way of guitars, but too late. Before anyone could say "Cool it, dad," high fashion had taken over.

Sandals, of course, are nothing new. Alexander the Great wouldn't have been caught dead without them, and Julius Caesar wasn't. But only in recent A.D. days have they become something more than what to wear in the shower, at the beach, at home alone, or on a tour through alien lands whence the news will not get back. Gradually, as America discovered its special fashion nook, a knack for the sporting look, sandals began to be everywhere, and everywhere pretty much proper.

However, there are sandals and there are sandals. In Manhattan, Greenwich Village's cowhide standard will still raise eyebrows north of 59th Street; only on very special feet will they get by a doorman with class or a headwaiter with vision. But the introduction of the spaghetti strap and the low, more graceful heel has turned a little item into big business, earned fashion's acclaim and the blessings of women everywhere who have spent all the summers of their lives struggling into nylon stockings and old-style, cover-up pumps—all for the sticky sake of decency.

The credit is mostly Chanel's. The closed-toe, sling-back shoe shown with her Paris collection several seasons ago swept the Continental set off their cramped feet; slow to cross the sea, the shoe was introduced to the U.S. only last fall by Designer Herbert Levine, was instantly copied in every color in real and ersatz fabrics from Monterey to Montauk Point. Strictly speaking not a sandal except to the industry, the Chanel model spurred what Stylist David Evins calls "the less-shoe look," was such a staggering success on the market that even barer versions seemed worth a try.

They were. Today, at the beginning of sports shoes' hot season, sandals are hottest of all, far more popular than ever before. In any of a hundred shapes, whether exquisite and chic or plain and substantial, wrought with precision by careful hand or knocked out en masse by machine, littered with "jewels" at a cost in the neighborhood of $150 or woven of raffia for $2.99, sandals are increasingly the newest, the nicest and the niftiest way to step out in style. The squares? Swinging. The beats? Beaten.

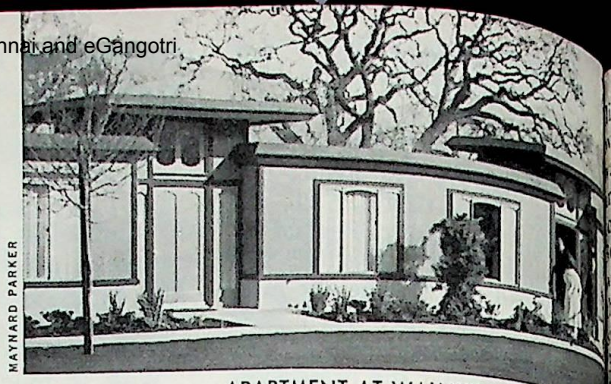
BUILDER CORTESE



MAYNARD PARKER

APARTMENT AT WALNUT CREEK, CALIF.

COMMUNITY CENTER

ARCHITECT CA

Sculptural roofs, gazebos and no water moaning.

DESIGN

Good Partnership

To merchant builders, who buy la by the tract and sow it with houses, a chitecture is usually something to d without. Architects, they feel, are t prone to run up costs with perfectio ists' details, and too preoccupied w niceties that are wasted on developm customers, who don't care much what house looks like so long as there ar plenty of appliances in the kitchen.

A notable breakthrough has bee made in this architect-builder standoff and made by one of the top builder in the U.S.—California's Ross Willia Cortese, who is discovering that archi tecture is not only selling his building but cutting his costs.

Privacy & Chats. Builder Corte (rhymes with daisy) specializes in re tirement housing. When he was crank ing up for his third retirement com munity—at Walnut Creek in the San Francisco Bay area—he decided to giv an architect a crack at it. The result ha made $250 million Walnut Creek, now abuilding, one of the most talked-about developments in the U.S.

The architect Cortese picked for his experiment was the West Coast's well-known Warren Callister. "We've been selling everything else in these retire ment projects," he told him. "Now we want to try selling architecture."

Callister delivered it. Walnut Creek's roofs lift the eye, its patios are big enough to let the sun in, instead of be ing the penumbral little fakes so beloved of corner-cutting contractors. And there is no scamping of the invisible details. Air-conditioning ducts are oversized to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

minate duct noise, water pipes are versized to eliminate water moaning, alls and ceilings are fully insulated, nd almost every partition is a floor-ceiling storage wall. Doorways are 6 in. wide to permit easy passage of heelchairs, wall plugs are 2 ft. off he floor to minimize stooping, light witches are at fingertip height, about 3 in. off the floor for effortless flipping by an arthritic arm.

More subtle is the Callister-Cortese anning for easy sociability. Gardens are planted around the laundry rooms, for example, so that women with no clothes to wash may still have an excuse to sit in the lounge, enjoying the view and a chat. Walkways are planned with many corners for accidental meetings, and there is a gazebo, where free coffee and tea are served. "People want some privacy but not all the time," says Callister. "They want action and legitimate excuses to meet each other —so we have all these clubhouses and courtyards and meeting rooms."

More Excitement Ahead. Having taken a chance on architecture, Cortese was pleased to discover that he had more than he had bargained for. "Callister helped us get lower costs than we could have got without him," says the project manager.

Callister sees the future of architecture in developments. "I don't think people are going to buy the old-fashioned homesteads any more," he says. "They're going to buy the projects that provide the greatest excitement, activity and adventure. When architecture provides that, it lives."

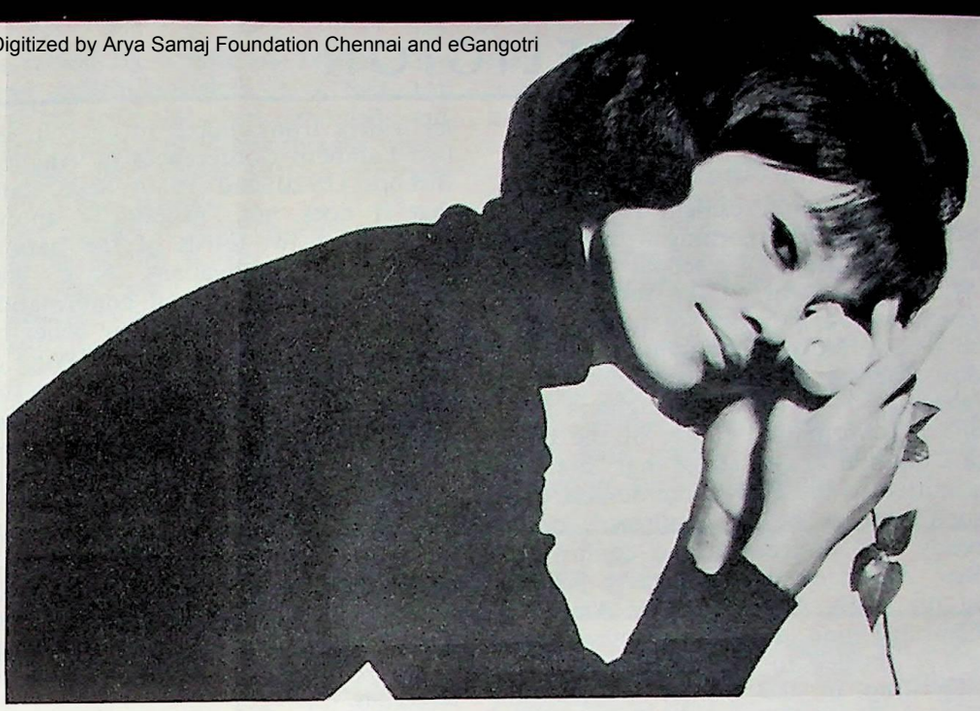
HAZARDS

He Who Steals My Purse Steals My Credit Cards

"I have a champagne taste but no funds to support it," the 17-year-old girl explained to New York police. With credit cards belonging to Actress Carol Lawrence, she rented a car, bought clothes, perfume and records, was about to fly off to Miami, before she was stopped.

Loser Lawrence was no isolated victim. Of the 70 million credit cards in circulation in the U.S., no fewer than 1,500,000 are lost each year, and of these 60,000 have been stolen. Illicit charges run up on a stolen card are estimated to average $500. And stealing credit cards is an increasingly popular crime; dollar losses from their misuse increased eightfold from 1958 ($266,850) to 1962 ($1,915,000).

Most major credit-card companies grimly absorb these losses themselves. But to protect holders against laws making cardholders liable for charges until their loss has been reported, a St. Louis company called Saf-Card Inc. has announced a plan by which, for $20 annually, Saf-Card will indemnify the holder for up to $10,000 in purchases run up on a card by champagne spenders with mickey finn morals.



stop taking snapshots

[*and start taking photographs*]

If you are really serious about photography you want more out of your photographs than mere snapshots. You want pictures that are exciting to look at *more* than once, pictures that reflect the true nature of the subject and its surroundings, colors that come alive.

No camera can take a good picture. Only the photographer can do that. A camera can, however, help you avoid mistakes, give your photographs the mark of experience. Here is how the new Minolta SR-7 does just that:

SR-7 is equipped with a powerful CdS light meter. And you'll notice it's built in (all the way in). The meter is highly sensitive, measures anything you can see, and is every bit as accurate as the hand-held meters the professionals use.

The world-famous F1.4 Rokkor lens is treated with Achromatic coating, a patented process which brings a new faithfulness to color photography.

The significance of the Minolta SR-7 is obvious when you see it, test it, compare it. Take a look. You'll see why this camera is used by serious photographers throughout the world.

Minolta
MINOLTA CAMERA CO., LTD.

"I Am Disgusted"

So spoke an architect with obvious dislike for tradition and conformity. TIME quoted him, and presented his views on the direction architecture should take in the Modern Living section, gathering place for new ideas on everything from housing to baby formulas. Ideas with merit invariably find their way into TIME. In doing so, they attract the attention of millions of TIME families around the globe—themselves ever receptive to progress and innovation.

WORSHIP

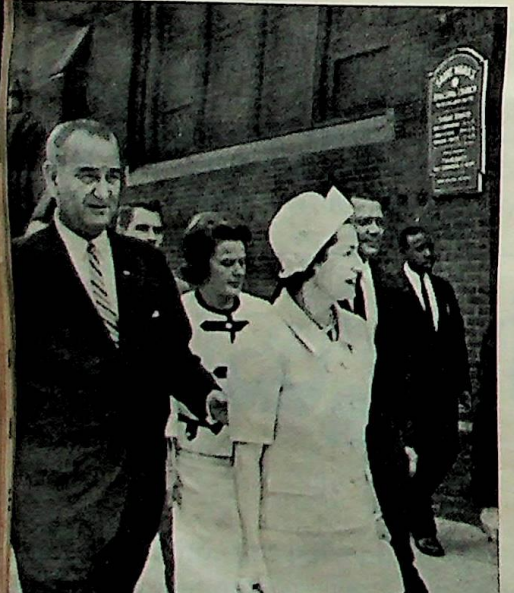
Johnson at the Altar Rail

On occasion, President Johnson has attended Sunday morning worship services at St. Mark's Episcopal Church in Washington, where, like most of the congregation, he goes to the altar rail to receive Holy Communion. But Lyndon Johnson is not an Episcopalian (although his wife and daughters are), and a confirmation rubric of the book of Common Prayer states that "none be admitted to the Holy Communion until such time as he be confirmed, or be ready and desirous to be confirmed." Rev. Albert du Bois, executive director of the stiffly Anglo-Catholic American Church Union, questions whether Johnson is entitled to Communion.

Writing in the monthly *American Church News*, Canon du Bois admits that the President "is undoubtedly receiving Communion at Episcopal altars in good faith and in sincerity." Nonetheless, he argues that priests who have admitted non-Episcopalians to Communion make it difficult for the clergy, "who wish to maintain the church's law and discipline but who do not wish to make an issue of this at their altar rails." He suggests that the President ought to legalize things by presenting himself to a bishop for confirmation.

Theologically speaking, the Protestant Episcopal Church has always been a "closed Communion" faith, in contrast to the Disciples of Christ, to which Johnson belongs, and many other Protestant groups that welcome all baptized Christians to the altar. The Episcopal reasoning is that people should not receive the sacrament together if they do not agree on what it signifies. But observance of the confirmation rubric varies widely from church to church, and two Lambeth Conferences of Anglican Bishops (1920 and 1930) have stated that it does not "necessarily apply." Only about two-thirds of the nation's 3,587,000 Episcopalians have gone through the ceremony of confirmation, in which they testify to their belief before a bishop and receive the laying on of hands. Few priests would ever refuse Communion to a stranger,* although most churches will not allow unconfirmed members to assume lay offices.

In any case, Johnson is not likely to get turned away from many altar rails in Washington, traditionally an Episcopal diocese that favors open Communion. Bishop William Creighton says that "the President, of course, is welcome to receive Holy Communion in our churches."



PRESIDENT & WIFE OUTSIDE ST. MARK'S
Communion without confirmation?

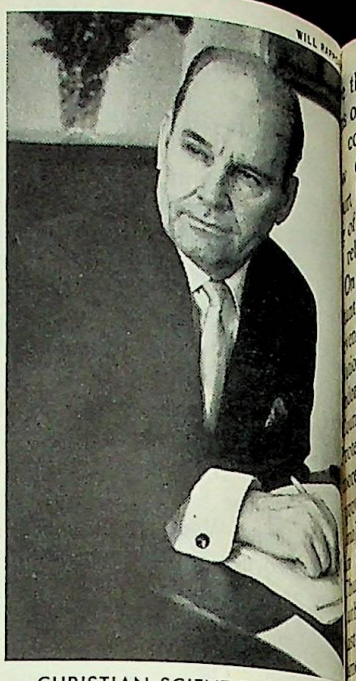
CHRISTIAN SCIENTISTS

Her Growing Daughters

Next to a conclave of cardinals, probably the most secret religious assembly is the annual meeting of The Mother Church, The First Church of Christ, Scientist. Last week more than 7,000 of the faithful showed up in Boston to hear the yearly report on how their made-in-America faith is doing. Names and church standing were carefully checked before admission tickets were granted, and reporters of other faiths were barred from the four auditoriums where the proceedings were held.

The curbs help keep secret such statistics as membership figures, but they do not hide internal dissension: there is none. Christian Science is autocratically governed by a board of five directors with lifetime tenure who make all the major decisions for the church. Among them is the choice of Christian Science's president, who serves for a year as chief spokesman for the faith. The leader presented to this year's meeting was German-born Edward Frederman, a trustee of the church's Publishing Society, who gave up a vice-presidency of a Chicago bank 15 years ago to work as a fulltime practitioner of Mary Baker Eddy's healing doctrine.

Quickening. Mrs. Eddy passed on, as Christian Scientists put it, in 1910, but her spirit looms heavily over the church. Christian Science still affirms her central belief that evil—including physical illness—can be conquered through faith and understanding, although members are free to consult doctors if they want to, as Mrs. Eddy herself did. Along with the Bible, her major work, *Science and Health with Key to the Scriptures*, is regarded as divine revelation, but there is never any theological debate in the church about how it should be interpreted. Christian Scientists feel that there is no need to modernize her teachings, and, as Board Chairman Inman Douglas says, "within the church organization there is no controversy on this point, no difference of opinion, no liberal and conservative wings. No, nothing like that."



CHRISTIAN SCIENTIST DOUGLASS
Revelation without dispute.

Christian Science in the past has often seemed as sober and conservative as its best-known creation, the daily Monitor (circ. 190,000). Now there seems to be a measurable quickening in the church's missionary impulse, both at home and abroad. U.S. "branches" of the Mother Church total 2,449, up 106 in a decade, and foreign branches now number 819. Best outside guess on membership: 400,000. Forty new Christian Science clubs have been formed on U.S. college campuses.

Modernization. Lately, too, a number of relatively young members have taken over responsible positions in the church and tried to modernize its approach to evangelism. Among the signs of change: the $700,000 Christian Science Pavilion at the New York World's Fair, a paperback edition of *Science and Health*. Says Harvard-trained Robert Peel, of the church's Committee on Publication: "Like many small groups, we started with a great deal of persecution and were put on the defensive. But as the movement has grown, Christian Science has begun to reach out to society as a whole."

CHURCH & STATE

A Tide Reversed

Millions of U.S. Christians emotionally reject the Supreme Court's successive decisions against prayer in schools; in fact, as this month's hymn-laden commencement ceremonies show, prayer is still very much in schools, regardless of the court. But church leaders, at first often prone to echo their congregations in opposing the court

* Unconfirmed children, at the now-popular family service, can approach the altar with their parents, cross their arms and receive the priest's blessing instead of the consecrated bread and wine.

thought through the legal implica-
of attempting to overrule the court
constitutional amendment. They
overwhelmingly agree that the
has affirmed the essential mean-
of the First Amendment: it protects
religions by establishing none.

On the Record. Almost every Prot-
nt denomination—ranging from the
enth-day Adventists to the Episcopal
tional Council—has gone on record
orsing the decisions. The National
ncil of Churches, representing 31
testant and Orthodox groups with
re than 40 million members, ap-
ved the rulings last June. The three
jor Lutheran bodies—the Luther-
Church-Missouri Synod, Lutheran
urch in America, and American
theran Church—side with the court.
st month additional endorsements
me from the American Baptists,
uthern Baptists, United Presbyterians
d Unitarian Universalists.

Virtually every Jewish organization in
U.S. applauded the initial court de-
ion on school prayer, while Roman
tholic opinion has shifted from open
position to guarded approval. A new
rvey of diocesan papers by the Cath-
weekly *Ave Maria* revealed that
have gone on record opposing any
ngressional action to overturn the
urt decisions, while only eight favor
wo years ago, a big majority of
e same papers attacked the Supreme
urt's ruling on the New York State
ard of Regents' prayer. Meanwhile,
e church leaders who oppose the court
cisions are fewer, although they still
clude Billy Graham, Fundamentalist
dio Preacher Carl McIntire, James
ancis Cardinal McIntyre of Los An-
es" and New York's Auxiliary Bishop
ulton J. Sheen.

Doubtful Layman. Says the United
esbyterian Stated Clerk, Dr. Eugene
rson Blake: "My experience is uni-
rmly that where there is careful study
the issues involved—in contrast to
initial and unconsidered emotion-
reaction—a substantial body of
oughtful church-member opinion sees
e dangers inherent in the practice of
votions in the public schools." Yet
far, laymen have not been convinced
the court's wisdom to the degree
at clergymen are. The Rev. Shrum
erton, president of the Kansas City
Council of Churches, explains that
me laymen have a vague feeling that
e are losing all religion in public life
d that something ought to be done,
t they don't know what." At the re-
ent Methodist General Conference, a
solution approving the prayer rulings

who last week was chided by one of his
ests for taking a conservative stand on an-
er political issue: civil rights. The Rev.
illiam Du Bay, 29, petitioned Pope Paul
to remove McIntyre on the ground of
ross malfeasance in office" for failure to
ercise moral leadership on the racial issue
d for refusing to let his clergy take part in
y civil rights campaigns. At week's end the
rdinal replied by removing Father Du Bay
om his administrative duties.

was tabled by a vote of 341 to 339. Many school districts have not yet complied with the court decisions, and there are plenty of public schools where the class day begins with a moment of silent meditation.

The degree of church-leader opposition to school prayer has not been lost on the House Judiciary Committee, which recently concluded hearings on constitutional amendments—principally one proposed by New York Republican Frank Becker—that would allow voluntary prayer and Bible reading in the public schools. When the hearings began, some Congressmen reported that their mail was running 20 to 1 in favor of Congressman Becker's amendment; it now appears to run almost as heavily against. At least 20 of the committee's 35 members, according to one informal poll, will vote down Becker's resolution. Says Committee Chairman Emanuel Celler: "The effect of the churches has been to reverse the tide. In the beginning there was a wave of patriotic piety and religious fervor in support of the Becker amendment. But the churches pointed out the thicket of embarrassments the committee would enter upon if it attempted any change in the Constitution."

MILESTONES

Born. To Heller Halliday Weir, 22, Mary Martin's daughter, who played with mother in *Peter Pan*, and Anthony Weir, 28, Madison Avenue ad man: their first child, a boy, and Mary's third grandchild; in Manhattan.

Married. Anthony Accardo, 29, adopted son of Anthony ("Big Tuna") Accardo, heir to Al Capone's Chicago crime syndicate; and Janet Marie Hawley, 23, Miss Utah of 1961; in a Roman Catholic ceremony in Chicago attended by their families, four minor-league hoods, and 30 representatives of the FBI, the Illinois Crime Commission, Chicago Crime Commission, Cook County Sheriff's Office and the Chicago police.

Married. Dr. James Slater Murphy, 41, associate professor of virology at the Rockefeller Institute and Happy Rockefeller's ex-husband; and Victoria Thompson, 25, Manhattan socialite turned schoolteacher; he for the second time; in Manhattan.

Married. Stewart Granger, 51, Hollywood's Great White Hunter (*King Solomon's Mines*); and Caroline Lecerf, 22, Belgian beauty queen; he for the third time; in a civil ceremony in Geneva. Said Stewart: "Only thing that makes me wince is that her mother's two years younger than me."

Died. Pamela Moore, 26, fledgling novelist, who hit the bestseller lists at 18 with *Chocolates for Breakfast*, describing a girl's first bittersweet taste of adult pleasures and problems, but had less success with a second novel, and found her inkwell dry part way through her third, about a washed-up writer who puts a rifle to her head; by her own hand (.22-cal. rifle); in Manhattan.

Died. Charles Clarkson Stelle, 53, career U.S. diplomat, an ever-so-patient negotiator at the Geneva disarmament conferences for the last four years, and a key man in both the 1962 nuclear test ban treaty and last year's "hot line" agreement; in Washington.

Died. Luang Pibul Songgram, 66, Thai strongman, who as Prime Minister from 1938 to 1941 and again from 1948 to 1957 changed the country's name from Siam to Thailand, turned it westward, or so he thought, with such Occidental laws as ordering men to kiss their wives before leaving for work each morning, ruled with a generally competent, militantly anti-Communist hand until a 1957 economic crisis led the Thai army to overthrow him; of a heart attack; in Tokyo.

Died. Mazie Phillips, 72, angel of mercy to Manhattan's Bowery bums, a guttural-voiced platinum blonde who worked as a cashier in a Skid Row moviehouse and for 50 years comforted every bench warmer, panhandler and swillbelly with a quarter here, a nip there, believing that more organized forms of charity were doomed because "you ain't goin' to get a bum in a mission if there's a gutter to sleep in"; after a long illness; in Manhattan.

Died. Morris Cafritz, 77, Washington real estate man and builder, known for his 100-acre Parklands housing development and shopping center in southeast D.C., but best remembered as the rich husband of Gwen Cafritz, who in the '40s and '50s clashed cocktail crystals with Perle Mesta for the scepter of hostess with the mostess until Jackie Kennedy arrived; of a heart attack; in Washington.

Died. Lord Beaverbrook, 85, patriarch of London's Fleet Street; of a heart attack; in London (*see* PRESS).

Died. William Pettus Hobby, 86, onetime Governor of Texas (1917-1921), longtime chairman of the Houston Post and husband of Oveta Culp Hobby, Ike's first Secretary of Health, Education and Welfare, who gave his state women's suffrage and its first oil conservation laws, then rode off to the newspaper wars, supervising the Post's rise as one of Texas' most informative and widely read newspapers (circ. 227,649); in Houston.

Worthington makes everything you see in gray...

No wonder it is so easy to build power plants when you work with us.

Are you modernizing or expanding an electrical and steam generating plant? Or building a new one? You will find that Worthington makes every major component (excluding the boiler). There are three important reasons why working with Worthington is the easiest, surest way to get reliable, low-cost power.

First, having a broad line of equipment gives Worthington extensive practical experience in solving heat balance problems for maximum efficiency and flexibility. As Worthington makes every type of steam turbine, you are assured of efficient electrical power generation with steam delivered for heating or for process at lowest cost. The same heat balance benefit is derived from selecting fluid handling cycle equipment from Worthington's line of pumps, ejectors, heat exchangers and deaerators.

Second, Worthington applies the same design philosophy to every piece of equipment in the power plant. The reliability, efficiency and other performance characteristics of each piece of equipment are closely balanced with the performance of over-all steam cycle. For example, condensers, ejectors deaerators are carefully designed for maximum air rem without excessive steam consumption. All condensate and b feed pumps are carefully designed to maximize efficiency, N requirements, and reliability to fit in with system requirem

Third, Worthington can provide highly experienced, s responsibility for specification and selection of equipm delivery, installation and start-up. Worthington engineers plants are located throughout the world.

For further information, please contact the regional o nearest you.

BLOUGH

Leading the greatest reorganization.

have what one U.S. Steel official calls "good records and good attitudes," have been rooted up from such outposts as Birmingham, Cleveland and Provo, Utah, leaving behind a surfeit of $35,000 to $50,000 homes. Transferred to Pittsburgh, they now overflow the 41-story headquarters into four other downtown buildings. They have been brought together as part of the corporation's effort to slice through its layer cake of supervisors, consolidate its sprawling divisions and end the costly overlapping of its sales offices. The company has united many of its independent accounting and engineering offices in central headquarters, reduced the number of its regional sales offices from 53 to 28, and ordered all salesmen to sell its full range of 10,000 kinds of steel instead of only a limited number. Says President Leslie B. Worthington: "It was so obvious that we could improve our effort by bringing together these divisions."

The obvious need is to increase sales and earnings. The company that controlled 65% of the nation's steel sales 60 years ago has slipped almost steadily to a low of 24.2% of the present booming market; each percentage-point drop now means a loss of $150 million in annual sales. Though U.S. Steel last year reached a three-year peak in sales ($3.6 billion) and earnings ($203.5 million), its profit as a percentage of invested capital (4.9%) was the lowest among the majors, and as a percentage of sales (5.6%) was just average. In comparison, National Steel, which is one-quarter the size, led by both measures with returns of 8.4% and 7.5%. In 1962 U.S. Steel was forced to cut its quarterly dividend from 75¢ to 50¢, and its stock closed last week at 53⅛—less than half of what the price was five years ago.

Lawyers & Bankers. Such losses in income and image have stirred up criticisms of the company's management. In the 63 years since J. P. Morgan bought out Andrew Carnegie for $500 million and brought in Judge Elbert Gary to organize U.S. Steel, the company has been guided mostly by lawyers and bankers. Of the six chairmen in its history, only one—the late Ben Fairless—ever worked regularly in a steel mill and was not a lawyer. Says a vice president of a competing steel company: "The operating people simply do not have an equal voice. The corporation would do much better if they did."

High policy at U.S. Steel today is made by three men—two of whom came from consulting jobs outside. Chairman Roger Miles Blough, 60, probably the best-known U.S. businessman, was recruited 22 years ago from the company's law firm, White & Case, and today is in charge of its relations with Washington and with stockholders. Finance Committee Chairman Robert C. Tyson, 58, a cool accountant who came from Price, Waterhouse, looks after the money. Leslie Worthington, 61, an ebullient salesman who was lifted several ranks to the presidency in 1959, runs day-to-day operations. Steelmen and securities analysts consider Blough and Tyson to be adequate specialists, rate Worthington as the most imaginative and popular of the three. "In sum," says one Pittsburgh steel executive, "the top managers are conservative men who tend to practice what they already know."

Penalty of Size. Instead of leading the industry, the company's cautious managers were slow in adjusting to some of the great marketing and technological changes that have vastly altered the steel business over the past decade. Such companies as Inland were quicker to react to the fact that the great postwar and post-Korea steel shortage ended in 1957, and they stepped up their selling drives. While U.S. Steel continued to concentrate on the heavier and less profitable grades of steel, such specialists as Armco and Youngstown marketed more and more of the lighter and flat-rolled steels that have taken larger bites of the market.

European firms developed the two major postwar steelmaking innovations—the oxygen process and continuous casting—and companies such as McLouth, Kaiser and Jones & Laughlin built oxygen furnaces before U.S. Steel

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

did. Progressive McLouth was also first with continuous casting. In addition, U.S. Steel declined to meet lower prices set by aggressive domestic and foreign competitors, sometimes abandoned markets rather than compete.

U.S. Steelmen say that they are penalized by bigness. Theirs is the only truly national steel company, with plants stretching westward to Pittsburg, Calif., and it often cannot change prices or products as rapidly as smaller but more profitable regional companies. At the same time, the corporation is among those most hurt by cut-price imports from Japan and Europe, for it is a major producer of the products most heavily imported—bars, wires, pipes. Many U.S. Steelmen also complain that Government harassment prevents them from expanding their markets or raising prices as high as they would like. The Government has filed no fewer than six antitrust suits against U.S. Steel since Roger Blough's price fight with President Kennedy in 1962.

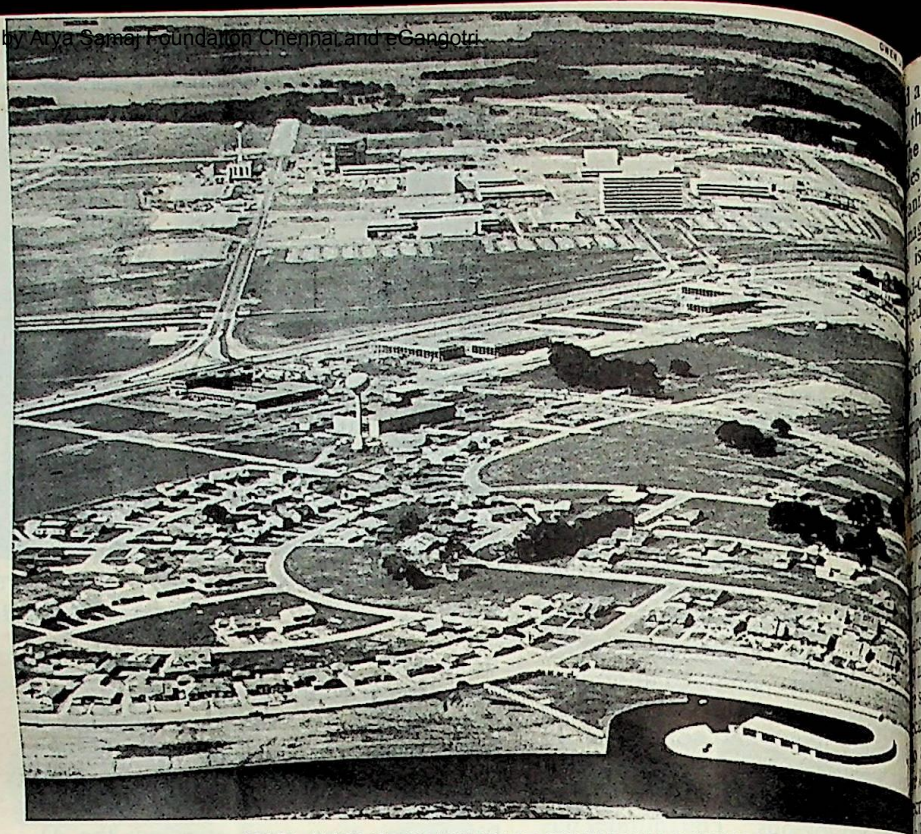
"The New Competition." U.S. Steel has begun to make up for its inadequacies. "Changes occur at such a rapid pace," Roger Blough told stockholders last month, "that we might call this business ferment the new competition." The corporation has tripled its research budget over the last five years, is introducing new or improved products at the rate of one a week. Among them: a cheaper wire rod to battle the imports, and a .002-in. "thin tin" to foil aluminum's inroads in the packaging business. U.S. Steel recently opened its first two oxygen furnaces at Duquesne, Pa., may build four others at Birmingham and Lorain, Ohio. To capture more of the rich Midwestern market from Inland, Republic, National and Bethlehem, U.S. Steel is building three oxygen furnaces and a continuous casting line at Gary and a strip mill at South Chicago capable of turning out enough tin cans to supply almost all the nation's needs.

First quarter sales, helped by price increases on 75% of its products last year, were 11% higher than the same period of 1963. But not even its managers expect the full effect of their corporate changes and capital spending to be felt until 1966 or 1967. Competitors believe that U.S. Steel is still in the midst of upheaval, and they hope to exploit it to their own advantage for several years. President Worthington agrees in part. Says he: "Nobody around here is saying that this reorganization is the last word."

THE ECONOMY

Where the Growth Is

Every week the surging U.S. economy packs a few more happy surprises and leaves some old records behind. Last week the Government reported important gains in retail sales, inventory buying and capital spending. While businessmen last February budgeted a 10% increase in capital spending for 1964, the Commerce Department reports that they now plan a 12% gain, to almost $44 billion. The benefits will be uneven; the U.S. economy is so varied that some regions of the country are clearly doing better than others. A comparison by regions:



NASA MANNED-SPACECRAFT CENTER NEAR HOUSTON
Some areas are moving fast.

The South, which paced the nation with a 6% rise in personal income last year, will continue to lure industry with sunshine, low-wage labor and generous tax concessions. Last week multimillion-dollar expansion programs were announced by Lockheed in Georgia, International Paper in Alabama, Reynolds Metals in Florida, Allied Chemical in South Carolina. Growth in chemicals and oil helped lift personal income in Louisiana well above the national average of 5% last year.

The Southwest gets more than its share of Government contract money, thanks in no small part to its important friends in Washington. NASA's new Manned-Spacecraft Center brings $3,000,000 in monthly salaries to Houston, and at least 85 aerospace companies have landed in the area since 1961. The regional boom is broadly based. Last year the Southwest's industrial output rose 5%, construction 11%—both to alltime records. Texas has become the nation's leading producer of basic chemicals, and its $5 billion petrochemical industry is a bigger business than oil refining.

The West senses some growing pains. Southern California last year started more new houses and apartments—200,000—than any entire state, but local contractors now complain of overbuilding. Cutbacks in defense-spending during April resulted in 5,000 layoffs in California, which depends upon the Pentagon for fully one-third of its manufacturing output. But personal income in neighboring Nevada last year ran 13% ahead of the 1962 rate—a more rapid gain than any other state, mostly because of its returns from legalized gambling.

The Midwest is growing more slowly than other regions because such [illegible] growth industries as aerospace and defense have drifted to areas that boast a gentler climate and more persuasive Congressmen. Compared with the same period last year, personal income during the first quarter rose scarcely 1% in Missouri, Illinois, Iowa. But auto-booming Michigan gained almost 8%, and the unemployment rate there is down to 3.6%.

The Northeast is also moving more rapidly than the South and West, partly because those regions have more room for expansion. Last year, personal income ran from 4% to 5% higher in New Jersey, New York and Pennsylvania. These highly developed regions stand to fare better in the future. The Labor Department recently predicted that the fastest-growing businesses during the last half of the 1960s will be construction, electronics, publishing, trucking, retail and wholesale trade—precisely those sectors in which the Northeast is strongest.

JUNIOR EXECUTIVES

Most Likely to Succeed

Smiling recruiters from 18 companies will take over 32 rooms in Manhattan's Waldorf-Astoria this week to interview more than 600 college graduates. On hand will be personnel specialists from Boeing, Bristol-Myers, Chase Manhattan, Equitable Life, Lever Bros., J. C. Penney, Xerox and other giants. The young men who will get the corporate glad hand are some of the most sought after graduates of the class of '64. The

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

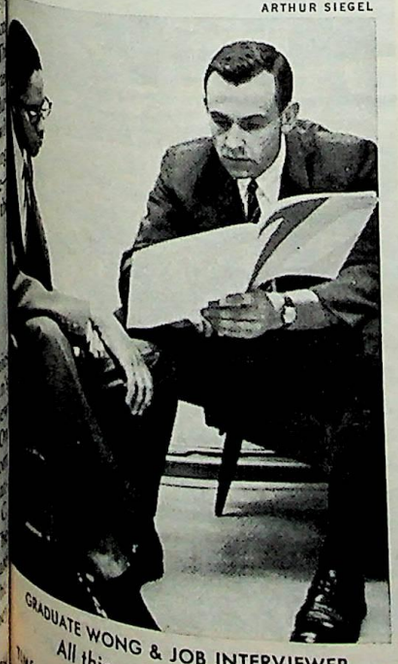
a variety of degrees, but they have thing in common: all are Negroes. the Right Time. Quite a few com- es have asked colleges and Negro anizations to help them find Negro agement trainees. In some cases is a calculated gesture, a sort of over-backward bow that has been ed by social and political pressures. New York University Associate ment Director André Beaumont: white and a Negro graduate were eting for the same job and were al in every respect save skin color, job would go to the Negro." Some ege contractors feel it is good busi- s to display Negroes conspicuously drafting tables and in labs. Con- -oriented companies are inclined woo Negro trainees to avoid the un- easantness of picket lines and sit-ins. nd large, however, U.S. companies seeking Negroes for promising jobs ause they feel it is the right thing to and the right time to do it. "We looking for brains," says Swift & Co. ruiter Edward Hall, "and they come ll sizes and colors."

Finding them is not always easy. attan Personnel Consultant Rich- Clarke, a Negro who organized the iting jamboree at the Waldorf, es- tes that there are only five Negro ates available for every 100 man- ent-level jobs open to them. There 5,000 Negroes among this year's 000 graduates, and many of them not choose corporate careers. For mple, 21-year-old Edward Wong, a s graduate from Chicago's Loyola versity, had interviews with eight panies but elected to go to law ol. Negro students have traditional- pted for such sheltered fields as hing, government and social work, re discrimination has been relative- mild. As for business, Negroes have —with justification—that their op- rtunities would be severely limited. Some doors are still shut. But such rmerly "tight" fields as banking, bro-

ARTHUR SIEGEL



GRADUATE WONG & JOB INTERVIEWER
All things being equal.

kerage, steel and the auto industry are opening wider. Negro recruits are increasingly welcome at airlines, retail stores and food, petroleum, aerospace and electrical-equipment companies.

The Right Man. The Negro is arriving at name-on-the-door status at a time when starting salaries for all kinds of graduates can only make old grads cluck in envy. The best-paid are top-graded engineers, whose B.S. degrees will earn them between $600 and $625 a month. Even graduates in the lowest-paying fields—government, journalism and general business—stand to begin at $400 to $500. William Eagleson, a 22-year-old Negro from M.I.T. (B.S. in metallurgy), was interviewed on campus by seven companies, accepted invitations for four plant tours, decided to enter Ford's management program at $625 a month plus many fringe benefits. "The other companies may have been interested in me because I was a Negro," he says. "But I got the job at Ford because I am a man they can use."

EMPLOYEES

The Power of Suggestion

By changing its sales contracts to include extra charges for valuable bismuth sprinkled through its copper by-products, Kennecott Copper this year will earn an extra $100,000. Accountant Robert J. Edwards, who proposed the addition, has profited too. The $25,000 that Kennecott awarded him made Edwards the top winner among 500,000 employees to whom major corporations paid $19 million for suggestions last year.

Suggestion boxes were once considered a joke, and some employees still treat them that way. Most managers now take them quite seriously, have lately started to solicit suggestions from engineers and supervisors as well as clerks and production workers. Companies accept some 30% of the suggestions, save an estimated $200 million a year from the ideas they take out of the box. Says Douglas Aircraft President Donald W. Douglas Jr.: "These ideas help us improve our competitive position through reduced costs." Ford is so eager for ideas that employees who win the maximum $6,000 award also receive a new car. So far this year, ten suggestion stars have lifted themselves into Galaxies.

No idea is too small. A Liberty Mutual office worker suggested that the company install a second mirror in the ladies' room. "It turned out to be a great timesaver," says an executive of the company, which paid her $15. Most ideas are more technical, and many are more lucrative. The record award—$72,186, spread over the past three years—went to two IBM technicians, Charles G. Glancey and Lawrence R. Livigni, who figured out a way to eliminate 14 printed circuits in a computer. Along with other suggestions for which General Electric has paid $14 million

HERZIG & HOUSE THAT IDEAS BOUGHT
Nothing too small.

in the past 40 years was the "Peek-a-Brew" coffeemaker, which shows how much coffee is inside.

Once an employee wins with a suggestion, he almost always tries again. At General Motors, where $7,000,000 was distributed to more than 200,000 employees for suggestions last year, a die tester named George Herzig is the grand champion. In 17 years, he has dropped 134 suggestions in the box, had 35 accepted. With the $41,905 he received, he has bought and furnished a house.

TOBACCO

Tar Czar

Sales of cigarettes, which fell sharply after the Surgeon General's report in January, have lit up again. Last week the Internal Revenue Service reported a steady gain—29 billion smokes shipped in February, 38 billion in March, 44 billion in April. The April total was almost 5% higher than that for the same month last year.

Tobaccomen still must puff easily on their advertising. Pressured by the Federal Trade Commission, nine cigarette companies formed the Cigarette Advertising Code, Inc. Last week they named a smoke warden to administer the code: Lawyer Robert B. Meyner, 55, former (1954-62) Governor of New Jersey.

Meyner—who will work part-time for an undisclosed salary—will have authority to filter out ads that are pitched to youngsters or suggest that smoking promotes success, social acceptance, health or virility. His first act was to put in a word for the sponsors: "I think it is rather remarkable that people with a great deal of self-interest have set up a code that goes so far. I feel it can be enforced." To help him handle cigarette makers who would rather fight than switch, he can levy fines up to $100,000. Meyner, once a heavy smoker, now limits himself to half a dozen after dinner. Which brand? "The code says I have to be impartial."

TRADE

When Poor Meets Rich

There is an old Middle Eastern story about the beggar who boasts in the bazaar that he is going to marry the sultan's daughter. "I've decided to do it, and I have my parents' consent," said he. "All I have to do now is get her agreement—and the sultan's."

That tale was wagged around the corridors of Geneva's Palais des Nations last week, as the first great confrontation of the world's rich and poor nations reached its final hours. For three months at the U.N. Conference on Trade and Development, 75 underdeveloped nations squared off against 29 industrialized nations, which had been shotgunned into the meeting in the first place. At issue was how to improve the poorer nations' dwindling share of world trade. The underdeveloped bloc came up with a list of extravagant demands that would boggle even a sultan: preferential tariff treatment for their manufactured goods, abolition of all barriers against their raw material exports, high fixed commodity prices. Predictably, the wealthy nations did not buy.

North v. South. By sheer weight of numbers, the underdeveloped nations got their way in the endless committee meetings. But the resolutions meant little without the backing of the industrial nations that carry on 80% of the world's trade. Working against the June 15 adjournment deadline, the conference's president, Egypt's Deputy Premier Abdel Moneim El-kaissouni, and secretary general, Argentine Economist Raúl Prebisch, used their skills as suave fixers to salvage some things. The industrial nations' delegates made several soft compromises. By supporting proposals to reconvene the trade meeting every three years and to set up a small secretariat at Geneva, they moved toward creating what someday could become a new trading organization for the world. They also agreed to "recommend" that the World Bank grant loans to countries that suffer from commodity-price declines, and that the industrial nations set a foreign aid goal of 1% of their "national income," that is, the sum of their personal income and corporate profits.*

More important was the fact that the underdeveloped nations moved toward creating a new alliance—along economic, not ideological lines. Though they bickered among themselves, they held fairly firm against the richer lands, both free and Communist. Said U.S. Delegate Richard N. Gardiner: "This is the first major international conference in which the East-West confrontation has been submerged by the North-South divisions."

Get that GATT. Failure of the U.N. conference to produce a quick cure for trade deficits only strengthened the 62-nation General Agreement on Tariffs and Trade (GATT), the single permanent machinery for lowering barriers and expanding trade. GATT carries the hopes of industrial nations for freer trade, but is by no means ignoring less developed ones. In the continuing "Kennedy Round" of negotiations, GATT ministers aim for 50% across-the-board tariff cuts that would be extended to underdeveloped countries on a nonreciprocal basis.

Moscow damns GATT as a "rich men's club," but Communist countries are beginning to cozy up to it. Poland became an associate member last year. While in Geneva, Hungary and Bulgaria put out feelers. Delegates from Rumania are conferring seriously with GATT officials. Even the Russians have made guarded inquiries about setting up a permanent mission to the Common Market in Brussels—presumably a first step toward closer relations with all the West's trading organizations.

* At the current rate, that would add $1.3 billion to the U.S.'s proposed $3.4 billion foreign aid budget for next year.

PREBISCH & EL-KAISSOUNI AT U.N. CONFERENCE
New alliances are economic, not ideological.

COMMODITIES

Rotten Cotton?

Exporters of U.S. cotton, who year will ship $600 million wor the nation's sixth largest export, ha tough row to hoe. More and more ropean buyers are complaining a the condition of U.S. cotton. "Am sends us the worst-made-up ba says Harry Tonge, chairman of Bri Raw Cotton Committee. Grumbles Genoa importer: "The condition U.S. cotton cries out for reve Some countries are beginning to revenge. Communist Bulgaria judg shipment to be so shoddy that it not ly delayed unloading the $2,750 cargo last month but impounded Danish freighter that carried it. week the Bulgars finally released ship—after its owners agreed to pu $350,000 pending an international vestigation to determine whether cotton was damaged in transit.

Loudest complaints come from b men, Europe's busiest cotton excha German importers cast baleful eyes on slashed bundles of brittle, sh fibered U.S. cotton that sometimes c tains a large amount of twigs, lea and rocks. Nearly half the U.S. co shipments to Bremen go into arbi tion, which often results in stiff pe penalties for the U.S. shippers.

Why does the U.S., which prides self on exporting quality goods, ha this problem? European buyers bla the poor condition of the cotton pa on U.S. mechanization. Cotton-picki machines gather more leaves and ste than hand-pickers do; fast-ginning m chines dry the cotton excessively, lea ing the fibers broken and brittle. T Agriculture Department contends th

lity has actually improved in recent s, says the complaints stem mainly m the Europeans' desire to achieve er prices through arbitration.

The Europeans have a legitimate vance and a good part of the re- sibility for it rests with the U.S. eral bureaucracy. Piling subsidy atop dy, the Government buys up much the cotton that U.S. farmers grow, it handles most of the cotton that exported. The Government is sup- osed to properly inspect the bales, but quently its standards of classification d control are not sufficiently strict. porters buy the cotton from the Gov- rnment, sometimes sell low grades high-grade prices—and Washington es not stop them.

The record of another exporter adds the embarrassment of the U.S. Of 90,000 bales that Russia shipped to men last year, only 95 were subject bitration.

CANADA

ck to the Mines

Mining in Canada seems to follow a ttern of seven years of fat, seven ars of lean. The great uranium boom mped $10 billion into the Canadian onomy between 1950 and 1957, then led. Now, after seven fairly slender ars, a new mining rush is on. Some 0 companies are drilling for metals d oil from New Brunswick to British lumbia.

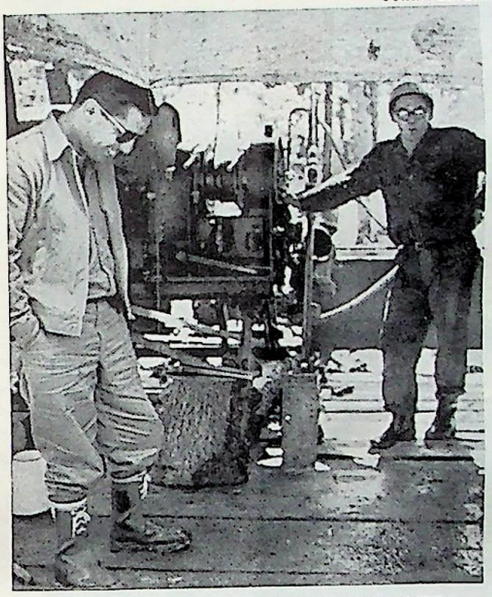
The big dig has been prompted by half a dozen recent oil, gas and metal rikes, notably the spectacular copper, nc and silver find by Texas Gulf Sul- ur near Timmins, Ont. More than 1,000 prospectors have staked 8,000 laims, some as far as 65 miles from the rike site. Texas Gulf Sulphur will spend $20 million to develop its Tim- ins properties, and such Canadian firms s Noranda Mines, Hudson's Bay and Consolidated Mining together have aised their exploration budgets in the rea by $10 million. International Nick- l put 30 surveyors to work, some in elicopters, and even staked more than 50 claims to the Timmins airport— nder which copper is thought to be uried.

The hunt is by no means confined to ntario. In western Canada and the rctic regions, Imperial Oil, Home Oil, hell Canada, California Standard and half a dozen other firms intend to spend ore than $300 million exploring for il and gas this year.

Frenzied Trades. Mining men have always known that Canada hides a treasure of minerals. But because of high development costs, great distances from markets and erratic transporta- tion, they have exploited that country less than the U.S. Some recent changes now make the effort and expense worth- while. World prices of copper, lead and zinc have jumped because of political unrest in Chile and Africa. This year also, prospectors struck oil in Alberta, gas in British Columbia and nickel in Manitoba. Geologists estimate the value of the Timmins find at $1 billion, and many of them believe it ultimately will return much more.

All this has led to the most frenzied trading in mining stocks in history. Over the past two months, more than 1 billion shares in Canadian mining companies have changed hands on the Toronto Stock Exchange, and more than 14 million shares of Texas Gulf have traded on the New York Stock Exchange. Brokers figure that half a dozen mining companies have raised between $4,000,000 and $6,000,000 by floating new shares. Some of the funds have already slipped back across the border, are being used by United Comstock Lode Lines to reopen the dormant Comstock

JOHN REEVES



PAT GIARDINE (LEFT) AT TIMMINS SITE
The rush is on.

gold mine in Nevada. Among the half dozen new millionaires at Timmins, 28-year-old Pat Giardine made a killing on both his claims and controlling interest in Bunker Hill Extension Mines—which he had bought for a song.

Staggering Markups. Promoters have also made millions by buying prospectors' claims and selling them at staggering markups to speculators. Much of the Timmins land is owned by descendants of Boer War veterans, who were granted the mining rights in perpetuity. One promoter tracked down an heir in Buffalo, paid him $400 for his rights, sold them the next day for $30,000. There has been more claim jumping in Timmins in the last two months than in the previous 50 years.

Whatever the outcome of the searches and speculation, Canada's economy is sure to profit. The country is the world's third biggest miner, behind the U.S. and Russia. From mines and wells already operating, Canada this year expects to increase output of copper, zinc, oil and gas by 10%, potash by 50%. It will earn more than $3 billion from minerals, and Federal Mines Minister William Benidickson predicts that output will reach $4 billion by 1970.

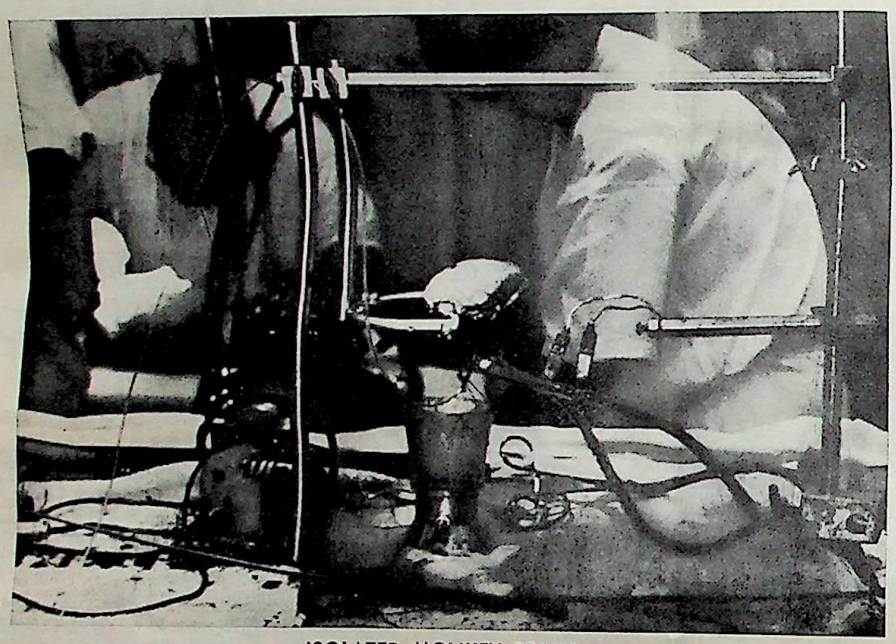
NEUROPHYSIOLOGY

Live Brains in the Lab

The recipe has long been a staple of science fiction: learn how to keep monkey brains alive after the monkeys die, then try the technique with humans. But whatever the profits of the fictional feat, such achievements would be even more rewarding to the real scientist. Now, at Cleveland Metropolitan General Hospital, researchers have taken the first long step: they have learned to keep isolated monkey brains alive.

A team led by Dr. Robert J. White takes a brain, which is about as big as a man's fist, out of a rhesus monkey's skull, retains only small bits of bone to serve as supports, and suspends the brain in an apparatus of tubes and rods. Its blood vessels are hitched to a small heart-lung machine, and fresh blood is supplied from a monkey blood bank. Delicate needles stuck in its surface allow an electroencephalograph to measure the electrical activity by which all brains do their work.



ISOLATED MONKEY BRAIN
Asleep? Awake? Frightened?

Dr. White's monkey brains sometimes stay alive for as long as 18 hours. When they finally die, it is usually because of waste products accumulating in the blood. Soon Dr. White hopes to use an artificial kidney to clean up the blood and lengthen the brains' survival time.

Sounds & Sights. While alive, the brains' EEG charts show a continuous flow of electrical signals, and Dr. White can communicate with them. When he rings a bell near the stump of a brain's auditory nerve, he gets an electrical reaction. When a needle carrying weak electric current touches the stump of the optic nerve, the visual part of the brain responds.

This activity indicates that the brain is functioning on a high level, reacting to signals that seem to come from its lost ears and eyes. But Dr. White is not sure whether the brain is asleep or awake. Does the brain believe it is still alive and in the original monkey? Is it frightened by loud sounds and bright flashes of light? Does it send desperate escape orders to nonexistent limbs?

Rewards in Death. No attempts have been made so far to find out whether the isolated brain functions logically, sizing up a situation on the evidence of its sense nerves, consulting its memory and giving appropriate orders to its muscle nerves. Such experiments might be made by using food rewards to train a living monkey to perform a simple action, such as reaching an arm forward when it hears a set number of familiar sounds. When the monkey is fully trained, its brain would be isolated, and the sound signal given to its auditory nerve. If electrical signals appear in nerves that formerly led to arm muscles, this will mean that the brain's memories of past rewards are making it try to reach for food with an arm that no longer exists.

Still far in the future is another favorite idea of science fiction: using the isolated brains as cheap, efficient computers to do routine jobs. But if still living human brains ever become available, Dr. White's monkey techniques would probably keep them alive, and there might be jobs for them to do.

ECOLOGY

Chemical Controversy

The more chemical pesticides are put to practical use on farms and gardens, the more controversy rages about their possible hazards. The most recent acrimonious debate has focused on U.S. rivers where fish have died in conspicuous numbers.

Are pesticides to blame? The Public Health Service said they were when 5,000,000 fish died last fall in the Mississippi Delta. After a hurried investigation and an analysis of the re
of ten dead catfish, PHS blam
entire slaughter on endrin, an
cide used on cotton and sugar c
the farms around the lower reac
the river. No significant amo
endrin was found in the water

Olivia Goes Ape

Lady in a Cage. A power failure. In an elegant old mansion a self-service elevator stops suddenly at an awkward level between floors. In it, mildly startled, stands a middle-aged woman with a book of poems in one hand and a Lowestoft jar in the other. "Don't worry," she reassures herself. "This can't last more than a few minutes." But it does. It lasts all day, a day of wrath that changes a cultured woman into a caged beast and adds Olivia de Havilland, now 47, to the list of cinemactresses (Bette Davis, Joan Crawford) who would apparently rather be freaks than be forgotten.

Unable to open the elevator door, the woman (Olivia) presses the panic button. In the service street behind the house an alarm begins to jangle. A drunken derelict hears it, wanders up to the kitchen door, peeks in, sees a bottle of wine vinegar, deliriously smashes a window pane, enters the house and goes staggering through it in search of liquid plunder.

He finds it, but then he finds so many other wonderful things to steal that the sight sobers him and he runs off to collect a more efficient colleague (Ann Southern). Poor slob, he also collects three predatory teen-agers, two boys and a girl, who tail him back to the mansion, snatch his boodle, conk him cold and, finding nothing better to do, kill him.

All this the trapped woman watches in helpless horror, but fear and anger do their work in her, and when the killers at last come to kill her they discover that the lady in the cage has turned into a tigress.

Lady, in short, is just a routine withdrawal from Hollywood's bottomless blood bank, but it does give Olivia a grand chance to go ape. She gibbers, growls, simpers, screeches; rolls her eyes, tears her hair, rattles the bars, climbs the walls, bawls a snatch of *Alouette,* jabs a villain's eyes out with some jagged metal strips; and at the climax, screaming like mad, crawls through the nearest gutter in a $400 negligee. Attagirl, Ollie.

OLIVIA DE HAVILLAND IN "CAGE"
A panic at the blood bank.

The Bard in Barcelona

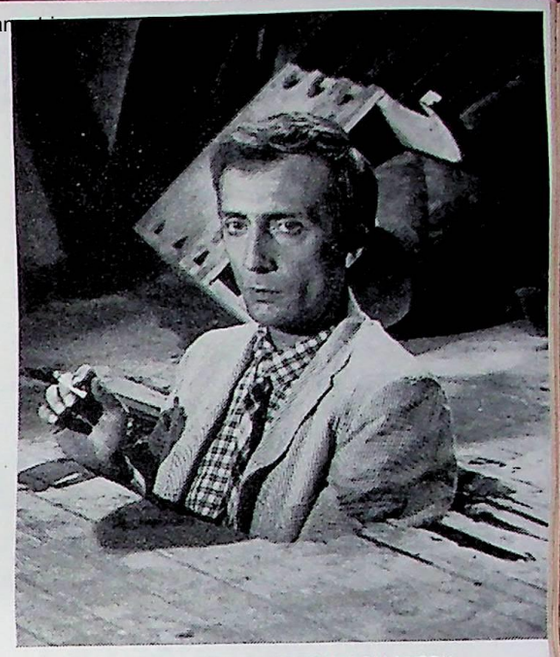
Los Tarantos, described in its publicity as "a Spanish *West Side Story*," spills its Romeo and Juliet legend onto the screen with a moving, ferocious beauty more in the spirit of the memorable *Black Orpheus.* As drama, it is only an idyl warmed over. As dance and folk poetry, it has a forceful, shimmering integrity of its own.

In modern Barcelona, the feud of two passionate gypsy clans, the Tarantos and the Zorongos, provides a turbulent prologue to the first meeting of young Rafael and Juana at a wedding feast. Dark eyes burn, hands slap out flamenco rhythm, bare feet pound the golden dust: thus Director Rovira-Beleta wordlessly launches a tale of love at first sight with an excitement that Shakespeare himself might envy. Later he tries too many tricky variations on the familiar story line, occasionally becoming somewhat incoherent, but his feel for Spanish gypsy folkways never falters. The tragedy mounts while men, women and children dance a fervid accompaniment in which the worst of enemies seem, at long last, brothers in blood.

Playing Rafael's mother with fiery whiplash energy, Dancer Carmen Amaya proudly declares: "When your father met me, he danced until his feet bled. They were bandaged for 15 days." Ever alert to such cues, *Los Tarantos* throbs whenever plot and subtitles give way to the stirring beat of darting hands and clicking heels. When an old man caracoles through a whirlwind of autumn leaves. Or when Rafael's doomed friend (Antonio Gades) dances among Barcelona's street sprinklers in the silver-blue wash of a winter's night, casting a rich theatrical spell that makes many another movie musical look as pale as 60-watt moonshine.

Based on a Premise

The Troublemaker is an avant-gardish comedy geared to the perceptions of bearded anarchists. But for half of its 80-minute length, practically anyone can enjoy it. Anyone, at least, who is reasonably irresponsible, mad about old movies, and perhaps a wee bit crazy in the first place. Written and directed by Theodore J. Flicker, onetime entrepreneur of a Greenwich Village coffee-and-show house known as The Premise, the movie tells of young Jack Armstrong (Tom Aldredge) who arrives in An Unidentified City—the one substantial clue to its whereabouts is a Statue of Liberty in the harbor—and tries to open a coffeehouse. He finds a promising firetrap on Bleecker Street, signs a lease that looks like a Dead Sea Scroll, and begins to clear out the debris, among which he uncovers *Citizen Kane's* sled, inscribed "Rosebud."



TOM ALDREDGE IN "TROUBLEMAKER"
A firetrap full of promise.

Ostensibly inspired by his own experiences with municipal corruption, Flicker soon wraps his hero in red tape and delivers him to a greedy pack of policemen, firemen, city inspectors and hotshot racketeers, all seeking payoffs. The cop is a half-witted movie monster, obviously put together by graft. The fireman is a Negro with an Irish brogue. Behind them all looms the Syndicate's Mr. Big, who may or may not be the local crime commissioner.

But such frequently sophomoric social satire is what's wrong with Flicker's cinematic prank. What's right with it is its irrepressible urge to let the plot go hang and take up more amusing matters, some of them crude, some of them nude, a few of them downright side-splitting.

Jack Armstrong's cohorts are an improper Bohemian (Joan Darling) and "an aggressive, successful young lawyer" (Buck Henry), an astringent facsimile of Jack Lemmon with everything pared away but the raging, libidinous core. Together these three spray buckshot at everything from psychological testing to Hollywood sex and suspense to Harold Lloyd cliffhangers and the sacrifice of 5th century Chinese maidens. Occasionally they take time out to paint one another white, or to elude a Sanitation Department truck propelled by murderous impulses. With all its freewheeling eclecticism and formless exuberance, *The Troublemaker* is finally just funny enough to leave an audience feeling it ought to have been a whole lot better.

In the Village Hollow

TO AN EARLY GRAVE by Wallace Markfield. 255 pages. Simon & Schuster. $4.50.

This hilarious first novel can be enjoyed by the general reader for its grotesque comedy, savored by the insider for its satire on the folkways of Greenwich Village intellectuals. "I raised you from a Middle-brow. I weaned you away from the art films, showed you the difference between the Western as mass myth and mass rite," one character tells another. It can also be read as a seriocomic exploration of the hollowness concealed beneath the vintage sophistication that has long been iden-

WALTER DARAN

WALLACE MARKFIELD
Greenwich Village in jargon.

tified as Greenwich Village at its most intellectually pretentious.

Author Markfield's quartet of intellectuals revolves around the Little Magazines, to which they rarely contribute but wish they did. There is Felix Ottensteen, burly book reviewer for a Yiddish daily, who refers to himself as *der Alte* and browbeats his sullen son because he is still a student at 27 ("The way Catherine the Great took lovers, he takes courses"). There is Barnet Weiner, a fading poet-critic who remembers peevishly the time when his picture appeared on the dust jacket of *New Critics, 1944*. There is Holly Levine, who teaches creative writing but keeps a copy of *Playboy* hidden under the *Kenyon Reviews*. Composing a review: "He hissed softly, 'Trilling . . . Leavis . . . Ransom . . . Tate . . . Kazin . . . Chase . . .' and saw them, the Fathers, as though from a vast amphitheater, smiling at him, and he smiled at them." Finally, there is Morroe Rioff, not quite "in" because he is an organizer and speechwriter for a Jewish fund-raising organization. (By no coincidence, Author Markfield is a publicity writer for the Anti-Defamation League.)

Whisky & Bier. As the novel begins, the intellectual quartet finds itself bereft. Leslie Braverman, a bona fide writer who published more than 100 articles that were read and discussed, has just died of a coronary at 40, and satellites are in a panic. For Leslie held perpetual open house, fed them ideas and patiently listened to theirs. He had integrity—"the way some people have b.o.," remembers one of the survivors emotionally. Leslie's wife also made herself available—and not just for talk.

On a kind of odyssey via Volkswagen, the four intellectuals drive to Leslie's funeral in Brooklyn, a voyage of self-discovery. Spouting psychoanalytical jargon, needling one another and everybody else, the Volkswagen men bumble through Brooklyn, pulling at a bottle of whisky, stopping at intermittent bars, where they are worsted by all the local Cyclops and Circes. Finally, they barge into the funeral parlor, snort, giggle and guffaw over the rabbi's sermon—obviously they knew Leslie so much better than the rabbi ever did. They file past the bier, peer in—whoops, the cadaver is not Leslie. Wrong funeral parlor.

Home Truths. At odyssey's end, the four intellects are, if not wiser, at least candid. They have grown closer than they have ever been, and they may never meet again. Too many home truths have been blurted—the loftily literary Ottensteen, for instance, reveals that he also writes boilerplate for the magazine section of the Yiddish daily under the pen name N. J. Felix. Holly wearily confesses that nothing happens any longer when he writes down the magic words *tradition, tragic, committed, alienation*. "The word moral looked mean and angry, ailing on the page. And two weeks ago, with the best will, I was unable to pull it through. Dead!" Finally, the three turn on Morroe, whose "moral hypocrisy," they decide, has led them astray, and exorcise him from them in an ancient Jewish ceremony.

But Morroe ultimately comes off best. Beset by his companions, in a drunken peroration Morroe appeals to his dead friend: "Leslie, he begged, intercede for me. I am no big intellect. I am no bargain. I watch too much television. I read, but I do not retain. I am not lost exactly, but I am still nowhere. I am the servant of no great cause. I follow the recommendations of the *Consumer's Research Bulletin*. But do me this favor, anyway. Keep them off. For they hem me in from all sides now. They put in my mouth the taste of darkness. They give me queer feelings, they get me all balled up."

And in the end, it is only Morroe who can genuinely cry for Leslie, the man of integrity.

Filter-Tip Tobacco Road

AROUND ABOUT AMERICA by E. Caldwell with illustrations by M. Caldwell. 224 pages. Farrar, $4.50.

Erskine Caldwell and Second Margaret Bourke-White collab in 1940 on a book called *Say! I the U.S.A.?* ("This America is a of men living in the extremes of and bad, heat and cold, wealt poverty . . .") Now, working new wife and a new title, Caldwe turned in almost the same ("Dynamic. things to say about the fringe literati who attend them.

Along the dreary road of social awareness are comfort stations offering comic relief to the weary. At WHER, an all-girl radio station in Memphis, there is an advertising saleswoman whose ashtray bears the well-worn lettering: "Long Time No He." In Welch, W. Va., there is a motel operator whose sideline is painting Fundamentalist road signs; his masterpiece reads:

WHERE WILL YOU BE IN ETERNITY?
WHERE WILL YOU BE TONIGHT?
WHY NOT AT THE SHADY GLEN MOTEL?

Caldwell should stick to his fictional white trash. They are more interesting.

The Emerson of Music

THAYER'S LIFE OF BEETHOVEN *edited by Elliot Forbes. 2 volumes, 1,136 pages. Princeton. $25.*

It was Richard Wagner who called Beethoven "a world walking among men." The world was, of course, his music, and there is no more striking example of a world so self-contained or so apparently independent of the man who created it. All of the conscious or subconscious control that Beethoven was capable of seems to have gone into the music—leaving none for the day-by-day business of living. The human Beethoven could not add, could not learn the rules of grammar, and could not master his emotions. For a time, his biographers were able to ignore these facts. But in 1866 the first volume of Alexander Wheelock Thayer's great *Life* appeared, and Beethoven biography has not been the same since.

An Ounce of Accuracy. Thayer was no debunker, but he was a scrupulous researcher after the truth. Until he wrote his *Life*, Beethoven biography had been a tissue of romantic fables and errors in "almost ludicrous contrast," as Thayer put it, to the facts of the composer's life. Thayer decided to set the record straight while he was still a graduate student at Harvard, and the effort occupied him for the rest of his life. On the theory that "an ounce of historical accuracy is worth a pound of rhetorical flourish," he went abroad in 1849 and roamed the Continent, rummaging through archives, talking with surviving Beethoven friends, old violinists and singing teachers, unearthing old letters and deciphering the scrawls and hieroglyphics in the composer's notebooks.

Always out of pocket and always complaining, like Beethoven, of his ill health (he had "overworked" his brain, he said, during a brief stint on the old New York Tribune and never recovered), Thayer labored for 40 years correcting dates, altering anecdotes and filling in the vast gaps in the Beethoven chronology. Because he could not find an English publisher, the *Life* came out, volume by volume, in German; by the time it appeared in English in 1920, it had long been regarded by scholars

Of course it's by Toshiba—

And it has all the mechanical and economical advantages of Toshiba refrigerators.

Take the freezer . . . it's rustproof, stainless steel. The cooling unit is guaranteed absolutely noiseless. There's plenty of space—a Toshiba refrigerator is *roomy*—that full-length crisper at the bottom keeps a plentiful supply of fruits and vegetables garden fresh.

All shelves are movable . . . and removable for easy cleaning. And this refrigerator defrosts at the touch of a button . . . no fuss, no bother.

Look over a line of superior refrigerators at your Toshiba dealers.

as a classic and its author had been dead for 23 years. Though long out of print, it is still the basic source book for all Beethoven biographies, and it has now been edited with notes and fascinating explanatory appendixes by Harvard Professor Elliot Forbes.

It was Thayer who, by scrupulous study of the sketchbooks, revealed the slow and strangely tentative manner in which Beethoven composed, starting with ideas so trivial they look like a student's and rewriting virtually each bar a dozen times. Thayer's study of Beethoven's correspondence disproved not only the composer's supposed grand love affair with the Countess Giulietta Guicciardi but also alliances with many of the ladies with whom the sentimental 19th century liked to link his name. Factually, Thayer was rarely wrong (although he assumed the Beethoven family had come from Holland, whereas later research indicates it came from Belgium). Incredibly, a whole generation of biographers had accepted Dec. 16, 1772 as the date of Beethoven's birth until Thayer established it as occurring two years earlier, thus clearing up a series of chronological contradictions that had plagued students of the first half of the composer's life.

Ungovernable Temper. It was the character of Beethoven that most fascinated Thayer, however, and he left a portrait of the man that every biographer, with varying degrees of embarrassment, has had to reckon with since. Thayer's Beethoven is a man of atrocious manners, immense ego and ungovernable temper who at one time or another turned on virtually every one of his friends and alienated most of the musicians of Vienna. His idea of a joke was to dump a bowl of gravy on a waiter who had brought him the wrong dish.

His ingratitude was staggering, and Thayer rightly criticizes him for gulling his old friend Johann Mälzel out of the first-performance rights to *The Battle Symphony,* which Mälzel had commissioned. Perhaps least appealing of all, he was a self-righteous moralist who could denounce his brother Johann's wife as "an infamous strumpet" though he himself, says Thayer primly, "did not always escape the common penalties of transgressing the laws of strict purity." What Thayer meant, as he later explained in correspondence, was that Beethoven had contracted syphilis, probably in the course of certain "conquests" during his early years in Vienna, and that his deafness may have resulted from it.

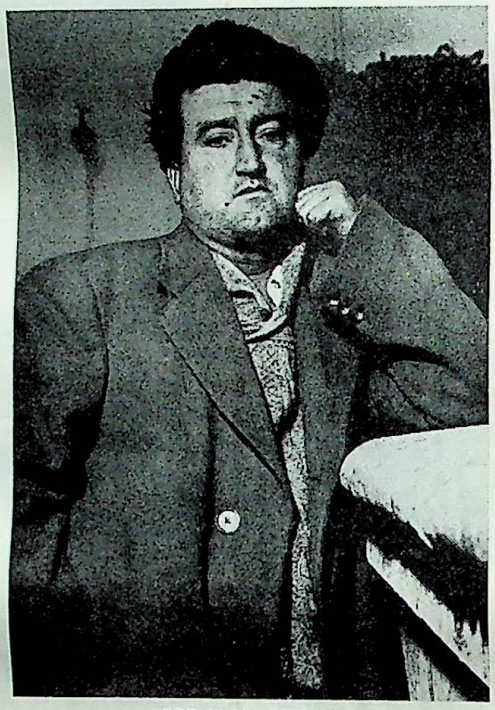
A generation after Thayer's death, at 80, in 1897, British Critic Ernest Newman set the fashion in psychological evaluation of Beethoven by concluding that he suffered from "morbid sex obsessions" because of his troubles with syphilis. Alexander Wheelock Thayer belonged to a gentler, less analytic age. All he could finally conclude about the man he had spent his life studying was that, take him all in all, his was "a very human nature, one which, if it showed extraordinary strengths, exhibited also extraordinary weaknesses."

At His Boozy Best

THE SCARPERER *by Brendan Behan.* 158 pages. *Doubleday.* $3.95.

To scarper is to make off, to run away, to escape, in Irish slang. And to scarper is what the young Brendan Behan must often have dreamed of doing in the six years he spent soberly behind bars, rather than convivially touring them. He put those dreams to good use in this merry and murderous mock-suspense story about a professional im-

JOHN D. BARRY



BRENDAN BEHAN
High comedy from low life.

presario of escapes at work in the underworld of Dublin and Paris.

By masterminding a successful jailbreak for a rich client every couple of years, the businessman-of-crime known as the Scarperer makes enough to live the life of a gent of leisure. This time the trick is trickier. The client is a toff London tough lodged in Dublin's Mountjoy penitentiary, and the price is 5,000 nicker. But when the limey is sprung by the Scarperer's guileful crew, he finds himself the victim of a Gaelic doublecross. The Scarperer has arranged to have him drowned and his body washed up on the coast of France. The implausible explanation: he closely resembles a richer client of the Scarperer —a French desperado who has commissioned this elaborate plan to get himself off the Sûreté's most-wanted list.

What makes the plot bubble is the Behan people and the Behan gab. There is Pig's Eye O'Donnell the bet runner, Tralee Trembles the wino and ex-poet, M'sieu Le Tramtrack, who spent 30 years abed in an effort to collect damages from a trolley company, and the vigorous old lady of the International Society for the Defence of the R... who stumbles on the Scarp... scheme while trying to prevent ... horses from being butchered for F... tables. Here's a radiograph machine you can afford! Because it's portable, you can spread the cost of inspection over one, two or more factories

As you know, more and more customers are insisting that their castings be radiographed by *Betatron* to ensure strict quality control.

You can meet these requirements — and recover premium prices, extra profits for your *Betatron*-inspected products — whether you are engaged in manufacturing, foundry research or technical lab work. Here's how.

This ALLIS-CHALMERS INDUSTRIAL BETATRON UNIT uses a powerful 25-million-volt X-ray beam to inspect for flaws in castings, weldments, pressure vessels, stainless steel, alloys, aluminum and other poured and fabricated metals and products.

Because it's portable, you can quickly charge off the cost of the *Betatron* against one, two or more factories. Simply schedule it where you need it. Inspect in your own factories. Or arrange to inspect on a cooperative basis with non-competing factories in your area.

You'll find that Allis-Chalmers industrial *Betatrons* produce radiographs with the greatest sensitivity and latitude, with the sharpest definition and the shortest exposure time.

One reason is the 0.2-mm. X-ray focal spot of the A-C *Betatron*. With this point source, conventional limitations of the specimen-to-film distance are eliminated. Thus, the *Betatron* can detect cracks of .005 inches width in moderately thick sections. With direct geometrical magnification — placing film at a distance from the specimen — cracks as small as .002 inches wide can be detected.

For details covering Allis-Chalmers industrial *Betatron* units in ratings from 25 to 40 mev — stationary and mobile installations—contact your nearby A-C distributor. Or write for bulletin 31S9449 directly to Allis-Chalmers International, Milwaukee, Wis. 53201, U.S.A.

HOLLYWOOD AND THE STARS (NBC, 9:30-10 p.m.). Part 2 of "The Funny Men," featuring old film clips of Fred Allen, W. C. Fields, Will Rogers, Jack Benny, Bob Hope, Laurel and Hardy, the Marx Brothers, and so on. Repeat.

Tuesday, June 30

TEXACO STAR PARADE (CBS, 10-11 p.m.). The second of Meredith Willson's musical variety specials, this one features Debbie Reynolds introducing highlights from her forthcoming film version of Willson's *The Unsinkable Molly Brown*.

THEATER

On Broadway

THE SUBJECT WAS ROSES, but the theme is thorns in this perceptive new play by Frank D. Gilroy about the barbed bloodletting that drains people who live within the closeness of the family without being close. The playwright could not have dreamed of a better cast than Irene Dailey, Jack Albertson and Martin Sheen.

HAMLET is played by Richard Burton as Hamlet wanted to be—the self-assured ruler of his fortunes, and never the tormented prey of a tragic destiny. It is a portrayal alight with intelligence, but rarely aflame with feeling.

FUNNY GIRL, based on the life of Fanny Brice, is an entertaining excuse—if any is needed—to see an exciting new Broadway star, Barbra Streisand.

HIGH SPIRITS. Bea Lillie and Tammy Grimes are probably creatures of their own imaginations, since not even Author Noel Coward could quite conceive such zany stage sprites.

ANY WEDNESDAY. Sandy Dennis plays a kept doll with an unkempt sense of humor that leads to precious little love-making but does produce an unreasonable amount of fun-making.

DYLAN is another acting triumph for Alec Guinness, as he bodies forth the poetic fire, the playful wit, the alcoholic antics that constituted the life and legend of Dylan Thomas.

BAREFOOT IN THE PARK turns a six-flight walkup into a cascade of laughs about young love in Manhattan.

Off Broadway

THE KNACK is a fantastically droll British bedroom farce played out in an all-but-bare room. If one can imagine three perplexed and, at times, almost pathetic Marx Brothers chasing a plump country girl, with the cry of "Rape!" punctuating the air like "Tallyho!" one gets a glimmer of Playwright Ann Jellicoe's comic instincts.

DUTCHMAN. A sex-teaser white girl lures and then tongue-lashes a sedate Negro in a subway car until he turns on her with a venomous tirade of racial hate. Playwright LeRoi Jones aims to terrify, and between stations he succeeds.

THE TROJAN WOMEN. This tragic masterpiece by Euripides is 2,400 years old, but in its current superb production, it is the most profoundly alive drama to be found in New York.

RECORDS

Chamber Music

AN EVENING OF ELIZABETHAN MUSIC (RCA Victor). Nineteen short pieces, called "broken music" in Shakespeare's day because they were performed during a play or between the acts. This recently rediscovered 16th century pop music was and is played by a six-man consort: violin, flute, bass viol and lute with a rhythm section of pandora and cittern. Impeccably recorded by the Julian Bream Consort, with lute solos by Virtuoso Bream.

BEETHOVEN: STRING QUARTETS VOL. III (Deutsche Grammophon: 4 LPs). The distinguished London-based Amadeus Quartet concludes its Beethoven cycle with these six works. Perhaps the most-admired chamber music ever written, they include *Quartets 12* through *16* plus the thorny, abandoned original finale of *No. 13*, known as the *Great Fugue*. The Amadeus plays with virtuosity and feeling, but its recordings have to compete with those of the venerable Budapest String Quartet (Columbia). The Budapest has a mellower tone and a more flowing and integrated style. The dialogue of the Amadeus is outspoken; sometimes it is more gripping, but occasionally they lose the thread.

BRAHMS: SONATAS FOR VIOLIN AND PIANO, NOS. 1 AND 3 (Columbia). Isaac Stern pours out the lavish, songlike melody of the first ("Rain") sonata with unparalleled richness and sweetness of tone, and *Sonata No. 3* adds the flashes of brilliance.

WILLIAM SYDEMAN: MUSIC FOR GUITAR, VIOLA, AND PERCUSSION (Composers Recordings Inc.) is one of Sydeman's 30 chamber works, all scored for unorthodox instrumental combinations. Composed in 1962, it has a chittering, fragmentary but pleasant quality, and a muted viola as though the quintet (including two percussionists) from the Contemporary Chamber Ensemble were playing it underwater.

SHOSTAKOVICH: QUARTETS 4 AND 8 (Mercury). Shostakovich's late chamber works are better than his late symphonies. The eighth quartet, a secular requiem for victims of Fascism, was written in 1960 and is daringly monochromatic: three of the five movements are largo, and the often-repeated main theme changes only from a moan into a sigh. Even the fast sections seem to shift into a remembrance of gaiety long past. A subtle performance by the Borodin String Quartet, which the U.S.S.R. will send on a first visit to the U.S. in October.

CINEMA

THAT MAN FROM RIO. In a hilarious parody of Hollywood adventure movies, French Director Philippe de Broca throws clichés at the screen like soggy old tomatoes, with Hero Jean-Paul Belmondo panting through many a tight squeeze.

NOTHING BUT THE BEST. A ne'er-do-well aristocrat (Denholm Elliott) tutors an ambitious junior clerk (Alan Bates) who yearns for Establishment status in Director Clive Donner's black comedy about hoary old England.

THE ORGANIZER. Marcello Mastroianni is perfect as a scraggly 19th century revolutionary in this timeless, beautifully photographed, warmly human drama about workers who strike against sweatshop working in a Turin textile mill.

YESTERDAY, TODAY AND TOMORROW. Sophia Loren separates the men from the boys in three racy Italian fables directed with gusto by Vittorio De Sica. All the men are Marcello Mastroianni.

BECKET. England's 12th century Archbishop of Canterbury (Richard Burton) dares the wrath of his onetime friend King Henry II (Peter O'Toole) in an eye- and ear-filling spectacle based on Jean Anouilh's drama.

FROM RUSSIA WITH LOVE. In a sly spoof of Ian Fleming's thriller formula, Secret Agent 007 (Sean Connery) is lured to Istanbul for hand-to-hand combat with hired assassins and a high-proof blonde.

THE WORLD OF HENRY ORIENT introduces Tippy Walker and Merrie Spaeth as a pair of teen-age metrognomes who live in New York in pursuit of Concert Pianist Peter Sellers, their favorite celebrity.

THE SILENCE. Two women and a child travel to a seemingly godforsaken city that is the geographical center of this stark, brooding allegory directed with breathtaking virtuosity by Ingmar Bergman.

...ad his Joyce very closely, but his style ...lighter and his wit strictly 1964.

LES NUITS DE PARIS, by Nicolas-Edme ...estif de la Bretonne. Restif may be some-...hat of a comedown from the great court ...ssip, Saint-Simon, but he set down the ...e in Paris just before the Revolution ...idly and prophetically, and thus pro-...duced, without his aristocratic brain ever ...owing it, an indelible picture of an ...th-century slum.

THE SCARPERER, by Brendan Behan. To ...Scarper" in Irish is to escape, and Be-...an runs off with some Dublin weirdos ...dentifying their past and dreaming their ...uture. This short novel is vintage Behan ...(1961), when the mercurial writer wrote ...his best, ebullient prose.

THE INCONGRUOUS SPY, by John Le Carré. ...The bestselling author's first two books ...have been reissued in one volume. Both ...are good, but admirers of *The Spy Who ...Came In from the Cold* will be especially ...drawn to *A Murder for Quality*, which ...has its own suspenseful plot but at the ...same time reads like a first draft for *Spy ...*characters, Cold and all.

A MOVEABLE FEAST, by Ernest Heming-...way. The Nobel-prizewinning author ...wrote this memoir of his lean years in the ...'20s of the '20s when he was in his 50s, ...still famous but passé. *Feast* reveals Hem-...ingway's deadly, deadpan sense of humor, ...his lingering romanticism, but most of all, ...the degree to which he fooled himself.

RAINER MARIA RILKE, THE YEARS IN ...SWITZERLAND, by J. R. von Salis. From an ...aimless life spent alone, Rilke drew lyric ...and contemplative poems that have made ...him a source of modern thought as well ...as modern poetry. Von Salis retraces what ...he can find of Rilke's life, and describes ...the few people (all women) who in-...spired it.

JULIAN, by Gore Vidal. In A.D. 361, ...Roman Emperor Julian the Apostate took ...a 1,800-month back step to the Hellenic ...past, using all his imperial power to de-...stroy Christianity. In this ingenious his-...torical novel, Gore Vidal brings wit and ...humanity to his subject, but does not quite ...capture the spirit or the rounded person-...ality of his elegant hero.

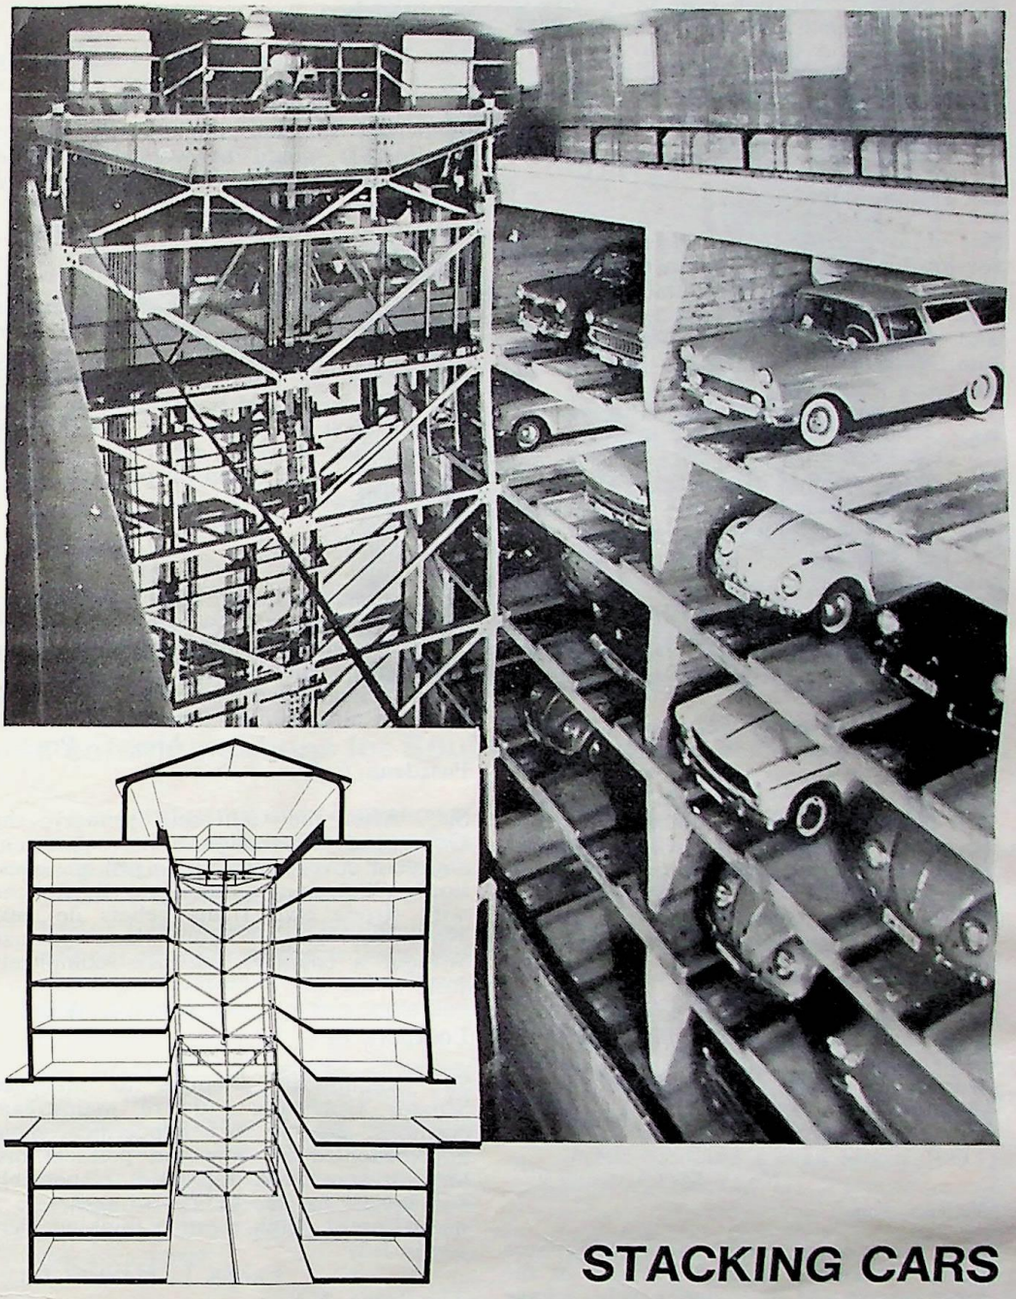
PROBLEMS we encounter



STACKING CARS

to overcome the world-wide parking problem sounds rather like cutting the Gordian knot. But this is just what we do, with certain refinements of course, in the automatic car parks which we build in cooperation with the Autosilo AG, Zurich. A car arriving on the ground floor for parking is picked up by a moving platform which takes it into the lift. The lift well is suspended from a travelling bridge so that the car can be deposited automatically at any point in any of the many floors above and below ground level. Retrieving is also fully automatic.

LETTERS

Three Weeks Before San Francisco

Sir: I tend to agree with those who say that Scranton's drive for the Republican presidential nomination may be a bit too late in the game. However, I feel that Scranton would make an ideal standard-bearer at a time when the Republicans need someone to unify their party if they are to defeat Lyndon Baines Johnson in November.

PAUL F. LLOYD

Herwinton, Conn.

Sir: Governor Scranton's decision to run for President would be humorous if it did not come at this time. All that he can do now is embarrass himself and his party and, because of his public exposure, bar himself from any future consideration by the party leadership.

CHARLES M. LYONS III

Boston

Sir: The entrance of Governor Scranton into the Republican race for the nomination is as refreshing as an oasis in the Sahara. The great tradition of the Republican Party is one generally of progressive moderation, and it is in this tradition that Scranton stands.

J. T. MOORE

Winfield, Kans.

Sir: With Governor Scranton now racing for the Republican nomination, it is beginning to appear that the uncommitted delegate to the Republican Convention will have one of three choices: Governor Scranton, whom the majority of delegates don't want; Senator Goldwater, whom the majority of the voters don't want; and Richard Nixon, whom nobody wants.

CHARLES L. SHANK, D.D.S.

Harrisonburg, Va.

Sir: The hare and the tortoise should give more thought to running as a team. With Goldwater willing to send in the Marines after two minutes of careful deliberation and Scranton willing to consider every decision for a year or so, the G.O.P. would have a balanced ticket.

KATY MCCLANAHAN

Wichita, Kans.

Sir: Your superb cover story on Senator Barry Goldwater [June 12] is one of the most precise and up-to-date articles I have yet to read in any magazine. I am very glad to see, for once, the true interpretations of his standings on national and world affairs.

MARK J. HETTEL

Monroeville, Ohio

Sir: It is a relief to note that at least one small part of the vast journalistic empire sees Goldwater as a man—not a monster; with normal dedicated followers—not lunatics; as a staunch Republican who really believes what he preaches—not a showman out to impress the press; and finally, as an honest, but perhaps too frank gentleman who has been mercilessly treated by the mass media.

CAROL PEACE

Freeport, N.Y.

Sir: There are thousands of supporters of Senator Goldwater who are not extremists, who don't belong to the John Birch Society, who are "responsible" Republicans, who are for the betterment of our country, and who are not trigger-happy imbeciles—contrary to what the "superior" Republicans and Democrats emit from their opinionated and twisted heads and tongues.

TERRY GATES

San Francisco

Sir: I'm a Democrat, and I am voting —if I get a chance—for Barry. It looks like the internationalists and New Dealers are scared someone might stop the big spending. It would be wonderful if we could get a "pro-American" for a change as President.

MRS. M. L. GRANDEUR

Great Bend, Kans.

Sir: For 30 years the lily-livered liberals have had their way in the Republican Party. We conservatives have supported them. Now we have won a victory and now these poor-sport boobs have their lips hanging clear to the ground. Is there any reason, after 30 years, why the conservatives shouldn't be given an opportunity to see what they can do?

SHIRLEY J. WEIDIG

Costa Mesa, Calif.

Sir: I'm embarrassed! I am a Republican and a Californian, I *whisper,* hoping no one will hear! To think that a man like Goldwater could be elected in our California primary and headed for the nomination is almost more than I can take.

MRS. G. POST

Pasadena, Calif.

Sir: After the California primary, the Governors' convention, Ike's statement and your cover story, I have just one question: What does a moderate Republican with strong civil rights beliefs do next November? Now I know what "the man without a country" felt like—completely lost.

LUCY A. WARD

Lockport, Ill.

Sir: Republican attempts to influence Senator Goldwater "toward mainstream positions" amount to a hypocritical sham unprecedented in American political history. It would be far more responsible and honest for the G.O.P. to nominate a nonextremist, 20th century-thinking person in July.

FRANK L. HAYNES JR.

The Bronx, N.Y.

Sir: As a Democrat, I hope Senator Goldwater emerges as the victor of the July convention; no better way could be found to ensure a Republican defeat in November, at both the national and local levels. As an American hoping that [illegible] will have a choice between two [illegible] tent candidates, however, I can only [illegible] Governor Scranton.

RONALD P. WO[illegible]

Peoria, Ill.

Sir: If Barry Goldwater gets the [illegible] lican nomination, I shall be forced [illegible] turn to my old Christian frame of [illegible] ence and choose the lesser of two [illegible] That choice will be Lyndon—the le[illegible]

MRS. JOE FRED SOMERV[illegible]

Norman, Okla.

Sir: Who really won the Californ[illegible] mary? L.B.J., of course.

FREEMAN F[illegible]

Melrose, Mass.

Rights, Fights & Fears

Sir: Senator Dirksen not only [illegible] ously represents his state of Illino[illegible] represents a proud figure of the na[illegible] legislative strength. That was a mos[illegible] cellent portrait and a fine article [illegible] depicting one of America's most fa[illegible] and beloved Senators.

(MRS.) FAITH HA[illegible]

New York City

Sir: Although I am a firm believ[illegible] civil rights, I venture to suggest that [illegible] New York's Negro minority is tau[illegible] live in fear, New York's white maj[illegible] will continue to live in terror.

DAVID W. SIF[illegible]
2nd Lieutenant, U.S.A.F.

Patrick A.F.B., Fla.

Sir: If the so-called civil rights b[illegible] passed, we shall be forced to live [illegible] police state identical to Communist c[illegible] tries, where people are forced to a[illegible] the friendship and love of people th[illegible] not want. Where will be the freedo[illegible] the individual, for which we are so[illegible] ing all over the world? I salute Gov[illegible] Wallace, Goldwater, and any other p[illegible] who is against the bill of privileges.

OLGA BARANCEWI[illegible]

Brooklyn

Sir: Re Goldwater's vote against [illegible] and the civil rights bill: is it not ti[illegible] dust off a few campaign slogans for [illegible] white knight? How about the Civil [illegible] Copperhead appeal: "The Constitution [illegible] it is, the Union as it was, and the Ne[illegible] where they are."

R. B. TYREE[illegible]

Anaheim, Calif.

Sir: Upon reading the "Cloture [illegible] Call," and being an absentee Colo[illegible] voter, I was amazed to find a Colo[illegible] Senator listed in the "uncommitted"

New electronic communications for South Vietnam.

This year, an advanced new radiotelephone communications system provided by the U. S. State Department's AID Program will link nine key cities of South Vietnam. Seven will be joined by a large capacity microwave network. Others will be tied in to the system by very-high-frequency radio. An ITT company, Federal Electric Corp., drawing on ITT's tremendous worldwide resources, is prime contractor with responsibilities ranging from resurveying of proposed sites to construction and completion of the operational system. The program is being administered by the U. S. Navy's Bureau of Yards and Docks.

The ITT System—world's largest international supplier of electronics and telecommunications—has unmatched experience in projects of this scale and complexity.

For information or service, wherever you're located, contact your ITT distributor or write: ITT Far East and Pacific, Inc., 24 Des Voeux Road, Central, Hong Kong. World Headquarters: International Telephone and Telegraph Corporation, 320 Park Ave., New York, New York 10022.

umn. This triggered a blunt airmail letter from me to him. I imagine that I was not alone and that senatorial mail was heavier than usual following your June 5 issue.

L. R. NICHOLL

Claremont, Calif.

▶ *Republican Senator Peter H. Dominick voted for cloture.*—ED.

Unconfirmed President

Sir: As an Anglo-Catholic Episcopalian I have felt increasing distress over Canon Albert du Bois' opinion on the propriety of President Johnson's receiving Holy Communion at Episcopal altar rails [June 19]. Although in technical agreement with Father du Bois, I think Bishop Creighton of Washington has taken a difficult but commendable stand in this issue. Certainly I'd love to see the President received into my Communion. But that decision must come from the President and not through suggestion or coercion on the part of any priest or layman.

KEITH MARVIN

Troy, N.Y.

Sir: I can only say that I am appalled that Canon du Bois has chosen to make an issue out of this matter. Certainly the law of the Episcopal church supports Canon du Bois; yet, it seems to me that in this special case, at this crucial time, for this critically important man who carries so many of the burdens of the world on his shoulders, charity should have tempered the canon's judgment, urging him to keep a godly silence.

Christian Science Schism

Sir: As a member of the Mother Church (First Church of Christ, Scientist, Boston), I admit there is a staunchly upheld bit of propaganda that there is no controversy within the church organization [June 19]; but that simply is not true. It hinders rather than helps the Christian Scientist movement when Mr. Douglass pretends otherwise. He knows, as do all informed Christian Scientists, that there is a wide and definite schism in the church between the absolutists and the relativists. Moreover, it is natural for us to interpret Mrs. Eddy's writings from whatever level of understanding we happen to have reached. As for modernizing her teachings, if Mr. Douglass can say he has never heard a member wistfully remark that Mrs. Eddy would have changed this or that teaching had she lived longer, or were she alive today, he is owning to imperfect hearing, which, of course, he could not possibly manifest.

TIME, JUNE 26, 1964

A letter from the PUBLISHER

Bernhard M. Auer

AT the airport in Vientiane, Correspondent Frank McCulloch watched a young Laotian in dungarees servicing a small aircraft. The youth drained fuel from the plane into an open bucket, carried the pail into a shed where 500-lb. bombs, rockets and machine-gun ammunition were stored, picked up a tool box and sauntered back to the airplane. Only then did he throw away the cigarette he had been smoking all the while.

Watching such vignettes in the Southeast Asian powder keg last week, Hong Kong Bureau Chief McCulloch mused that "covering Laos is like being Alice in Wonderland—surrealistic, exasperating, frequently incomprehensible but often utterly delightful." A lunch with the cover subject, General Kong Le, in his headquarters village of Vang Vieng was a study in the country's need as well as its plenty. It was served on a table covered by a red checked tablecloth "with so many holes in it that it must have been riddled by a shotgun." But no one needed to go away hungry from the meal—bamboo sprouts, fish, large bowls of glutinous rice, tiny cubes of dried smoked water buffalo, eggs fried with garlic, cucumbers, oranges and pineapple. After flying low across the embattled countryside with Kong Le, McCulloch wrote: "Laos is one of the loveliest lands on earth, and it is a bitter travesty that such a land and the gentle people who inhabit it should be caught up in a war they are ill prepared to fight but cannot be allowed to lose."

With McCulloch's firsthand reporting, supported by backgrounding from the rest of the Hong Kong staff and the Washington bureau, the cover story written by Robert Jones and edited by Henry Grunwald throws the sharpest light yet on the plight and possibilities of Laos and the U.S. in the jungle of neutralism.

OF all the stories in this week's issue that called for reporting from a wide array of sources, none came from a wider net than the WORLD BUSINESS story "Doctors of Development." Work on this report of the activities and powers of economists around the world was begun some three weeks ago, involved 35 interviews by correspondents in 15 countries. One of the economists who was a source for the story was Holland's Jan Tinbergen, who had never before granted an interview to the press. When TIME's correspondent was leaving after their talk, the economist said: "If you really are going to have an article in TIME, please mention my wife. Her name is Tine de Wit. She has supported me enormously. She is a great woman. I would love to see that in print somewhere." There it is, Dr. Tinbergen.

PICTURE OF A MAN GOING TO MAKE A HOLE

Using the 53 lb Cobra motor drill as a breaker, a research scientist digs through nine feet of frozen moraine to its bed of glacial ice.

In itself, perhaps, not so very remarkable. But given a point on a glacier, 4,000 feet above sea level in Sweden's Arctic Circle, then the hole takes on quite different proportions. The fact remains that glaciologists at Stockholm University needed samples of age-old ice buried beneath the glacier's moraine ridge. Getting there was difficult enough. Getting there with a compressor and rock drill was out of the question. They would need to be in ruc-sac size. Surprisingly, this was the answer—a complete drilling unit that one man could back-pack over rivers or mountains. An Atlas Copco *Cobra* that could also dig and break.

In neighbouring Norway's roughest terrain these self-contained Cobras help lay foundations for pylons in the National Grid System. In fact, they are used in remote spots practically everywhere from Alaska to New Zealand.

This is an example of how compressed air experience has helped develop the world's lightest rock drill. Such experience is a part of Atlas Copco service to contractors, mines and industry the world over.

THE U.S.

THE CONGRESS

The Final Vote

On June 19, 1963, President John Kennedy sent to Congress a civil rights bill, urged its speedy passage "not merely for reasons of economic efficiency, world diplomacy or domestic tranquillity, but above all because it is right." Last week, a year later to the very day, the U.S. Senate by a vote of 73-27 passed that bill—considerably changed and strengthened.

The bill's opponents died hard. They brought up amendment after amendment, not in any expectation that the changes would be adopted, but rather as a time-consuming effort to delay the moment of truth. In one day, the Senate had 34 roll calls, an alltime record. Such was the pace that at one point a pro-civil rights Senator rushed onto the floor, heard his name called, shouted "aye," then turned to a colleague and asked just what it was he had voted for. In all, 115 amendments were voted on between cloture and the final vote, and only one of any great substance was approved. That was the package, written by Republican Leader Everett Dirksen and approved by Democratic Senate and Administration leaders.

All About Mammy. Under the terms of cloture, voted the week before, each Senator was limited to a total of one hour of speechmaking on all motions. It was the day before the final vote, when Georgia Democrat Richard Russell, leader of the filibustering forces, ran out of time, was ordered to sit down. He did so, with tears in his eyes: "We have fought the good fight until we were overwhelmed and gagged."

But even with Russell out of action, the bitter battle continued. Just a few hours before the vote, Louisiana Democrat Russell Long, in one of those some-of-my-best-friends-are-Negroes statements, recalled how he had been reared by a "Negro mammy." The phrase enraged Rhode Island Democrat John Pastore. "We don't just want to protect our mammy," he said. "We want to protect everybody's mammy. We want to fix it so that a Negro woman can go into a drugstore and get a glass of water when she is thirsty. That's what this is about."

At that point, Florida Democrat George Smathers got into the act, shouting at Pastore: "Not one word does the Senator from Rhode Island know what he is talking about! She could go into any drugstore and get a drink of water." Moreover, Smathers continued, there is discrimination in the North as well as the South, so Pastore had no right "to get so holy and mighty about this." Retorted Pastore: "Well, if you have no segregation and discrimination, then you don't need to worry about this bill."

In their final, last-gasp effort, the Southern segregationists made a motion that could have required the Senate clerk to read the record of the entire 68-day "legislative day" since formal debate on the bill began—some 6,000,000 words in all. The motion was defeated, 73 to 18, and at long last it was time for the historic vote.

Acid in the Pool. In the showdown, 46 Democrats voted for the bill, while 21 voted against it. Twenty-seven Republicans voted aye, while only six said no. In addition to Barry Goldwater (*see following story*), the dissident Republicans were New Hampshire's Norris Cotton, Iowa's Bourke Hickenlooper, New Mexico's Edwin Mechem, Wyoming's Milward Simpson and Texas' John Tower.

Although the civil rights bill must next go to the House, little difficulty or delay is anticipated in reconciling the Senate and House versions. That done, it is expected that President Johnson will ceremoniously sign the bill into law on or about the Fourth of July. The bill's voting guarantees must wait for an election before being fully tested. The ban on discrimination in employment and labor unions does not become effective for a year. But effective immediately, and likely to cause the fastest fireworks, is the wide-ranging public accommodations section.

Civil rights leaders were yearning to start testing that section. And even as the final Senate vote approached, there was an indication in St. Augustine, Fla., of what the summer might hold.

There, five Negroes and two white fellow demonstrators dived into the swimming pool at the segregated Monson Motor Lodge. The motel manager, furious, grabbed two jugs of muriatic acid, a cleansing agent, tried unsuccessfully to splash the stuff on the swimmers. Cops moved in, one of them stripped off his shoes and socks, leaped gracelessly into the water and pummeled the swimmers with his fists. When the fracas was over, 34 people, including the swimmers and other civil rights who kept dry, were hauled off to jail.

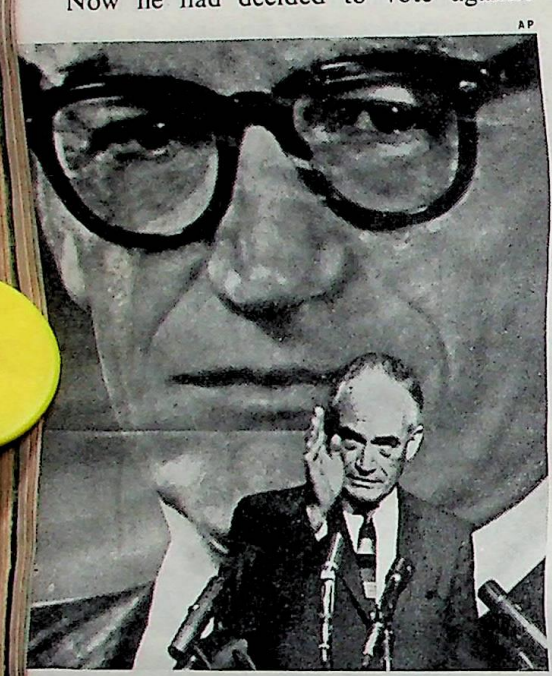
One Man's Stand

Rarely has one man's vote been watched so closely as Barry Goldwater's on the civil rights bill. He had thought about it long and hard. "I really wanted to be able to vote for the bill," he told a newsman. "This week I've asked every lawyer friend I know to show me some constitutional justification for it. The answer is always: 'All you can say is that you feel a majority of the people are for it, and so you're going to vote for it on that basis.' But that's not enough. I just can't go along with just that."

Goldwater had consistently sided with Democratic segregationists in their proposed amendments to the measure. Now he had decided to vote against

AP



GOLDWATER IN DALLAS
"Let me be judged in this . . ."

the bill itself. But first he had to explain his stand in a Senate speech.

Police State? Reading rapidly and tonelessly, Goldwater declared that he had always been "unalterably opposed to discrimination." But he insisted that the real remedy lay in the good will in the human heart. The legislation that reached the Senate after passage in the House, he said, was produced by "sledge-hammer political tactics." He had hoped that it would be modified by "what was once considered to be the greatest deliberative body on earth." But it was apparent "that emotion and political pressure, not persuasion, not common sense, not deliberation, had become the rule of the day and of the processes of this great body." The Senate, he charged, had ignored the Constitution and "the fundamental concepts of our governmental system. My basic objection to this measure is, therefore, constitutional."

Goldwater was bitter about the bill's public accommodations and fair employment provisions. These, he warned, would require the creation of a federal police force of mammoth proportions, would result in a "police state" and an "informer" psychology—"neighbors spying on neighbors, workers spying on workers, businessmen spying on businessmen, where those who would harass their fellow citizens for selfish and narrow purposes will have ample inducement to do so."

"The Real Concern." Even Goldwater's harshest critics agreed that he was taking his stand on the basis of conviction, letting the political chips fall where they might. But his vote did demonstrate dramatically just how far he is removed from the mainstream of U.S. and Republican Party thinking.

The civil rights bill was, after all, the product of national demand in the light of the Negro revolution of 1963 and '64. Republican platforms and declarations of principle have long been strong for civil rights. In the House of Representatives, Republican Leader Charles Halleck had gone down the line for the bill, and 138 out of 172 voting Republicans approved it. In the Senate, G.O.P. Leader Dirksen was the main architect of amending the bill into its final form, and Barry was one of a mere six Republican Senators who finally voted against it.

Goldwater was, of course, aware of all this, but he felt that in good conscience he had no choice. Concluded he in his justification speech: "If my vote is misconstrued, let it be, and let me suffer its consequences. Just let me be judged in this by the real concern I have voiced here and not by words that others may speak or by what others may say about what I think."

REPUBLICANS

Mission: A Winner's Image

Pennsylvania's Governor Bill Scranton, latest entry in the Republican presidential race, last week invaded the Goldwater-minded Midwest. In Iowa, Kansas, Minnesota, Missouri, Colorado and Kentucky, Scranton and his wife Mary received warm welcomes, addressed national convention delegates, even managed to win over a few who had previously leaned toward Barry.

But delegate-scrounging was not Scranton's mission—not yet. Instead, what he had to do was build an image, not just as an energetic, articulate, moderate alternative to Goldwater but, far more important, as a Republican who might give Democrat Lyndon Johnson a terrific fight in November.

Thus Scranton was waging a war on two fronts, one against Goldwater, the other against the incumbent President. He missed no opportunity to contrast his views with Goldwater's, and Barry, with his vote against the civil rights bill, served up Scranton a golden issue on a silver platter. No sooner had Goldwater announced that he would naysay the civil rights measure than Scranton shot off a telegram. "I urge you," he wired, "to repudiate your opposition to the civil rights bill by voting yes on final passage. Your views on the subject to date are opposed to the ditional Republican philosophy of opportunity for all, and it is of importance to our party that you change your views. Other Repu Senators, especially Senator D have worked hard and long with statesmanship to bring about civil rights legislation."

In Des Moines, Scranton ro crowd of 3,000 to cheers as he clared: "Tonight the heartlan America waits for new answers night the heartland of America mands vigorous leadership, n faith, and a renewal of the marc ward. I intend to offer those a —I intend to provide that leade If you will march with me, the A can journey can begin again. W issues are complex, I will not t fool you into believing that the simple. Where we are in trouble we are in trouble tonight in many of this shrinking world—I will no you with lofty assurances that well. I will not lead you dow easy road. I will call for sacri will call for courage, I will call spirit—a spirit of adventure."

"Stand with Me." In Topeka, Sc ton kept hammering at Goldw philosophy. Cried he to his fellow publicans: "Suppose the Democrats accuse us—and be believed—of responsible defense policy that w turn over the decision to use nu weapons to field commanders? Sup they can accuse us of trying to de the social security system? Suppose can establish that we think foreign icy is a matter of shooting from hip—and who cares what we hit? pose they show that when the chip down, Republicans won't stand equal rights for all Americans?" result, said Scranton, would not be defeat for the G.O.P. in Nove but the ruin of conservatism.

At a St. Louis press confer Scranton's aggressiveness led him making a charge that he later regre Discussing Goldwater's refusal to him in a face-to-face television de Scranton said: "I think this in an apparent lack of courage to people." Later, in Denver, Scr apologized, said his remark had "ill-advised." "I know Goldwater personal courage," he explained. one denies that. But since the Hampshire primary, he has guarded and hemmed in by the ticians around him lest he express personal views."

In Louisville, Scranton went Goldwater for another of Barry's lip-shooting remarks. "I believe it unfortunate," said Scranton, "that present front-running candidate for presidential nomination has embarra our party by announcing that people are poor have only their stupidity their laziness to blame. This is a sla on the thousands of good Amer who through no fault of their own

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

been caught in the backlash of our urbanized, industrialized, fast-moving society. There is a need for the party of Lincoln to remember that 'there but for the grace of God go I.' But heaven help us if we go before the American people with the naive belief that every poverty-stricken family in America deserves nothing but contempt."

The Real Opponent. This was tough talk, but no tougher than Scranton's attack on the Johnson Administration, which he accused not of having "bad policies," but of having "no policies." The Democrats, he said, "have put together a short-order foreign policy, serving each day's hash from the leavings of yesterday's mistakes." If given the nomination, he pledged, he would "strip away the sham promises, the heavy-handed politics-as-usual, the worn bag of political legerdemain which the Johnson Administration has substituted for a sense of national purpose. For the past six months the propaganda mills of that Administration have ground out a vast array of slogans and crackpot schemes."

Winding up his week before a tumultuous crowd at the Massachusetts G.O.P. convention in Boston, Scranton again lashed out at the Democrats: "There is not a single thing in President Johnson's poverty bill that is going to help anybody who is poverty-stricken or who hasn't enough to eat." Moving into foreign policy, Scranton said that the present Administration "has failed to produce a single good idea or successful strategy during its first year in office."

In his campaign, Scranton was winning strong allies among the forces of moderate Republicanism. Henry Cabot Lodge's campaign backers were now working for Scranton. Nelson Rockefeller withdrew from the race, threw his support (and, perhaps more important, the facilities of his widespread organization) to Scranton. And while Dwight Eisenhower maintained a glum silence, his brother Milton sent Scranton a lengthy letter of endorsement, which said pointedly: "I know that you avoid snap judgments and clever remarks devoid of sincerity and common sense. I admire you for your moderate but firm philosophy, and I hope the American people will realize what an opportunity they now have for placing the leadership of our nation in steady hands."

The Sinister East. What was Candidate Goldwater doing while Scranton was hitting the Midwestern hustings against him? For one thing, he was busily picking up delegates. Montana, last of all the states to select its delegates, picked a solid, 14-member Goldwater group. Three days earlier in Texas, Goldwater had, as expected, added all 56 of the state's delegates. At the Texas convention, Goldwater extended his usual attacks on the sinister "Eastern Establishment" of powerful Republicans who would impose him to include certain elements of the press. Said he: "All of a sudden all the radical columnists—Childs, Lippmann, Alsop—and all the radical newspapers like the New York Times, the Washington Post, even Izvestia in Russia—they are suddenly expressing a great deal of concern about the Republican Party. Nothing would make these people happier than if the Republican Party were to drown. Do you know what they're afraid of? They're afraid they're going to have a Republican candidate they can't control."

This Eastern-clique business is a fetish with Goldwater and his followers; they constantly compare 1964 to 1952, when, they insist, the Republican kingmakers of the industrial Northeast cheated Robert A. Taft out of the Republican nomination. The comparison, of course, is absurd. Bill Scranton has not achieved the national stature of a Dwight Eisenhower, and Barry Goldwater is far, far from being a Bob Taft. Moreover, the storied kingmakers who launched Ike into politics—and thereby won undying enmity from the G.O.P.'s conservative wing—did not catapult Scranton, or anyone else, into the race, and as yet have attempted nothing of consequence in the 1964 campaign.

With three weeks to go before the convention, Scranton's fight is uphill. Goldwater managers now claim some 700 delegates, more than enough to win nomination.* But of these, only about half are really committed. Of the others, many lean toward Barry mostly because they figure he might just as well be the Republican sacrifice in a Democratic year. If they were convinced that another candidate might actually win the presidency and carry hundreds of other Republicans into office with him, their loyalty to Barry almost certainly would waver and wane. It is up to Bill Scranton to convince these delegates that he is just the fellow to whip Lyndon.

* At a comparable preconvention stage in 1952, Taft claimed some 600 delegates, with 604 needed to nominate.

ILLINOIS

What Upset Ev

For once, Ev Dirksen was speechless. Leaving the first powwow of Illinois' Republican Convention delegates in suburban Chicago last week, he plowed head down through a crowd of newsmen, got into a car and drove off without saying a word.

What so visibly upset Ev was a crude power play, aimed at G.O.P. Gubernatorial Nominee Chuck Percy, by Goldwater forces at the meeting. During his successful primary campaign, Percy pledged himself to vote in San Francisco for the presidential candidate favored by a majority of the Illinois delegation. As of now, Goldwater holds that majority, and Percy has every intention of keeping his word. But he is suspect to the Goldwaterites because of his well-known belief that putting the Arizona Senator at the top of the ticket would seriously hurt the chances of all Illinois Republican state candidates, including Percy's own.

As the gubernatorial nominee, Percy could have expected to be chairman of the Illinois delegation to the national convention. But he knew he faced opposition from the Goldwater camp, and he didn't particularly want the chairmanship anyway; as chairman, he would be required to announce the convention vote of the heavily Goldwater delegation, thereby apparently identifying himself with Goldwater in the floodlights of national television.

Percy therefore proposed that Dirksen be chairman, that he himself take second place as co-chairman, and that the third top delegation post, that of secretary, go to an all-out Goldwater man. Dirksen agreed, and so did U.S. Representative Ed Derwinski, the Goldwater leader in Illinois. Said Derwinski later: "I agree to Dirksen's taking over as chairman because I think Chuck should be absolved from the line of fire

ROBERT W. KELLEY—LIFE

PERCY & DIRKSEN IN CHICAGO
Angry and speechless.

at the convention. He needs to be out of it for his campaign."

But the rank-and-file Goldwater followers emphatically did not agree. And it quickly became clear that they had the votes to require that two of the three top national delegation officers be signed-in-blood Barry backers, thereby eliminating either Dirksen or, preferably, Percy. Dirksen was furious. "This is awful," he told Percy. "I'm going to make a fight of this."

For the sake of party harmony, Percy urged Ev against this course. "I can't afford to fight these Goldwater people," he said. Percy therefore withdrew as prospective co-chairman, a Goldwater-leaner was named vice chairman, Dirksen left town mad, and Illinois Republicans were treated to the sight of their gubernatorial nominee, chosen overwhelmingly in a statewide primary, being reduced to the status of just another common delegate at the national convention.

MASSACHUSETTS

Teddy's Ordeal

Delegates to the Massachusetts Democratic Convention in West Springfield were disappointed when Teddy Kennedy's telephoned voice from Washington came over the public-address system. Teddy had planned to be on hand to accept his Senate renomination by acclamation. But now, because of the vote on the civil rights bill, he would be delayed. So would Indiana's Senator Birch Bayh, who was scheduled to be the convention keynote speaker. "I want everyone to know that I am a candidate this next year, even though I'm hundreds of miles away," said Teddy. "We are now 15 minutes away from the vote for civil rights."

That was after 7 p.m. Only one hour later, on a sultry Washington evening, Teddy, 32, his aide Edward Moss, 41, Bayh, 36, and his wife Marvella, 31, climbed aboard a twin-engine Aero Commander at National Airport. The chartered plane, frequently used by Senator Kennedy, was piloted by Edwin T. Zimny, 48.

The Apple Orchard. When they took off from Washington, the skies were clear. But warnings of heavy weather to the north had already been posted. Their destination was Barnes Municipal Airport, Westfield, Mass., about seven miles west of Springfield. There, fog and drizzle had socked in the runways.

Approaching Barnes, the pilot was flying on instruments. At about 11 p.m., he told the tower that he was "over the 'Z' "—exactly on course. Looking out of the plane's windows, the passengers could see a few fog-blurred car lights, knew they were nearly on the ground.

Suddenly the plane soared into a steep, desperate climb, shook violently, plunged and crashed. There was a moment of deep, terrifying silence: everyone aboard was stunned or dying. Birch Bayh recovered before the others. "My first thought," he said later, "was that the plane had been hit by lightning." He looked cautiously about. "I saw black things outside my window," he recalled. In his shock, it took him a while to notice the black things were trees, that the Aero Commander had crashed—as it turned out, in an apple orchard on a hill three miles short of the airport.

Fearful that the wreckage would burst into flames, Bayh hurriedly boosted his wife through an escape hatch, which popped open on impact. Then he called for Teddy, who was crumpled on the floor. Bayh got no answer and climbed out the hatch himself. Again, he yelled to Teddy. This time Kennedy answered, managed to reach his hand through the hatch, and Bayh helped him wriggle through the window. Moss and Pilot Zimny—both horribly injured—were trapped in the cockpit, which had been sliced apart as if by a huge can opener.

On the Wet Grass. Teddy lay helplessly on the wet grass, beneath Mrs. Bayh's raincoat. The Bayhs staggered down the hill to a road, stopped a[car] driven by Robert Schauer, who had [been] attracted by the sound of the crash. [He] took them to his home, called the po[lice], returned immediately with a pillow [and] blankets for Teddy. Said Schau[er]: "When I got to the plane, Senator Ken[-] nedy was still there. He was cool as a cucumber. He said he had shoulder [and] back injuries."

Word of the accident swiftly [went] to the Democratic convention in [West] Springfield. Teddy's wife, Joan, went [to] Cooley Dickinson Hospital in Nor[th]ampton, arrived at 12:30 a.m., shor[tly] after Teddy reached there in an am[bu]lance. Doctors found the Senator's [pulse] erratic, his blood pressure "almost [unin]telligible." Soon after he arrived, they [gave] him three blood transfusions.

At 3:40 a.m., Brother Bobby and [his] sister, Jean Kennedy Smith, arrived [after] a 100-mile dash from Boston in a [state] police car. By then, Teddy was able [to] summon up a wan smile and murmur: "How are you, Bobby?"

The Parents. Teddy Kennedy [has] suffered two fractured ribs, three [broken] vertebrae, and assorted cuts and bruises. He would probably be out of action for quite a while, but there were no neurological injuries, no paralysis, no immediate need for surgery. Marvella Bayh was in good condition; Senator Bayh had a severe muscle strain. But Moss, one of Teddy's ablest, most faithful friends, died of brain injuries during surgery. Zimny had died before help came.

Rose and Old Joe Kennedy, at [their] summer house on Cape Cod, learned of the accident from Niece Ann Gar[dner] when they arose. What passed through their minds can hardly be imagined. Of their nine children, they had already lost Joe Jr. and Kathleen in air crashes, Jack by assassination.

THE PRESIDENCY

"Love Me in November"

Lyndon Johnson is quite fond of asking White House guests if they happen to have any criticism of his Administration. Whether the guests are Republican or Democratic, the criticisms are few and far between. But whenever one comes, Lyndon is likely to lower his head and allow as how: "Maybe you're right. Maybe, for the good of the country, I shouldn't even run for President this year."

In perfect sincerity, Johnson thinks of himself as being President of all Americans—which he is. He would also like to see himself regarded as a bipartisan leader, and he insists that all of his speeches, his travels, his handshaking are "nonpolitical." This is something much akin to Arnold Palmer's claiming that he plays golf just for the exercise.

Pep Talk. Last week, under a scorching noon sun, Lyndon nonpolitically cultivated a group of businessmen in the White House Rose Garden. The guests were gathered for a presidential pep talk about the proposed new International Executive Service Corps, a kind of blue-chip, button-down Peace Corps. "The program we are launching today," said Lyndon, "is an inspiring example of wise and sensible, responsible and constructive cooperation between Government and private enterprise."

That day the President made a jet trip to New York City for an event so nonpolitical that it was practically a secret. It was a dinner for Jackie Kennedy and trustees of the John F. Kennedy Memorial Library. Perhaps never before have so many celebrities gathered with so little fanfare. The President's plane from the airport was not made public, and most of his companions all tried to hide their faces behind newspapers as they rushed into the St. Regis Hotel. Among them were Chief Justice Earl Warren, Justice Arthur Goldberg, Defense Secretary Robert McNamara, Commerce Secretary Luther Hodges, Agriculture Secretary Orville Freeman, H.E.W. Education and Welfare Secretary Anthony Celebrezze. Also on hand were a galaxy of diversified doers: International Ladies Garment Workers Union President David Dubinsky, Department Store Magnate Bernard Gimbel, Mrs. Ernest Hemingway, N.A.A.C.P. Executive Secretary Roy Wilkins, Writer-Historian Theodore White, Actor Fredric March, Arthur Schlesinger Jr., and Artist William Walton. The President sat next to Jackie at the dinner, visited with Attorney General Bobby Kennedy, but made no speeches and left town barely 24 hours after he arrived.

Ending the Trumpet. Next day the President was in Ohio, still nonpolitically. But his Secret Service escorts into Cleveland he sent into nervous tremors by standing the ride from the airport by standing again and again to plunge into the crowds to shake hands. At the Public Auditorium, Johnson delivered a peach of a noncampaign speech to a convention of the Communications Workers of America. "And when the roll is called, and when the trumpet sounds, and when the strong of heart and the stout of spirit stand up to be counted," thundered Johnson, "I have not the slightest doubt where this union will be or where American labor in the U.S. will be. You will be where you have always been: on the side of compassion. You will be on the side of progress. You will be on the side of human rights. You will be on the side of the future."

Lyndon brought the whole auditorium audience to its feet when he declared: "You are no longer alone. Most of the American people have joined with you. Most of your old adversaries are with you. And the President of the United States is with you!"

At week's end the President went to California—and now there was no pretense in the slightest about his political purpose. At a party fund-raising dinner in San Francisco, Lyndon cried: "Let us resolve here tonight that in California and in the nation the Democratic Party will be the party that worked for the people, the party that journeyed with the people across the New Frontiers toward a richer and better life for all human beings."

Would he run this year? Of course he would. Said he at a San Francisco building dedication: "A government which can get things done and knows where it is going is the kind of government you have had for the past four years—and that is the kind of government you are going to get for the next four years!" Later he shouted to cheering Democrats: "I hope you love me in November as you did in May."

CRIME

A Savage Stalks at Midnight

"We, the jury, recommend the death penalty," said the foreman—and the New York City courtroom echoed with audience applause. Judge J. Irwin Shapiro, an ordinarily soft-spoken veteran of more than 20 years of criminal law, pounded his desk for order, then exploded in his own outburst against the defendant. "I don't believe in capital punishment," he cried, "but I must say I feel this may be improper when I see this monster. I wouldn't hesitate to pull the switch myself!"

Before Shapiro stood a slim, impassive Negro named Winston Moseley, 29. In the course of confessions to police and his own horrifying testimony at the trial, Moseley had admitted murdering three women, setting fire to the genital organ of one victim, raping "four or five" others, robbing and attempting to rape even more. He had attacked lone women on New York streets, using a single-shot .22 rifle, a pistol, a steak knife, a hunting knife and a screwdriver. He was also a necrophiliac. Said a psychiatrist in court: "He told me he got no thrill with live women he raped."

"Until She Was Quiet." The father of three children, a $100-a-week business accounting machine operator and a sometime Baptist, Moseley owned a $16,000 home in Queens, had five pedigreed German shepherd dogs, drove a 1960 white Corvair, and gave every sign of respectability—in the daytime. But after dark, he became a savage.

The crime for which he was finally convicted occurred about 3 a.m. last March 13 when Moseley, armed with a bone-handled German hunting knife, was cruising in his Corvair through the

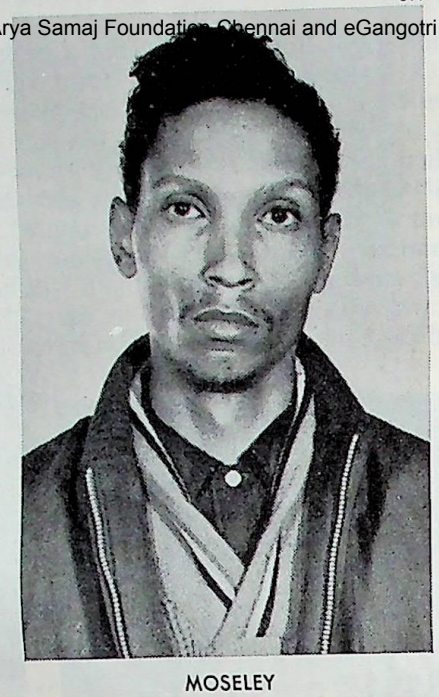
KITTY GENOVESE

UPI



MOSELEY

Would it be all right if he covered his face?

quiet streets of Queens. In calm, almost dispassionate testimony, he told the shocked courtroom: "I just set out to find any girl that was unattended and I was going to kill her." The girl he spotted was Kitty Genovese, a 28-year-old bar manager, driving her red Fiat home from work. Moseley followed until she parked in a lot just 35 yds. from her apartment home.

When Kitty left her car, she noticed Moseley lurking nearby, walked nervously toward a street light, then began to run. Recalled Moseley: "I could run much faster than she could. And I jumped on her back and stabbed her several times. She fell to the ground and I kneeled over her." Kitty shrieked: "Oh my God, I've been stabbed! Please help me! Please help me!"

Lights flashed on throughout the apartment building. One man threw open his bedroom window, bellowed down to the street, "Let that girl alone." Moseley hurried back to his car, while Kitty—stabbed four times—staggered away. Moseley stayed in his car only long enough to change from a stocking cap to a black fedora, then he returned to stalk the bleeding girl. Of the shout from the building, Moseley recalled: "I had a feeling that this man would close his window and go back to sleep, and sure enough he did." In all, at least 38 persons witnessed—without calling the police—one part or another of the fatal ordeal of Kitty Genovese.

Before their eyes, Moseley began hunting through the shadows for his victim. He peered through locked doors of a railroad station and a coffee shop. He returned to the apartment building and found Kitty, bleeding and terrified, on the floor. "She was twisting and turning," said Moseley, "and I don't know how many times or where I stabbed her until she was fairly quiet." Then Moseley ripped off her clothes and sexually molested her. "I heard the upstairs door open at least twice, maybe three times," Moseley recalled, "but when I looked up there was nobody."

"A Pretty Shameful Thing." Now relaxed and at ease, Moseley drove home, even played good Samaritan once by stopping to waken a motorist who had fallen asleep at a stoplight. He silently entered his house, washed his knife, replaced it neatly in his tool box and slept soundly. For a time thereafter, he seemed normal enough. Then on March 19, he skipped work, left home in broad daylight and drove to a nearby residential section. There he burglarized one house, drove to a second and parked his car at the curb. Incredibly, he made three trips carrying his loot to the car. Neighbors saw him, called the police, who arrested Moseley without a struggle.

Within hours, he confessed to all his crimes, insisted he felt no sorrow. When police wanted to take him past a battery of cameramen to his cell, Moseley said serenely: "I have a father out there. I also have a wife, and this is a pretty shameful thing. Would it be all right with you people if I covered up my face?"

At his trial, Moseley pleaded not guilty by reason of insanity. After the jury returned its verdict, Moseley's lawyers asked for extra time to file motions before formal sentencing. Judge Shapiro flatly refused: "I know what I'm going to do," he said. "The sooner we get him out of Queens County and into the death house—the better."

THE SUPREME COURT

A New Charter For State Legislatures

The agricultural counties of California are far more important in the life of our state than the relationship their population bears to the entire population of the state. It is for this reason that I never have been in favor of restricting their representation in our state senate to a strictly population basis. It is the same reason that the founding fathers of our country gave balanced representation to the states of the Union, equal representation in one and proportionate representation upon population in the other.

In 1948, when he made that decision, Earl Warren was the Republican Governor of California. It was a statement with which almost all elected officeholders could agree. But times change, and so do jobs and outlooks. And last week Warren, now in the role of Chief Justice of the U.S., wrote the opinion for a 6-to-3 Supreme Court majority that not only flew in the face of his earlier ideas but considerably changed the complexion of U.S. politics.

Shaky Grounds. Judging cases from Alabama, Colorado, Delaware, Maryland, New York and Virginia, the Court found that their existing systems of representation in their state legislatures were unconstitutional and laid down the general rule: "The seats in both houses of a bicameral state legislature must be apportioned on a population basis."

Until a Tennessee case of 1962, the Supreme Court had always held that state legislative apportionment was outside of the federal court system's business. Now all that is changed. Justice Warren justified his decision on the provisions of the 14th Amendment to the U.S. Constitution that requires that no state "shall deny to any person within its jurisdiction the equal protection of the laws." Some lawyers thought this was on shaky ground.

The whole notion in many states has been that one house is based on population, thus representing local interests. The other, just as in the U.S. Congress, is elected on an area basis, and its members are responsible to more diverse, often conflicting groups. Warren saw no particular difference between the two houses and state senates. Wrote he:

"Legislators represent people, not trees or acres. Legislators are elected by voters, not farms or cities or economic interests. As long as ours is a representative form of government, and our legislatures are those instruments of government elected directly by and directly representative of the people, the right to elect legislators in a free and unimpaired fashion is a bedrock consideration in the political system.

"Logically, in a society ostensibly grounded on representative government, it would seem reasonable that a majority of the people of a state could elect a majority of that state's legislators to conclude differently and to sanction minority control of state legislative bodies would appear to deny majority rights in a way that far surpasses any possible denial of minority rights that might otherwise be thought to result. Since legislatures are responsible for enacting laws by which all citizens are to be governed, they should be bodies which are effectively responsible to the popular will. Our constitutional system amply provides for the protection of minorities by means other than giving them a majority control of state legislatures.

"To the extent that a citizen's

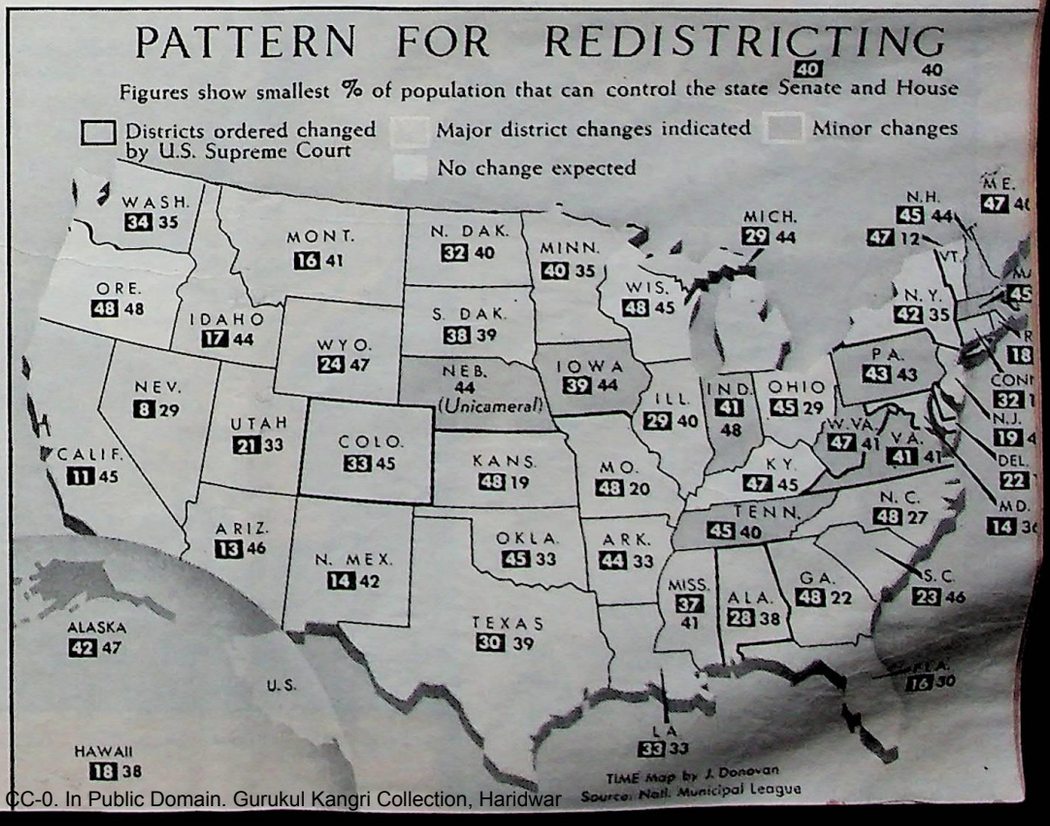
Such inequalities are more than mere statistical curiosities. In Hawaii, the left-wing International Longshoremen's and Warehousemen's Union has been able to elect, and then to influence, legislators outside the heavily populated island of Oahu. The union therefore can ram almost any labor legislation through the legislature at the expense of Honolulu's underrepresented businessmen. Dominant farm legislators in Delaware have maintained a law that requires a farmers' market to be situated on a main street of Wilmington. Florida's Dade County (Miami) supplies 25% of the state's gasoline-tax revenue, gets back only 4% of this for highway construction; the county has 1,000,000 people, but not one state-supported park or beach. In many states, four-lane highways connect small, out-of-the-way towns, while metropolitan areas choke on inadequate roads.

Warren's opinion required only that both branches of state legislatures be represented by members from districts "substantially" equal in population. He added: "The equal-protection clause requires that a state make an honest and good-faith effort to construct districts, in both houses of its legislature, as nearly of equal population as is practicable. Mathematical exactness or precision is hardly a workable constitutional requirement."

More Problems Than Answers. While the Warren opinion spelled out the new legal principles, it also raised more problems, legal and nonlegal, than it solved. Precisely how equal must equal-population districts be? Can a single legislator roaming, for example, a huge, sparsely settled Texas range serve his constituents as well as can the city legislator with a pocket-sized district? Is it really helpful to run the risk of giving a big-city political machine, such as Chicago's, a stranglehold on a whole state? If both branches must be based on population, why not save money and time by following Nebraska's example of a unicameral legislature, a possibility that was being discussed last week in Delaware, Hawaii, Iowa, Vermont and Rhode Island? Should two such diverse areas as Northern and Southern California both be dominated by the single county of Los Angeles? Already some Northern Californians are renewing the old plea for statehood of their own. Their rallying cry: "Would you want your daughter to marry a surfer?" Finally, as Governor Earl Warren once insisted, are not the many minority interests more important to the welfare of a state than their population indicates?

What would all this mean to the two major U.S. political parties over the long haul? Almost surely, it would give the Republicans greater legislative representation in the South, where their greatest voter strength is in underrepresented cities. It should also give the G.O.P. greater representation from the U.S.'s generally Republican, fast-growing suburbia. It may hurt the Republicans in their old stronghold, the Midwest, where rural interests have long had disproportionate power in state legislatures. If nothing else, it should serve as a spur to the G.O.P. to work much harder in the big industrial cities.

On its surface, the decision seems to be in keeping with the present Court's tendency to interpret the U.S. Constitution so as to minimize states' rights. Yet by removing the glaring inequities in the representation in state legislatures, the decision should strengthen the statehouses by increasing their efficiency and attracting more capable members. And any upgrading of the state legislatures should, in the long run, make them less reliant on the Federal Government when they are faced with difficult state problems.



vote is debased, he is that much less citizen. The fact that an individual lives here or there is not a legitimate reason for overweighing or diluting the efficacy of his vote. The complexions of societies and civilizations change, often with amazing rapidity. A nation once primarily rural in character becomes predominantly urban. Representation schemes once fair and equitable become archaic and outdated. But the basic principle of representative government remains, and must remain, unchanged — the weight of a citizen's vote cannot be made to depend on where he lives."

Warren also saw no merit in the argument that because the U.S. Congress apportioned one chamber by area and one by population, the states may do the same. He contended that the Constitution specifically set up the congressional system as a compromise between large and small states—all of them equally sovereign. But, reasoned Warren, counties, cities or other subdivisions of a state have never had such sovereign powers.

"Not a Panacea." Concurring with Warren in the key Alabama case were Justices Hugo L. Black, William J. Brennan Jr., William O. Douglas, Arthur J. Goldberg and Byron R. White. Justices Tom C. Clark and Potter Stewart disagreed with the reasoning of the majority, but only Justice John Marshall Harlan flatly dissented from the decision itself. In his written opinion Harlan declared: "The Constitution is not a panacea for every blot upon the public welfare, nor should this Court, functioned as a judicial body, be thought of as a general haven for reform movements. The equal-protection clause was never intended to inhibit the States in choosing any democratic method they desired for the apportionment of their legislatures." At one point, Harlan went beyond his text to declare: "This decision involves the Court amending the Constitution. If the time comes when this Court is looked upon by well-meaning people—or, worse yet, by the Court itself—as the repository of all reforms, I think the seeds of trouble are being sown for this institution."

The Inequalities. Beyond question, Warren was right in one sense: not only state assemblies but also state senates are often wildly disproportionate in their voter representation (*see map*). There are examples galore. Because rural areas are overrepresented in the Nevada senate, a mere 8% of the state's population can elect a majority of the senators. In California, State Senator Thomas Rees of Los Angeles County represents 6,700,000 constituents; Senator William Symond Jr.'s three mountainous counties have only 15,300 constituents. New York is so closely divided between political parties that Democratic Governors have held office about half the time in this century; yet upstate areas are so overrepresented that Democrats have controlled the state legislature but once.

LAOS

The Awakening

(See Cover)

The silvery Cessna Wren scudded high above the Plain of Jars, and the tiny man in rumpled fatigues peered down through eyes red-rimmed with exhaustion. Below him the wind moved casually over apple-green downs, setting the jade-colored rice fields to shivering. A few pagodas, their tiled roofs torn by howitzer shells, yawned at the sun. On the barren hilltops, orange-colored lines of slit trenches spread like ringworm across the Plain of Jars, which had been fought over for three years by Communist Pathet Lao troops and neutralist forces. The tired little passenger in the Wren was neutralist General Kong Le, whom the Communists had just pushed off the Plain. But he vowed to get back on it—with American help.

Kong Le was on his way to inspect one of his outposts at the edge of the Plain. As his aircraft slewed to a halt near the village of Vang Vieng, he jumped down and stared around at the straggly cluster of palm-thatched huts and muddy walkways that would be his headquarters for the next fight, for it was here that he expected the Communists to resume the attack. Kong Le and his headquarters looked worn, scruffy, far from impressive. But he stood almost alone in Laos last week as the West's only effective battler against Communism. With only 3,000 ill-paid, ill-trained troops supplied only infrequently by airdrops, Kong Le's prospects seemed poor. His spirit did not. "Whether we win or lose," he said, "I'm afraid there is not much choice except to fight until we can fight no longer."

Behind Kong Le loomed an elaborate, half-hidden U.S. operation designed to maintain the fiction of Laotian neutrality and keep both Kong Le and Premier Souvanna Phouma's government from falling completely to the Communists. For the first time outside South Viet Nam, the U.S. had used direct if limited military intervention in its attempt to hold Southeast Asia from the Red Chinese and North Vietnamese. From Washington to Vientiane, the operation was punctuated by denials that obviously could not be kept up much longer. After all, it was an election year, and even as Lyndon Johnson preached "the pursuit of peace," other Government officials were taking pains to tell Washington journalists that Southeast Asia was as crucial to Western interests as Berlin. But the U.S. had made its move, and, for the moment at least, it seemed to have produced an effect.

Hawks & Doves. The neutralist government of Prince Souvanna Phouma, shaken severely by a right-wing coup last April, had been jolted further by a series of sharp Pathet Lao attacks that forced Kong Le off the Plain. If the delicately balanced Laotian coalition was to hold, outside help was needed. A month ago, unarmed U.S. jets began flying reconnaissance missions over Laotian territory in hopes of intimidating the Pathet Lao. When one of the slow-flying Navy recon planes was downed by Russian-made antiaircraft guns, the U.S. decided to send armed jet fighters to escort the reconnaissance craft. When one of the escorts was shot down, the U.S. obviously had to do something—or give up the whole game.

The aviary of official Washington was, as usual, divided between "hawks" and "doves." Foremost among the hawks was Defense Secretary Robert McNamara, who urged strong retaliatory action. Leaning heavily on the advice of the Joint Chiefs of Staff, McNamara pointed out that in a normal combat situation the reconnaissance targets would have been clobbered by fighter strikes before the recon planes were sent in. But since the "Mickey Mouse game" of diplomacy had to be satisfied, such sound military tactics had been precluded. Now two planes lost. Now, said McNamara, was the time to hit those targets.

The doves contended that any such strike would jeopardize Souvanna's neutralist position, make him appear an American stooge and thus play into Pathet Lao hands. Besides, there was the danger of "escalation." At the same time, interservice rivalry reared its head in the discussion: the Air Force argued that it could best carry out any Laos retaliatory mission, while the Navy, whose planes after all were the ones shot down, demanded the privilege of striking back. And the Strategic Air Command, hoping to refocus its image in an era of minuscule rather than massive retaliation, asked for a chance to show "how gentle" its big bombers could be on a delicate mission.

Turn of the Screw. President Johnson himself finally sided with the hawks. It was decided to turn the screw slightly, by applying the smallest amount of pressure available, and then sit back to see what happened. Philippines-based Air Force jets were picked to carry out the mission. Out of Clark Air Force Base near Manila swept

MICHEL RENARD

COMMUNIST POSITIONS AFTER LAOTIAN AIR FORCE RAID
The neutralists have learned some lessons.

aircraft carrier U.S.S. *Constellation* was cruising in the South China Sea off South Viet Nam, some 250 miles from the Plain of Jars. The question that remained in everyone's mind was whether the U.S. would intervene with airpower only when provoked, or whether the jet strikes presaged a willingness to carry the air war in Laos further.

Not that the U.S. particularly wants to be in Laos, any more than it wants to be in the rest of what used to be Indo-China. But the vacuum left by the French collapse a decade ago forced the U.S. to assume responsibility for the area. Laos is less important strategically than its Vietnamese neighbor; the country could fall to the Communists without necessarily making the situation in South Viet Nam much worse, while the fall of South Viet Nam inevitably would also mean the fall of Laos. But if the U.S. could deny the implausible little kingdom to the Communists, it would have important effects in the area. It would not only demonstrate firmness against Chinese expansion, but it would also make some important points about neutralism, a concept so often and so loosely offered as a solution in Southeast Asia.

The U.S. has moved a long way from the time when it automatically backed the rightists in Laos and elsewhere and assumed neutralism was immoral. But the neutralists have come a long way, too, and no one embodies this fact better than Kong Le. The gritty, grinning captain of paratroopers had fought for almost a decade in jungle and mountains, while fat cats in the cities grew fatter on U.S. and Communist aid; yet never had he known whom or what he was fighting or defending. "You have to give a man something to live for," he said, "before you can ask him to die." To the tough paratrooper, as to most Southeast Asians, the cold war was a puzzlement. Neutrality seemed the answer, and Kong Le gladly included the Pathet Lao within his amiable embrace. But, battle by battle and defection by defection, Kong Le and Laos learned that not even a neutral could stand safely beside the Pathet Lao.

Lotus Land. Kong Le's awakening to the realities was a painful process. Of all the people involved in the struggle between Communism and the West, none were more reluctant to enter it than the Laotians. Delighted inhabitants of a warm, green land, where all a man needed was "a small knife to peel bananas and a large one to kill pigs," the Laotians had built their culture on singing, silk weaving and sex. Scarcely a week goes by without the celebration of a *boun*—the Laotian festival at which men play the *khene*, a many-barreled bamboo flute, while the lissome women dance the *lamvong*, swinging their long, embroidered skirts while their delicate hands tell tales of love. The skirts are called *sinhs*, but the deeds that follow the dance are not.

The 2,000,000 Laotians earn a scant $90 a year on the average, but it scarcely bothers them. They have a taste for fried bricks of green river moss and charcoal-broiled toad stew, and the ingredients for both are abundantly available in Laos. A steep, river-rent land of limestone cliffs and rich alluvial plains, Laos can grow enough rice, bamboo, flowers and toads to keep its people happy forever. French attempts to impose European ways on Laos from 1893 to 1954 failed for the most part—in fact, Frenchmen who served in Laos usually returned as dreamy-eyed, wistful victims of the *malaise Laotien*.

At Vientiane's Wattay Airport, where the Laotian air raids originate, the clocks that are supposed to tell the time in other world capitals are inevitably out of joint. A Westerner can buy a

week of perfumed Elysium for the price of a pair of gold-mounted tiger-claw cuff links ($20), drive his sports car right into the Hotel Constellation bar and play endless rounds of cameroon, a dice game nearly as complicated as Laotian politics. All these qualities of Laos —its fey charm, its naiveté, its innocent lechery, its refusal to see the world as an interlocking whole—are reflected in Kong Le himself. To a large extent they keep him from being a really major leader. But he may be closer to it than anyone else in Laos.

Taste of Defeat. He was born 33 years ago in the village of Phalane in southern Laos, the son of a Lao mother and a Kha father. Of all the country's many ethnic groups, the Kha are socially the lowliest (the word Kha means slave). Kong Le himself came out even lower—physically. He stands just 5 ft. 1 in. tall in his paratrooper's beret, weighs 115 lbs., and even in a nation of small people that is diminutive. "He has a runt complex," says one American friend. Combined with his backwoods, ethnically inferior background, this provided him with all the motivation, if not the genius, to become a Southeast Asian Napoleon.

Though he studied briefly at the *lycée* in Savannakhet, he never graduated, joined the French army in 1952 to fight the losing battle against the Red Viet Minh. As a sergeant, he quickly learned the taste of defeat. After the French withdrawal, he transferred to the Royal Laotian Army as a paratroop lieutenant only to taste more of it. Kong Le's was a battalion of troubleshooters. Whenever the Pathet Lao got particularly obnoxious, he and his men were sent out from Vientiane over jungle villages to float down silently and kill. Often they dropped without supplies, fought their way back on a bullet a day, gratifying their taste for toads and bamboo shoots along the route. Kong Le perfected an instinct for infantry leadership. He made the right moves, and U.S. military men credited him with a fine field officer's instinct for combat. In 1957, the army sent him to the Philippines for Ranger training. At Camp Vicente Lim in southern Luzon, he won honors in ambush and guerrilla operations, gained bloody battle experience against the Communist Huks in the snake-haunted highlands back of Olongapo. At the same time, Kong Le kept wondering why he was fighting.

Waiting for Neutralism. Back home, Captain Kong Le was promoted to command of the 1st Parachute Battalion of the Royal Army. But the promotion did little to ease his growing dislike of conditions in Laos. The 1954 Indo-China armistice had handed the Pathet Lao two sections of the country—Samneua and Phongsaly—bordering Communist China and North Viet Nam. The International Control Commission, made up of Polish, Indian and Canadian delegations, was theoretically responsible for keeping any faction from bringing in more troops and arms, but the Pathet Lao ignored the ban; Viet Minh cadres poured across the border to train Pathet Lao troops in guerrilla and conventional warfare. In 1957 the U.S. grew alarmed, began casting about for a rightist leader to counter the Communists. It found him in General Phoumi Nosavan, a tubby but talented field commander whose cousin, the late Strongman Sarit Thanarat of Thailand, was a firm supporter of the U.S.

Two years later, Phoumi led the first of five coups that have kept Laos in turmoil ever since. In April 1960 Phoumi's slate of candidates won handily in a rigged election, but the Pathet Lao were back in business as guerrillas, and the prospect of another long, bloody civil war faced the country. Then, in August 1960, Kong Le acted.

Under cover of darkness, his 300 paratroopers moved in from Camp Chinaimo outside Vientiane, picked up some 2,700 like-minded soldiers from other units and in less than two hours held all the key points in the city. Kong Le deposed the right-wing government, although Phoumi had been his mentor in the army. Installing Prince Souvanna Phouma as Premier, Kong Le sat back hopefully and waited for neutralism to develop. But furious at what he considered a betrayal by his protégé, Phoumi pulled his 60,000-man army down to southern Laos and set up his own revolutionary committee. Sporadic fighting between Phoumi's army and the Pathet Lao broke out. The neutralists were drawn ever closer to the Pathet Lao.

Is He Setthathirath? In Kong Le, the Communists thought they had an invaluable tool. Politically unformed, the little captain was immensely popular with his troops and the Laotian people. In superstition-ridden Laos, Kong Le was believed invulnerable to gunfire. The phi or cotton strings, he wore tied around his wrists and a stone amulet he carried in a pouch at his waist kept his 32 souls (one for each major part of the body) from fleeing. The *phi* or demon who guarded him was undoubtedly among the underworld's most powerful. Kong Le had never been wounded.

The myth of his invulnerability took on a new dimension during a festival in Vientiane, where an old woman fell into a trance on seeing Kong Le's photograph. "Setthathirath is returned!" she screamed. Setthathirath is a legendary king of Laos who disappeared in the 16th century while on a jungle expedition. The Lao believe that when Vientiane is in great danger, this hero—like Britain's King Arthur—will return to save them. To this day many Laotians believe Kong Le is Setthathirath. Although Kong Le embarrassedly shrugs the matter off himself, he is not sure either.

Kong Le's magical properties failed him late in 1960 when Phoumi's rightists—led by a rising young colonel named Kouprasith Abhay—defeated the neutralists in the Battle of Vientiane and forced Kong Le and his men north to the Plain of Jars. There, Kong Le's alliance with the Pathet Lao was cemented, and when the neutralist-Communist troika headed by Souvanna was established at another Geneva conference in July 1962, Kong Le was still firmly allied with the Communists.

Then came the betrayals. The Pathet Lao began wooing Kong Le's men

KONG LE EXERCISING

AP

DURING VISIT IN CZECHOSLOVAKIA (1962)
Betrayal was a great teacher.

AMPHORN

WITH WIFE AT HEADQUARTERS

unting quick, vicious infantry ac-
ons against his positions on the Plain
f Jars in hopes of grabbing territory.
When a Pathet Lao gunman shot down
Kong Le's top deputy, the idealistic
eutralist was well on his way to be-
oming a fervent anti-Communist. The
US pulled out of the coalition govern-
ent when a left-leaning minister was
assinated by a neutralist soldier.

Roses & Red Ants. Unfortunately,
remier Souvanna did not share Kong
's new-found anti-Red sentiments, re-
used repeated requests to counterat-
ack against the Pathet Lao. During the
ays of alliance with the Pathet Lao,
Kong Le's men had been equipped with
ussian tanks and guns. Now he was
ut of ammunition, and with U.S. mili-
ary aid cut off under the terms of the
ugust Geneva agreement, he had to rely
or supplies on jealous Rightist Phoumi,
eputy Premier in the coalition govern-
ent. Kong Le got precious few sup-
ies. His men, unpaid in nearly two
ears, still remained loyal, and thanks
o his legendary status among the Lao,
ew volunteers appeared daily to fight
he side of Setthathirath.

As a result, his is a young army, its
oldiers averaging about 19. "Young
ys like that," says Kong Le, "they
ome to me, and they want to join the
ght against the Communists. But first
have to tell them that we do not have
ough equipment or uniforms or mon-
y for them. Then, when there is a spot,
ey must be handed a rifle and sent
ght into combat." Still they come to
im up, largely because Kong Le has
hat *di*—the "gentle heart," a quality
hat makes for intense loyalty on the
art of his men, but also leaves him a
rey to politicians who want to use him.
Casual Kong Le sleeps and eats with
is men in the field, never returns sa-
utes (he just waves back). He raises
ones and keeps pets. Two white ham-
sters had the run of his old, tin-roofed
headquarters on the Plain of Jars. Many
Laotians keep giant red and black ants
n jam jars, feed them with bread, then
suffocate them in alcohol to create a supposedly aphrodisiac tonic. But Kong Le is so fond of his ants that he never has been known to drink them.

Phing Sad Lao. He probably needs no aphrodisiacs. Married four times, his latest wife, a slim, pretty Chinese girl whom he met three years ago at the market in Xiengkhouang, occasionally sheds her sarong, leaves her sons in Vientiane and follows him on campaigns dressed in skin-tight field pants, diminutive leather combat boots and a U.S. Navy foul-weather jacket.

When the tides of war turn against him, Kong Le develops a psychosomatic sinus headache, takes to munching pills, and mournfully wishes aloud that he were in London or Paris "or anywhere that has pretty girls." But when things are going well, and he is sitting outside his shack at sundown with a deer roasting over the fire and his men dancing the *lamvong* or playing the flute, he would not give up soldiering. His thoughts turn always to his troops. "My boys, they are trained only by being in wars," Kong Le explains sadly. "We have no money or no time to train them properly. They join my army and must begin to fight then. What a difference it would make if my boys could be trained in Thailand by Americans so that they could know how to fight before they are really fighting."

Kong Le still considers himself a neutralist, says he is fighting merely to see his country left alone by all sides. His simple hope is to reunite faction-torn Laos, and thus to remove the sadness from the opening bars of the national anthem, *Phing Sad Lao*:

Our Lao race had once known in
Asia a great renown,
The Lao then were united and loved
each other . . .

Price for Prisoners. One of Kong Le's big difficulties is the help the Pathet Lao gets from the Viet Minh, who have an almost legendary reputation in Laos. Neutralist and rightist battalions have been known to flee the field at the mere hint of Viet Minh troops in the vicinity. The Pathet Lao take advantage of this by broadcasting orders in Vietnamese over their radios. Kong Le, himself an inveterate radio listener, believes fully half the 75,000 Pathet Lao forces that oppose him are Vietnamese. Actually, there are between 8,000 to 10,000 Viet Minh fighting with the Laotian Reds, mostly in training and administrative posts. Though the Laotian government has offered a reward, consisting of an expense-paid weekend in Bangkok, to any soldier who can produce a Viet Minh prisoner, none has shown up.

Thanks to intimidation and a skillful infiltration, the Pathet Lao control fully two-thirds of Laos, though no more than one Lao in ten is a Communist. The Reds succeed by chipping away at the authority of village headmen, by threatening murder and killing the cattle of villagers who do not contribute aid and comfort. Though loose-lipped Laotians are notoriously bad conspirators, Pathet Lao agents have turned many back-country hamlets into what the French-speaking officials call *pourri*, or rotten, villages. Most Laotians have no use for the Pathet Lao, which they call "the party of slaves," find their incessant Marxist preachments boring, and countryfolk warn strangers away from *villages pourris* with typical Laotian indirection: "Don't go there; the mosquitoes are biting very hard."

On the Road. Last week Kong Le's ragtag army was surrounded by Red mosquitoes. His position astride the Ngun River—deep and swift in the rainy season—dominated the high ground west of the Plain of Jars. His force was bolstered by thousands of bitterly anti-Communist Meo tribesmen armed with knives, spears and homemade flintlocks, who had fled their hilly homes in the north when the Pathet Lao began slaughtering them. Anchored on both flanks by steep, jungle-grown mountains, Kong Le's 30-mile-long defense line presents the Pathet Lao with a strong front. He is sending scores of infantrymen up the slopes of Phou Koutt, a strategically located peak near the edge of the Plain. If he could secure the knob, which has changed hands three times in the past week, he hopes he could then mount an offensive into the Plain itself. But he will do well if he merely stalls further Red advances.

With his well-worn howitzers and half a dozen Russian-built tanks left over from the good old days, Kong Le controls crucial Route 7, thus keeping two Pathet Lao armies from joining

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

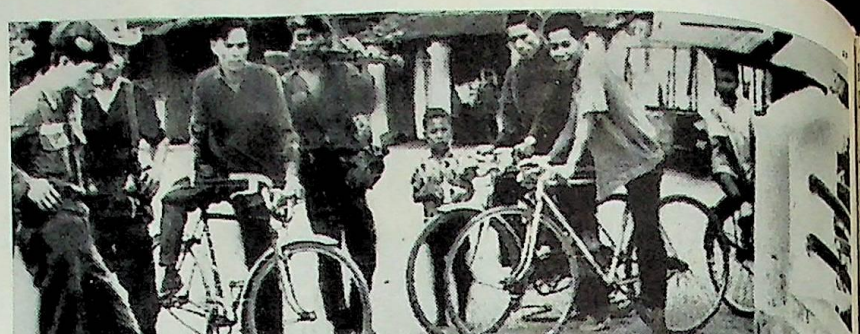
forces. If the Communist troops opposing Kong Le were to break through and join up behind him at the juncture of Routes 7 and 13, the Pathet Lao would have a clear, unopposed path to Vientiane. That would mean the end of the war in Laos.

What Will It Take? Tenuously supplied by low-flying C-46 transports, Kong Le holds on. Last week he looked longingly at the spot on his crinkled battle map that indicated the primary Pathet Lao supply point: Muong Sen, just over the border in Communist North Viet Nam, on Route 7. "The supply dumps there would make fine targets for bombs," he said wistfully, protesting, like so many other commanders in the age of limited war, against constricting "ground rules." Since the U.S. is obviously not yet willing to hit North Vietnamese targets, Kong Le hopes at least for U.S. air strikes to cut Route 7 behind the Pathet Lao. "If the bridges on Route 7 were cut for even a little while," he says, "the Pathet Lao could not hold their positions. That road provides everything they need—food, ammo, men, even the Viet Minh."

Chances are that the tough, ingenious Pathet Lao would find ways to fight on anyway. But the questions remain: Can the U.S. afford to intervene further in the little Laotian war? On the other hand, having gone this far, can it afford not to intervene? By committing itself to a sustained air offensive on Kong Le's side, the U.S. would at best be backing a long shot. Even if the disruption of the Pathet Lao supply lines permitted Kong Le to regain the Plain, it would only buy time and return the whole Laotian equation to where it was before—admittedly with the significant difference that the U.S. would have demonstrated its readiness to take a firm stand.

But there is a growing feeling in Washington that the only way to ease the chaos in Laos must come as part of an area-wide, rather than a country-by-country, solution. This would inevitably test American willingness to carry the war to North Viet Nam. Just in case that becomes necessary, five U.S. Navy cargo ships steamed toward Thailand last week loaded with tanks, trucks, armored personnel carriers and ammunition. The troops to use them could always be airlifted in.

As Kong Le mused about the long-range prospects in his thatch-roofed headquarters at Vang Vieng, guns boomed hollowly beyond the blue volcanic peaks around him. What will it take to win his war? "More soldiers," he said, "more money to pay them with, specially that, more artillery, more rifles and machine guns and mortars, more land mines—everything, should the U.S. be willing to provide that again." He shrugged. "I suppose that depends on what the U.S. wants to do in Southeast Asia. And only the U.S. can answer that question."



VIET CONG ATTACKERS SLAIN IN BATTLE OF DUCHOA
Closer to the capital, shorter fuses.

SOUTH VIET NAM

Unexpected Guts

While nightfall across much of South Viet Nam brought the fear of Red attack, the capital of Saigon used to sleep undisturbed. But the Viet Cong guerrillas have moved ever closer, and skirmishes occur regularly near the city's outskirts. Last week Saigon was literally jolted awake by the closest major clash yet—only twelve miles away.

Breaking a six-week lull in the war, a 600-man Viet Cong battalion stormed the district capital of Duchoa (pop. 7,000) west of Saigon before dawn, ran into determined resistance by the outnumbered, 140-man garrison. Vietnamese Rangers barricaded inside a day nursery stopped one Viet Cong company at the edge of town. When the guerrillas opened fire on two U.S.-made 105-mm. howitzers defending the local military headquarters, the platoon of Vietnamese artillerymen shortened their fuses to 2 sec., slammed shells into the breaches, and blasted away pointblank at anything that moved—firing an awesome 322 rounds in an hour. The barrage turned back the enemy, who left 13 dead *v.* the government's 15 killed. Said a surprised American adviser who arrived shortly afterward: "Somebody threw something into the balance that the Viet Cong had not expected—guts."

It was the sort of thing that had not happened often enough during the last 2½ years, when General Paul D. Harkins had the difficult and troublesome post of U.S. military commander in Viet Nam. Last week Harkins, 60, left for home and retirement. His successor: Lieut. General William Childs Westmoreland, 50, West Point graduate ('36) and combat veteran of World War II and Korea. Back from a trip to Malaya, where he hopefully studied techniques the British used to win a twelve-year Malayan anti-Commu struggle, Westmoreland insisted c tiously that the job in Viet Nam co be done with "spirit, patience, and t niques seldom before experience Then he sat down behind Harkins' d and got to work.

MALAYSIA

Same Old Sukarno

A summit conference used to m a meeting of the world's top leade Nowadays, just about any get-toget between heads of government is bille summit, whether it joins Tito and Na ser or Liberia's Tubman and the Upp Volta's Yameogo. Last week still a other less than towering summit bro together in Tokyo Indonesia's Preside Sukarno, Malaysia's Premier Tunku A dul Rahman and Philippine Presid Diosdado Macapagal. Agenda: " Malaysian problem," which happens be entirely of Sukarno's making.

Since last summer Sukarno had be waging a "crush Malaysia" guerri campaign, branding the new Federa a neocolonialist plot. Three times promised to call a halt, but in fact k pushing the bloody little jungle w When Malaysia's Abdul Rahman r fused to talk as long as fighting con tinued, Sukarno once again promised withdraw his guerrillas and to have operation supervised by neutral Th observers. Finally last week a group 32 ragged Indonesians marched out northern Borneo through a Thai-supe vised border checkpoint. Shouted departing Indonesian warriors: "Long

* Like many another verbal ducat, the t was coined by Sir Winston Churchill, w 1953 called for a "summit of nations" settle East-West differences.

...ive Thailand, long live Malaya, long ...ive Sukarno."

...Rahman accepted this withdrawal as ...token, even though several hundred ...more guerrillas remained behind in ...northern Borneo, and the Tokyo talks ...got under way—but not for long. Ma...capagal proposed a four-nation Afro-Asian conciliation commission to mediate the dispute. Fine, said Sukarno playfully. How about Red China as one of the mediating powers? He did not insist on that condition, and Rahman was ready to accept mediation, provided the Indonesian guerrillas were called off. This Sukarno refused. In the end, the three leaders could only agree to turn over Macapagal's proposal to their subordinates. After the summit's failure, Sukarno hastened home, explaining: "We can't keep the wives waiting." In Indonesia the recruiting of guerrillas continued.

SOUTH KOREA

Academic Exit

There are various ways of dealing with politicians who have become embarrassing to their countries. Bao Dai, former Emperor of Viet Nam, was exiled to his Riviera villa. Korea's old strongman Rhee was dispatched to tend a garden in Honolulu. Russia's Georgy Malenkov was placed in charge of a power plant in Kazakhstan. Now a far more original idea has appeared in South Korea. Kim Chong Pil, Seoul's widely feared behind-the-scenes strongman, is being sent to Harvard.

Kim, 38, who was head of the ruling Democratic-Republican Party as well as boss of South Korea's CIA, hastened his own downfall when in a government re-shuffle last month he continued to get his supporters into key jobs. This open power grab made him the principal target of violent student rioting, which ended only after President Chung Hee Park proclaimed martial law and fired Kim, his nephew by marriage. Park repeated the familiar promises to ferret out corruption, banned the use of government limousines to take the families of officials on outings and their children to school, and ordered a stop to all non-essential building. The government also launched a "help-your-neighbor" charity drive to raise money for the poor. But none of this silenced the clamor of the opposition for Kim's expulsion from Korea.

At this point, U.S. Ambassador Samuel Berger (University of Wisconsin '33) produced a convenient face-saving device in the form of an invitation for Kim to attend a seven-week Harvard seminar on politics and economics conducted by Professor Henry (*Nuclear Weapons and Foreign Policy*) Kissinger. Promptly, Kim and his pretty wife were escorted aboard a jetliner that took them to Japan on the first lap of their journey to the Charles River.

KIM & WIFE DEPARTING SEOUL
When the Kissinger had to start.

JAPAN

The Good-Luck City

The 346,000 inhabitants of the seaport of Niigata, 160 miles north of Tokyo, have long regarded themselves as fortunate. In earthquake-prone Japan, Niigata had never been hit by a temblor. During World War II, Niigata suffered only minor U.S. air raids. On the August day in 1945 when the atom bomb was first dropped on Japan, Niigata was the alternate target in case of bad weather. But the skies that day had been clear over Hiroshima. Small wonder, Niigata was known as the "Good-Luck City."

At 1:02 p.m. one day last week, Niigata's luck changed. Said one survivor: "The ground rose up as though a giant had awakened underground and was trying to get out into the sunlight." The shock of the earthquake tumbled a brand-new bridge into the Shinano River. For a few moments the river ran backward, broke through embankments and flooded half the city. A four-story apartment house slowly fell over on its back, carrying with it a terrified housewife who had been hanging laundry on the roof. When the rolling stopped, she stepped to the ground, unhurt, as were the other residents of the house.

At the airport, Photographer Fukuo Yuminamochi, 27, was about to take off in a private Cessna. "We were warming up at the end of the runway," he recalls. "Suddenly, there was a rumbling noise over the sound of the engine, and the plane began jumping around as if it were fighting turbulence in the sky. I watched the terminal building crack open at the sides and sag to earth." Dozens of oil tanks on the city's outskirts burst into flame, sending up columns of choking black smoke 20,000 ft. high. The tanks burned for 96 hours, despite efforts by U.S. planes to smother the flames with foam bombs. A tidal wave hurled fishing boats far inland. A nearby island rose 9 ft. in a series of jolts, as if a giant were using a lever. Tunnels caved in; a train was buried beneath the collapse of an overpass.

T. TANUMA

TILTED NIIGATA BUILDING AFTER QUAKE
When the giant awakened.

Officials put the damage at over a billion dollars and estimate they will be rebuilding the city for the next two years. Yet Niigata had not exhausted all its luck. Only 27 people died and 403 were injured—a miraculously low figure for an earthquake that measured 7.7 on the Richter scale, only slightly less than Japan's worst, the 7.9 temblor of 1923 that killed 142,807.

THE CONGO

Is Anyone in Control?

A heartening sight to the Congo's government soldiers these days is that model T of an airplane, the T-28 trainer. Rigged with rockets and 50-cal. machine guns, half a dozen of the U.S.-donated aircraft have proved to be lethal weapons against the ragged rebels who are undermining the shaky regime of Premier Cyrille Adoula on the eve of the U.N.'s departure June 30.

What caused some embarrassment in Washington last week was not the planes but their pilots. For it was finally common knowledge that the men in the cockpits have been U.S. citizens (the same type of plane is being used by the Laotian government against the Pathet Lao, is also occasionally flown by Americans). At the controls of one T-28 operating in the Ruzizi Valley near the Congo's eastern frontier recently was a lanky, 30-year-old ex-Marine pilot named Ed Dearborn from Gardena, Calif. His partner, also flying four flights a day to strafe the rebels,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

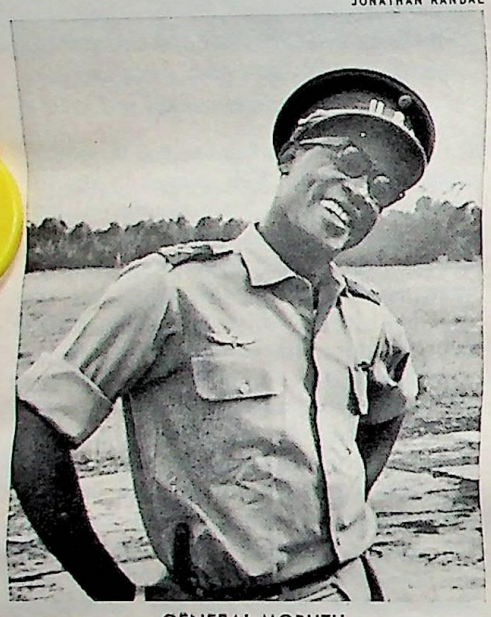
Digitized by Arya Samaj Foundation Chennai and eGangotri

was another American, Don Coney. They are civilians, technically listed as hired hands of the harassed Leopoldville government.

Anarchy in Albertville. At first denying that American pilots were directly involved in the Congo fighting, the State Department then claimed it had been misled. U.S. mercenaries had indeed been flying missions, a spokesman admitted. But he hastily added that Americans would not be used again. This seemed accurate enough, for Dearborn and Coney last week headed back to Leopoldville to help train replacements—a dozen anti-Castro Cuban volunteers, most of them survivors of the Bay of Pigs fiasco, who have gone to the Congo to provide some kind of air support for Adoula's faltering army. Within a week, they will head east toward the fighting zones.

They will get there none too soon,

JONATHAN RANDAL



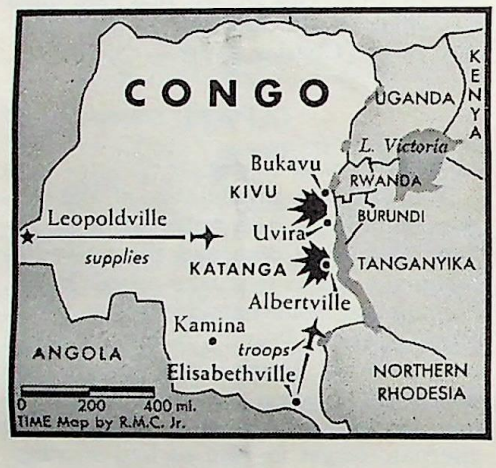
GENERAL MOBUTU
Advancing back to chaos.

for revolt flared in yet another important town in the Congo's anarchic east. It was in Albertville, capital of North Katanga, where only a month ago the government managed to regain control from dissident rebels. Now once again, the streets of Albertville were alive with armed insurgents; scores of whites gathered at the tiny airport in hopes of evacuation, while others took refuge on two steamers anchored offshore in Lake Tanganyika. Where was Adoula's army? Also seeking safety, by all accounts. When last seen, elements of the local garrison were heading swiftly for the bush.

Save Your General! This had also been the frustrating pattern farther north, in the Kivu region, where for weeks, shouting, spear-waving rebels had threatened Bukavu, the biggest town (pop. 33,500) of the eastern Congo. Government troops clearly had the weapons and the manpower to deal harshly with the marauders; yet each time the army units tried to push down the Ruzizi Valley toward the terrorist headquarters at Uvira, they scattered in fright at the first sight of a rebel band. It took the T-28s—and the presence of Army Commander General Joseph Mobutu himself—to rally any kind of organized campaign.

Flying in from Leopoldville, the plucky Mobutu collected as many soldiers as he could find and strode down a highway in defiance of snipers' bullets to win control of a village 25 miles south of Bukavu. "Advance! Advance! If only to save your general!" exhorted an officer. Ahead, Dearborn and Coney were making strafing passes in their T-28s to keep the rebels scattered. It worked reasonably well, but when Mobutu and the T-28s headed back for Leopoldville, the army's drive stopped, and the rebels were free to begin their marauding again.

As in North Katanga and other Congolese trouble spots, the Kivu rebellion is manned largely by local youths who nurse vague grudges against the government. But in Kivu at least—and perhaps elsewhere—powerful support



comes from neighboring Burundi, where Communist Chinese diplomats are in close touch with Congolese refugee leaders who call themselves the "Committee of National Liberation for Eastern Congo." From Bujumbura, Burundi's capital, Liberation Committee "President" Emile Soumaliot and his "commissars" travel over the border to the rebels' Uvira headquarters at will, carrying supplies, money and orders to their field commanders.

Whistle's Blast. It is not at all clear how much real control the leaders have over their ragged followers, as TIME Correspondent Jon Randal and other newsmen discovered in a visit to rebel territory. They were accompanied by two commissars, one of them being State Commissar for Information, Security and Press Martin Kassongo.

The visitors were hardly across the frontier when their Volkswagen was surrounded by some 50 highly nervous rebel troops carrying pangas, clubs and spears, their uniforms ranging from European suit coats to shorts and grass skirts. From their midst emerged a goateed man known only as "Major," clad in green fatigue pants and a splendid monkey-skin bush hat. You can irrigate 40 hectares, supply a village with cool water and feed a thirsty herd with one Worthington pump

Or you can wait for rain

Assured water supply from available underground sources can be yours with a Worthington pump. The above photo shows one of a thousand new UHF (Ultra-High Flow) vertical turbine pumps used in a massive land reclamation project. Whether you need one pump or a thousand, Worthington's UHF pumps are the most economical you can use.

UHF pumps are 4% more efficient than previous models. This gives you one hour of free pumping per day, and therefore lowers operating costs.

Capacities of the UHF line range from 3 to 900 liters pe second. For further information, please contact the regiona office nearest you.

output of nationalized industries since 1962 and a drastic fall in production on the farms seized from French owners when they fled the country. Because of mismanagement, storage vats are filled with millions of gallons of wine from last year's harvest, and there is no room to store this year's crop. Anti-government bands roam the mountains of Kabylia, and last month a clumsy attempt was made on Ben Bella's life. So far, Ben Bella has maintained control through his ingenuity in sowing discord among his foes and by frightening the masses with the prospect of civil war if he is overthrown. The situation is summed up by a wry Western joke heard in the cafés: "Algeria is a developed country that is moving toward underdevelopment."

COMMUNISTS

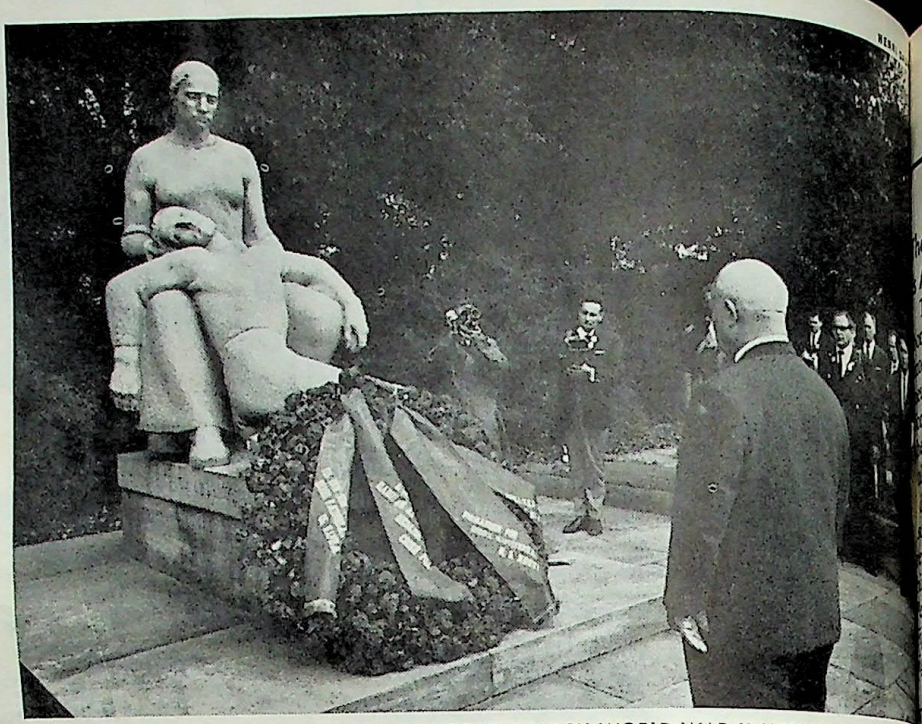
Traveling Act

Nikita Khrushchev never worries about the dangers of "overexposure." While Western statesmen make quick flying visits abroad, Nikita stays for weeks and weeks. Last week, as he arrived in Copenhagen for an 18-day journey through Scandinavia, it was quickly clear that his once effective act as the heavily charming, frank and shrewd Russian cornball has grown stale. It was his 52nd foreign voyage since he took power a decade ago, and the style was still the same, but the welcoming crowds were scanty and almost silent.

As Nikita made his way down the gangplank of the blue and white Soviet ship *Bashkiria* that had brought him, Wife Nina and 40 others across the Baltic, he glimpsed the handsome wife of Premier Jens Otto Krag, who used to be one of Denmark's best-known actresses. Pushing toward her, Khrushchev cried, "I've brought some bread for you, my girl," recalling the fondness for Ukrainian bread she had expressed during the Krags' trip to Moscow last February.

Within a matter of hours he had laid a wreath on a Danish war memorial, bussed a classroomful of kindergarten mites (who squealed "We want Khrushy!"), urged total disarmament to anyone who would listen, heavy-handedly told Danish shipyard workers how to strike against their employers, and promised to tear up his party card if Russia does not solve its food-growing problems by 1970 or so. At a school, Khrushchev jovially declined a cigar offered him by a woman teacher ("I am not old enough to smoke"), but accepted a glass of vermouth. That was about the strongest thing Khrushchev drank all week, and he wanted to make it quite clear that he was still on the wagon—and perhaps that is why he seemed so dull.

Touring a farm on the island of Fyn, a rich beef and pork area, Khrushchev irritated his hosts slightly by saying, "I saw your wonderful farms today, but I saw nothing that I would care to take home with me. You have such small farms. Our farms are big." When the swarms of photographers crowded too close around him, Khrushchev got furious: "These barbarians would scare the devil, let alone the cows," he said. "Let the bull at them!"



KHRUSHCHEV CONTEMPLATING DANISH WORLD WAR II MEMORIAL
A better show off the wagon.

In the confusion, Soviet Foreign Minister Andrei Gromyko stepped in a pile of cow dung, and the alarmed cows trotted off to a distant corner of the pasture. Finally one Red Danish stood still long enough to be patted on the nose by the Russian leader. "That cow doesn't seem frightened of Communism," chuckled the owner of the farm. "Of course not," snapped Khrushchev. "All cows know Communism is their friend."

Cows may know it, but what about people?

GREAT BRITAIN

The Future of Half the World

With elections due in the fall, both major parties in Britain were beginning to nip at one another's heels. There was not all that much to argue about. Labor M.P. James Callaghan, economics spokesman in the shadow cabinet, rose in the Commons to express shock at the hardly startling discovery that several large corporations were funneling money into Conservative Party coffers. For their part, the Tories were trying to force Labor to discuss details of its plans for nationalization, which Harold Wilson's men have been deliberately vague about; in the end, Deputy Leader George Brown repeated an earlier pledge to bring steel, truck transport and much urban land under government ownership or control.

On defense policy, Wilson scathingly attacked the government's "pathetic idea" that the decision "to hire Po missiles from the U.S." has any se influence on the course of events, there was accord between Conse tives and Labor on at least one i At one with Labor on China po Prime Minister Douglas-Home clared: "Far better that China sh be in the United Nations, that t should be increased contact betw the West and China, and that C should be gradually weaned away we have weaned the Russians a from this policy of including force Communist doctrine."

It might be done through increa trade, added Sir Alec. "I have sisted in my view, put rather cru perhaps, that a fat Communist is preferred to a thin Communist."

The view with variations had its herents across the Atlantic. In a co mencement address at St. John's U versity in Jamaica, L.I., former U Ambassador to Italy Clare Boothe Luce warned that Red China, now "isolate militarily and economically by bo U.S.S.R. and U.S. policy," might re desperately aggressive. In Southea Asia, said she, "we must hold firm e if it becomes necessary to wield a n clear stick over the head of Mao T tung." But, added Speaker Luce, th are other ways to stop Chinese expa sionism. "For example, what argume can be made for our present policy trading with the Russians or sel them wheat that cannot also be m for trading with Red China, and fee ing her far hungrier and far more de perate people? Long before the you men in this audience are old, Chi will account for half the population the whole world. We must soon fi ways of living at peace with half t human race, or your generation w know nothing but endless war in t Orient."

COLOMBIA

The Backlands Violence Almost Ended

The orders read like the work of a crowned general trying to inject a little life into a standard peacetime troop maneuver: the Colombian army and air force were to invade, conquer and hold the "Independent Republic of Marquetalia," a 1,400-sq.-mi. enemy enclave [illegible] in the Andean highlands 170 miles southwest of Bogotá. But this war is real, and so is Marquetalia. Colombians know it as the stronghold of Pedro Antonio Marín, 34, alias "Tiro Fijo" (Sure Shot), last of the country's big-time bandit chieftains.

Communist Country. By wiping out Tiro Fijo, Colombia would just about end the savage backlands violence that had begun in 1948 as a feud between the country's Liberals and Conservatives. But catching Sure Shot is no sure thing. Reared in poverty and squalor, he drifted into a Communist guerrilla band in the early 1950s. By 1960 he had his own gang, and moved his family and followers onto a 10,000-acre hacienda near the foot of snow-topped Mount Tolima—after killing the hacienda's owner. From his new home Tiro Fijo began ruling over all neighboring haciendas, establishing Communist cells throughout the area, indoctrinating peasants, collecting a monthly head tax and collecting up to 30% of farmers' profits. His bandit gang numbered some 250 men to the area's 6,000 population, and was the only law.

Busy with outbreaks of banditry elsewhere, the federal government let the remote coffee-growing land slip away by default. Marquetalia paid no taxes, and death awaited any police or military force rash enough to cross its borders. Last December Tiro Fijo and his men ambushed an army patrol, killing six soldiers. All told, the army credits him with 200 murders.

Two-Stage Assault. The army started planning Tiro Fijo's downfall months ago. Combat units were divided into small, tightly organized teams, given extensive training in anti-guerrilla warfare. To backstop the military campaign, new roads, schools and other civic-action projects were planned to draw the peasants closer to the government. The offensive began four weeks ago as units of five battalions—totaling 3,500 men—poured into Marquetalia.

Flitting through the thickly wooded mountainsides, Tiro Fijo's men fought half a dozen bitter skirmishes. But in the deadly game of hide-and-seek, the guerrilla-wise soldiers came out on top, pressed steadily on toward Tiro Fijo's hacienda headquarters. Early one morning last week, a fleet of helicopters airlifted 170 crack troops into position surrounding the hacienda. The desperate Communists opened fire from underbrush and foxholes. In the three-hour fight, they wounded only one soldier; finally Tiro Fijo put the hacienda to torch and retreated into the mountains. That night his men ambushed an army patrol, killing two soldiers; four nights later they killed four more.

But "Operation Marquetalia" was virtually complete. The yellow-blue-and-red Colombian flag now flew over the area for the first time in its history. Tiro Fijo himself was holed up with 50 to 80 men in a narrow canyon six miles from his old base, and at week's end two army pincer columns were closing in for the kill.

FLAG RAISING AT MARQUETALIA
Closing the pincers.

BRAZIL

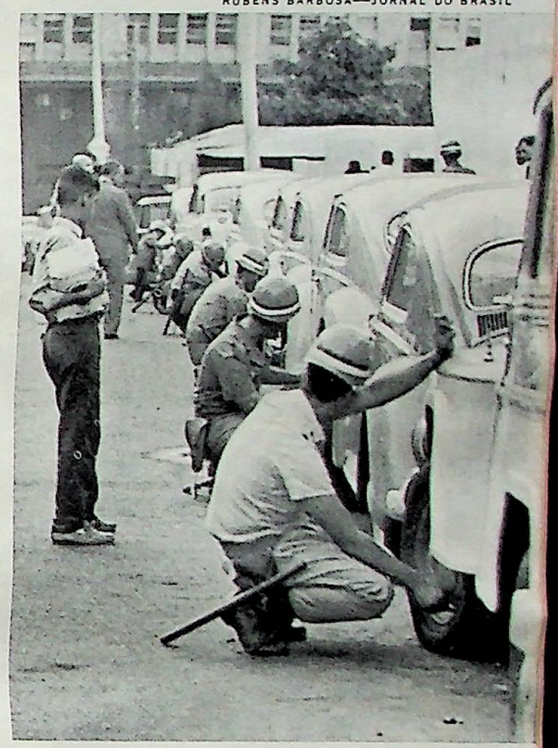
Pffft!

Rio de Janeiro's parking problem is about as acute as New York's might be if everybody drove to work. Since there are no parking lots, garages or meters, and since Rio traffic cops have always regarded parked cars with compassion, Rio motorists park anywhere. They double park and triple park; they park on sidewalks, in crosswalks, at intersections, on center islands. Every place but on top of another car. Now Brazil's revolutionaries are taking the matter in hand—the stern hand of Air Force Colonel Américo Fontenele, 43, Rio's new traffic director.

With the righteous indignation of a Renault-owner boxed in between two Buicks, Fontenele commenced by hiring a fleet of trucks to tow off all illegally parked cars. When police garages were full, offending cars were simply stashed away on isolated streets. No records were kept of what went where. If the car was in a police pound, the owner paid maybe a $4 fine; if it wasn't —shrug. One army captain wailed that it took him three days of searching to find his Volkswagen; other owners found that vandals had followed the tow trucks, stripped their cars bare.

Colonel Fontenele was only warming up. When he learned that parking violaters were escaping before the tow trucks arrived, he sent his men through downtown Rio to descend on the front tires of illegally parked cars, unscrew the valves—and pffft! "Vandalism," cried Rio papers in shocked unison, quoting eminent jurists' opinions that "Operation Pffft!" was illegal. "This campaign will continue until motorists begin to cooperate with the authorities," answered Fontenele.

RUBENS BARBOSA—JORNAL DO BRASIL



RIO COPS AT WORK ON THE VALVES
Deflating the town.

Pffft went the tires of the Ghana Ambassador, three federal Congressmen, one state assemblyman, and a plainclothes detective shadowing a suspect. One squad of cops was discovered gleefully flattening the tires of 35 legally parked cars, until someone pointed out the error. When police moved in on six illegally parked official cars they almost came to blows with some marines on guard; a squad of battle-dressed tommy gunners was eventually called up to protect the wheels' wheels.

Fontenele remains airily unperturbed. Traffic is moving right along these days, and the colonel is now prohibiting parking on almost every main street. "The public is on my side," says the colonel, "except those, of course, who have had their tires flattened."

NATIONAL NEWS SERVICE

GOVERNOR LUYT
One stop short of anarchy.

BRITISH GUIANA

A New Boss

At last the British had no choice but to take control of their race-torn little South American colony. After five months of continued violence between 295,000 East Indians, led by Marxist Premier Cheddi Jagan, and 190,000 Jagan-hating Negroes, Britain's Governor Sir Richard Luyt announced that he was assuming emergency power in British Guiana to prevent further bloodshed. He also ordered the arrest and detention of 35 leading troublemakers—all but two of them members of Jagan's People's Progressive Party. Temporarily at least, Cheddi Jagan and his Communism-spouting wife Janet were out of business.

In the most recent clashes between the races, 15 have been killed and scores injured. The worst horror was played out in the Georgetown capital when terrorists fire-bombed the home of a mulatto anti-Jagan civil servant, killing him and seven of his children. On radio next day, Governor Luyt (pronounced late) reported that Jagan and his ministers had refused to impose curfews, refused to permit military searches for terrorists, and had not muzzled race-baiting radio broadcasts. Said the Governor: The security force of 1,200 British troops, 600 "volunteer" troops and 1,600 local police "will be firm. They will also be fair. The position now is that the Governor and not the ministers will handle the emergency."

Some of Jagan's opponents welcomed Luyt's action as "the only one that can prevent the country from falling into a final stage of anarchy." Predictably, Jagan cried imperialism and condemned it as "a dark mark on Britain's all-dirty record as a colonial power." His followers warned that he might call for countrywide civil disobedience. If he does, Jagan himself is almost certain to land in jail.

VENEZUELA

Subversion *Sí*, Study No

Latin America's troublesome students go out on strike at the pop of a firecracker: against the government, for Cuba, to oust professors, or anything else that catches their fancy. Last week, on the eve of final exams, the 18,725 students at Caracas' Central University were on strike for a brand-new reason: the right to flunk forever and still remain in school.

Students of Venezuela's state-supported universities won flunking privileges in the euphoric period following the 1958 ouster of Dictator Marcos Pérez Jiménez. The government guaranteed admission without an entrance exam to any high school graduate, and wiped out all penalties for failure except a nominal fee for repeating a course. The result was chaos. While academic standards tumbled, the university became a base for communists and subversives. They were rarely seen in class, and their ages ran well into the 30s. All during turbulent 1963, Castroite F.A.L.N. terrorists took refuge on the campus—which is off limits to police. Recently, Castroite students beat up two policemen found on campus; and two others were forced to kneel and beg for their lives.

The cult of university autonomy is so strong in Latin America that the Venezuelan government is reluctant to put the campus under ordinary law. But it is trying to do something about students obviously uninterested in learning. Last month the University Council began a crackdown, adopting a "repeater's rule," which expels any engineering student failing two subjects twice or one subject three times. Rector Jesus María Bianco thinks that the reform, modest though it seems, is long overdue. And he intends to make it stick.

HAITI

"What Is Called Democracy"

The scraps of paper came in pink, red, green, blue and yellow. But they all said the same thing: "Citizen Dr. François Duvalier, President of the Republic, will exercise for life his high functions according to Article 92 of the present constitution. Does this conform to your wishes? And do you ratify it?" At the bottom, in big black letters, was the word OUI.

In Haiti last week Duvalier was holding a "popular referendum" before he assumed office for life. It was only proper, said "Papa Doc," because "we have what is called a democracy." But in the dank, dark Caribbean nation, where almost 90% of the 4,500,000 population could not read the ballot, even Lou Harris could have predicted the outcome. Eight hours before the polls closed, the little doctor-turned-dictator appeared on the balcony of the presidential palace and graciously conceded victory. "Duvalier has won the battle," he told the obedient crowd. "He is already elected. I accept no one else in front of myself."

There is still a smattering of opposition to Duvalier in Haiti. Once in a while someone scratches "Caca Doc" (a Creole obscenity) instead of Papa Doc on the wall, and in a Port-au-Prince bar last week a sodden upper-class mulatto suddenly raised his voice: "How long must we stand here and suffer and be killed?" But most Haitians have resigned themselves to a numbing life under Duvalier. The dictator's 5,000-man *Tonton Macoute* roams the country ferreting out opposition and collecting "donations" from terrified businessmen. Even Duvalier's own henchmen live in mortal fear. Using Haiti's pervasive voodoo mysticism, Duvalier has set himself up as the pseudo-religion's top practitioner, and fearsome tales that he performs ghoulish rites on severed vital organs of his enemies flit after like bats through Port-au-Prince.

The U.S. has tried everything short of intervention to bring about a change in Haiti. It has cut off all aid, pulled out its ambassador, even sent a Navy task force to steam around outside the three-mile limit for a few weeks. But Duvalier remained unmoved, and in the meantime Haiti's economy went from bad to worse. On paper, per capita income is $70 a year, lowest in the hemisphere; the real figure may be as low as $15. Now, to alleviate at least a little of the misery, the dollars are flowing again: $2,360,000 in Inter-American Development Bank funds for a drinking-water project, frequent liberty visits by U.S. Navy vessels. Ambassador Benson E. L. Timmons III, 48, mindful that a dozen embassy officials have been declared *personae non gratae* in the past 6½ years, is restricting his activities merely to "what is proper."

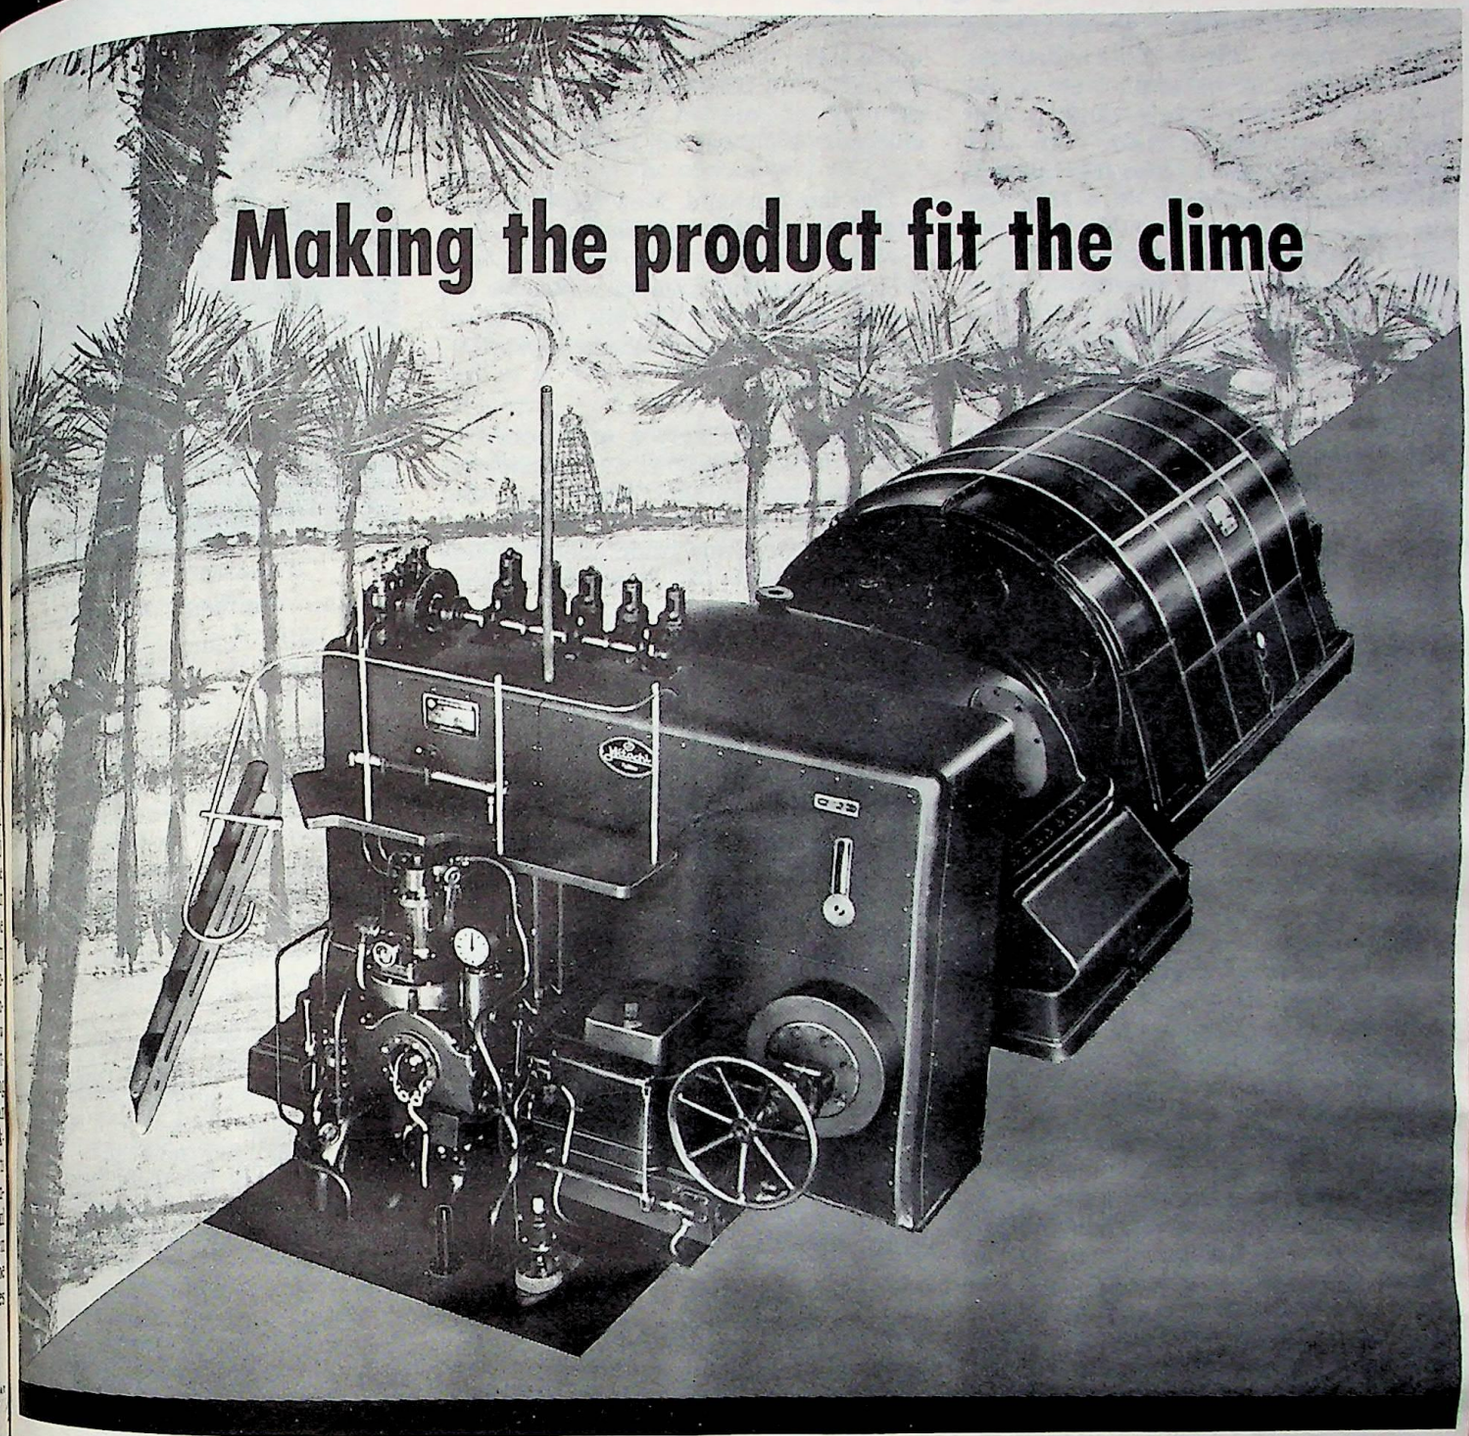
Making the product fit the clime



You might not think the design of heavy electrical generating equipment would vary from one region to another. Yet climatic and other local conditions often dictate small but important changes. One example is the 10 mW turbine-generator set Hitachi manufactured for the Madurai Power Station in India's Madras State. To withstand the high temperatures of the area, particular care was taken in the design of every part of the equipment, especially the cables. And to protect against the high humidity, anti-corrosion paint was used on exposed parts, the panel moisture-proofed, and high-insulation wiring installed. The result: 10 years of flawless operation without overhauling, probably a world record for this type of equipment.

Word of the success of the Madurai project spread, and Hitachi won orders for equipment from four other power stations in India. Two are taking advantage of Hitachi's unique ability to manufacture complete power plants, all designed to "fit the clime."

Heavy electrical equipment is not the only field where Hitachi has shown its capability, which includes industrial and transportation equipment and extends to precision electronic instruments and scientific apparatus. If you're interested in any of our product lines, we'll be happy to forward you complete information. Or if you'd like to know more about our latest activities, we'd be delighted to send you our popular, informative quarterly, Age of Tomorrow.

The mighty New York Yankees, those bankers of baseball, were giving away 20,000 free tickets—and to New York taxi drivers at that. With each pair of ducats went a letter from General Manager **Ralph Houk**, 44, telling how the Yanks ("a great New York institution") wanted to "do something for another great New York institution." The Yanks could use some friends: the National League's happy-go-sloppy Mets were outdrawing them at home 3 to 2.

Mirza Asadullah Khan Ghalib and Mîr Taquî Mîr are not exactly U.S. household words. But Minute Rice is, and it is the wish of its inventor, Afghan Immigrant **Ataullah K. Ozai-Durrani**, that the two little-known 19th century Persian poets roll trippingly off American tongues. Ozai-Durrani's will, probated six weeks after his death at 66 in Denver, leaves more than half of his $1,000,000 estate to Harvard "or some such nonprofit institution" to translate the poets' works into English and underwrite biographies. Ozai-Durrani's lawyers are being besieged by half a dozen nonprofiteers anxious to investigate, but Harvard is ahead by a Yard.

Descending from a Pan American thrift flight in Honolulu, **Lynda Bird Johnson**, 20, was nearly strangled by a nest of welcoming leis. "I can't see," she said plaintively. They kept coming. "I can't stand another one." So it went, for the eight days of her Hawaiian visit, through speech giving, sightseeing and skindiving: an embarrassment of riches, from feathered gourds to a monkeypod tray, and an even more embarrassing swarm of aloha photographers. She banned one from a luau for snapping her in a bathing suit, wailed at others, "I can't stand up, I'm sinking," when they asked her to pose in spike heels on a soggy lawn. She even tried to elude them when a gift Indian sari was wound about her dress. "It's like taking pictures of me in a bathtub," she chirped. "Y'all wait till I have it on."

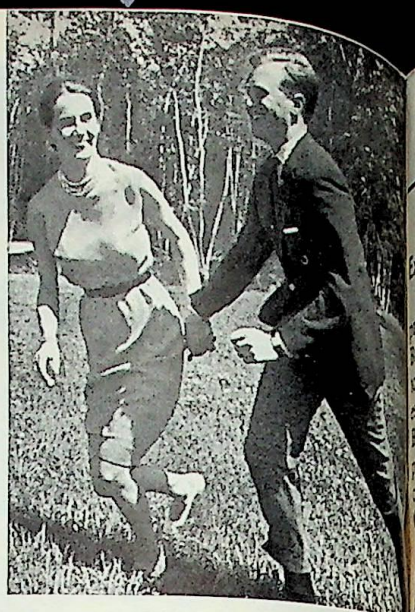
Mary Caroline d'Erlanger, 24, daughter of BOAC's late chief, Sir Gerard d'Erlanger, prefers the nickname Minnie. Her fiancé, **Winston Spencer Churchill**, 23, on the other hand, strenuously resists Winnie, and as anyone who has tangled with his grandfather can testify, Churchills are stubborn. Randolph's Oxford-educated son has other family traits: 1) a fondness for travel and journalism that last year sent him on a four-month tour of 40 African and Middle Eastern countries, will result in a book, *First Journey*, due in the U.S. in January; 2) freckles; and 3) a hankering eventually to go into politics ("That is what all Churchills do"). Meanwhile, Minnie and Winston are busy choosing a London church and a July day for the wedding.



D'ERLANGER & CHURCHILL*
Resisting strenuously.

Viking princes have claimed the sea as their domain since the days of Leif Ericson, and Norway's debonair Crown Prince **Harald**, 27, has salty blue in his veins. A deep-water sailor from the age of eight and Norway's kingpin skipper for the past decade, Harald was named by the Royal Yacht Club to represent his country in the 5.5-meter yacht class at the 1964 Olympics. Sailing the *Fram III*, designed by U.S. Master Draftsman Bill Luders, Harald is rated a good bet for a medal of some sort, but it had better be gold if he is to maintain status in court circles. Both his father, King Olaf, and his good friend, Greece's King Constantine, hold gold medals for sailing won at the Olympics of 1928 and 1960.

* At the Mt. Kisco, N.Y., home of his mother, now Mrs. Leland Hayward.

THE SUPREME COURT

Extending the Fifth

"The American system of criminal prosecution," wrote Justice William Brennan, "is accusatorial, not inquisitorial, and the Fifth Amendment is its essential mainstay." With those words, Brennan last week announced the Supreme Court's decision to reverse the contempt conviction of a small-time Connecticut 52-year-old gambler named William Malloy and extend the protection of the Fifth Amendment's privilege against self-incrimination to witnesses and defendants, whatever their status, in all state courts.

When a Hartford County crime commission three years ago tried to question Malloy about his employer and finances at the time of his 1959 arrest, Malloy invoked the privilege and refused to answer any questions. He was tossed into prison for contempt after a Connecticut court, relying on more than 50 years of the Supreme Court's own rulings, declared that the federal Fifth does not apply in state courts. Malloy had been assured by Connecticut authorities that because of the state's one-year statute of limitations for misdemeanors, he was not exposing himself to further state prosecution, but the Supreme Court ruled that if he had been compelled to testify, he might have furnished "a link in a chain of evidence sufficient to connect him with a more recent crime for which he might still be prosecuted." The court's turnabout served notice on the states that from now on they will be required to honor the stricter federal protection against self-incrimination.

The court also overturned the New Jersey contempt conviction of two longshoremen who had invoked the privilege despite state pledges of immunity against prosecution. The longshoremen had argued that they feared federal authorities would use their state-immunized testimony to build a federal case against them. Putting an end to that peril, too, the court held "that the constitutional privilege against self-incrimination protects a state witness against incrimination under federal as well as state law and a federal witness against incrimination under state as well as federal law."

PUBLIC SAFETY

The Right of Self-Defense

A frightened St. Petersburg resident called the police for advice on how to handle a prowler. "If you catch this guy at your front door," said the officer, "it's O.K. to shoot him, but make sure he falls inside." Reason: in Florida it is legal to shoot an intruder in one's house, but not in one's yard. In few other cities can citizens expect such straightforward advice from their police. Yet with crimes of violence increasing, more and more Americans are concerned about how to protect themselves and still stay within the law.

Duty to Run. It isn't easy. U.S. laws governing self-protection derive from the ancient English common law that held that a medieval Briton was obliged to retreat until his back was literally to a wall or a ditch before he was justified in fighting off an assailant. This so-called "retreat law" has been substantially modified in American courts, which have generally ruled that though a person must attempt to avoid trouble, he is not legally bound to flee if such action would increase his peril. Only Texas law ignores retreat altogether and permits an attacked person to stand and fight it out under any circumstances.

In any state, once the fighting has begun, the law becomes a matter of interpretation. An attacked person is legally permitted to exert only as much force as is necessary to repel the aggressor. But what is reasonable? In Washington last month, as Frances Clark, a comely 24-year-old, sat in a Chinese restaurant, a man named Zebedee Lee, 42, walked over and, by his own admission, "patted her on the buttocks." Grabbing a knife, Miss Clark stabbed him in the stomach, putting him in the hospital. Though Lee's act was technically an assault, the district attorney felt that the girl used more than reasonable force to repel it. As a result, Miss Clark, not Lee, was charged with assault.

Self-protection becomes even more complicated in cities that require licenses for firearms. Yet never have New Yorkers, for example, needed protection so desperately. Only last week a 63-year-old lawyer, Leonard Simpson, was shot to death in the self-service elevator of his West Side apartment house. An 84-year-old New York shopkeeper, Frank Felicetti, recently shot and killed an intruder who, he said, had robbed and beaten him twice before. Felicetti was arrested for violating the city's Sullivan Law, which forbids owning unlicensed concealable weapons. He faces a maximum penalty of seven years in prison and a $1,000 fine.

Aiding others under attack is fraught with more legal perils than protecting one's self. Most Americans find it outrageous that New Yorkers fail to aid fellow citizens who are being mauled by thugs on streets and subways. Yet no matter how cowardly New Yorkers may be, the fact is that under the law anyone who intervenes in an attack exposes himself to the possibility of severe penalties. If a good Samaritan repels an attacker too aggressively, or inadvertently jumps in on the wrong side, he may wind up under arrest for assault.

FRED MORGAN—N.Y. DAILY NEWS

FELICETTI (RIGHT) & WELL-WISHERS
The third time was fatal.

Do-It-Yourself Protection. In an attempt to obey the law and also stay alive, many people are turning to weapons that are guaranteed to repel attack yet not inflict lasting injury. Most popular are cylindrical Penguns, which shoot a jet of tear gas and are legal in most states (with the notable exceptions of California, New York and Illinois). Where tear gas is barred, pocket-size aerosol sprays that discharge a temporarily eye-stinging chemical are usually allowed. Fittingly, girls who work nights in the Wonderful World of Chemistry at the World's Fair all pack such protection. Another gimmick: a walking stick that conceals a cattle prod delivering 4,000 volts.

Reassuring as such weaponry may be to a worried public's peace of mind, most police officials are increasingly nervous that the trend toward do-it-yourself protection may lead trigger-happy matrons to mass mayhem. The best advice, claims a top Baltimore cop, is still: "learn to run." The question is, can nervous citizens run fast enough—or far enough?

GOLF

After the Avalanche

"It's like jumping off the top of a building," Ken Venturi said recently, surveying the shreds of his tattered career. "There are no steps on the way down."

Once he was the hottest player in golf. Arnie Palmer was just a promising young pro when Venturi, a 24-year-old amateur, shot a final-round 80 and lost the 1956 Masters by a single stroke. Jack Nicklaus was a chubby-cheeked Ohio State freshman when Ken was winning four tournaments in 1958 and hearing himself hailed as "the new Ben Hogan." In his first four years as a pro, Venturi won $141,276. Critics raved about the silky smoothness of his swing. "Ken stands up to the ball," said one, "as if he, the club, the ball and the golf course were all part of a beautiful piece of sculpture."

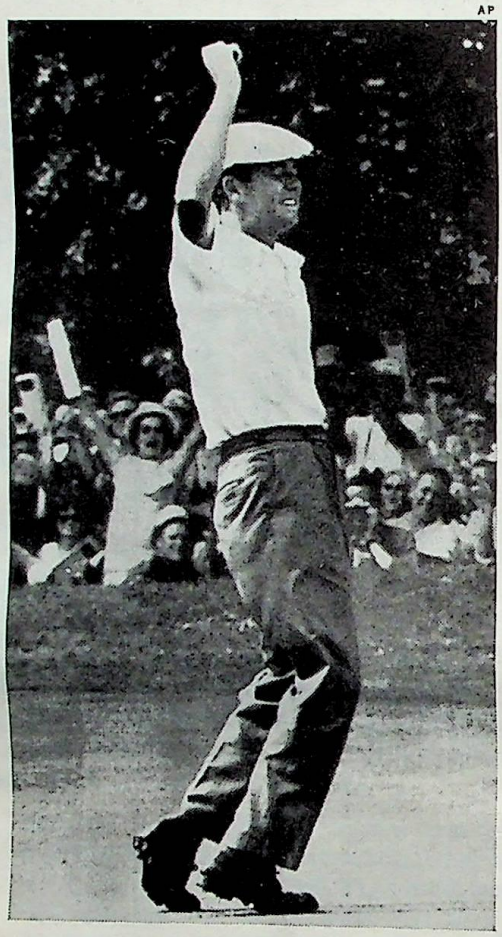
Bizarre Ailments. It is always impossible to single out the snowflake that starts an avalanche. Maybe, for Venturi, it was the last day of the 1960 Masters, when he was half-carried away from the 18th hole, measured for a green winner's blazer, and plunked down in front of a TV set—to watch Palmer birdie the last two holes and win. Things certainly went from bad to worse after that. He was plagued by a series of bizarre physical ailments: a pinched nerve that paralyzed half his chest, a stubborn virus infection, a hand injury, an automobile accident. In the next four years Venturi won only one minor tournament, and his official earnings last year amounted to exactly $3,848.33. There was a brief flurry of interest when he finished third in the Thunderbird Classic in early June. But last week, when it came time for the U.S. Open at the Congressional Country Club in Washington, D.C., nobody gave Venturi a chance.

The Congressional is the longest and toughest course any Open has ever been played on—7,053 yds., with greens so irregular that one golfer accused Architect Robert Trent Jones of burying dinosaurs under the undulating turf. The 9th hole is all of 599 yds. long, and its green is separated from the fairway by a deep, grass-choked ravine. "That," said one pro, "is where elephants go to die." In short, the Congressional is a brutal course, even for Palmer, Nicklaus, or Tony Lema, who had just won two tournaments in a row. But when Palmer fired the only sub-par round of the first day, a two-under 68, one sportswriter boldly announced that "Arnold Palmer has 198 holes to go on the Grand Slam of golf."

Plodding Along. Palmer did not do badly the next day, either: a one-under-par 69. But that was only good for second place, a stroke off the pace set by a curly-haired Californian named Tommy Jacobs, 29. Only twice all afternoon did Jacobs stray from the fairway; only twice did he fail to reach a green in par figures; and he did not miss a single putt under 12 ft. Jacobs' six-under-par 64 tied for the lowest score ever recorded in a U.S. Open. In all the excitement, who was going to notice Ken Venturi, plodding along in fourth place, six strokes behind?

Nine holes later, everybody was. Washington weather is never much to brag about, but for the 36-hole final round, it was atrocious. The temperature reached 97, and the humidity could drown a man. Nicklaus shot a 77, Palmer and Lema blew to 75s. But Venturi, in some astonishing way, suddenly became that sculpture again.

AP



VENTURI AFTER SINKING A BIG PUTT
In the Open, one master.

On the first hole, his 10-ft. try for a birdie hung tantalizingly on the lip of the cup for a full minute—and then dropped in. "When that happened, I said to myself, 'Well, well! If that's the way things are going, I might as well make the most of it.'" Venturi birdied the 4th, 5th, 8th, and 9th holes, turned the front nine in 30 strokes—and found himself deadlocked with Jacobs for the lead. But on the 17th he missed an 18-in. putt for a par; on the 18th, he messed up his drive and had to settle for another bogey. Then he almost collapsed from heat exhaustion. Leading by two strokes, Tommy Jacobs ate a plate of beef stroganoff. Doctors packed Venturi off to bed.

Cap in Hand. That's it, the exp figured. Venturi came out for the f 18, splay-footed and staggering. Ye some weird magic his swing held gether. Relentlessly he stuck the on the board. Trying for another o wonderful rallies, Arnie Palmer sank the way to fifth place. Tommy Ja needed five strokes to negotiate the three, 195-yd. 2nd hole.

Finally it was the 18th hole, and th was Ken Venturi, cap in hand, totte up the middle of the fairway wit four-stroke lead and a big smile, so ing up the applause. His ball was in sand trap 110 ft. from the pin. Casu he knocked it onto the green; coolly ran in the 15-ft. putt—for a 72-h total of 278, second lowest win score in U.S. Open history. Then he down behind a tree and sighed: "Y know, I was going to give up this g eight months ago?"

CREW

Two Make Ready But One to Go

Most top college crews have a cal tree-edged river or lake to pad around in, a well-appointed boathou to change in, and money from old gra for new equipment. Not so the Univers of California at Berkeley. One of Coa Jim Lemmon's shells has been arou for 29 years and the building his eig call home was built in 1925. His pra tice course? It would probably be eas to row through Times Square.

Freighters, pleasure boats, barges a tugs wash up wakes like walls in S Francisco Bay's East Oakland estuar but they are getting used to watchi out for the thin-skinned craft with t straining oarsmen. Since California fi dipped an oar in 1907, it has won t Intercollegiate Rowing Association Re gatta eight times. Golden Bear crew have won three Olympic gold medals i three tries, and established themselve as the power in the West.

None of which holds any water wi Easterners. They simply think U.S. row ing never left its East Coast cradle So when California traveled East fo last week's 62nd annual I.R.A. regat ta, undefeated in six West Coast race this year, the competing coaches got together and voted twice-defeated Co nell the crew to beat. California thought that was a fine idea. And on New York State's Lake Onondaga, they did it with ease.

Using the tulip-shaped oars popular ized by Germany's 1960 Olympic-win ning Ratzeburg crew, the high-stroking Californians soon jumped into a boat length lead. From then on, they uncon cernedly looked back at their pursuers for the length of the Olympic-size 2,000-meter course. At the finish, the coxswain took the stroke up to 40 for kicks, and California slid across in 6 min 31 sec. Adding insult to injury, another Western crew, the University of Wash ington, was second, nearly two lengths

at the finish they were almost five
ths ahead. Now that makes them
ow for California to beat.

AUTO RACING

To Win in Belgium Not Really Coasting

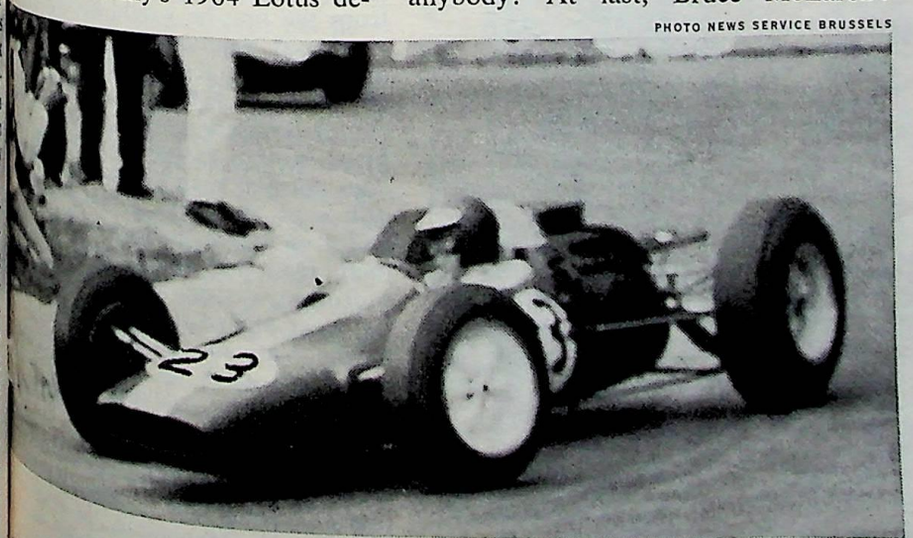
Scotland's Jimmy Clark, 28, is every-
g a world champion auto racer
ut to be: bright, cool, daring, ear-
, fearless—and lucky as a field full
four-leaf clovers. Last week he won
280-mile Belgian Grand Prix to
ke it two out of three races so far
year. And he didn't even realize
at he was doing.
his practice, Jimmy's 1964 Lotus de-veloped mechanical trouble, and he had to trade it in on a 1963 model that was geared too low for the ultrafast Spa-Franchorchamps course. So there he was, a few laps from the end, touring unhappily around in fourth place. Out front in a Brabham-Climax, the U.S.'s Dan Gurney was burning up the track, leading Britain's Graham Hill and New Zealand's Bruce McLaren by 40 sec., and Clark by 90 sec. Play safe? Not Gurney.

Where Was Anybody? Gurney had not won a Grand Prix race in two years, and this was going to be a victory worth savoring. On the 28th lap, he blasted around the 8¾-mile course at 137.6 m.p.h.—breaking the old track record by more than 2 m.p.h. Then the Brabham's engine began to miss. Gurney screeched into the pits. "Gas!" he yelled —and imagine his surprise. There was no gas: fuel-company mathematicians had concluded that nobody would need to refuel. Frantically, Gurney wheeled his sputtering Brabham back onto the track. On the last lap, he ran completely out of gas.

Tall, mustachioed, and very British, Graham Hill would have cut a dashing figure at the winner's stand. But the fuel pump of his B.R.M. quit just 100 yds. past the spot where Gurney sat nursing his grief. In the grandstand, the fans began to get restless. Where was Gurney? Where was Hill? Where was anybody? At last, Bruce McLaren's Cooper cleared the crest of the last hill and started down the final straight. But McLaren was only coasting: his generator belt had parted and his engine was dead. Then came a sound that made McLaren swivel in his seat—a staccato roar, rapidly increasing in volume. Here was Clark, buzzing merrily along, ignorant of the drama up ahead. Down the straightaway rolled Bruce McLaren, at a desperate 30 m.p.h. Down the straightaway flashed Jimmy Clark, at a casual 130 m.p.h. McLaren was pounding his knees in helpless frustration as Clark zipped past, just 300 yds. from the finish.

"Who, Me?" In the confusion, the flagman was waving the checkered flag at everybody. Clark apparently hadn't noticed McLaren, hadn't seen Hill stopped by the wayside. So he kept on going—anxious to find out what had happened to Gurney. Photographers commandeered a car and rushed after him. "Jimmy," they shouted. "You're wanted at the victor's stand!" "Who, me?" asked Clark. "What for?"

PHOTO NEWS SERVICE BRUSSELS



CLARK ON THE CORNER
At the track, the man with everything.

SCOREBOARD

Who Won

▶ Australia's Roy Emerson, 27: the London Grass Court tennis tournament, last big tune-up for Wimbledon, with a skin-of-the-teeth victory over Tomas Lejus, 22, first Russian ever to reach the finals of a major tennis tournament. Unseeded and unheralded, Lejus beat Mexico's Rafael Osuna in the semifinals, played Emerson almost even for 90 min. before losing, 12-10, 6-4.

▶ The University of Minnesota: baseball's college world series, for the third time, beating the University of Missouri 5-1 in the final game, on the four-hit pitching of Joe Pollock and the headlong base-running of Second Baseman Dewey Markus, who then signed a contract with the Chicago Cubs.

▶ Northern Dancer: Canada's Queen's Plate 1¼-mile classic, in a strong comeback after losing the U.S. Triple Crown in the 1½-mile Belmont Stakes; in Toronto. E. P. Taylor's bay colt went off a 1-to-9 favorite at the shorter distance, breezed home 7½ lengths in front, thus adding another $49,075 purse to bring his two-year earnings to $580,647.

SECTS

The Uncontaminated

"Do not unite yourselves with unbelievers," St. Paul told the first Christians of Corinth. To the surprise and dismay of their fellow Britons, more than 10,000 members of the Exclusive Brethren sect are currently trying to take the injunction literally and separate themselves from the rest of society.

An offshoot of the fundamentalist Plymouth Brethren, the Exclusives have traditionally been a clannish sort, clustering in self-imposed ghettos in small English towns and Scottish fishing villages. They seldom marry outside the sect, and refer to each other as "saints"—the only true disciples of Christ. The Brethren do not smoke, dance, watch TV or wear makeup, but official doctrine says that "strong drink is to be regarded as a creation of God and saints should freely drink it."

They had always remained distantly courteous to their neighbors until 1960, when new orders came from James Taylor Jr., a retired New York businessman who is the leader of the sect. Taylor, who styles himself "the authoritative voice of God," decreed that his followers must avoid "contamination" from the unclean by abandoning all association with non-Brethren. The Exclusives were thereby forbidden to mix professionally or socially with outsiders, and Taylor warned: "Those who do not agree will be excommunicated."

In obedience to Taylor's new dogma, Exclusive landlords in the Scottish town of Peterhead evicted non-Brethren tenants; Exclusive fishermen fired crewmen who did not belong to the sect. Members of the sect were forced to leave their jobs in Midlands factories because Taylor's rules forbade them to join unions. Marriages have foundered on the doctrine of separation; in Walsall, for example, Businessman Leslie Pearson and his father-in-law Frederick Jessop publicly complained that their wives would not even speak to them when the two men left the sect. In Staffordshire, two spinster sisters who belonged to the Exclusives committed suicide after they were forbidden to speak to old friends.

So far, about half the Brethren have left the sect rather than obey Taylor; one Tory M.P. has heard so many tales of hardship from his constituents that last month he asked for a Home Office investigation of the sect. But difficult as their new way of life may be, the rest of the Brethren have followed Taylor, convinced that to live with the Lord means not to live with other men.

ROMAN CATHOLICS

A Question of Leadership

At St. John's Seminary near Los Angeles one morning last week, the Rev. William Du Bay entered the chapel, genuflected before James Francis Cardinal McIntyre, put his hand on a Bible in the cardinal's lap, and made a profession of loyalty to him. Then, as hundreds of priests watched, Du Bay kissed the cardinal's hands and withdrew. A week earlier, Father Du Bay had publicly petitioned the Pope to remove McIntyre as Archbishop of Los Angeles, charging the cardinal with "gross malfeasance in office" for what he called his superior's failure to condemn racism as a moral evil.

Priests who would play Luther are notably rare in the Roman Cath Church today, and Father Du Bay came something of a national celeb A fresh-faced man of 29, he had been transferred from parishes charges of pressing for civil rights excessive zeal. He then applied for sion service in Kenya, and instead made administrative assistant in a ly Negro parish in Compton, an in trial suburb of Los Angeles. Impre by his parishioners' passionate com for equality, Father Du Bay did a burn. One morning fortnight ago said Mass, then went to the Gr Los Angeles Press Club and loosed thunderbolt against the cardinal. spent the rest of the day, hea mouth, teaching some of the parish how to play a game called "Steal Bacon."

But Father Du Bay never mean play the Luther game to the poi leaving the church, and McIntyre sponded by using a bishop's norma ciplinary powers. The chancery str Father Du Bay of his administra duties and silenced him.

No Challenges. Canon law aut ized McIntyre's move, but he is su strong-minded man that it was from the first he would brook no lenges. A year ago, when Swiss ologian Hans Küng spoke to Catho all over the U.S. on reform in church, conservative Cardinal McIn forbade him to talk at U.C.L.A. does not like such liberal Catholic azines as *America*, *The Commonw* and *Ave Maria*, and so he has ban them from his archdiocesan semina McIntyre was one of 19 cardinals last year signed a statement protes to the Vatican Council the "here methods"—such as the technique form criticism, devised by Germa Protestant theologians—used by Cat olic Biblical scholars.

An ascetic and humble man, Intyre entered the priesthood late life. Born in Manhattan, the son of invalided former city employee, he tended public high school, City Co

FATHER DU BAY
... a profession of loyalty.

Columbia University at night, while ving days for a Wall Street broker- firm. At 29, he turned down the er of a partnership to enter St. Jo- 's Seminary at Yonkers, N.Y. He ordained in 1921, spent two years a curate in a Manhattan church, put his financial skills to work as dministrative officer in New York's ocesan chancery. So successful he that he was consecrated as one Francis Spellman's auxiliary bishops 941, and five years later became tor archbishop.

Spellman and McIntyre are good ds, but they did not always see eye on all public issues. In 1947 Mc- denounced, and thereby helped a state anti-discrimination law, h he called "formed after a Com- nistic pattern." A year later Spell- recommended him for the vacant of Los Angeles and presided at his allation.

Arriving in Los Angeles, McIntyre ped his predecessor's plans for a cathedral and began the most vig- construction drive for parochial ols of any diocese in the world. To this has resulted in the astonishing tion of 206 new schools, bringing total for the diocese to 347. With ifornia's population boom, his flock grown from 625,000 to 1,500,000 5 years, and he has opened 76 new ches, five new hospitals. In 1953 he me California's first cardinal.

Ticklets at the Chancery. McIntyre provided what many Catholics re- as shrewd and adroit leadership his archdiocese. But since he keeps ing that "there is no racial prob- in Los Angeles," he is a wide-open et for critics, both in and out of the rch, who know better. He has for- den priests and nuns to take part racial demonstrations, and refused ocesan recognition to a lay-run holic Human Relations Council. As result, another lay organization called holics United for Racial Equality has quently picketed his chancery.

Last week Cardinal McIntyre was on a retreat, and unavailable for comment. Archdiocesan officials pointed out that he is not a segregationist, has signed the antiracist statements of the U.S. Catholic hierarchy, and has many times avowed his support of equality for all. But his other actions have helped create an ambivalent image—an image of a man who has prosecuted his ecclesiastical mission with zeal but has failed to seize the moral leadership that many of his flock had expected of him.

THEOLOGIANS

The New Jerusalem

Who was the most brilliant mind of the 18th century? A good case could be made for Newton, Voltaire, Samuel Johnson—or for Emanuel Swedenborg, the polymathic scientist and seer whose fame lingers on not just in literature but in churches that honor his writing as the vehicle for the second coming of God's word.

Born in 1688, the son of a bishop in Sweden's state church, Swedenborg was a kind of Nordic Da Vinci. He invented a machine gun and a fire extinguisher, first explained to the world the phenomenon of phosphorescence and the function of the ductless glands, devised a nebular hypothesis to account for the origin of the universe. Metallurgist, physiologist and mathematician, he knew nine languages, and promoted fiscal reforms and liquor regulations as a member of Sweden's Diet.

Conversations with Spirits. At the age of 57, after seeing a vision of Christ, Swedenborg abandoned his secular pursuits for theology, and his religious writings run to 30 fat volumes. His thinking was decidedly un-Lutheran. Rejecting the traditional doctrine of the Trinity, he taught that Christ alone was God. Man, he argued, was not saved by faith alone, as Luth natural perfect the world. Swede visions of heaven described at great le ical writings. He also quent conversations w informed him that a church was coming into b his works would form the of its teachings.

Despite his prediction of the "New Jerusalem," Swedenborg died a Lutheran, and was buried according to the rites of the Swedish church. In 1784, his followers organized a society to propagate his teachings, which have influenced such disparate figures as Balzac, Emerson, Lincoln, and Helen Keller. Today there are more than 7,000 loyal Swedenborgians in the U.S. (and about 45,000 elsewhere) who belong to three churches. The biggest concentration of them is in the Philadelphia suburb of Bryn Athyn; there, most of the town's population of 1,100 belong to the General Church of the New Jerusalem, which for 51 years has been putting up a magnificent—but still incomplete—Gothic cathedral.

Courage & Zest. Last week, another Swedenborgian church, the General Convention of the New Jerusalem in the U.S.A., held its 141st annual meeting in Philadelphia. About 200 of the faithful showed up to elect new officers and discuss the continuing relevance of the Swedish sage. "His really great mind relates faith to the world of science," said Dr. Dorothea Harvey, associate professor of religion at Lawrence College. Says Adolph Liebert of Pittsburgh, a research and development engineer: "He has given me a perspective on what life is for and how to use it. He gives me the courage and zest to look for a new day."

SCULPTURE

Merlin with Magnets

Sculpture must defy gravity, says Alberto Collie, and by using magnets he performs feats of levitation with objects made of aluminum, copper and magnesium. Though Collie's magnetized sculptures do not soar with full airborne freedom, they do hover and float* above their pedestals, attached by almost imperceptible nylon strings. The effect is playful and magical-rather like Collie himself, who combines the hot-eyed zeal of a young Merlin with the twinkle-eyed grin of a boy with a toy. Collie, 25, calls his works spatial-absolutes: spatial because they are floating in space, absolute because "the true essence of a shape, its 100% value" can be fully experienced and appreciated only when it is lifted from its base.

Two sculptural shapes dominate Collie's show at Manhattan's Nordness Gallery. One is a tilted disk that looks like a model of a flying saucer. Such disks jiggle at a fingertip touch, but may weigh as much as 13 lbs.—as a thief discovered when he tried to whisk one away from the Chrysler Art Museum, only to have it drop with a clang. The second, also a space-age motif, resembles the hollow cone of a missile. Inside, visible from both ends, are two metallic spheres, one hanging down like a tiny bathysphere on its nylon thread, and by its magnet attracting the magnet in another sphere that levitates upward, tethered by a thread. Each open end of the sculpture gives out a sound like a giant sea shell humming with the rhythm of breakers. If the viewer steps back a few paces, the interior spheres look like twin, lightless moons haunting the barren landscape of a science-fiction planet.

Collie's spatial-absolutes represent a marriage of technology and art, but science is clearly the stronger partner. Yet Collie insists that he is no technological faddist catering to a novelty-hungry art public that is ready to pay $1,000 to $3,500 for his floating sculpture. In his obsession with simplicity and freedom of form, he argues that his shapes "derive from Brancusi. If he were alive today, he would have released his *Bird in Space* and freed the *Fish* to swim. He simply lacked the technology that we have today. His work implies flight." Collie promises to fly even higher in his next show: no strings.

HENRY GROSSMAN

SCULPTOR COLLIE & SPATIAL-ABSOLUTE
Doing what Brancusi would have liked to do.

* *Using the principle that identical magnetic poles (two norths or two souths) repel each other. Collie embeds light, powerful ceramic magnets in the floating and fixed elements of his sculptures, which are themselves made of light, nonmagnetic metals.*

PAINTING

History in Portraits

Gilbert Stuart tartly maintained that "no one would paint history who could do a portrait," but as the chief depicter of George Washington, he showed that to paint portraits is often to paint great history. Over the centuries, on a less exalted plane, an amazing amount of homely personal history also stuck to the brushes of the portrait painters, but the daguerreotype and the photograph in the end reduced this broad popular stream of American art to a trickle. The rise and decline of portraiture is the most striking theme of a World's Fair exhibit called "Four Centuries of American Masterpieces" (*see opposite*) and housed in the Better Living [illegible]

More Doll Than Boy. The first [illegible] World painters called themselves [illegible] sans and drew picture signs for [illegible] or coated fire buckets, depend[illegible] the state of business. In that [illegible] frugal age, a commission for a [illegible] was a plum. "Limning" a portrait [illegible] producing a flat two-dimensional [illegible] ness, and what gives tang to these [illegible] now is the period flavor and naïve [illegible] sureness of craft or conviction [illegible] Primitive, untutored and serene [illegible] anonymous 1670 *Portrait of* [illegible] *Gibbs* is a charming example [illegible] limner's style. The floor is in [illegible] tive; little Henry is not. More [illegible] boy, more doll than either, the [illegible] seems to be floating through the [illegible] not rooted in it. Yet the boy's [illegible] painting's mood of grave, graceful [illegible] possession is undiminished after [illegible] three centuries. In time, the limner [illegible] came the itinerant painters who [illegible] crossed the continent by foot, horse [illegible] and wagon well into the 19th [illegible] painting family portraits in return [illegible] food and temporary lodging.

Artists of loftier vocation expatriated themselves to study in England and absorb the classic mastery of Renaissance portraiture. John Singleton Copley was one such, but before he left [illegible] shores, he had already put together a masterly portrait gallery of some of his fellow Bostonians. His *Portrait of Nathaniel Hurd*, a famed silversmith and engraver, stares back at the viewer with a keen, curious, probing [illegible] sity that is uncannily lifelike. As John Adams said of Copley's portraits, [illegible] can scarcely help discoursing with them, asking questions and receiving answers."

Bravado & Bravery. The idea that portraits were history came naturally to Western Painter George Catlin. In the 1830s he resolved to assemble a pictorial record of the last golden years of the Indians freely living their own lives. He rode across hundreds of miles of unmapped prairie, visited 48 tribes and painted 600 pictures. His *Indian Gallery* is a triumph of photographic realism blended with psychological insight. There is a trace of bravado in the [illegible] stance, backed by ultimate bravery, in the clenched right fist. Around the eyes and mouth is the faint hint of sadness, a boy fated never to roam and rule the land of his father.

The mask of anguish in Marsden Hartley's *The Lost Felice* hides a different sort of grief. It is a symbol of [illegible] anhood mourning her drowned [illegible] The 20th century's passion for abstraction makes any representational [illegible] seem accessibly human, but the grief of mother in Hartley's picture [illegible] a woman only in the way that an [illegible] echo resembles a voice. The intense distortions of the 1939 picture [illegible] complete the cycle begun with the intentional distortions of the 1670 [illegible] Perhaps fittingly, the decline of portraiture ends without a portrait.

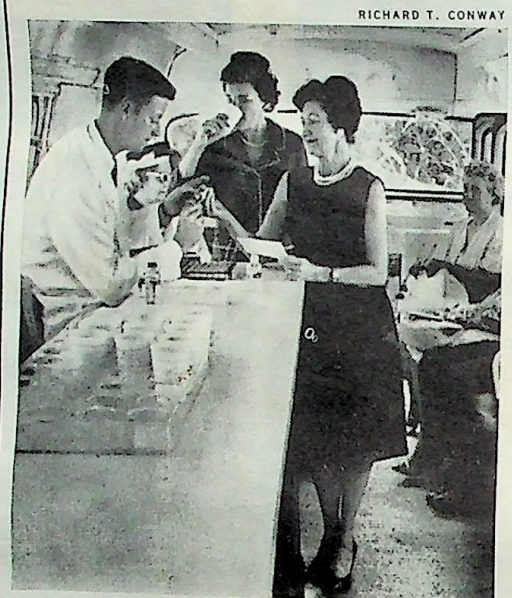
MEDICINE

DIAGNOSIS

Detecting Diabetes Early

Secretaries turned out during their lunch hour; housewives with kids queued up before trips to the supermarket; businessmen stopped by after a day at the office. Wherever the blue-and-white trailer picked a place to park in Cleveland, crowds gathered for a free drink of flavored corn syrup. And two hours later the drinkers returned to the trailer. Not that Clevelanders were afflicted with a sudden thirst; on their second visit, instead of getting another shot of syrup, they donated a blood sample. A technician smeared the blood on chemically treated cardboard. In a matter of moments the results were obvious.

RICHARD T. CONWAY



CLEVELAND MOBILE DAC LAB
4.5% are victims.

If the cardboard changed color from grey to blue, sugar from the corn syrup had not returned to normal level in the drinker's blood, showing a distinct possibility of diabetes.

The city-wide campaign organized by DAC (Diabetes Association of Greater Cleveland) was eloquent testimony to one of the ironies of modern medicine. Diabetes has been a well-controlled, though incurable, disease ever since 1921 when Sir Frederick Banting and Charles Best first extracted insulin from sweetbreads. But with the aged accounting for more and more of the U.S. population, and diabetes predominantly a disease of old age, it is estimated that one person in every 80 is a sufferer. Says International Diabetes Federation President Howard Root: "Excluding goiter, diabetes is the most prevalent endocrine disorder in the U.S."

Early diagnosis means that insulin or other treatment may help prevent such complications as hypertension, calcified arteries, and blindness. And the DAC test, developed by Drs. Gerald Kent and Jack Leonards of Western Reserve University, detects the disease even before sugar begins to appear in the urine —where it is now picked up by c tional testing.

In Ceveland, whenever a car test strip turns blue, a second sample is taken for more thorough ing in the Kent-Leonards auto-a at Western Reserve. If this test positive, the subject is asked to co for a third check; if diabetes is dicated, the subject's doctor is inf by letter, then by a telephone f up. Thus far, the tests have up a 4.5% incidence of diabetes Clevelanders, and Kent and Le suspect that the old estimate of ap mately 1% for the entire U.S. is fa low. They hope to get a chance to their hunch next year when the test, with its corn-syrup cocktail, pected to get a nationwide tryout.

DENTISTRY

Tuning in Teeth

Every so often a dental patie ports that a tooth has turned i radio receiver, that one of his fi is acting like an old-fashioned cr set. Now dentists have devised a of reversing the process: they are fitting teeth to do the transmitting.

In an effort to learn what goe inside the mouth when people c drink or swallow, Dr. Samuel Adam 28, and his associates at Roche N.Y.'s Eastman Dental Dispensary, been bugging the bridgework of vo teers with tiny radio transmitters i into dummy teeth. Crammed inside electronic tooth are a transistor, an duction coil, two capacitors, a res and a hearing-aid battery—all mi turized items developed by the Force. Once the radio denture is place, the subject enters a Faraday c a metal-mesh enclosure that blocks most outside electrical disturbances. the subject chews and drinks in his st free environment, his tooth transm gives out a signal every time two sp of gold on the chewing surfaces of opposing teeth come together. In a tion, a muscle-tension detector attac to the skin of his jaw is connected t electromyograph. The signals from chewing teeth and the muscle-tens record of the electromyograph picked up by a receiver and record on tape before being translated graphs. Some subjects have been wir for sound in their sleep, in hope th their late, late broadcasts may be he ful in studying the relation betwe teeth grinding and dreaming.

So far the chewing programs of volunteers have been tuned in, and Dr. Adams hopes that his records will even tually aid his colleagues in telling if bite is good or poor in real dentures. What reward do the volunteers get for their services? A piece of nonbroadcasting bridgework to replace their own missing molars.

ALBURTUS—YALE NEWS BUREAU

THE CORPORATION*
"L'université, c'est nous."

EDUCATION

UNIVERSITIES

yal Blues

With dignity, earnestness and im-ense discretion, four men last week ove for election to a place on one of e nation's most select, secretive and mber ruling bodies: the board of uni-sity trustees that is styled by ancient ge as the Yale Corporation. Follow-tradition, an alumni committee put an official slate for Yale's 85,000 duates to choose from: Flour Heir p W. Pillsbury, 60; Republican ngressman John V. Lindsay, 42, of w York; and George B. Young, 51, ecutive vice president of Chicago's ld Enterprises Inc. Competing with em was William Horowitz, 57, a New ven banker and chairman of the nnecticut state board of education. Petition candidates rarely have much a chance, but there was a special ry in the case of Horowitz, whose n and son-in-law were also Yale men. ve hundred alumni, including Demo-atic Senator Thomas G. Dodd and ding Republican John Alsop, signed e nominating petition to get him on e ballot on the general theory that "it uld be a good sign" to have a Jew on e board for the first time in the cor-ration's history. However, in the bal-ing, the alumni's choice was New rk Congressman Lindsay, '44.

Congregational Ministers. By his elec-n, Lindsay became one of six cor-ration members chosen by the alum-one every year, for six-year terms.* the elected "fellows" are not the ole board; ten co-ruling "successor stees" jointly pick their own replace-

Harvard's seven-member corporation, which n the university on financial and policy ers, is composed of the president, treasurer ve fellows—currently four lawyers and a Harvard Board of Overseers, who approve ing appointments for longer than a year and ervise the school's program and facilities ugh 43 "visiting committees" made up of mni and outsiders.

ME, JUNE 26, 1964

ments and serve *until* they are 68. For most of Yale's history, the ten successors ran the corporation, reluctantly agreed to give graduates representation in 1871. In earlier times, the ten were invariably Congregational ministers from Connecticut, like Yale's founding fathers. This pattern was smashed in 1905: the corporation admitted a Congregational minister from New York. The only Congregationalist left is Amos N. Wilder, a Harvard divinity professor, who must retire this year.

The essential power of the corporation is ownership of the university—buildings, endowment, everything fixed and movable that is Yale. "*L'université, c'est nous*," joked former Corporation Member Dean Acheson. The corporation manages all finance and investment, must give recorded approval to each course of study, faculty appointment and degree. In practice, said Acheson, "we don't interfere with the running of the college. This would be the quickest way to louse things up." Instead, the corporation applies itself seriously to its key job, which is to pick the president of the university, and usually ratifies his decisions.

"We are all busy men," says Herbert F. Sturdy, a Los Angeles lawyer who five years ago was elected as the first member from the Far West. "But for me, the corporation comes ahead of everything—all business, social or family." He flies in ten times a year for two-day meetings in New Haven and, like most members, rarely misses a session.

"Clams or Oysters?" The sessions are conducted according to tradition as tenacious as the Yale bulldog. Members arrive on a Friday morning, meet in committees (educational policy, finance, budgets, endowments and gifts, buildings and grounds, honorary degrees), and in the evening go to Mory's, where the waiter laconically asks each of them: "Clams or oysters? Steak or lobster?" Informal talks are leavened by tact, wit and persuasive intellectual argument. "There is a tremendous sodality," says Walpole Scholar Wilmarth Lewis, who holds the record for continuous membership, 26 years.

At 9:15 the next morning, the corporation assembles in its paneled Woodbridge Hall meeting room, sitting around a mahogany table in high-backed leather chairs, each bearing an engraved plate with the name of the occupant. No one smokes until university officers and corporation committees present their reports. Then a faint cloud of blue begins to fill the air, while the group politely strives to reach their decisions.

Only after they agree do Yale and the rest of the world hear about it—maybe. And, as Acheson put it, "we never give reasons for our decisions, merely the blunt fact of them. How vulnerable are those who explain—courts, statesmen, editors. We can say

* Front row (from left): John Hay Whitney, financier, publisher of the New York Herald Tribune; Juan T. Trippe, president of Pan American World Airways; Wilmarth S. Lewis, author and editor; Kingman Brewster Jr., president of Yale (ex officio); Edwin F. Blair, lawyer; Gardiner M. Day, Episcopal minister; B. Brewster Jennings, former Socony-Mobil Oil Board chairman, whose term is expiring. Standing: Caryl P. Haskins, president of the Carnegie Institution of Washington; William McChesney Martin Jr., Federal Reserve Board chairman; Amos N. Wilder, Harvard Divinity School professor; J. Richardson Dilworth, president of Rockefeller Brothers Inc.; Herbert F. Sturdy, lawyer; J. Irwin Miller, Cummins Engine Co. board chairman and former president of the National Council of Churches; Harold Howe II, Scarsdale (N.Y.) superintendent of schools; T. Keith Glennan, president of Case Institute and former administrator of the National Aeronautics and Space Administration; William P. Bundy, Assistant Secretary of State for Far Eastern Affairs; Frank O. H. Williams, Connecticut General Life Insurance Co. executive. Glennan, Howe, Martin, Sturdy and Williams are elected alumni fellows.

of our views, as Mr. Churchill did of his when challenged with inconsistency, 'My views are a harmonious process which keeps them in relation to the current movement of events.' "

PRIVATE SCHOOLS

On the Slopes of Mt. Ida

"Genuine learning has ever been said to give polish to man; why then should it not bestow charms on women?" Pioneer Educator Emma Willard 150 years ago answered her own question with energy and decision. As farmers jeered ("They'll be educating the cows next"), she started a school for girls in her home in Middlebury, Vt. A few years later she moved her classes to a remodeled coffee house in Troy, N.Y., and set up the school as a Female Seminary, where young ladies learned such novelties as science, philosophy, literature, foreign languages and history.

By virtue of this head start, "Fem Sem," now the Emma Willard School, is the oldest academic girls' school in the U.S. It is still as progressively rigorous as in the days of its no-frills founder. "No deb balls for us," says Principal William Dietel, 37. "The parents want their children to have a superior education. They don't want it all gummed up with manners."

White Gloves & Pink Diplomas. Ungummed social graces were much in evidence last week as 90 graduates carried pink diplomas in one white-gloved hand and pink roses in the other. An organ played, and as if on signal, the girls broke into tears—for Emma Willard will be hard to leave.

The beautifully landscaped 55-acre campus, on the slopes of Mt. Ida, near Troy, centers on a quadrangle of neo-Gothic dorms and classrooms mostly donated by Alumna Mrs. Russell Sage (wife of a millionaire investor), a library with 19,000 volumes, hockey fields, riding stables, a gymnasium with swimming pool and bowling alleys. Tuition and board costs $3,000, and optional charges (piano lessons, for example) can raise the bill by another $1,000. Yet Emma Willard is not a rich school; the endowment per pupil is $2,500, compared to $11,400 for Miss Porter's in Connecticut. Emma Willard took in only $80,000 in gifts last year, all of which went to scholarships and loans to 62 of its 340 students. A $5,000,000 fund-raising drive aims to finance new construction, raise teachers' salaries (average: $4,000-$5,000), and widen scholarship aid.

Learning by Era. Modernizing a plan of study introduced by Emma Willard in the 19th century, the curriculum integrates its studies of art, religion, music and literature into single historical eras. A freshman studies ancient history. A sophomore learning about the Renaissance studies the medieval church, listens to Gregorian chants, designs an illuminated manuscript in her art class. The junior year concentrates on the industrial revolution, and the senior year on modern times.

About half of the girls go on to some 40 women's colleges in the East, including all the "Seven Sisters," but no particular sister more than the others; the other half—for all Emma Willard girls go to college—choose coed colleges all over the U.S. Girls from Emma Willard usually do exceptionally well, and many become lawyers, doctors and teachers.

Principal Dietel, a graduate of Exeter, Princeton and Yale, came to Emma Willard in 1961 from Amherst, where he was assistant professor of humanities. "I knew nothing about teen-age girls," he said, but his ignorance has been a blessing. While keeping academic standards as tough as ever, he has softened some of the starchiness. Young ladies may now wear pink nail polish.

I'm a serious musician, but I don't want to be classified. I'd be bored doing only symphony music."

Fire Buff. Descendant of a long line of fiddling Fiedlers (his father and two uncles were violinists with the B.S.O.), Arthur studied at Berlin's Royal Academy of Music, joined the Boston Symphony in 1915 and played musical chairs (violin, viola, celesta, piano, organ and percussions) before he founded the open-air Esplanade Concerts in 1929 and began luring up to 20,000 persons across the Arthur Fiedler Bridge to the banks of the Charles River for free concerts. In 1930 he became the first Boston-bred conductor of the Pops.

An irrepressible fire buff, Fiedler indoctrinated his Beacon Hill socialite bride by squiring her to all-night vigils in firehouses, for variety dragged her along on forays with the Boston police. Today the Fiedlers live in a baronial brick mansion in Brookline with their two daughters, a son, and a collection of fire helmets and honorary fire-chief badges from some 90 cities.

The future? "Fifty more years," he says grandly, professing again his allegiance to Rossini's credo: " 'Every kind of music is good—except the boring kind.' "

OPERA

Right in the Heart of Paris

As soon as the curtain dropped on the performance of Bellini's *Norma*, fist fights erupted, insults bounced between boxes, and the grandly helmeted Gardes Républicaines clanked into action. One bejeweled matron tore the glasses off a startled young man next to her; another dug her fingernails into her adversary's Balenciaga décolleté. Dress Designer Yves Saint Laurent dealt his neighbor a smart kick in the shins. Monaco's Princess Grace, along with Charlie Chaplin, his wife and his brood, fled for the exits. Aristotle Onassis and Rudolf Bing stayed on to applaud. The tumult raged for a full 30 minutes. Then at 2 a.m., the object of it all, Maria Callas, slipped out the stage door of the Paris Opera, ducked into her flower-strewn limousine, and

MILTON FEINBERG

FIEDLER & BOSTON POPS

purred off into the balmy Paris night.

Pro- and anti-Callas factions have been squaring off ever since the celebrated diva opened in *Norma* a month ago. But the big uproar began when at one performance she reached for a high C and nothing came out, eliciting a cry of "Take her to the cloakroom!" from the gallery. Despite the furor, Callas and *Norma* were judged a triumph by the Paris critics. WHO CARES ABOUT A LITTLE B-FLAT, headlined Paris Presse. This week, at the conclusion of *Norma's* run, everyone agreed that Director Georges Auric, 65, who was hired two years ago on his promise to "bring a breath of new life" to the Paris Opera, had delivered the most exciting season in recent memory.

Tourists Only. When Auric first took on the weighty title of Administrateur de la Réunion des Théâtres Lyriques Nationaux, he took on a ponderous load of problems as well (TIME, April 27, 1962). Mired in a vast swamp of bureaucracy, militant unions and second-rate talent, the state-operated Paris Opera had foundered helplessly for nearly two decades. Five postwar administrators had promised revolution, only to sink quietly into the morass. Some tried staging productions *à la* Folies-Bergère, featuring flights of ballerinas being hoisted to heaven on wires, madly flapping their arms and showering rose petals while spray guns hissed perfume into the audience. But the audiences hissed right back, and the Paris Opera, a towering rococo palace covering three acres right in the heart of the city, remained a flop.

JEAN-LUCE HURÉ

AURIC & CALLAS
Breathing new life.

Vowing to change all that in short order or else resign, Auric started boldly by scheduling Alban Berg's fiercely modern *Wozzeck*. "If I am not able to mount this production," he declared, "I will know that nothing can be done for the National Opera here." He demanded an unprecedented 35 rehearsals, grappled successfully with eleven labor unions (guardians of the Opera's bloated staff of 1,100, including 95 stagehands, 35 firemen, 32 electricians, 30 wardrobe mistresses), but still lacked funds for his crash program.

New Era. Undaunted, Auric, who lives in the shadow of the Elysées Palace, marched across the street to have a word with an influential neighbor—General Charles de Gaulle. "We understood each other perfectly," says Auric, chomping on his cigar. "I just said to him, 'General, I need money.' Then I explained the situation, and everything went off very well."

Wozzeck was a smash. "How long," mused L'Express, "has it been since L'Opéra de Paris has offered its public a work of such strength, executed with such care, love and precision down to the slightest detail? Not since the war certainly." Hiking the cost of tickets up to a high of $16 for *Norma* and brazenly importing big-name, high-priced foreign artists in excess of the legal quota (by government decree not more than 10% of the singers can be foreign), Auric mounted new productions of *Tannhäuser, Don Carlos* and *The Damnation of Faust*. After the first two years, critics were heralding "a new era."

"It's still too early to tell," insists Auric, mindful that many of the old problems, such as the regulation limiting rehearsal time to a mere three hours daily, still exist. But despite his caution, the signs are all good. Parisians queued up before dawn to get tickets to *Norma*, and a black market in seats is prospering nicely.

COMPOSERS

Britten-san

During a tour of Tokyo eight years ago, Composer Benjamin Britten was introduced to "a totally new operatic experience"—a Japanese *No* drama. Fascinated by the stark economy of style and the eerie mixtures of guttural chants, drums and flute, Britten decided that it might be interesting to give an English background to the simple tale of *Sumida-gawa*—a demented mother seeking her lost child.

Britten finally brought East and West together last week in a 14th century Norman church near his home in Aldeburgh, a tiny (pop. 3,000) fishing village on the windswept east coast of England. The occasion was the 17th Aldeburgh Music Festival, where right from the start the main attraction has always been Townsman Britten. The première was just about to begin when a thunderstorm knocked out the electricity. When light was restored, Britten unfolded his hour-long opera, *Curlew River*, a moving parable patterned after an English medieval mystery play, but with strong *No* overtones in its echoes of *Sumida-gawa*, its incantatory music and its austere dramatic styling. Did it mark a new "Oriental period" for Britten? Press and public agreed that *Curlew River* may not be a major work, but it may well mark a turning point in Britten's creative career.

MILESTONES

Born. To Jomo Kenyatta, 74, Kenya "Burning Spear" in the days of the Mau terror, now Prime Minister, and Ngina Kenyatta, 34, his fourth wife, their second son, fourth child (and eighth); in Nairobi.

CINEMA

Adult Western

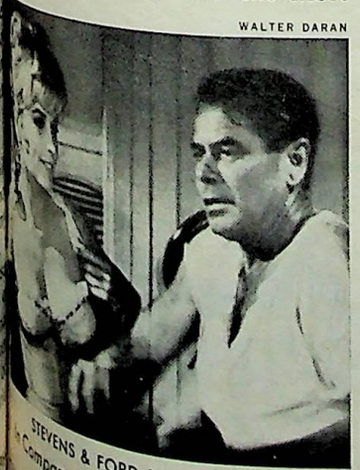
Mail Order Bride. This wistful little romantic comedy looks as though it would like to grow up and become a horse opera. It has gunfights, cattle rustlers, fancy women and a smoke-filled gambling hall, but all the roaring wickedness is dedicated wholeheartedly to the proposition that a feller (Keir Dullea) needs a girl (Lois Nettleton). Cupid's go-between is Buddy Ebsen, a gray old handmaiden who holds the deed to a family friend who holds the deed to a decrepit ranch left to Dullea by his late father, though Dullea can't collect it until he simmers down some. One morning Ebsen strides out of the barn with a Monky Ward order book and begins thumbing through the catalog's listed commodities: wagons, wheat seed, whitewash . . . wives! Off he goes to Kansas City to fetch home for Dullea a scrubbed young widow and her small son.

Despite the predictable foolishness of the plot that further synopsis would confuse, *Mail Order Bride* is an amiable feather-brained entertainment, mostly because Ebsen has buoyant appeal. Masquerading as the frontier wilderness of Monterrey circa 1890, California's High Sierra country fills the wide screen with some breathtaking acreage that no TV oat opera can duplicate. Actor Ebsen seems an authentic embodiment of covered-wagon grit. And though Dullea's bad guy characterization scarcely conceals the fact he is easily redeemable—a sort of boy next door—his warm, fresh, quiet-persuasive scenes with Actress Nettleton recall his vivid debut in *David and Lisa*, and enhance both actors' reputations as a pair of arresting young talents for whom better movies ought to be made.

Non Blue Comedy

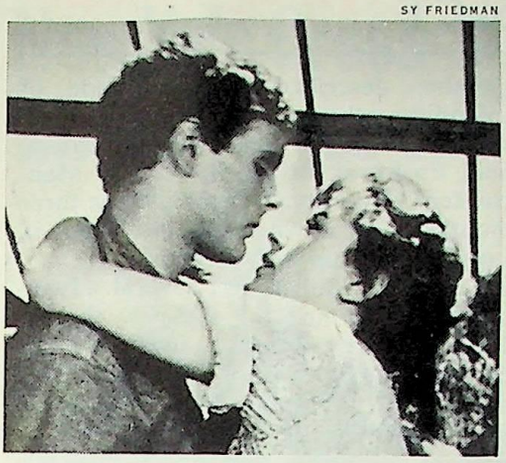
Rear Entrance to the Rear. Since any departure from formula comedy seems welcome, a slapstick farce about the Civil War perhaps deserves a nod for taking a different attack. This frolic proves, however, to be unremittingly broad, energetic, and for the most

WALTER DARAN



STEVENS & FORD IN "REAR"
In Company Q, a bunch of boobs.

SY FRIEDMAN



DULLEA & NETTLETON IN "BRIDE"
In Monky Ward, a wife.

part humorless. Based on a sober historical novel by Jack Schaefer (*Shane*), the movie attempts to spark laughs by logging the misadventures of Company Q, a detachment of Yankee misfits led by inept Colonel Melvyn Douglas and his wry-smiling lieutenant, Glenn Ford. The boobs under their command include a firebug, a flagpole sitter, a kleptomaniac, a skittish soldier afflicted with an untimely burp, and assorted psychopaths.

Enroute to Fort Hooker, an outpost "so far west they'll never be heard from again," the lads in Union Blue board a river boat where they reconnoiter a contingent of bawds house-mothered by Joan Blondell and infiltrated by Stella Stevens, a Confederate spy. As an anti-hero of such indolent disposition that he lets a lady in distress fend off a villain singlehandedly, Ford appears bemused when he should be amusing. Douglas looks plain uncomfortable, and well he might. He gets caught under collapsing tents, heads a sandy downhill charge sitting on skis made from barrel staves, finally leads his men—all wearing nothing but droopy long underwear—in a rampageous free-for-all with renegades who are trying to highjack a shipment of Union gold. Bringing the Civil War era to life in Mack Sennett style calls for a tricky blend of taste and ingenuity that few have tried since Buster Keaton's *The General*, a silent classic of 1926. In *Rear*, a whole platoon of actors work up a sweat doing the funny business that one real comedian might have tripped through with ease.

A Mickey for the Muse

Bedtime Story is a witless, one-joke soporific concocted by a pair of usually wide-awake Hollywood pitchmen. This time out, Producer-Writer Stanley Shapiro (*Lover Come Back, That Touch of Mink*) and Co-Author Paul Henning have pitched a Mickey to the comic muse. *Story* unfolds against rear-projection views of the Riviera, where a bogus Highness (David Niven) and an ex-U.S. Army corporal (Marlon Brando) pool their resources to squeeze a living out of wealthy women such as Dody Goodman, an Omaha madcap just born to be trimmed. The thieves fall out, of course, when both wind up vying for the love and money of Shirley Jones, whom they mistakenly mistake for a soap heiress.

Niven alone survives the picture, coasting through the film on his charm. Early on, before the first tissues appear, he issues a nimble challenge to his co-star: "Are you proposing to pit your crude animal instincts against intelligence, culture and breeding?" Unfortunately Brando answers yes, then lumbers on to demonstrate how a potentially great talent can petrify through miscasting and misuse. In one scene he attempts to seduce the mayor's daughter by performing a squalid striptease. Later, posing as a mentally defective prince, he gibbers like a traumatized gorilla and has to be spoon-fed. Then, pretending to be a crippled, self-pitying veteran, he exploits the comic possibilities of a wheelchair. Funny as a crutch. A few more stiffs like this one and Brando fan clubs will be flying their torn and faded T shirts at half-mast.

Dog Bites Wolf

Wild and Wonderful, which is neither, is a comedy about a poodle so revoltingly cute he makes Tony Curtis seem almost natural. The poodle Cognac, it develops, is a pooch who likes hooch and loves his mistress (Christine Kaufmann) with doglike devotion. Tony is a wolf who hopes to appropriate the mistress. In real life he did: he married Actress Kaufmann while this movie was being made. On screen he has trouble with the watchdog, who 1) spills soup on his lap, 2) contrives to drop a piano on his head, 3) slips him a knockout powder on his wedding night, and 4) fakes suicide to put him in the doghouse. In the end, of course, man beats dog, but only because the scriptwriter is biased in favor of people. After all, he's human—or is he?

Never mind. *Wild and Wonderful* may mean misery for the customers but it probably means happiness for the newlyweds. If their love survived this picture, it can survive anything.

TONY CURTIS & COGNAC IN "WONDERFUL"
In the doghouse, a fake suicide.

COSMOLOGY

Math Plus Mach Equals Far-Out Gravity

What would happen to the solar system if half of the universe disappeared? From Newton to Einstein, most experts have agreed that nothing much would happen except that the sky would have fewer stars. But now British Cosmologist Fred Hoyle says that the sun would shine 100 times brighter and burn the earth to a crisp.

Hoyle is a respected scientist, one of the originators of the theory of continuous creation, which holds that the universe is still being formed by particles that appear out of nothing in empty space. When he presented his new gravitation theory to a packed meeting of Britain's venerable Royal Society, he modestly described his work, done in collaboration with Indian Mathematician Jayant V. Narlikar, as a slight extension of Einstein's theory of general relativity. "We are clearly aware," he explained, "that in putting forward still another idea we may be like small boys trying to steal apples."

LONDON OBSERVER

$$\mathcal{A} \equiv \sum_{a<b} \sum \iint G(A,B)\,da\,db$$

$$\left[\Box G + \tfrac{1}{6} R G\right]_{A,B} = \frac{\delta^{4}(A,B)}{\sqrt{-g}}$$

$$\frac{\delta \mathcal{A}}{\delta g_{ik}} = 0$$

HOYLE & NEW LAW

Why the apple didn't fall up.

Splendid Parade. Far from a slight extension of Einstein's work, Hoyle's apple stealing is more ambitious larceny. His new theory stems from the Mach Principle, that the mass* of every object in the universe is affected by its interaction with every other object. Einstein tried to incorporate the Mach principle in his own scheme of the universe and admittedly failed. Hoyle claims to have succeeded.

Most of the Hoyle-Narlikar lecture consisted of what one Royal Society member described as "a parade of splendid mathematics"; it seems to have stunned to silence nearly all its hearers. Said Professor Brian Flowers of Manchester University: "If you give me three months to sit down and think about it, I might come up with something."

For all its difficulties, several advantages are claimed for the new theory. It explains why gravity is always a force of attraction, never of repulsion. "We all know," said Hoyle, "that the apple hit Newton on the head. It did not fly upward." Einstein took account of this often-observed action by arbitrarily assigning a minus sign to a key quantity in equations. Hoyle demonstrates why the sign must be minus.

Hoyle's theory also explains why galaxies in distant parts of the universe can, theoretically, move away from the earth faster than the speed of light—a limit that Einstein said could not be exceeded. Hoyle argues that it is wrong to compare the speed of light in one locality with the speed of an object in another locality. He believes that his theory makes it easier to explain in earthly terms events that occur in distant localities of the universe.

Hot, Heavy Sun. The most striking consequence of Hoyle-Narlikar gravitation is that it explains how the mass of every particle in the universe helps to create the mass of every other particle. As Hoyle and Narlikar see it, a universe with nothing in it is impossible. There must be at least two particles, each to give mass to the other.

The masses, and therefore the gravity, of the sun and the earth are partly due to each other, partly to more distant objects such as the stars and galaxies. According to Hoyle, if the universe were to be cut in half, local solar-system gravitation would double, drawing the earth closer to the sun. The pressure in the sun's center would increase, thus raising its temperature, its generation of energy and its brightness. Before being seared into a lump of charcoal, a man on earth would find his weight increasing from 150 to 300 lbs.

Hoyle is well aware that he will never be able to prove such ominous claims by experiment. He is hopeful, though, that someone, some time, will devise a practical way to test his theories.

* *Mass is that property of a body which resists change of motion. On the surface of the earth, it is closely equivalent to weight. Austrian Physicist Ernst Mach (1838-1916), who gave his name to the principle, is better known today for Mach numbers, a method of measuring speed in multiples of the speed of sound.*

AERODYNAMICS

Tilting Plus Swiveling Makes Agile Aircraft

Whatever weapons the Air Force finally gets for big wars of the future—manned supersonic bombers, or more potent missiles, or a mix of both—there is little argument about what is needed for the small, brushfire battles of the present. Army, Air Force, Navy and Marine Corps all agree that they need fighter planes and transports husky enough to handle modern armament, yet agile enough to take off and land on back-country roads or in jungle clearings.

The problems that must be solved already encouraging fanciful flights aerodynamicists' imaginations. The gested solutions are many and bizz Some of the more interesting:

▶ TILT WING: Rolled out last week Ling-Tempco-Vought, Inc. of D the XC-142A transport has four t prop engines and a wing that ca tilted for takeoff so that its four 15 propellers point upward. When the are pulling together, the props sh generate enough direct lift to the plane vertically. When safely a obstacles, the pilot will gradually the wing into normal flying po The plane has yet to be flown, bu designers admit that it is no speed It will cruise at less than 300 m

LING-TEMPCO-VOUGHT'S XC-142A

BRITAIN'S P-1127

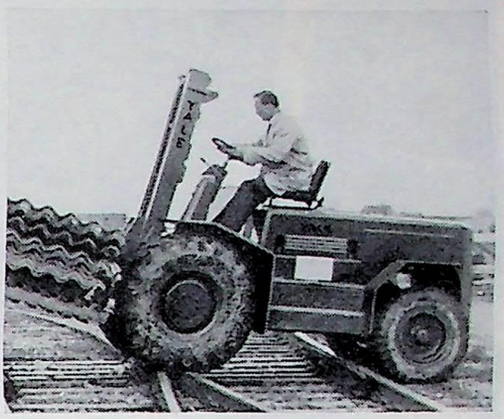
its operating radius with full load only about 230 miles. These limits the penalties it pays for its vertilifting power.

ENGINES: Other aircraft designers prefer to keep their wings fixed to swivel only the engine or the exhaust. The Curtis-Wright X-19 four tiltable engines on the tips of stubby wings. The Bell X-22A has tiltable propellers in circular ducts. other plane has yet completed such tests, but two years ago the were already flying the Hawker P-1127, which has a single engine with 13,500 lbs. of thrust. takeoff, the engine's exhaust are diverted downward, exerthrust to lift the airplane the ground. At cruise altitude, exhaust is switched to the rear plane flies in normal jet-plane The P-1127 has done everything for it, but its payload is small, is too slow to be of much value fighter. Hawker Siddeley is building bigger model with a more powervectored thrust engine that it expects to be supersonic and also able take off from British lanes.

ENGINES: In yet another approach to the problem, France's Dassault Mirage III-V will pack eight small Rolls-Royce jet engines thrusting downward. When well in the air, a larger engine will take over and push the plane forward at supersonic speed. Its designers admit that the vertical engines will be dead cargo most of the time, but they think vertical engines will have less effect on performance than dual-purpose engines that are too powerful for efficient horizontal flight. A German project, VJOL, the Bölkow, Heinkel and Messerschmitt VJ-101C, varies the French idea slightly by having two main engines that are tiltable and supplementing their thrust with two vertical-lift engines. The VJ-101C has made many vertical takeoffs with successful transition to horizontal flight.

JET FAN: Perhaps the most imaginative design of all is the XV-5A lift fan built by Ryan Aeronautical Co. and General Electric. At first glance, it looks like an ordinary jet fighter with two engines, but set into the stubby wings are what seem to be large manhole covers. When opened, each cover reveals a fan 5 ft. in diameter. When pilots close off the tailpipe of the jet engines, racing exhaust gases hit the blades of the fan blades and spin them at high speed. Twin blasts of air are forced downward, and their powerful thrust lifts the airplane off the ground. Transition to horizontal flight is made by gradually opening the normal tail-pipe and covering the wing fans. So far the XV-5A has been tested only in conventional flight. If the XV-5A succeeds in taking off vertically and making the transition to horizontal flight, it will be the only speedy V/STOL that does not carry more engine power than needs to fly on the level.

New Yale Cross-Country goes where others can't!



When your materials handling route takes you cross-country, you need a rugged lift truck like the Yale Model VDP-50G. Designed specifically for operation over rough terrain, the Cross-Country has a capacity of 5000 lbs., choice of two transmissions.

A differential lock enables the operator to lock the two drive wheels, making it impossible for the wheels to spin independently. Heavy-duty, wide-base pneumatic tires have traction treads. Its climbing ability easily takes it over grades of 26% and more. An independent braking system on each drive wheel makes maneuvering easier.

And, the Cross-Country is built for durability and ready access to parts requiring service.

Your local Yale representative, your materials handling expert, sees to it that your truck is properly installed and will show your people how it can be employed most efficiently. He also provides complete maintenance service.

Remember it takes two: The right Yale truck (like the Cross-Country) and a Yale expert to cut handling time and costs. For additional information on your specific materials handling requirements, write: Dept F34, Yale & Towne International, Inc., Postfach 26, Zug 1, Switzerland; or Box 30, Maxwell Road Post Office, Singapore.

Men who guide the destinies of the world w

THE ROLEX "DAY-DATE"

Most remarkable achievement in watch-making, the Rolex Oyster Perpetual "Day-Date." Available only in 18-ct. gold or platinum, with matching "President" bracelet.

Like all Rolex chronometers, every "Day-Date" is now awarded the highest distinction of the Swiss Institutes for Official Chronometer Tests, the mention "Especially good results."

Its superlative accuracy is protected by the famous Rolex Oyster case, made in Geneva by Swiss craftsmen and guaranteed 100% waterproof, and its movement is selfwound by the Perpetual rotor. The date and the day of the week, written in full, change instantaneously every midnight.

COLUMNISTS

I Remember Arma

Hollywood Columnist Louella Parsons reported last week that M-G-M has ticketed good-looking Jim Garner to play the male lead "in *Arma Geddon*, the new Leon Uris property."

REPORTING

What Publication Does

This being a presidential year and all, hardly anyone expected Henry Cabot Lodge, U.S. Ambassador to South Viet Nam, to stay in Saigon indefinitely. But no one had any idea precisely when he would come home. No one, that is, except Max Frankel, the New York Times's diplomatic reporter in Washington. Ambassador Lodge, reported Frankel last week, "has asked to be relieved of his post within 30 days. Mr. Lodge told President Johnson that the resignation was prompted by reasons of health, which he did not specify."

Even as Frankel's story appeared, people began assailing its verisimilitude. White House Press Secretary George E. Reedy swore that the President "has received no such communication." In Saigon, Ambassador Lodge swam ten laps at the Cercle Sportif pool before facing inquisitive newsmen. "I'm supposed to be sick, am I?" he grinned and, with that, disavowed the story of his resignation. "There's no truth in it at all."

As it turned out, Frankel himself had not really considered his own story hot news. He wrote it several days before its appearance, slugged it "hold for Monday release," and then went picnicking all day Sunday with friends.

Where did that leave things? "It's conceivable that the information that came to me was wrong," Frankel said. "But, as so often happens, the publication of a story of this sort could alter the facts."

LIBEL

The General *v.* the Cub

It was his first big story, and Associated Press Cub Reporter Van Savell was determined to do it justice. "I dressed as any college student would," he wrote in the dispatch that went out to all client A.P. newspapers, "and easily milled among the rioters on the University of Mississippi campus." On that September night in Oxford in 1962, two men were to die in the violence provoked by the registration of Ole Miss's first Negro student, James Meredith. The A.P.'s Savell reported it all. He also reported the gaunt and commanding presence of onetime Major General Edwin A. Walker, 54.

"Walker assumed control of the crowd," Savell wrote of the man who had ended a distinguished military career by joining the John Birch Society and resigning his commission. Savell went on to say that the general "led a charge of students against Federal marshals on the Ole Miss campus," was met with a repelling volley of tear gas, then climbed the base of a Confederate monument to dispense tactical advice and rally the scattered segregationists: "Don't let up now. This is a dangerous situation. You must be prepared for possible death. If you are not, go home now."

"Bring Your Skillets." Last week, in the Tarrant County courtroom in Fort Worth, the general and the 22-year-old cub met again. Walker was there to plead his $2,000,000 libel suit, in which

AP

EDWIN A. WALKER

A.P.'S SAVELL

In the record, a battle cry.

he claimed that the Associated Press had, in effect, charged him with helping to incite the insurrection at Ole Miss. Walker had that very charge leveled against him by the U.S. Government, and he had also been subjected to a psychiatric examination. But doctors found him sane, and a federal grand jury refused to return an indictment.

From two weeks of testimony, there emerged the picture of a man who had come to Ole Miss to play something more than an observer's role. Read into the record was Walker's battle cry to segregationists broadcast over a Shreveport, La., radio station five days before the riots: "It is time to move. We have talked, listened and been pushed around far too much for the anti-Christ Supreme Court. Bring your flags, your tents, and your skillets." Even some of Walker's own witnesses testified to his involvement at Oxford.

Appeal. The A.P. could produce no witness who heard Walker speak the exact words that Van Savell attributed to the general, although defense testimony seemed to corroborate the wire service. But to the Fort Worth jury of eight men and four women, the A.P. statements that Walker had assumed control and led the charge were both false and malicious. After 24 hours of deliberation, the jury awarded Walker $800,000. Still pending: some $27 million in Walker libel actions stemming

from the republication of the A.P. story.

The A.P. served notice of its intention to appeal. "In the light of the evidence presented by both sides," said A.P. General Manager Wes Gallagher, "we are confident that the verdict will not be upheld."

NEWSPAPERS

The Newsboys' Revolt

The meeting in Reading's dingy, red-brick Labor Temple had been postponed for a week because the chief organizer broke out with the measles. But now red-haired Ronald Haan, 17, was back on his feet, dressed in his Sunday best, standing nervously in front of a hand-lettered cardboard sign that read: JOIN THE NEWSBOYS ORGANIZATION NOW. In the audience sat some 100 teen-age carrier boys of Reading, Pennsylvania's two dailies, the jointly owned morning

FREDERICK A. MEYER

READING'S RONNY HAAN
"We are battling a ruthless foe."

Times and the evening Eagle. In the back of the room lounged a few adult labor leaders, who had come to observe.

"Fellows," said Ronny Haan, "I am glad to see you here tonight. I know it took gumption to come. We are battling a ruthless foe." He went on to spell out a long list of newsboy grievances, then asked for a vote. How many carriers were willing to picket the Eagle-Times? One hundred hands shot up; 100 young voices cheered. And how many would support a one-day strike against the paper? Again, the same noisily unanimous response. Ben Stahl, who had come over from A.F.L.-C.I.O. regional headquarters in Philadelphia, decided that it was time to take a hand.

"May I just suggest," said Stahl, "that you try once more to get the Eagle-Times to sit down and discuss your grievances with you? In the union movement, you talk first, and if that doesn't work, you picket. A strike is the last resort." This was reasonable advice, and the carriers took it. The boy grievance committee was delegated to approach the papers' management.

Risky Meeting. The boys could have relished the task. In the months that the Reading newsboy rebellion had been brewing, the publishers management has shown no disposition to recognize, much less meet with the other side. Against this resistance, Ronny Haan has been able to enlist names of only 300 of the papers' 1,000 carrier boys in the cause.

Not a line about the rebellion appeared in either paper. The Times even tried to head off last week's meeting by sending letters to the parents of all carrier boys. "We have had a number of telephone calls asking about a meeting of newspaper boys," the letters went. "The answer is no—no meeting of Reading Eagle-Times carriers has been called by the circulation department of the Reading Eagle-Times."

But a meeting had been called by Ronny Haan. Until last March he was an Eagle-Times carrier boy himself, and a good one. So were his kid brothers Nolan, 16, and Kenneth, 13. Four years ago, Ronny won an all-expense trip to Colorado, but he chose the alternate prize of $150 in cash. He wanted to add the money to the personal savings account that he hoped would, one day, pay for college. The papers refused to pay. That $150 figure was a misprint, they said, and they offered Ronny Haan $18.75 instead. Ronny went on the picket line.

Touching Letter. Last March, without warning, Ronny Haan was fired. So were both of his brothers. The publishers said that all three Haans had delivered the morning paper late and were always late with their collections. Subscribers did not agree. At Ronny's request, they signed testimonials to the quality of his service and the punctuality of his service.

Ronny also sent a letter to A.F.L.-C.I.O. President George Meany in Washington. "After learning about divisions in school," Ronny wrote, "I think its about time something was done about the newspaper boys." A onetime carrier boy himself, Meany bucked the letter to the A.F.L.-C.I.O. regional office in Philadelphia. There was never any thought of organizing the boys. But Jim Gildea, Meany's assistant in Washington, said: "It simply was a touching letter. We all wanted to help the kid."

Since then, Ronny Haan has called three mass meetings in the Labor Temple, set up the grievance committee, enlisted other carriers in the cause. The newsboys have drafted a list of 13 grievances that they would like to discuss with management. To counter the youthful rebellion, the Eagle-Times has chosen to ignore it. "Ronald wanted to have his own way in virtually everything," said Eagle-Times General Manager William Rohn. "We have nothing to apologize for in our dealing with the boys. Our carrier organization is open. They've never expressed any dissatisfaction." Not yet, anyway.

STATE OF BUSINESS

They're Spending Their Tax-Cut Money

For the past dozen weeks, shopkeepers and economic policymakers have pondered a $9 billion question: What will consumers do with their new tax cuts? Some businessmen wondered whether the extra $4-a-week in the average paycheck would really bolster retail sales by much. Others worried that consumers might go on a spending binge, which could turn the orderly economic expansion into an "overheated boom" followed by an inevitable bust of reckoning. Last week it became clear that consumers are indeed increasing their spending, apparently just enough to give the economy a nice lift without producing too much heat.

Looking over the new statistics on retail sales, up a handsome 1.5% during May, Commerce Secretary Luther Hodges said that the cut "is beginning to take effect pretty well." There was a distinct shift in mood among the nation's storekeepers, many of whom had been seeing much change at the cash registers in the first few weeks after the reduction. Said James Bliss, counsel for the National Retail Merchants Association: "All of a sudden, merchants seem to be satisfied in the belief that the extra dollars are finding their way into stores further down the line."

More Saving. The billion-dollar figures are being translated into millions of everyday, personal decisions to spend. In San Francisco, the Western Girl temporary-employee-placement firm asked young women how they were handling their plumper paychecks, reported that "the majority are putting it toward their living, new clothes, things like that." Travel agents say that the tax cut is largely responsible for the upsurge in their go-now, pay-later installment business. "This means taking my family to Scotland instead of Massachusetts this summer," beamed a Columbia Broadcasting vice president. Compared with the same month of last year, sales during May in leading chain stores and mail-order houses were up 11%.

A good part of the money is also being saved or used to reduce personal debts. Only 153 out of every 10,000 installment borrowers are behind by 30 days or more in their payments, the lowest number in five years. New deposits in savings and loan associations during May ran 3% higher than in the same month in 1963, the first such gain this year. To Washington's chart watchers, this is a clue that many Americans are building up a backlog of spendable funds that will contribute to keeping the economic expansion going.

More Production. Helped in large part by the healthy mix of spending and saving, the economy continues to do well. That important barometer of investor confidence, the Dow-Jones average of 30 industrial stocks, rose for four straight sessions last week, closed just five points off its alltime high of 830.17. Last week also the Commerce Department reported that the average American factory worker earned a record $102.97 a week before taxes during May, and that industrial production—the supreme measure of business expansion—climbed by more than one-half of 1%, to 130.3% of the 1957-59 average.

AUTOS

Year of the Coffee Break

In three conference rooms around Detroit, preparations are being made for a decisive confrontation. At the corporate headquarters of General Motors, Ford and Chrysler, janitors are washing blackboards, flicking pieces of lint from carpets and drapes, buffing and rebuffing elongated tables. Across these tables next week, scores of bargainers from the auto industry's Big Three will square off against negotiators from the United Auto Workers in Round 1 of the 1964 labor negotiations.

At issue are the wages and working conditions not only of the automobile industry's 565,000 blue-collar employees but of millions of other industrial workers, whose new contracts will be strongly influenced by Detroit's pattern. Should the negotiators fail to close a deal by the deadline on Aug. 31—when the '65 models will be rolling out—a strike could brake the industry's three-year boom and dent the whole economy. Noting that the auto companies are enjoying "fantastic" profits, the union figures this is a good year to step up to the higher-priced field itself. President Walter Reuther insists that "only a fool or an economic moron could suggest that we are not entitled to greater equity."

What Walter Wants. The Johnson Administration has asked labor leaders to limit their wage-and-benefit demands to 3.2%, but Reuther says he will fight for 4.9% or more because productivity is rising faster in autos than in some other industries. Detroit anticipates that Reuther will seek a wage raise on top of the annual boost of 2.5% or 6¢ an hour—whichever is higher—that the auto companies already award for higher productivity. A still more important issue will be his demand for earlier retirement and fatter pensions. The rank and file have been pressing their leaders for a plan to cut mandatory retirement age from 68 to 65, to reduce the voluntary retirement age from 60 to something less and to raise pensions to a minimum of $400 a month, including social security benefits.

The most emotional issue involves not money but working conditions. Specifically, the unionists want more free time

J. EDWARD BAILEY

G.M.'S SEATON

Time to step up to the higher-priced field?

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

to escape from the noise, perhaps go to the toilet or relax over a cup of coffee. In most plants, auto workers can leave the production line only for their 30-minute unpaid lunch break and two twelve-minute paid periods during the eight-hour shift. Now the union wants to shut down the assembly lines for at least 15 minutes during each shift—making a total of 39 minutes' released time. Says U.A.W. Vice President Leonard Woodcock, who will conduct most of the negotiations with G.M.: "You have coffee breaks on assembly lines all over the world. Only the U.S. has no coffee breaks on the assembly line."

Drawing the Line. The Big Three negotiators seem disposed to grant some wage increase and some form of earlier retirement. But they draw a firm line against the U.A.W.'s proposed changes in working conditions, particularly those extra minutes of what they call "time-paid-not-worked" that would add millions of dollars to labor costs. In the last negotiations three years ago, both sides reached agreement on economic issues (the U.A.W. got a package amounting to 17¢ an hour), but disputes over working conditions provoked strikes by maverick locals that paralyzed both Ford and G.M. for about two weeks. "The chances of trouble this year are greater than they have been at any time since 1946," says one top negotiator. "Somebody's got to come down off the mountain."

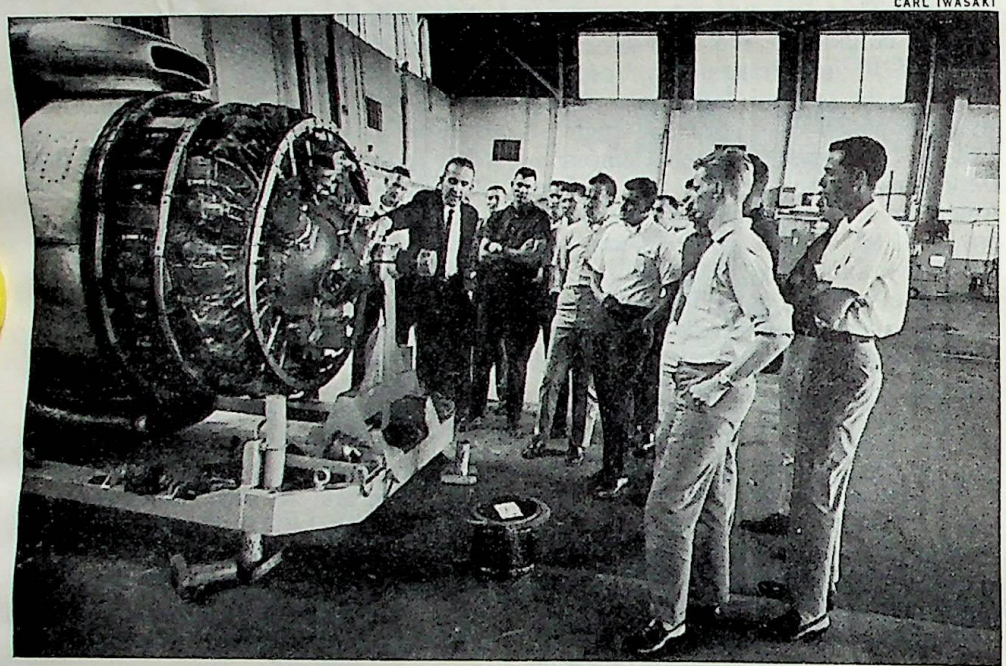
The U.A.W. may well concentrate its attack on General Motors and its tenacious negotiator Louis Seaton, because G.M. has the highest profit margin. Both sides will huff and puff down to the end, orating for their grandstands at the start, then making a hurry-up effort to talk to each other. One auto company vice president observes that "it always comes down to the last week, when G.M. makes another, more liberal offer." There could very well be a strike of sorts in September, but it would probably be settled quickly. Reason: 1964 is an election year, the first one since 1948 to run concurrent with auto labor talks. Walter Reuther does not want to embarrass Lyndon Johnson in the heat of his own battle, and neither side relishes the prospect of federal intervention at the bargaining table.

AVIATION

The Pilot Shortage

When the commercial jets flew into service, they made the airline pilot a surplus commodity. Because the airlines could carry many more people much faster, they needed smaller fleets of planes and fewer men to fly them. The lines laid off hundreds of pilots, demoted countless others to lower ranks in the cockpit. Now the situation has made a full turn; for the first time in the annals of peacetime aviation, there is a serious pilot shortage.

CARL IWASAKI



UNITED AIR LINES TRAINEES IN DENVER
Climbing toward $35,000 a year.

TWA says it "desperately needs pilots," recently hired 190 of them, its first newcomers since 1957. To sell flying careers to young men, it sends teams of pilots on speaking tours around the country. Pan Am hopes to hire up to 275 pilots this year. Eastern has been recruiting at Air Force bases, recently added 400. TWA, Eastern and United also have been advertising in the help-wanted columns, and United is busy at its large flight-training school at Denver, intends to break in more than 1,000 men over the next two years.

The pay is high, and can become sky-high. Pilots who handle the large jets begin at $6,000 to $6,720 the first year, then soar to some $35,000, plus many benefits, by the ninth year—for 85 airborne hours a month.

Why, then, the shortage? For one thing, the surge in travel has led airlines to greatly expand their fleets; last week TWA announced the largest equipment order in its history, 33 jets totaling $162 million. The airlines have usually picked up many pilots fr... the ranks of young officers who ... the Air Force after a few years ... with the switch to missiles, the ... tary is training fewer pilots. CONSTRUCTION

Too Much Too Soon?

Construction in the U.S. is humming at a record $67 billion-a-year rate, and that ought to make everyone close to the building business happy. But it doesn't. There is open concern—expressed by Federal Reserve Board Chairman William McChesney Martin Jr. and chief Presidential Economist Walter Heller, among others—that the long postwar building boom may be coming to a pause. In the past two years, builders have put up twice as many apartments as they did the previous two years, and there has also been a marked rise in the number of office buildings, motels and shopping centers. Now the builders have more on their hands than they need.

From New York to Los Angeles, the apartment vacancy rate is on the rise, climbing to 14% in Philadelphia, 15% in Fort Worth. In Las Vegas, realtors are stuck with 3,200 unrented apartments. Rents in Cleveland and Detroit have already dropped 7% in the past year.

Builders have seen the vacancy signs on the wall, and in many cities are slowing down. Office construction so far this year is off $20 million in Los Angeles; Phoenix builders recently cut a planned 18-story building to ten stories. In New York City, where a tightening of the zoning code has complicated the contractors' problems, apartment construction is only one-third what it was a year ago. But Southern California builders are constructing 25% more apartments than last year.

Mortgage leaders are becoming much more selective than at any time since World War II. An officer of Manhattan's Manufacturers Hanover Trust Co. says that bankers there are now "looking twice" at all loan applications from builders. Prospective hotel builders have a particularly difficult time finding mortgage money (many lenders believe that the current room shortage in New York City is a short-range phenomenon that will disappear as soon as the World's Fair closes). Partly to tighten up lending by savings and loan associations, the Federal Home Loan Bank Board this year increased the associations' reserve requirements.

It is a fact, however, that while the bankers and bureaucrats are concerned about the short-range outlook, they are not pessimistic about the longer view. They believe that any slump in the near future will not be bad enough to restrain the economy's overall advance, and that demand for buildings will again send construction to new highs by 1967.

PERSONALITIES

FRESH out of the field artille 1946, Paul L. Miller took a tra job at Wall Street's First Boston "to give me eating money while I l around to see what I wanted to d turned out to be a tour of exe duty. Last week Miller, at 44, named president of the nation's underwriting house, which last placed $2 billion worth of securities will be in charge of underwriting as the youngest of the firm's three executives (others: Chairman Pattberg Jr., 54, and Executive mittee Chairman Charles Glavin. Tall and greying, Miller is a Phi phian who went to Princeton. Wa a good student? "Negative," he On the job he gets his greatest sat tion from advising customers on and when to raise expansion capita he has taken on more responsibili has had to give up his favorite d sions one by one. Miller no longer much birdwatching. He still holds vate pilot's license, but disposed single-engined Comanche 250 a years ago, and "we sold off the last little old polo ponies last year."

ECONOMISTS

Doctors of Development

The age of chivalry is gone; that of sophisters, economists and calculators has succeeded.

Edmund Burke, 1757

In 1964, no statesman of Burke's stature would be so unchivalrous as to lump economists in such questionable company—or so unwise as to be without an economist at his elbow. In the palaces and Parliaments of a hundred countries, economists are increasingly called upon to build, revive or draw together national economies. Their home is no longer the ivory tower, and their profession is no longer the "gloomy science" but a romantic and rewarding wielding of power. Lively activists, they range the world in pursuit of the universal goal of economic growth.

Worldly, urbane and versatile, the top economists are first-class customers of the international airlines, often jetting across the oceans a dozen times a year. Fluent in several languages, they are self-confident in discussing the great painters, gourmet restaurants and gross national products of many countries. They tramp the African bush and they savor champagne at diplomatic receptions, where they advise chiefs of state to start new plants or shut down old ones, to expand or contract imports, to invite or restrict foreign capital. The Presidents and Ministers are receptive to the advice, partly because many of them have a much finer appreciation of the nuances of economics than political leaders used to have. Several economists have risen to head governments, including West Germany's Ludwig Erhard, Portugal's António Salazar and Bolivia's Victor Paz Estenssoro. Others, such as Britain's Harold Wilson, are hopefully planning their own takeover.

The Planners. Especially in the newly developing nations that favor highly planned economies, the economists greatly influence the income that the ordinary man earns, the products he can buy, the jobs he can hold. Economists were the first to devise the plans for the Common Market in Europe and the Aswan Dam in Egypt. When Kuwait's government was pondering what to do with its sudden oil riches, it summoned Fakhri Shebab, an Iraq-born Oxford don; he conceived an $860 million regional-development fund that has extended loans to five Arab nations. Nicholas Kaldor, a Hungarian-born Briton, has drawn up budgets and tax programs for India and Ghana.

Jamaica's W. Arthur Lewis, a Princeton professor, has answered calls from countries in Asia, Africa and the West Indies that are trapped between rising expectations and falling commodity prices. No development specialist has been more active than Jan Tinbergen, an obscure Dutchman ("I never gave an interview in my life," said he last week, in his first interview). From his Netherlands Economic Institute in Rotterdam, Tinbergen dispatches experts to 50 countries, where they preach the doctrines of economic planning. Recently he set up branches of his institute in Bangkok and Cairo.

The importance of economic advisers has also grown with the proliferation of common markets, payments unions, development banks and monetary funds—most of which the economists devised, either wholly or in part. Yale's Belgium-born Robert Triffin was the architect of the European Payments Union that abolished strict currency controls; now he is pushing the controversial "Triffin Plan" that would link nations through a world central bank and a single world currency. France's Robert Marjolin, first vice president of the Common Market, is also pressing for the "Marjolin Plan" that would unite nearly all the Six's fiscal and monetary policies in a super federal-reserve system. Argentina's Raúl Prebisch, who initiated and negotiated the Latin American Free Trade Association, was also the prime mover of the recent U Conference on Trade and Develop is favored to become head of the tious global trade organization grew out of that meeting. True, LAFTA nor the U.N. conference accomplished much, but they are steps toward greater world trade.

Communists & Capitalists. Communists are grudgingly around to recognizing the profes economists for the first time. The influential one by far is Poland's O Lange, who lived in the U.S. d the 1930s and 1940s, took U.S. ci ship but renounced it after the war is now a deputy chairman of the Council of State. In a mildly here mood, Lange declared last mo

"let's see what ASEA can do"

in INDUSTRIAL AUTOMATION. Many an ASEA product owes its origin to the creative maxim: "it's needed – let's invent it". One example is the Pressductor: just the simple and rugged yet sensitive and accurate load cell that industry has been waiting for. It is now a standard accessory in U.S. and European rolling mills, checking and controlling roll separating forces, and is steadily finding new applications within electronic weighing and process control. A torque meter, the Torductor, operating on the same magneto-elastic principle, reliably controls the torque in wood grinders, oil drilling rigs and propeller shafts in ships.

Other examples: The intricate problem of controlling the loop between rolling-mill stands in wire, rod and strip mills is ingeniously solved by the photoelectric loop regulator. The fully automatic sugar centrifugal has brought automation to the sugar industry all over the world. Development work on the Thyristor – the silicon-controlled rectifier – has extended its application to industrial drives of considerable size; this simple, entirely static and easily installed device is now used for motor drives in rolling mills, paper machines, centrifugals and mine hoists.

The list could be made much longer. For every industrial purpose ASEA supplies efficient driving machinery and the automatic control gear that enables the equipment to yield top production results. – It **is** worthwhile to "see what ASEA can do"!

a creative force in the electrical field **ASEA**

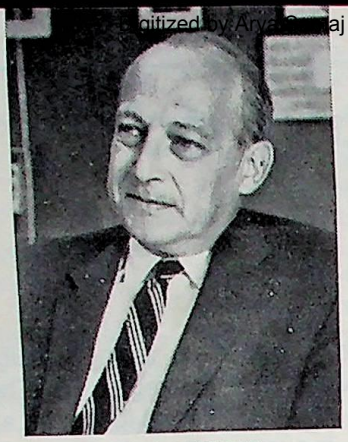
LACKENBACH—BLACK STAR

RUSSIA'S LIBERMAN



U.S.'S ROSTOW

BURT BERINSKY

U.S.'S GALBRAITH

Influencing what the ordinary man earns and buys.

ance for Progress. Students around the world learn the fundamentals of economics from Paul Samuelson, another M.I.T. professor, whose textbook, *Economics*, is a standard in at least ten languages. The chief U.S. representative to the Alianza, Walt W. Rostow, is better known abroad for his *Stages of Economic Growth*, a do-it-yourself guide to economic development that is gospel for many leaders of underdeveloped lands. These newly arrived politicians are also avid readers of Harvard's John Kenneth Galbraith, whose criticism of high consumer spending and low public spending in *The Affluent Society* provided many of them with an apologia for their planning programs.

Prescriptions & Persuasion. The economists speak with authority in Europe, where even nonsocialist governments believe in more planning than the U.S. does. France is in the midst of its fourth postwar economic plan. Though President de Gaulle has little taste for economics, he has given Pierre Massé, the commissioner of *Le Plan*, free rein to develop the planning machinery, which holds out rewards of tax credits and easy loans for companies that produce what the government suggests. Not long ago, the Common Market paid Massé the compliment of setting up a similar body to plan for the Six. An expert in the complex field of the mathematics of economics, Massé has sharpened his colleagues' ability to predict the consequences of some policies and to propose counteractions by changing interest rates and money supplies.

In Italy, Economist Guido Carli, governor of the central bank, has prescribed strong medicine for the country's debilitating inflation. With the patchwork government of Premier Aldo Moro too weak to take effective action, Carli on his own tightened credit and restricted borrowing from abroad. A convincing negotiator, he was called upon by Moro to persuade socialists and labor leaders to temper their own wage demands and agree to reduced government spending. One result of Carli's influence: Italy's trade balance is improving for the first time in two years.

Pitfalls & Penalties. The economists are far from infallible. It is testimony to their immense power that when they fail, whole nations can stagger. One reason that India's second five-year plan fell short of goals was that Economist Prasanta Chandra Mahalanobis overestimated the number of jobs that his industrialization ideas would create and underestimated the population growth. Sweden's versatile Gunnar Myrdal, best known in the U.S. for his monumental 1944 study of the race problem, *An American Dilemma*, is still one of the top-rated international economists; while highly regarded abroad, he erred gravely in his native Sweden. Fearing a disastrous, worldwide depression just after the war, Myrdal, then a Cabinet minister, pushed through an odd program that ordered inflationary monetary policies and the continuation of wartime controls. Result: Swedish goods were priced out of world markets, foreign-currency reserves dwindled, the trade deficit soared—and it took years for Sweden to recover. Myrdal went to Geneva for the United Nations, and is now completing a ten-year study of development problems in Southeast Asia.

The penalties can be much worse than tarnished prestige. High on the list of Brazilians who were stripped of their political rights after the government of João Goulart tumbled was Celso Furtado, who is now a virtual exile in his own country. Furtado's trouble was not so much that his plan for slowing Brazil's dizzy inflation failed—Goulart never carried it out—but that his prowess as an economic planner gained him notoriety, and the incoming government was suspicious of his left-leaning if not Communist politics. He takes comfort in the fact that his development program for the threadbare northeast successfully brought 200,000 jobs to the area.

Brazil's new strongman, President Humberto Castello Branco, relies heavily on his own brand of idea men. One of his first acts was to draft Roberto Campos as Minister of Economic Planning and give him extraordinary powers to restore some semblance of balance. Campos scorns the inflation-purging planners who believe, as he says, in "logic, having been invented by the Greeks in the northern hemisphere, can not be applied south of the Equator." He has taken steps to cut the budget, hold down wage boosts, restrict loans to businessmen.

Raising Keynes. Despite their occasional ambitious planning schemes, the economists score more often then they stumble. For one thing, they know far more than their predecessors did. Many years ago, John Stuart Mill mastered every important economic tract at the age of 13, and Karl Marx absorbed the important books in only three years of his time reading at the British Museum. But now the complex literature fills whole libraries. As the arbitrary art of politics has grown to embrace the more exact science of economics, the economists have learned to measure everything countable and discountable.

"Yesterday's economists were often wrong," says Alexander Cairncross, prime economic adviser to the British government, "but there was seldom enough statistical material to prove them so at once." Statistics that once took months to compile are now set up in days, or sometimes minutes, by computers. Economists still stand in awe of the modern maestro, Britain's John Maynard Keynes, whose doctrine of central planning and high public spending made him the darling of the New Deal. Some statesmen have declared that the modern world needs a new Keynes. Though no single economist today commands so much power, the fact is that economists collectively have far more influence than Keynes or Co. could ever have dreamed of.

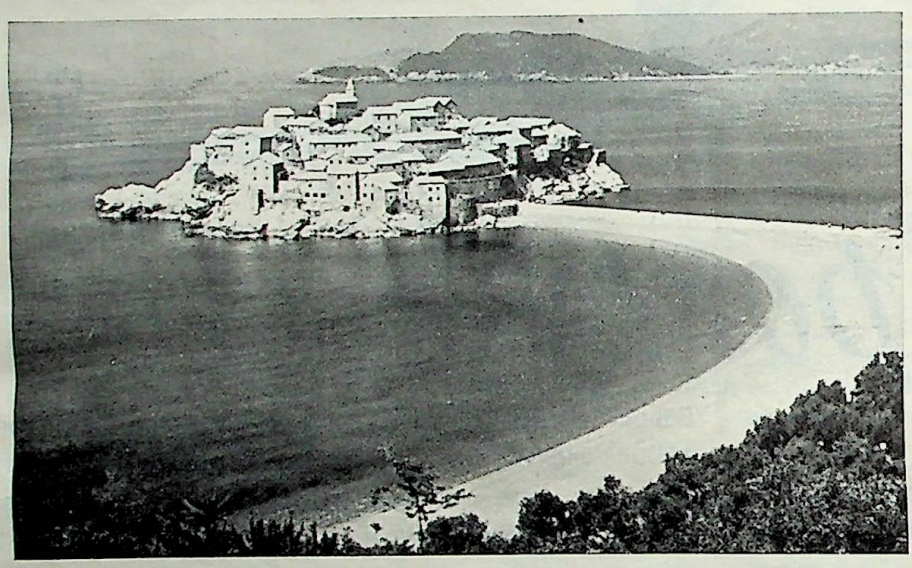
TRAVEL

The Precious Few

That major American export, the tourist, is once again beginning to fan out across what Novelist Nancy Mitford's Uncle Matthew used to call "bloody abroad." The old familiar faces —collegian and schoolteacher, all-expenser and retiree—are about to turn up in the old familiar places, at the old familiar prices.

This year there will be more of them than ever. Airlines estimate an increase of about 25% over last year's record load of 683,000 Europe-bound passengers from May through September.* It is not just that hotels in Paris, London, Rome and Athens are jammed; even such once-obscure places as Portofino and Majorca are out of the question. This summer, Scandinavia is experiencing a big influx of those who, having already done the standard museums and churches, are ready for a fiord in their future, with smorgasbord and aquavit on the side.



YUGOSLAVIA'S SVETI STEVAN

Today, the search is for the Unspoiled Spot.

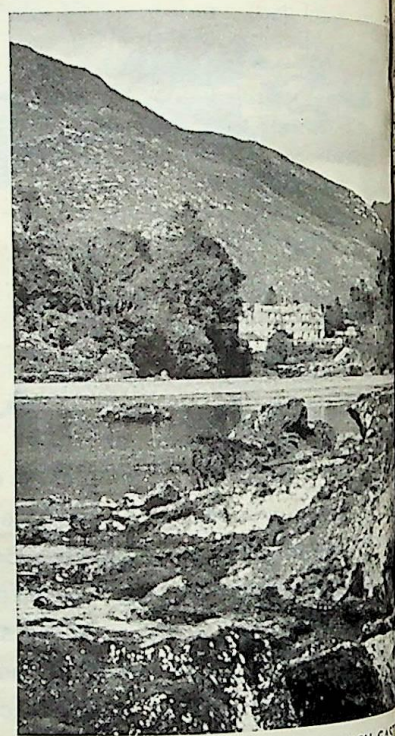
And the search is more intense than ever for the Unspoiled Spot, where Those Who Know can get away from it all for a quiet taste of nepenthe with good food and a clean bed. It is more dream and less reality than ever. But there are still some.

▶ Vulcano, one of the Aeolian Islands north of Sicily, is compounded of black sand beaches and a wild lava landscape that looks like a modern sculptor's nightmare. The sea around it is an unbelievable sapphire, lined with small white polished stones, through which bubble numerous hot sulphur springs, which are supposed to work wonders on an amazing range of problems from acne to sex. And against this black and blue landscape are some 25 dazzling white Saracen-style houses built by rich vacationers, plus a hotel called Les Sables Noirs. Built around a flower-filled patio, Les Sables Noirs has 25 rooms with baths or showers and a restaurant where lobster and caviar are served to candlelight and the soft Sicilian music of two local singers. Most of the waiters and maids are English or Swedish students, who work there in exchange for three months' vacation. The island's telephones are cut off from 8 p.m. to 8 a.m. And those in the know enjoy the highly civilized isolation (at about $9 a day, everything included, during July and August). Vulcano's visitors have included Alec Guinness, Adlai Stevenson—and Britain's Queen Elizabeth and Prince Philip, whose stay was unnoted by a single journalist or photographer.

▶ Yugoslavia has made a remarkable little summer resort out of Sveti Stevan, a 15th century town on a rock outcropping that rises dramatically out of the Adriatic and is connected to the mainland by a causeway that also serves as two splendid beaches. Once a fortress, then a fishing village, then abandoned entirely, it was transformed by the Yugoslav government in 1960 into a town-hotel to attract tourists from Europe and the U.S. The interiors of the old fishermen's houses in the winding streets and tiny flowered squares have been done over as comfortable modern suites with all the conveniences. The town is also equipped with an excellent restaurant that specializes in seafood.

▶ The south coast of Turkey is so undiscovered as yet that few Turks have heard of it, let alone been there. Most of it can be reached only by yacht, many of which are chartered in Athens, and there are no hotels—only peasant villages, sandy beaches, rocky promontories, azure water, clear skies and a background of snow-capped mountains. This coast was once a favorite Greek Roman resort area (one town with a modern population of 500 has an ancient amphitheater with a seating capacity of 30,000), and on one beach the sea laps at the steps of a ruined temple and the traveler swims among marble columns. Not surprisingly, a few rich Europeans and Americans are quietly—and illegally—buying up land through Istanbul front men.

▶ Belle Ile is one of the prettiest of the offshore islands scattered along France's Atlantic coast, and it is one of the places the French have managed to conceal from tourists. They go to it themselves, especially in August, but even then it is not crowded on its sandy beaches, protected by rocky cliffs off which there is excellent sailing, fishing, swimming and skindiving.



CONNEMARA'S BALLYNAHINCH CASTLE

Bernhardt had a house there, and it is still an occasional theatrical or intellectual visitor who is delighted to discover hotels such as Manoir de Gouphar with a view of the sea from every one of its rooms.

▶ Connemara, on the Atlantic coast of Ireland's County Galway, is bleak in winter, but in summer has a dreamy romantic beauty. Its heather-covered hills and mountains are dotted with trout-filled lakes and riverlets. The hotels are scattered but substantial, and some are notable, such as Ballynahinch Castle, where the fishing is famous, the food is delicious: trout and salmon, lobsters and crayfish, clams, mussels and—come September—the famous Galway oysters. Not to mention the small Connemara sheep, which roam the hills where wild herbs give the meat a rare, delicate taste.

▶ On Denmark's Jutland peninsula, the small old town of Ebeltoft—a cluster of low red-roofed houses,

* *The traffic is heavy in the other direction too; between January and May, the U.S. consulate in Paris granted 57% more visas than in the same period last year.*

Digitized by Arya Samaj Foundation Chennai and eGangotri

stone streets and idyllic gardens set in a rolling coastal landscape with good bathing and a fine variety of Viking graves, castle ruins and old country estates within visiting distance. Small farms and pensions are scattered through the area, as well as a modern hotel, Hvide Hus (White House). Visitors to Ebeltoft will also hear the old reassuring sound of a night watchman singing out the hour as he makes his nocturnal rounds.

One spot so unspoiled that there is still almost nothing there is Sardinia's Costa Smeralda. But a syndicate headed by the Aga Khan is busy trying to change all that. It has launched a $650 million development along 35 miles of mountainous coastline that embrace scores of beaches and several natural ports. Some 35 hotels are planned, with accompanying golf courses, hunting grounds, polo fields, theaters, nightclubs and casinos. Since the coast at present is nearly devoid of inhabitants, the promoters plan to provide authentic quaintness by building some fishing villages from the ground up, complete with imported fishermen.

GAMES

Yellow Fever

Moving with deadly mischief across the Midwest last week was still another herd of galloping gags. Hard on the heels of the whats-its (TIME, May 29), the new yaks cropped up first in newspaper ads and TV spot commercials in Nebraska, Iowa, South Dakota and North Dakota. Designed to stamp out the elephant jokes, they had a more professional intent as well, namely to promote Northwestern Bell Telephone Co.'s classified section. Sample Northwestern ad: "I found intestinal fortitude in the yellow pages. Where? Under Abdominal Supports."

Gagsters instantly leaped into the fray with improvisations of their own. Simple yellow pagies:

A way to get rid of your wife? Under Bags, Disposable.

Need to get rid of rabbits? See Hair Removers.

Enlightenment? Under Lamps.

Looking for an Egyptian doctor? Consider Chiropractors.

An innkeeper? Under Girdles.

Courtesy? Under Tanks.

FASHION

Purely a Bore

Rudi Gernreich was bored to tears with necklines. The V neck, the scoop neck, the boat neck, the turtle neck, the square neck, even the deep-cut plunge, all seemed drags. But the California designer is an all-action-no-talk man, and in no time at all he had pulled himself together and come up with a rather refreshing idea: drop a neckline low enough, say to the waist. Then it actually won't be a neckline at all, and

TOPLESS SUIT IN SAN FRANCISCO
So what's news?

no one will be even the least bit bored.

Rudi was right as rain. His topless bathing suit (designed as "a prediction of things to come") was first modeled in the flesh for buyers early this month, drew S.R.O. crowds and, of course, caused raging controversy. "Now come, boys," wrote the New York Herald Tribune's Eugenia Sheppard, "girls have been dropping the tops of their suits for years." "It has no dignity," snipped Designer Norman Norell, "it's rock bottom." Colleague Oleg Cassini explained that the suit could hardly influence him. "I'm already very conscious," he yawned, "of that part of the anatomy." Through all the fuss, Rudi stood fast, insisted the suit was no gag. "After all," he sighed, "women have been exposing their bosoms all through history. Now all of a sudden it's a big deal."

Buyers, devil-may-care in the showroom, found store owners back home far from bold, and plenty worried. Hess's Department Store, in Allentown, Pa., faced picket lines of women (WE DRAW THE LINE, read the placards), was stuck with a shipment and the likelihood of few, if any, sales. Manhattan's Lord & Taylor changed its mind even before the suits arrived. "They will be sealed up immediately," said the store's president, Melvin Dawley, "and shipped to the poor." More sophisticated Western ladies snapped up models available in San Francisco stores and over the warnings of local clergymen that "nakedness and paganism go hand in hand," the first few tentative attempts at barebreasted exposure took place. One deterrent: very few girls have either the courage to strip or the bosom to make it worthwhile.

At week's end, with all counties still not heard from, the topless suit remained a most delicate issue. As with *Fanny Hill*, the meek trembled while the smart set shrugged. English Channel Swimmer Florence Chadwick got practical and confused things even more. "I'm too modest to wear a topless suit," said she, "but it actually would be more comfortable. It would be even more comfortable to swim without the bottom as well."

Another idea for Rudi—should things get boring again.

THE HOME

Dreams of Glory

Except for hotels, hospitals and the Ku Klux Klan, almost no one these days gives much of a hoot for white sheets. Once the standard way to dress a bed, they are now hauled out only in an emergency (when nothing else is clean or an unexpected guest arrives), today account for less than 45% of home sales. More and more, the going way to go to bed is in checks and plaids, scallops, scrollwork, and fields upon blooming fields of flowers. And for the linen closet that has everything, Fieldcrest last week rounded out the collection. The newest way to turn in with style: stars and stripes.

Now no one, but no one, sleeps on the American flag and lives to tell about it. But Fieldcrest insists "Three Cheers" is merely "a salute to colorful living," with any associations flagwise purely coincidental and absolutely not intended. The colors are red, white and blue, all right, but Betsy Ross didn't patent the scheme. And, most important, the stars and stripes never appear together at the same time on the same sheet, pillowcase or reversible bath towel (stars *or* stripes, never both, border the sheets, mix or match with towels and pillowcases in overall prints of either pattern). As a final disclaimer, the sheet and pillowcase stripes are slanted. Price: $3.99 a single sheet, $1.39 a pillowcase, $2.99 a towel.

Big Ones, *Out* of Season

Despite the evident fact that most people have birthdays at about the same rate they have Christmases, publishers hesitate to issue expensive, elaborate books except in the jolly season, when the expense is less important than the solution of what to give Aunt Lucy. Those that do come out in other seasons must offer unusual promise. Among spring and summer's most unusual and promising:

MICHELANGELO THE PAINTER *by Valerio Mariani.* 151 pages, 86 color plates. *Kimberly Dormann.* For properly patriotic Italians, 1964 is the 400th anniversary not of the birth of Shakespeare but of the death of Michelangelo. The resulting commemorative volume, casually displayed on anyone's espresso table, is guaranteed to take the prize this summer—though perhaps only for price ($125) and awkwardness (14 in. by 11 in. by 3 in., weighing 11 lbs.). The text is learned, dull and clumsily translated. What almost justifies the outrageous price is the color plates, which display every surviving work that Michelangelo painted, including each panel and major figure in his ceiling frescoes and *Last Judgment* from the Sistine Chapel. The reproduction is generally good, though a trifle hard-edged; the color, for the most part, avoids the unnatural keying-up that afflicts so many art books.

NEW YORK *by Andreas Feininger and Kate Simon.* 159 pages. *Viking.* $10; NEW YORK: PEOPLE AND PLACES *by Victor Laredo and Percy Seitlin.* 192 pages. *Reinhold.* $12.50. As if to prove that New York is not to be reduced, despite the slogan, to a mere summer festival, a clutch of recently issued picture-and-commentary books have tried to capture the year-round look and feel of the city as its passionate fans know it. These two are the best. Laredo's photos are particularly good at capturing architecture, and the accompanying essays are casual and urbane. But for many readers Feininger's camera may prove more authoritative, his selection of subjects more inclusive, and the commentary by Kate Simon a shade more knowledgeable.

A MILITARY HISTORY AND ATLAS OF THE NAPOLEONIC WARS *by Brigadier General Vincent Esposito and Colonel John Robert Elting.* Unpaged. *Praeger.* $19.95. At the heart of this volume are 169 maps, 9 in. by 12 in., originally prepared for use at West Point. The maps begin with "Europe in 1795," end at "Waterloo Campaign: Situation 29 June 1815," and cover every campaign and battle in between. They are entrancingly peppered with red and blue bars, arrows, boxes, dots, circles, crosshatchings, and ominous notes like: "The Kamenski shown here is not the general of that name on Map 70." Facing each map is a dense page of breathless prose: "Part of the Russian first and second lines now toughly reformed and began firing wildly to the rear; Murat's leading divisions seemed hopelessly trapped. Instead, the cavalry of the Guard burst forward." Or: "On 11 October, Bernadotte halted short of Munich in a cloud of alarmist reports." If passages are inadvertently funny, the book is nonetheless a bugle blast to bring every armchair general snapping to wild-eyed attention.

SAILING FOR AMERICA'S CUP *by Everett B. Morris; photographs by Morris Rosenfeld.* 216 pages. *Harper & Row.* $10. The Small, Clever Tongue

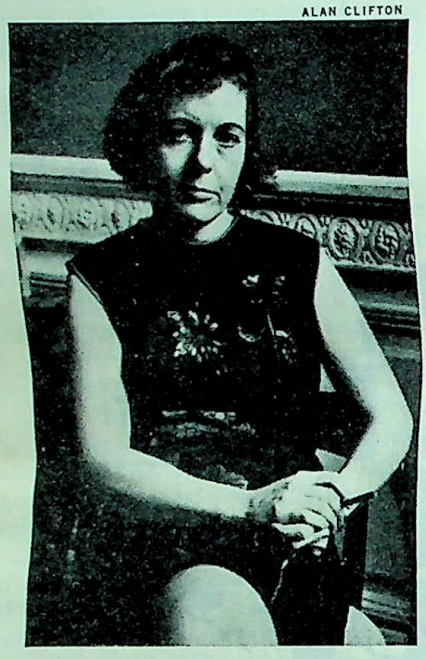
TWO NOVELS *by Brigid Brophy.* 253 pages. *World.* $4.95.

The falsest of truisms is that art is communication, as Novelist Brigid Brophy demonstrates with this admirably wicked little book.

Her writing suggests the play of a sleek, recently fed and slightly bored cat. The performance is brilliant, but the reader cannot feel that it is for his benefit; the glossy limbs would be stretched, the back arched and the bit of string stalked across the expanse of carpet even if there were no onlookers to watch.

ALAN CLIFTON



BRIGID BROPHY
Edging desire past resolve.

Author Brophy, 35, is a classics professor at Oxford. She has earned respect for her catlike talents before this —not so much for her two previous novels (*Flesh, Hackenseller's Ape*) as for her corrosive book reviews in English periodicals. ("The way Henry Miller demonstrates he is an habitué of Europe is to balk at the price of everything, including sexual intercourse.")

Stretched Memory. As *The Snow Ball* (first and longer of the two short novels in this book) opens, Anna is in confused flight from a black-masked man who kissed her; and what she tries to remember is this: has Don Giovanni raped Donna Anna as the opera begins or has he merely tried to do so? It seems terribly important to Anna, costumed inevitably as Donna Anna for this masked ball in 20th century London, that she puzzle out whether Mozart's soprano is telling the truth. The libretto seems to offer no clue. Possibly the music? The costume ball roars in her ears. Is she herself really running from the man masked as Don Giovanni, or trying to find him? In hot confusion she retreats to the dressing table of her hostess and redoes her makeup.

It may be that there is not another author writing English who could make a male reader watch so raptly as Anna smears herself with cold cream. It is a small talent, not to be made too much of, but in operation it is uncanny. The onlooker is fascinated as Brophy's small, clever tongue darts out and strokes, as it were, a bit of fur into place. And with the same fascination, the reader watches as Anna begins idly to look for her masked Don Giovanni, then searches more intently, finds him, leaves for a rendezvous with him, then returns to the ball.

Press of Flesh. The intensity persists because Author Brophy herself watches with such wonder, as if it were all new —the press of flesh against cloth, the edging of desire past resolve. She stares at it solemnly and sets it all down. Every bad writer who ever described a large party has used a wave and ocean metaphor; Author Brophy uses it, and it is brilliantly fresh because it is no metaphor: it is her wondering realization that the party is swept by waves.

The second of the novellas, *The Finishing Touch,* is quicker and more prankish, a joke the author tells herself about the unsuspected versatility of a lesbian schoolmistress. But the catty quality continues. A little uneasily, the reader admires the feline arabesques and muses, as one does of parlor cats, about the damage Brigid Brophy could accomplish if she grew to jungle size.

Real People Are Dull

WHAT TIME COLLECTS *by James T. Farrell.* 421 pages. *Doubleday.* $5.95.

"And, with pitiless banality, time passed." So writes James T. Farrell on page 399 of his 18th novel, accurately describing the way time has passed for his characters, and for the reader, in the preceding 398 pages. Banality is what Farrell's novel is about, and it is also the novel's sole literary device. The people of the book are joyless, hateless, empty of good or evil, fleshy machines that transmit at the audible level the prattle of Babbittry and, octaves above, the silent scream of tedium. The prose in which they are described is also joyless and hateless, empty of merit and of error, painfully boring. And it is obvious that this is intentional. Farrell's setting is St. Louis in the 1920s, and his method is to make his readers suffer at the same pace as his characters.

The Submen. In this willfully limited goal he is successful. The novel's desultory action occupies about two years, and reading about it provides the horrifying illusion of having spent that long with Farrell's submen. The reader's reaction is likely to be exasperation.

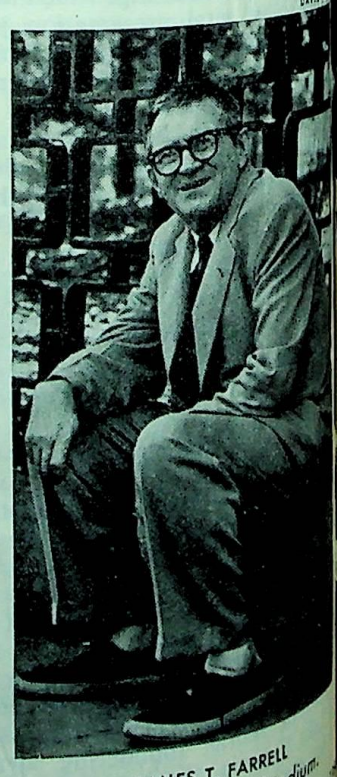
The central figures are Anne Duncan, a waitress and technically a virgin, and Zeke Daniels, the braggartly buffoon who marries her. There are assorted relatives: Anne has a weak, churchly mother, Zeke a managing mother and a popinjay father who struts in Klan robes. They are presented in a protracted series of flashbacks leading from the marriage of Anne and Zeke [illegible] flashbacks do not resolve down [illegible] nub of meaning but are centrif[illegible] leading away from meaning into [illegible] thinning reaches of an infinity of [illegible] lessness. Conversations take place [illegible] nothing is said. Eventually the [illegible] stops, Farrell having shown to his [illegible] satisfaction, not how Anne and Z[illegible] got that way, but "this is how it [illegible]

No Diversion. To show how [illegible] are, with nothing subtracted for [illegible] priety or added for spice, is the [illegible] aim of naturalism, the earnest [illegible] footed literary school of which J[illegible] has been perhaps the most determ[illegible] flat-footed U.S. member. His [illegible] beginning with his wildly succe[illegible] *Studs Lonigan* trilogy, has been [illegible] by the naturalistic writers' obse[illegible] need to prove, over and over a[illegible] that life is not art. It is a lesson that [illegible] casionally needs teaching, and F[illegible] and such hesitant early experimen[illegible] as William Dean Howells cleared [illegible] a good deal of literary rubbish by [illegible] ing the way they did. But merely [illegible] the farthest possible position fro[illegible] manticism is not a way to arrive [illegible] philosophy of writing. Each of [illegible] polar views is too limiting. In a ro[illegible] tic novel, the hero always wins [illegible] he rolls the dice; in a Farrell n[illegible] he always craps out.

Farrell says insistently that mos[illegible] ple are dreary, not fascinating, and [illegible] reader imagines Farrell saying "I'm [illegible] going to divert you from the impo[illegible] truth of dullness by presenting my [illegible] people in an entertaining way. I'm [illegible] ing to be as dull as possible about [illegible]

So Farrell has been saying fo[illegible] years. No one pays much attention [illegible] more, but there is courage in his w[illegible] headedness, and obviously he's g[illegible] to go on saying it.

DAVID [illegible]



JAMES T. FARRELL
A silent scream of tedium.

Where is Cariflex going?

Answer: here, there and everywhere. For Cariflex is a trio of complementary rubbers whose wide and flexible spectrum of characteristics enables them to tackle just about every job a rubber can do, more efficiently and more economically than anything on the market. There are Cariflex formulations for every kind of tyre, helping to combine hard wear with extra safety: for footwear, where Cariflex means high quality at low cost: for engine mountings and other industrial uses where long life under extreme conditions is all-important. Where is Cariflex going? Wherever there's a need for a comprehensive range of dependable, tried, economical rubbers.

The range of Shell Chemicals is wide and diversified. In industry and agriculture, in almost every country of the world, they are contributing to greater efficiency and lower costs. Shell are eager to give all the help they can. If Shell Chemicals can solve your problems contact the Shell company in your country.

HANDMADE WOODEN BOWLS BY JOHNNY MATTSSON, GAVLE, SWEDEN

SCANDINAVIAN MODERN is Mattsson wood carving . . . and a world of travel with a tradition

To set new trends for today, Scandinavian artists borrow from the past. Here the thousand-year-old form of the Viking longboat becomes unmistakably Scandinavian Modern. Scandinavian traditions are very much alive in the world of jet air travel, too. Navigating skill is one example. SAS won the Christopher Columbus prize for pioneering the polar air routes. Another—one you'll find wherever you go with SAS—is hospitality and cuisine in the good old tradition. Plan to enjoy them on your next trip with SAS.

We park the big ones right in our own backyard

(One of the ways we work with steel)

Even 70,000 ton freighters drop anchor right at Sumitomo's Wakayama steel mill. It's one of the few mills in the world that contains its own modern port facility with a 46-foot-deep harbor. The blast furnaces are only steps away. The result: important savings in freight costs. That's half the story. Finished products, too, go free of mill-to-port transportation charges. You'll find the time, labor and expense this convenient port saves in the Sumitomo price lists. ☐ Efficiency like this is a habit at Wakayama, newest of four Sumitomo steel mills. Designed by Kaiser Engineering and supplied by United, Abbey Etna, Mannesmann, Mesta, Sack and Krupp, this ultra-modern mill turns out 2,300,000 tons of steel per year (5,000,000 projected by 1968).

☐ For superior steel competitively priced—tubes, pipe, sheets, plate, wire rods, castings, forgings and rolling stock parts—you're right with Sumitomo.

TELEVISION

Thursday, July 2

ABC NEWS REPORTS (ABC, 10:30-11 p.m.).* A study of Republican Party platforms of the past and their influence on Republican Presidents.

Friday, July 3

U.S. SUMMER OLYMPIC TRIALS (ABC, 7:30-8:30 p.m.). First of twelve programs on the trials, beginning with some of the Men's Track and Field events from Downing Stadium, Randall's Island, N.Y.

Saturday, July 4

ABC'S WIDE WORLD OF SPORTS (ABC, 5-6:30 p.m.). Vic Seixas is commentator for the All England Tennis championships from Wimbledon, England; also the 24-hour Grand Prix of Endurance from Le Mans, France.

Sunday, July 5

THE TWENTIETH CENTURY (CBS, 6-6:30 p.m.). Dwight Macdonald, Maxwell Geismar, and John Houseman discuss the role of the artist during the '30s and show films of some of the '30s' greats: Carole Lombard, Thomas Wolfe, Sherwood Anderson, George Gershwin, etc. Repeat.

MEET THE PRESS (NBC, 6-6:30 p.m.). Guest: Wisconsin Congressman Melvin R. Laird, 1964 chairman of the Republican Platform Committee.

Monday, July 6

THE REPUBLICAN PARTY PLATFORM (NBC, 4:30-5 p.m.). First of five daily programs covering preconvention developments in San Francisco this week.

MONDAY NIGHT AT THE MOVIES (NBC, 7:30-9:30 p.m.). *The Pride of St. Louis,* the life story of Pitcher Dizzy Dean. Color.

Tuesday, July 7

THE CHOSEN CHILD (NBC, 10-11 p.m.). Award-winning documentary on the joys and difficulties involved in child adoption. Repeat.

THEATER

Straw Hat

The big news on the tent and barn circuit this year is the release for summer theaters of that alltime box-office bombshell, *My Fair Lady,* and more than 80 summer theaters are offering *Lady* to the straw-hat and sunback set.

This week the *Lady* will 'arness 'er haitches in Highland Park, Ill. (with Ray Milland, who will go on to North Tonawanda, N.Y., Framingham, Mass., Wallingford, Conn., Warwick, R.I.); Gaithersburg, Md. (with Zachary Scott and Joan —daughter of Aaron—Copland, who will also take it to Devon, Pa., West Springfield, Mass., Owings Mills, Md., and Westbury, L.I.); Kansas City (with Michael Allinson, who will play it in Atlanta as well); Corning, N.Y. (with Allyn Ann McLerie and George Gaynes, on a tour that will hit Fayetteville, N.Y., Latham, N.Y., East Rochester, Southfield, Mich., Toronto, Nyack, N.Y., and East Hampton, L.I.); Santa Monica (with Edward Mulhare, Reginald Denny and Barbara Williams); Yonkers, N.Y. (with Margot Moser and Michael Evans, for a whole month); other companies will mount productions in Hyannis, Mass., Laconia, N.H., Cedar Grove, N.J., Augusta, Mich., and Bellport, L.I.

Next week *Ladies* will pop up in Dallas (with Gayla Byrne and Michael Rennie); Somers Point, N.J., Fitchburg, Mass., and Cohasset, Mass. And the following week there will be productions in Mount Gretna, Pa., Skowhegan, Me., Sullivan, Ill., New London, Conn., and Hampton, N.H.

Music theaters and summer theaters across the country will play various versions of *Lady*. Some notable ones: Jeffrey Lynn will play Higgins in Ephrata, Pa., at the end of July, then go to Charlotte, N.C., with Mindy Carson (on leave for a week from Broadway's *Mary, Mary*). In August, Jane Powell, Michael Evans and Reginald Denny will play it in a brand-new theater in Woodland Hills (Los Angeles); Margot Moser will appear in it with Hugh Marlow and Lyle Talbot in Sacramento. Edward Mulhare will play a late-season engagement of it in San Diego.

CINEMA

THAT MAN FROM RIO. In a hilarious parody of Hollywood adventure movies, French Director Philippe de Broca fires clichés at the screen with Hero Jean-Paul Belmondo panting through many a tight squeeze.

NOTHING BUT THE BEST. A ne'er-do-well aristocrat (Denholm Elliott) tutors an ambitious junior clerk (Alan Bates) who yearns for Establishment status in a black comedy about hoary old England.

THE ORGANIZER. Director Mario Monicelli's vividly dramatic portrait of 19th century Italy has warmth, humor, and a fine performance by Marcello Mastroianni as a Socialist Savonarola who leads a strike of textile workers in Turin.

YESTERDAY, TODAY AND TOMORROW. Mastroianni again, teamed with Sophia Loren in three frolicsome tales celebrating the game of love as though Italians had invented it out of pure mischief.

THE NIGHT WATCH. Using their jail cell as a base for excavations, five French losers dig up enough walloping suspense and bitter insight to make this prison thriller one of the best of its kind.

BECKET. England's 12th century Archbishop of Canterbury (Richard Burton) dares the wrath of his onetime friend King Henry II (Peter O'Toole) in an eye- and ear-filling spectacle.

FROM RUSSIA WITH LOVE. In a sly spoof of Ian Fleming's thriller formula, Secret Agent 007 (Sean Connery) is lured to Istanbul for hand-to-hand combat with hired assassins and a high-proof blonde.

THE SERVANT. Dirk Bogarde deftly combines good manners with menace in Director Joseph Losey's class-conscious melodrama about an evil London valet who attends mainly to his master's vice.

THE WORLD OF HENRY ORIENT introduces Tippy Walker and Merrie Spaeth as a pair of teen-age metrognomes who liven up New York in pursuit of Concert Pianist Peter Sellers, their favorite celebrity.

BOOKS

Best Reading

TWO NOVELS, by Brigid Brophy. These short novels contain glittering prose, a variety of verbal tricks, and almost too many *tours de force* to digest at one reading. Already a well-known critic, Brophy has now hit a fictional stride that should make her a formidable literary figure.

TO AN EARLY GRAVE, by Wallace Markfield. A funny, unpretentious novel about a small clutch of men who make a living in Greenwich Village by being "intellectual." Author Markfield has obviously read his Joyce very closely, but his style is lighter and his wit strictly 1964.

THE SCARPERER, by Brendan Behan. "scarper" in Irish is to escape, and Behan runs off with some Dublin weirdos gleefully ing their past and dreaming their future. This short novel is vintage Behan (1954) when the mercurial writer wrote his most ebullient prose.

THE INCONGRUOUS SPY, by John Le Carré. A reissue of the author's first two books in one volume. Admirers of *The Spy Who Came In from the Cold* will be expecting more drawn to *A Murder for Quality*, which has its own suspenseful plot, but at the same time reads like a first draft for Le Carré characters, Cold and all.

A MOVEABLE FEAST, by Ernest Hemingway. This memoir of Paris in the which the author suggested should be as fiction, has a ghostly quality: it as if the author had written in the what in fact he wrote in the '50s. the famous are there: James Joyce, Pound, Gertrude Stein, the Fitzgeralds characterized memorably, if sometimes nastily, in vintage Hemingway style.

RAINER MARIA RILKE, THE YEARS IN ZERLAND, by J. R. von Salis. This raphy covers Rilke's last seven years, he wrote his greatest poetry—including most of his masterpiece, *The Duino gies*. Von Salis, who knew Rilke, well Rilke's temperament, but he perspective on his genius.

JULIAN, by Gore Vidal. In his reign as Emperor of Rome (A.D. 363), Julian crammed enough wars, grandiose plans to make Alexander Great seem inert and unimaginative. Vidal's novel records, with elegance flourish, every last adventure, including the notorious attempt to abolish Christianity, but he does not quite capture elusive subject.

Best Sellers

FICTION

1. The Spy Who Came In from the Cold, Le Carré (1 last week)
2. Convention, Knebel and Bailey (2)
3. The Night in Lisbon, Remarque (3)
4. Candy, Southern and Hoffenberg
5. The Group, McCarthy (6)
6. Armageddon, Uris
7. The Spire, Golding (4)
8. Von Ryan's Express, Westheimer (7)
9. Julian, Vidal (10)
10. The Martyred, Kim (8)

NONFICTION

1. A Moveable Feast, Hemingway (1)
2. Four Days, U.P.I. and American Heritage (2)
3. Diplomat Among Warriors, Murphy
4. A Day in the Life of President Kennedy
5. A Tribute to John F. Kennedy, Salinger and Vanocur
6. The Naked Society, Packard (6)
7. In His Own Write, Lennon (7)
8. My Years with General Motors, Sloan (9)
9. The Green Felt Jungle, Reid and Demaris (5)
10. Profiles in Courage, Kennedy (8)

A NEW UPRISING IN JORDAN?

(No, camel racing.)

The track was sandy but fast at the Royal Racing Club in Jordan. The new vogue: Camel racing and the betting thereon.

Racing authorities originated the idea, because they had become alarmed at the deterioration of the Jordanian camel breed.

So, amidst gargles, groans, moans, roars and grunts—they were off.

An American magazine, *Sports Illustrated,* covered the race from start to finish with a four-page article.

Why? Are Americans interested in camel racing? Some of them now are. They're the kind of people who delight in *Sports Illustrated's* sophisticated search for sporting excitement off the beaten track, all around the world.

Certainly, *Sports Illustrated* covers the big spectator sports as well. But the rapidly expanding number of Americans with more leisure time is interested in the esoteric sports, too. This they find each week in the unique pages of *Sports Illustrated* Magazine.

Oh, yes—about the race. The camel in the middle—AL-Yatima—won it. It paid 150 fils to win. (That's 42 cents.)

Sports Illustrated is one of the enterprises through which Time Incorporated endeavors to bring information and understanding to people everywhere.

WHEREVER THEY HIDE SHELL CAN REACH THEM

Dirty, ravaging, germ-carrying insects lurk and breed in the many odd corners of any building. Ordinary insecticides cannot always reach them. *Shell can.*

Shell's latest insecticide is called Vapona, it vaporises; actually chases insects into their former 'safety zones'... then kills them. Even insects resistant to other insecticides cannot escape Vapona, no matter where they hide. Yet it is not persistent; after doing its job it breaks down quickly into harmless substances. Vapona clears insect pests from houses, aircraft, food-stores, dairies, warehouses, ships, beaches, rubbish dumps. In fact from almost anywhere. Vapona is just one of Shell's comprehensive group of pesticides, which between them provide an effective answer to insect problems in every continent.

The range of Shell chemicals is wide and diversified. In industry and agriculture, in almost every country of the world, they are contributing to greater efficiency and lower costs. Shell are eager to give you all the help they can. If chemicals can solve your problems contact your local Shell company.

Unfortunately mileage indicators go up only to 99,999

That is why you can never be certain how old a Mercedes-Benz is. You can neither see from the outside, nor hear from the inside, whether it has covered 100,000 or 200,000 miles. There really is only one way to find out exactly how long a Mercedes-Benz lives: — by driving it. But don't get impatient if it takes a few years longer.

In 1964, quality improvement is top priority in the Daimler-Benz AG investment program. A large part of current investment is devoted to maintaining and improving the already high standard of quality.

LETTERS

Civil Rights Bill

Sir: The only unhappy part about the civil rights bill [June 19] is that there ever existed the need for it.

PATRICIA CHERONE

Glendale, Calif.

Sir: With God's help, I hope Americans will accept their moral responsibility by doing what they can to make life, liberty and the pursuit of happiness a reality for Negro people as well as white.

DAVID W. MANDYCK

Afton, N.Y.

Sir: The civil rights bill is not "the product of national demand." You should have said "the product of noisy minorities who terrify politicians."

DARRELL C. STEERS

Chevy Chase, Md.

Sir: What a thrill to see the cover picture of a Senator who is too much of a coward to permit Americans a referendum on the civil rights question. He seems to think he was elected to cram legislation down the throats of people he thinks are too dumb to know what they want.

W. C. CARGILE

El Paso, Texas

Sir: I was about to bid a reluctant farewell to the G.O.P. until I read your article on Senator Dirksen. While it is true that we cannot legislate morality, we can legislate conditions that are more conducive to morality. Goldwater's vote against the civil rights bill is another indication of his remarkable shortsightedness.

LYNN HARLAN

Fremont, Calif.

Sir: Let us not forget that Goldwater has now voted "no" on three recent major bills to reach the Senate: the civil rights bill, the trade expansion act, the test ban agreement. These bills could not have passed without staunch Republican backing. Mr. Goldwater is merely doing some wishful thinking when he claims to be in the mainstream of Republican thought.

A. DAVID DEGANN

Brooklyn

Sir: You assume that a majority of the electorate favors all provisions of this bill. I disagree. And only a national referendum could prove one of us wrong. If the American Mainstream has truly become a polluted effluent bound for the Gulf of Socialism, I will swim upstream with Barry—where the water is clean, the air pure, and the trees tall. This is where the American Dream was spawned.

KENNETH H. LOBITZ

Cincinnati

Sir: Can't you salute Goldwater's courage—whatever you think of his wisdom? Who was the last candidate you can recall with such guts? Here is a man who would rather be right (in a double sense) than President—if the choice must be made.

A. CULVER GORDON

Hawthorne, N.J.

Sir: Republicans have every right in the world to be disgusted with their gutless, confused and wayward party. Let them nominate a man with foresight, leadership, presidential principles and wisdom —Everett McKinley Dirksen.

PETER R. ANDERSON

San Rafael, Calif.

Sir: It is a perversion of history to take the famous words, "All men are created equal," in the Declaration of Independence and misinterpret them as a constitutional basis for declaring that all races are equal. All this phrase meant was that the colonial English gentleman was the equal of the English gentleman in the home country. Surely the aristocratic signers of this famous document did not think that the weaver, tanner and tavern keeper were their equals. Let those who insist on twisting the facts consider the facts of history: all the Southern signers of this document were slaveholders—including our first President. To say that this famous statement stands for racial equality is to imply that the Founders of our Nation were hypocrites.

HENRY ECKHARDT

Fair Oaks, Calif.

Sir: How ironic and sad that Lyndon Johnson, friend of the Negroes, will be defeated in November by an uneducated white populace outraged over the continuing violent demands of crusading Negroes. The ill timing of the leap forward in the civil rights field will unfortunately result in leaps backward in many fields with the inauguration of President Goldwater.

WILLIAM T. BALDWIN II

Bakersfield, Calif.

To the Barricades for Barry

Sir: Because of your obscene slant on the Goldwater campaign, indicating that G.O.P. professionals would nominate Goldwater against the voters' wishes, I don't want you to send me another issue of your mud-crawling magazine.

DAVID C. WESTON

Los Angeles

Sir: You make me feel ashamed to be seen reading your publication. You are to be pitied. Your cover of Barry Goldwater depicted and mirrored all the hate you feel for him. God help Mr. Goldwater for trying to save a nation filled with people like you. Mr. Goldwater, God bless him, is a handsome, real man, and as kind and gentle as he is handsome. You are all very, very sick. And *we're* going to win.

DOROTHY E. PEIRCE

Studio City, Calif.

Sir: The eminently fair shake you gave Goldwater in the cover story shows me that, unlike your competitors, you are resisting infestation by sentimental young leftists who do not stop at slander to promote self-intoxication with the morally superficial sensationalism which must fill the vacuum of their historical ignorance.

STEWART L. COLTEN

Back Bay, Mass.

Sir: Now that we have had a liberal, radical, left-winger, Communist-loving Administration in Washington for over 30 years, I sincerely hope that Senator Goldwater will be nominated for President of the U.S. We want an American for President for a change.

RUSSELL HOUSER

Cincinnati

Sir: I don't think that Goldwater will get elected for the reason that the American male has progressed too far down the road of unmanliness to take this one chance to regain his own and the world's self-respect.

ROY A. BATCHLER

Denver

Sir: The frantically vocal desperation of the "moderate" Republicans in attempting to stop Goldwater will prove to be like the whimpering of a wet puppy. The "liberal" Democrats will face the same problem in November. There are more of us "nuts," "cranks" and "right-wing extremists" than they think.

JAMES D. HAMILTON

Memphis

Crime in the Streets

Sir: Winston Moseley's crime [June 26] was inhumane and horrible, but no more so than the crime of those who might have aided Kitty Genovese and didn't. Those people who believe that giving Moseley the death penalty will relieve them of their own guilt are sadly mistaken. Capital punishment is not the answer. We must fight inhumanity with humanity.

DONNA REDER

Detroit

Sir: It was a great disappointment to me and those who knew my husband that the returned verdict was guilty of murder in the first degree instead of not guilty by reason of insanity. As members of his family, we did not expect the law to excuse his crimes, but to treat the condition that made him commit them. Winston Moseley for his 28 years has been quiet, shy and alone. He has been a devoted husband and father; then, it seemed, something snapped psychologically and made him commit antisocial acts. His behavior was called an "irresistible impulse" by psychiatrists, who explained that such people are unable to control themselves. This condition constitutes "medical insanity," but because of an obsolete rule, he was not found legally insane. He is intelligent,

TIME, JULY 3, 1964

A letter from the PUBLISHER

Bernhard M. Auer

THE original prospectus for TIME, written more than 40 years ago, took pains to express "a respect for the old, particularly in manners," and an "interest in the new, particularly in ideas." In an era when the pace of change puts almost overwhelming emphasis on the new, the old may often seem old hat. But not a week's news goes by without offering—when studied in some depth—a few striking examples of how much the very old affects what is quite new.

Take this week's cover subject. Princess Anne-Marie of Denmark is a very modern miss from a land of the most advanced institutions and culture. And yet she represents and carries forward the old and now increasingly rare institution of royalty. To strike this note of present and past, Artist Bernard Safran used as the background for his portrait of the pretty young princess part of the heraldic insignia of Denmark's large coat of arms. Its lions passant (walking, three paws on the ground, the right forepaw raised, the head looking forward, the tail curved over the back) and hearts are derived from the family design of the Valdemars and can be traced to the indistinct seal of King Knud IV dating back to 1190.

MODERN LIVING links the old and new in its report on the atrium house, which comes from a blueprint as old as the hills of Rome but is fast becoming the newest thing in town housing. ART touches on old *v.* new as it studies the argument whether Paris should or should not have its face washed, whether old buildings (or people) should look young, whether decades of dirt add character or merely hide style. The issue of old and new comes out in a hopeful way in THE HEMISPHERE story about a sensible move toward land reform—at long last—in Peru. It shows its unhappier side in THE U.S. story about this summer's new kind of agony as sociological change moves relentlessly on the Old South.

The old is always there, though too often it is forgotten; in the mid-60s the new presses in upon events with a force so strong that only the alert can grasp its significance. TIME's continuing aim is to respect the old that is worthy of respect, to be interested in the new that is worthy of interest, and to relate them to one another in a way that sheds intelligent light on both.

U.S. subscribers will notice an addition to the address label on this issue of TIME—their zip code. Putting those five little numbers on the records involves some 20 million changes in the Time Inc. mailing lists, but we thought it was worth it. The purpose: to help the post office expedite handling, and ultimately to get the magazine into the subscriber's hands as early as possible.

RELIABLE WORLDWIDE MODERN FRIENDLY INDEPENDENT

Keeping their business secrets really secret is the secret of success for many companies. There even exist formulas which no one person knows entirely—each of the top men knows a fraction.

Not a word against this practice. In many spheres of business complete secrecy is essential.

With us it's entirely different—everbody who wants to know our secret of success can see, feel and enjoy it—any time. For our success is built up on the fact that we are:

Reliable: Swiss precision workmanship is the only keyword that opens the doors to the workshops and hangars where we maintain our jet-fleet. Without very particular and detailed proof of outstanding ability no technician can gain admission to this holy of holies where even the air seems to breathe precision.

Worldwide: Swissair knows the world—and the world knows Swissair. Our jets feel at home in New York, Tokyo, Rio de Janeiro, Lagos and many more places—they are real globe-trotters. And the skilled staff in our hundred-odd offices all over the world—they'll settle your problems. You needn't know all about the place you are bound for—we know it for you.

Modern. Our network is worldwide, linking the world with the heart of Europe. For each sector we have the best jet ready for you: the giant DC-8 for our routes to North America, the fast Coronado to South America, the Near and Far East as well as Africa, and the famous Caravelle for Europe.

Friendly: On the phone when booking your flight, at the ticket office, check-in counter and aboard our jets, the warm-hearted friendliness of our staff will go with you all the way. And first of all—it's not a must—it's our privilege!

Independent: We are proud of our title "Switzerland's National Carrier," but what makes us still prouder is the fact that we never have to bother the State or anybody else for subsidies at the end of a year. By acquiring our shares thousands of Swiss men and women entrust their money to us—and we don't disappoint them. A yearly dividend is the rule.

This is how an independent airline—modern, reliable, friendly—always succeeds in giving you the best there is in every thing. Find out how much it means on your next trip. A warm welcome awaits you on board!

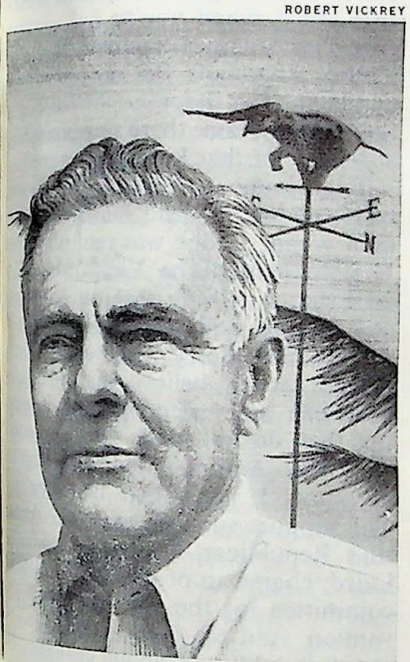
THE U.S.

FOREIGN RELATIONS

Our New Men in Saigon

Throughout the week, visitors streamed into the U.S. embassy in Saigon to bid farewell. Late one afternoon five Buddhist monks, two in saffron-colored robes and three in black, paid their respects, presented a large, framed color photograph as a going-away gift. U.S. Ambassador Henry Cabot Lodge

ROBERT VICKREY



AMBASSADOR LODGE
A change of faces . . .

smiled gratefully, held it up to look at it —and froze in shock. The picture was of a Buddhist burning himself to death.

Lodge quickly recovered his composure, thanked the monks, returned to his packing chores. He was leaving South Viet Nam after ten months as ambassador—ten months in which monks continued to die in flames of their own setting, in which the government of South Viet Nam had twice been overturned by military coup, in which—through no fault of Lodge's—the U.S.-backed war against the Communist Viet Cong had gone from bad to worse.

In his letter of resignation to President Johnson, Lodge cited only "personal reasons" for wishing to return to the U.S. His wife Emily has, in fact, been ailing, but not seriously, and the compelling cause for Lodge's decision was his desire to participate actively in the presidential campaign of Moderate Republican William Scranton against Conservative Barry Goldwater.

"It was about as tough a decision as I've ever made," Lodge confided to a newsman friend. "What finally tipped the balance was that in the last two or three weeks I've heard from people in whom I have a good deal of faith and confidence that my returning to the U.S. could make a significant difference in the prospects for Scranton's nomination. I felt a tremendous responsibility in this matter. I even felt the pressure here in Viet Nam. One afternoon I ran into a young Army captain, and he asked, 'Sir, are you going home to help Scranton?', and when I said I was not, all he said was 'Oh,' but the tone of his voice made me feel like a slacker. A few days later I decided I had to do it."

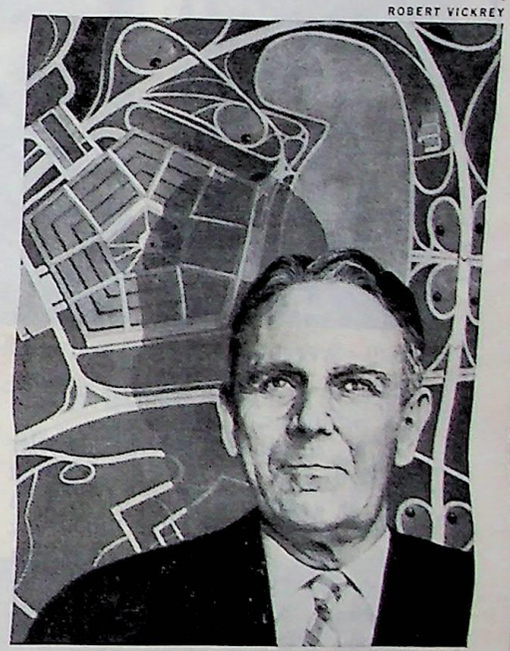
"Make No Mistake." To replace Lodge in Saigon, President Johnson named none other than the chairman of the U.S. Joint Chiefs of Staff, General Maxwell Taylor, thereby setting off a round of musical chairs in the Pentagon's military command (*see box next page*). In appointing Taylor, the President demonstrated the premium his Administration places on having a big-name ambassador in South Viet Nam—a premium so high that in recent weeks Secretary of State Dean Rusk, Defense Secretary Robert McNamara and Attorney General Robert Kennedy, all anticipating Lodge's resignation, offered to resign their present jobs and take over the Saigon post.

In an unusual move, the President also picked a top-level assistant for Taylor: he gave the rarely used title of deputy ambassador to U. (for Ural) Alexis Johnson, 55, who had been serving as Deputy Under Secretary of State for Political Affairs, the State Department's fourth highest post.

The immediate and widespread assumption was that Taylor would be sort of an ambassador in charge of military matters, while Alexis Johnson, a tough, unflappable State Department veteran who once served as Ambassador to Thailand and is considered an expert on Southeast Asia, would run the diplomatic shop. But this, insisted State Department officials, was a false assumption. "Make no mistake," said one, "Taylor is going out there as the ambassador and Johnson is No. 2 man. Taylor will have the responsibility and control over the entire bag of worms." Still, Taylor is 62, has long been looking forward to retirement and is not expected to stay in Saigon for long. He certainly will do so until past the U.S.'s November elections, after which Alexis Johnson presumably will take over.

Another widespread assumption was that Taylor's appointment meant an in-

ROBERT VICKREY



GENERAL TAYLOR
. . . but no new policy.

tensification and expansion of the U.S. war effort in Southeast Asia. This feeling seemed to be shared by South Viet Nam's Premier Nguyen Khanh, who welcomed Taylor as "a wonderful soldier" and proclaimed: "Things are going to happen fast and hard in the fight for freedom in the South and liberation of the North." Adding to the impression that the U.S. was about to step up the struggle against Communism in Southeast Asia was the arrival in Thailand of five U.S. supply ships.

Such impressions to the contrary, there is no present intention that Taylor's assignment means a change in policy—a fact President Johnson was careful to point out in announcing Taylor's appointment. Said he: "The United States intends no rashness and seeks no wider war." Max Taylor himself, both as a special military adviser to Presi-

THREE TOP SOLDIERS

Key figures in the U.S. military-command changes caused by the appointment of General Maxwell Taylor as U.S. ambassador to Saigon:

General Earle Gilmore Wheeler, 56, new chairman of the Joint Chiefs of Staff, moves up from Army Chief of Staff. Wheeler's appointment is another break in the tradition of rotating the Joint Chiefs' chairmanship among the three services. This happened partly by a process of elimination. Air Force Chief of Staff Curtis LeMay, 57, is scheduled to retire next February. The Chief of Naval Operations, Admiral David McDonald, 57, has been on the job only since last August, is still learning the ropes. That left "Bus" Wheeler for the top service job—which suited Defense Secretary Robert McNamara just fine. Wheeler is McNamara's kind of general—a skilled staff officer who specializes in analytical answers to complex problems.

WALTER BENNETT

WHEELER

JOHNSON

LACKENBACH—BLACK STAR

ABRAMS

In his 32 years of service, Wheeler has had only five months' combat duty, as a division chief of staff in Europe in World War II. But in his steady climb as a staffman, he caught the eye of Maxwell Taylor and later of John F. Kennedy, whom he was assigned to brief on military matters in the 1960 campaign. Named Army Chief of Staff in 1962, he set about revitalizing the Army along the lines of Taylor's doctrine of "flexible" response rather than overwhelming reliance on massive nuclear retaliation. During Wheeler's two-year tenure as Chief of Staff, the Army rose from eleven to 16 combat-ready divisions, increased its strength from 870,000 troops to 976,000.

Lieut. General Harold Keith Johnson, 52, new Army Chief of Staff, replaces Wheeler. In selecting him, President Johnson skipped over 43 more senior generals. A slight, sandy-haired man, Johnson was a lieutenant colonel with the 57th Infantry (Philippine Scouts) when the Japanese invaded the islands in 1941. He was captured, endured the infamous Bataan death march, survived three years in Japanese prison camps. In Korea in 1950, he took command of a combat infantry battalion, fought through the bloody defense of the Pusan perimeter and later was named a regimental commander. Back in the U.S., Johnson became commandant of the Army's elite Command and General Staff College. There he coined a slogan, "Challenge the Assertion"—an attitude that has since won him the admiration of Bob McNamara, whose hobby is *shattering* military shibboleths. In 1963 Johnson moved into the Pentagon as Deputy Chief of Staff for Operations.

Lieut. General Creighton W. Abrams, 49, new Army Vice Chief of Staff, replaces retiring General Barksdale Hamlett. From the moment the 37th tank battalion, which he commanded, rolled into action in Normandy in July 1944, "Abe" Abrams showed the feel and flair of a born combat man. Leading the sweep of General George Patton's Third Army across Europe, he would lean from his Sherman tank, chomping on a huge cigar, and rally his tankers with his war cry: "Attack! Attack! Attack!" Said Abrams: "I like to get out on the point where there's nothing but me and the goddam Germans and we can fight by ourselves." When the 101st Airborne was surrounded at the Battle of the Bulge, Abrams led the relief column into Bastogne, later led the dash to the Rhine.

After the war, to the surprise of many, Abrams became a fine staff officer, rewrote a book on armored tactics and served as a corps chief of staff in Korea. In 1961, when Soviet pressures on Berlin brought the cold war near the boiling point, Abrams commanded the U.S.'s key 3rd Armored Division in West Germany. In 1962 Abrams returned to the U.S. as Assistant Deputy Chief of Staff for Military Operations for Civil Affairs. The title sounded ho-hum, but the job was far from that. When race riots broke out on the Ole Miss campus in Oxford that fall, Abrams sped to take command of the troops that had been alerted there. He did the same in the bloody Birmingham riots of May 1963, in constant contact with the Army war room and Justice Department command headquarters.

dent John Kennedy and as chairman of the Joint Chiefs, was a major architect of present U.S. policies in Southeast Asia and has long argued against any massive commitment of U.S. ground troops in Asia.

Unfortunate Interview. There are several considerations against "escalating" the fight in Southeast Asia—and not the least of them is political. This is an election year in the U.S., and the last thing in the world that President Johnson wants before November is a costlier, bloodier war in Southeast Asia. He would indeed be understandably delighted if Southeast Asia were not even mentioned during the campaign.

In this sentiment Johnson last week got concurrence from retiring Ambassador Lodge. Said he, in an unfortunate Saigon interview: "I don't see how Viet Nam can be a part of this campaign. It involves the Eisenhower Administration and the Kennedy and Johnson Administration and the Truman Administration. As a matter of fact, foreign policy often is not a good subject for politics. In history, when you've had a disaster, then that becomes a political issue, even if the politicians do not do anything about it. But happily, in the case of South Viet Nam, there's no prospect for a disaster of that kind at this time."

Back home, Lodge's fellow Republicans shuddered. Said Bill Scranton, the man whom Lodge was returning to the U.S. to help: "The Vietnamese war is an issue. Anything that has to do with our foreign policy or defense is an issue." Cried Barry Goldwater: "Surely Lodge cannot believe that such questions can be evaded simply by pretending they do not exist. That is precisely what this Administration has been doing, and I hope that no Republican will support such an evasion." Wisconsin's Republican Representative Melvin Laird, chairman of the G.O.P. platform committee for the party's national convention, said his group certainly would not feel inhibited about criticizing the Administration's Southeast Asia policy because of Lodge's involvement. Said Laird of Lodge: "He was President Kennedy's and President Johnson's ambassador, not ours."

Out of the Crucible. At week's end, in a farewell press conference, Lodge backed off slightly from his earlier statement, conceded: "In a campaign you have a right to discuss any public question you want. What I meant to say was that it was not always a practical thing to do. I don't see much partisan advantage for anybody in this situation here, since members of both parties have taken part in it."

The fact is that Southeast Asia will be a major campaign issue, no matter whom the Republicans name as their candidate. And that is just as it should be. For out of the crucible of responsible political criticism may come a far more effective national policy toward Southeast Asia than any the U.S. has achieved so far.

TOBY MASSEY—MIAMI DAILY NEWS

CAMPAIGNER SCRANTON AT MIAMI AIRPORT
"I can beat Lyndon Johnson."

REPUBLICANS

"Let's Not Kid Ourselves"

Where were they? Headed for Wilmington? Leaving Cleveland? Circling Miami? Such was the pace of Republican William Scranton's headlong campaign for the G.O.P. presidential nomination that in the minds of aides and newsmen traveling with him in his chartered Electra, places and events blurred.

Scranton often prowled the plane, ignoring the FASTEN SEAT BELTS sign, to chat with reporters. Once, he picked up the galley telephone, read over the aircraft loudspeaker system a lengthy statement that got far less attention than it deserved.

The Evidence. "Since in politics almost anything can happen from day to day, it would not necessarily be impossible for Senator Goldwater to beat Lyndon Johnson in November," said Scranton above the Electra's drone. "But there is such a thing as playing with odds so long that only the most optimistic partisan would have anything but a glimmer of hope. I believe that would be the position of the Republican party with Barry as the candidate.

"Many persons have believed this, of course, for a long time. Why, then, am I saying it this bluntly now for the first time? First of all, I am a party man, but I don't believe I should lightly question the ability of a fellow Republican to win. After most serious thought, I have determined in my own mind that the more serious disservice to party unity and to party vitality would be to keep quiet about it. If for reasons other than a determination to win in November my party is to be steam-rollered into nominating Barry—something I don't believe is going to happen—then at the very least we ought not to kid ourselves about what we are doing."

Insisting that "the evidence against a Goldwater candidacy is so devastating as to be incapable of complete error," Scranton continued: "In state after state, surveys show that against Lyndon Johnson, Barry would not carry even a majority of Republican voters." He reeled off the results of polls taken among Republicans, some by independent pollsters, some by his own public opinion specialist, Philadelphia's John Bucci: nationally, 62% of Republicans would vote for Johnson, only 29% for Goldwater; in New Jersey, 72% of Republicans prefer Johnson, 20% Goldwater; Maryland, 63% Johnson, 27% Goldwater; Ohio, 64% Johnson, 17% Goldwater; Iowa, 52% Johnson, 30% Goldwater; Minnesota, 46% Johnson, 44% Goldwater.

Concluded Scranton: "Barry's chances in the cities are just unbelievably poor. Yesterday, for instance, we completed our latest check in Philadelphia. Barry Goldwater can count on only 11% of the total vote against Lyndon Johnson.

"If Senator Goldwater is nominated, I will support him and work for him, whatever the long odds of his being elected.

"On the other hand, I think that if I am the candidate, I can beat Lyndon Johnson."

The Coalition. In that statement lay the sum and substance of Scranton's campaign strategy. If he is to perform the near miracle of heading off Goldwater, he must convince the G.O.P. and the nation that 1) Barry would run so badly against President Johnson as to drag down and perhaps defeat Republican candidates at all levels, and 2) he, Bill Scranton, would have a far better chance against Johnson, might even win, and in any event would enhance the chances of other G.O.P. candidates.

Behind Scranton's candidacy were coalescing most of the major forces of moderate Republicanism—with the notable exceptions of Dwight Eisenhower, who still refuses to take a public stand, and Richard Nixon, who remains tangled in the web of his own ambitions. Henry Cabot Lodge Jr. was coming back from Saigon "to do everything I can" to aid Scranton. Nelson Rockefeller had turned over to Scranton the facilities of his own presidential campaign organization, and last week went so far as to say he would not support Goldwater even if Barry was the Republican nominee. Michigan's Governor George Romney, although not yet formally announced for Scranton, was determined to fight any attempt by Goldwater delegates to write a Goldwater-oriented platform in San Francisco.

There were, of course, disappointments. While Scranton's cause was helped by the reaffirmation of Ohio's 58-member delegation to vote for a favorite son, Governor James Rhodes, on the first ballot, Scranton's hopes for a breakthrough in the Illinois and Indiana delegations were rebuffed. Early in the week, Scranton stopped by the Capitol Hill office of Illinois' Senator Everett Dirksen, pointedly suggested that Ev would make a "great favorite son." But Dirksen was having no part of such a holding action. He was convinced that Goldwater had a strangle hold on the Illinois delegation, and, he said later, Scranton's suggestion "just sort of flopped onto my desk and stayed there." That same day, Scranton asked Indiana's Representative Charles Halleck for help with the Indiana delegation. Replied Halleck: "Come back and see me before the second ballot—if there is one."

What He Was Saying. In their coverage of Scranton's campaign, most reporters seemed to be concentrating on the success or failure of such efforts at delegate scrounging. As a result, much of what Scranton was saying in his public speeches received only cursory no-

J. EDWARD BAILEY

SCRANTON IN LANSING, MICH.
"It would be a disservice to the party to keep quiet."

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

tice. Yet what he was saying was well worth hearing.

At Newark's Essex House, Scranton obviously referred to Goldwater's weakness in the East when he declared: "Republicans in New Jersey and Republicans in Pennsylvania both want to participate in the election of a Republican as the next President of the U.S. Neither of us is prepared to have the East Coast of this great nation sawed off and set afloat in the ocean this November. We want to win."

In Cleveland, Scranton compared Goldwater's *conservatism* unfavorably to that of Ohio's own late Senator Bob Taft. "Bob Taft was a conservative *in* the truest sense of the word," Scranton declared. "He *sought* to conserve all of the human values that have been carried down to us on the long stream of American history. He saw history as the foundation on which a better future might be built—not as a Technicolor fantasy behind which the problems of the present might be concealed. Bob Taft didn't say stop social security—he said extend it to all elder citizens who are not now eligible. He *didn't say quit* the United Nations—*he said make the United Nations work. He didn't say forget our cities*—he said provide the *housing which will make* our cities liv*able. In fact, he* was the father of our modern housing legislation."

In Detroit, Scranton dealt with the complex problem of automation, called it "the first gigantic step toward a fundamental change in the basis for human society." He quoted Aristotle's assertion that "when looms weave by themselves, man's slavery will end," and added: "That day has almost arrived. We right now possess the technological means to conquer poverty and economic slavery for the first time in history. The only question that remains is whether this physical bondage will be replaced by a new slavery of the soul and mind. The underlying philosophy of the Administration boils down basically to this: delay automation as long as possible by harassing industry; when automation does come, tax the increased profits out of the economy and use these to pay relief or some similar kind of dole to the workers who have lost their jobs. I say this answer is wrong for the economy, but it is most of all wrong for the workers themselves. The workers of America are not looking for an easy berth, a soft touch, a free ride. The workers of America are seeking an honest return for honest labor."

And in Miami Beach, Scranton delivered perhaps the most forceful, sense-making Republican statement so far about U.S. policy toward Castro's Cuba. Said he: "Our national policy has become one of reacting to events *rather than one of seizing opportunities. In few places can we see present American indecision so clearly as we can see it in Cuba.* The Castro regime is *becoming more deeply entrenched in* Cuba with *each passing day. It has open*ly pledged its allegiance to the Communist camp. It has built a powerful military machine, second only to our own in this hemisphere.

"The leadership vacuum has produced an unacceptable and dangerous reaction. Some well-intentioned Americans, frustrated by the paralysis in our foreign policy, have turned to a doctrine of naked power. This doctrine holds that 'total victory' can be won

NINA LEEN—LIFE

OHIO'S LATE ROBERT TAFT
A truer sort of conservatism.

by simply standing up to the Russians, both guns drawn. It reduces the complexities of foreign policy to simple emotional terms that have wide appeal in the American experience—the rugged individualism of the pioneer, the gun-slinging marshal of the frontier town, the expedition of marines to clean out the pirates in Barbary or the corrupt governments of the Caribbean.

"But do these emotions and personal demonstrations of conviction provide the basis for an effective foreign policy? No. No President of the United States can avoid the problem of power and how to use it effectively and responsibly. An effective policy does not consist in orders to the marines to turn on the water mains at Guantánamo, or in unleashing Cuban exiles to attack Russian merchant ships trading with Cuba.

"While our objective is to expel the Communist leadership, we cannot return Cuba to the social and economic base of 1959. We must turn the social revolution already in progress toward democratic directions and control. To succeed, we must separate the Cuban people from their Communist rulers. We can do this only through a coordinated three-pronged strategy of economic, psychological and guerrilla warfare.

"First, we must continue and extend the free world economic boycott of Cuba. We have failed in communicating the seriousness of our purpose to our European allies and in enlisting their cooperation. We need to establish far better cooperative measures of passport and personnel surveillance at the ports and borders of other Latin American countries to control the stream of subversive activity which now flows like poison out of Cuba.

"Second, we must mount an effective psychological campaign against the Castro government. We need more basic intelligence on the attitudes of the workers, the middle classes, and other sections of the Cuban population toward the revolution and the regime.

"The third element of an effective strategy is the coordinated use of Cuban exile forces. If we mean business, we have a responsibility to give free Cubans full financial, moral, and political support—including the organization and equipping of Cuban exile forces. A free Cuba will need a well-organized, disciplined, democratically oriented force capable of assuming full governmental authority upon the overthrow of Castro."

Taking It Easy. What was Barry Goldwater doing while Scranton was campaigning? He was lying low. His advisers feel certain that his present delegate lead is so great that his nomination is assured if he can only stay out of political trouble. In other words, silence is Goldwater. Thus he occupied himself most of last week logging hours in an Air Force jet (he is a major general in the Air Force Reserve) and preparing like any other proud father for the 800-guest weekend wedding of his daughter Peggy, 19.

But even as the Goldwater strategists coasted on the assumption that Barry had the nomination sewed up, there were indications that other pragmatic politicians viewed a Goldwater candidacy as doomed to defeat in November. One Gallup poll showed that 73% of Republican and Democratic county chairmen believed that Johnson would beat Goldwater, while only 27% foresaw a Goldwater victory. Asked to rate the strongest possible Republican candidate, the Democratic chairmen voted: Scranton, 302; Goldwater, 297; Nixon, 246; Rockefeller, 246; Lodge, 243.

Earlier polls had shown that one of Scranton's greatest handicaps was that he was not broadly known across the U.S. But this week Gallup released the results of a new poll that demonstrated how dramatically the Scranton campaign has changed that picture. Gallup reported that rank-and-file Republicans now prefer Scranton over Goldwater, 55% to 34%. Just as significantly, among independent voters—and the G.O.P. will need plenty of them to defeat Johnson—Scranton is preferred 62% to Goldwater's 24%.

CIVIL RIGHTS

The Grim Roster

Despite its high purpose, the Negro revolution breeds violence and death. Among its victims have been Baltimore Postman William Moore, shot on an Alabama highway while on a one-man civil rights march; Mississippi N.A.A.C.P. Leader Medgar Evers, shot in the back by a bushwhacker; and the four Negro girls killed in the bombing of a Birmingham church.

Last week there was more violence, and three more victims may have been added to the *grim roster*. They were two young white men and a Negro youth, all civil rights workers, missing in the murky, snake-infested swamps of eastern Mississippi, where the charred shell of their Ford station wagon was found.

The Trip South. The trail to the Mississippi swamp started on the serene, sycamore-shaded campus of the Western College for Women at Oxford, Ohio. There, two weeks ago, an indoctrination course started for some 200 Northern college students who had volunteered to spend the summer in Mississippi working toward increased Negro voting registration. The project was sponsored by the Council of Federated Organizations (COFO), a combine of four civil rights organizations, and by the National Council of Churches.

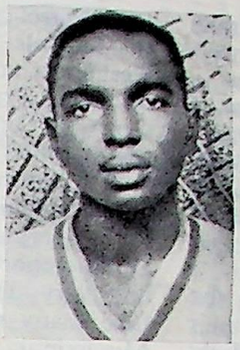
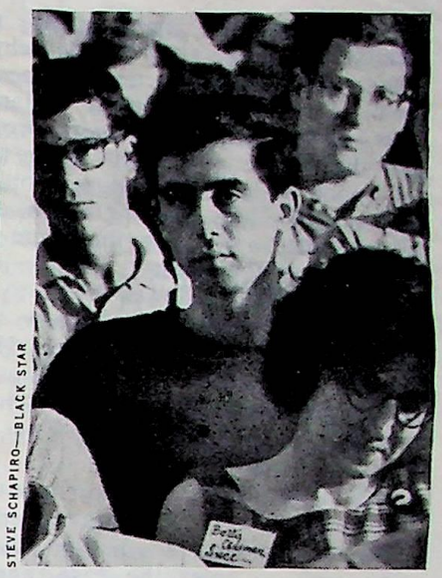
SCHWERNER



AP

CHANEY

After a stop at a burned church, a burned car.



STEVE SCHAPIRO—BLACK STAR

GOODMAN

Among the staff for that indoctrination course were Michael Schwerner, 24, and James Chaney, 21. "Mickey" Schwerner, son of a Pelham, N.Y., wig manufacturer, was a Cornell graduate in 1961, a social worker on New York's Lower East Side before joining the Congress of Racial Equality two years ago. Last January, Schwerner and his wife Rita, 22, went South, opened a Negro community center in Meridian, Miss. It included a 10,000-book library donated by Northern students. Rita taught reading and citizenship, instructed Negro women in how to work sewing machines, while Mickey worked on Negro vote registration.

Chaney was one of Schwerner's most helpful aides. He was a slender Meridian Negro lad who had dropped out of high school as a sophomore, became a plasterer, eventually joined CORE. When COFO called for volunteer instructors for the Ohio training course, Chaney went with Schwerner.

Among their Oxford students was Andrew Goodman, 20, son of a New York City building contractor and a junior at Queens College. The Mississippi project was Goodman's second active civil rights venture; he had been among those who picketed President Johnson at the World's Fair opening.

On Saturday, June 20, their week-long Oxford orientation course completed, Schwerner, Chaney, Goodman and five other young civil rights workers got into a CORE-owned blue station wagon to drive to Meridian. They had scheduled their trip so as to avoid driving through Deep Dixie after dark, always a perilous proposition for integration workers in such states as Alabama and Mississippi. As they passed through Birmingham, Ala., a car loaded with white teen-agers pulled alongside, screamed "Nigger lover!" at a white girl student sitting next to Chaney in the station wagon.

To the Church Ruins. The next day, Sunday, June 21, the three men got haircuts from a Negro barber in Meridian. They planned to drive to Longdale, Miss., 50 miles away in adjoining Neshoba County, to inspect the ruins of the Mount Zion Methodist Church, a meeting place for civil rights groups, which had been burned to the ground five days before. Bombings and burnings seem fashionable in Mississippi nowadays. Recently, churches at Brandon, Ruleville, Clinton and Hattiesburg have been either damaged or destroyed by fire or bombs; a Negro home in McComb has been bombed, and the N.A.A.C.P. meeting place in Moss Point was set afire.

Before leaving town, they dropped by the COFO office. Schwerner told an aide to call the FBI if he was not back by 4:30 that afternoon. Threats had become a commonplace in his life, but in recent weeks they had seemed even more ominous. Besides, he knew that the license number of the station wagon had been circulated by the area's Citizens Council. Chaney had the car's tank filled with gasoline before leaving Meridian; the three workers did not want to make any unnecessary stops in dangerous territory.

It was hot, nearly 100°, and hardly a breeze stirred the mimosa trees and scrub pines that dotted the landscape near the charred church ruins. There was not much to see at the burned church site—a twisted tin roof and a blackened iron bell in the ashes. The three drove a mile down the road to the farmhouse of Junior Roosevelt Cole, 58, a Negro and lay leader of the church, who told them that on the night of the fire he was dragged from his car in the churchyard and clubbed unconscious by a mob of whites. Schwerner asked Cole to come to Meridian Tuesday. "We want to get this fire business straightened out," Schwerner told him. "We want to stop all this."

The Search. At 5 o'clock that afternoon, while driving back to Meridian, the Ford was stopped on the outskirts of Philadelphia, Miss. (pop. 5,500), by Neshoba County Deputy Sheriff Cecil Price. Price arrested Chaney on a charge of driving 65 m.p.h. in a 30-m.p.h. zone, took all three to the county jail, just off the town square.

While booking them—Chaney for speeding, and Schwerner and Goodman "for investigation"—Mrs. Millie Herring, wife of the jailer, wrote "Negro

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

male" after each man's name, then scratched out the entry beside Schwerner's and Goodman's and penned in "white." Said she later: "I declare, I was just so confused I wrote it wrong." All three were questioned, fed a meal of spoon bread, green peas, potatoes and salad by Mrs. Herring. Then, after Chaney paid a $20 fine, they were told to get out of the county.

Deputy Price followed them to the edge of town, later said he saw their car head south down Mississippi Highway 19 toward Meridian. Price was the last person known to have seen Schwerner, Chaney and Goodman. That was at 10:30 Sunday night.

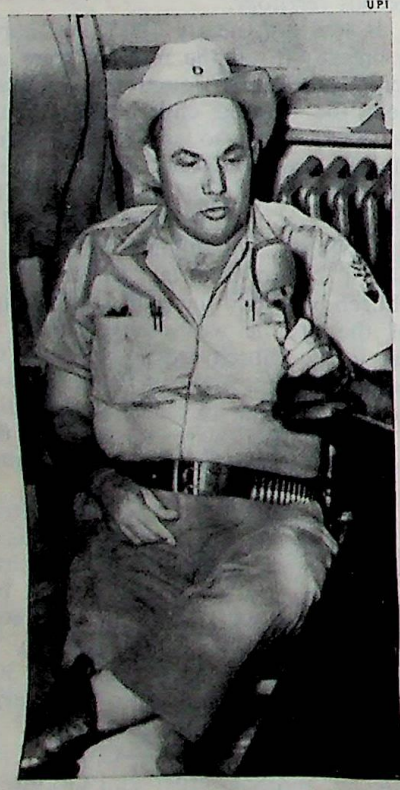
When the three failed to show up in Meridian, COFO workers called the FBI, which at that time had no evidence on which to enter the case, and the Mississippi Highway Patrol, which declined to do more than issue a routine missing-persons bulletin. Then, Tuesday afternoon, a telephone tip on the station wagon's whereabouts came to the FBI office in Meridian. Agents rushed to the northeast corner of Neshoba County, found the gutted car in a blackberry thicket 40 feet off State Highway 21 near the dank Bogue Chitto Swamp. The site, twelve miles northeast of Philadelphia, was in the opposite direction from which Deputy Price said he saw the civil rights workers going when they left Sunday night. By the time the law got there, Choctaw Indians from a nearby reservation had stripped three hubcaps from the station wagon.

Side by Side. After the discovery of the car, Attorney General Robert Kennedy ordered a full-scale search by an army of FBI agents he had ordered into the state. The Mississippi Highway Patrol came alive, worked with the federals in beating the swamps of Neshoba County and questioning rural residents. President Johnson sent one-time CIA Director Allen Dulles to Jackson to confer with Mississippi Governor Paul Johnson on the state's law-enforcement capabilities—and its willingness to cooperate. After a one-day trip, Dulles reported back that "a very real and very difficult problem which will take many months to solve" exists in Mississippi. But, he insisted, he saw "no likely explosion" soon.

President Johnson ordered 200 sailors from the Meridian Naval Auxiliary Air Station into Neshoba County to join in the search (the White House, through a mistake, at first announced that the sailors were marines, bringing screams of anguish from segregationists about another federal invasion of the South). Armed only with sticks to protect themselves against the water moccasins and rattlers that abound in the area, the sailors tucked and taped up their pants legs to ward off mosquitoes and chiggers, began poking under every bush and peering down every abandoned well.

At week's end, there was still no sign of the missing men. Some people shared the suspicion voiced by Neshoba County Sheriff L. A. Rainey: "They're just hiding and trying to cause a lot of bad publicity for this part of the state." But with each passing day, the possibility of a hoax seemed less and less likely. Whatever their fate, whether dead or alive, the case of the three young civil rights workers would reverberate around the U.S. for the rest of this summer and beyond.

UPI



NESHOBA COUNTY'S SHERIFF RAINEY
For declaring it all bad publicity.

From Satisfaction to Fury

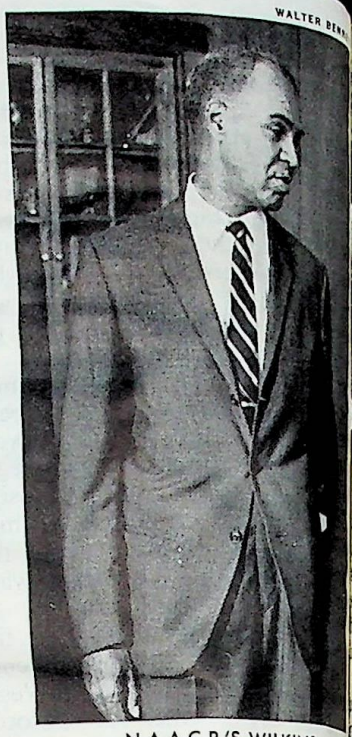
Meeting in Washington for the 55th annual convention of the National Association for the Advancement of Colored People, some 2,000 delegates could find real cause for satisfaction in the advance of the Negro revolution.

The Supreme Court, in a busy, term-ending week, had just invalidated the trespass convictions of 42 civil rights sit-in demonstrators in three Southern states. And the long-awaited civil rights bill would surely be signed into law by President Johnson on or about July 4.

Since the N.A.A.C.P., oldest, largest and among the most levelheaded of civil rights organizations, has long concentrated on court and legislative action instead of street demonstrations, the delegates now felt the correctness of their course had been demonstrated.

That was the spirit in which the convention began. Executive Secretary Roy Wilkins decried the "reckless adventurism" of more militant civil rights groups. Warned Carl Rowan, a Negro and director of the U.S. Information Agency: "Don't use an elephant gun to hunt toads." Counseled Guest Speaker Hubert Humphrey, the Senate's Democratic floor manager for the civil rights bill: "There is a place and a time for banners. But there is also a time to stack the banners for a while and get down to the patient, infinitely detailed work of making civil rights real."

WALTER BENN



N.A.A.C.P.'S WILKINS
For taking over the state.

But then, into this atmosphere of calm, cool and collected realism came word of the three missing civil rights workers in Mississippi. And in an instant the whole tone of the N.A.A.C.P. convention changed. Charles Evers, brother of Mississippi's assassinated N.A.A.C.P. Leader Medgar Evers, impassionately demanded that the delegates stage a protest march on the Department of Justice. "Let's go," cried the delegates, and only with difficulty did their national leaders dissuade them from marching instantly.

And then, acting in an outraged all-night session, the N.A.A.C.P. Board of Directors adopted a resolution demanding that President Johnson "invoke the power of the Federal Government" by "taking over the administration of the state of Mississippi."

THE PRESIDENCY

Penny Saved, Dollars Earned

Off on a three-day tour of political speaking and party fund raising in the midwest, President Johnson landed at Detroit's Metropolitan Airport in a 707 passenger Air Force JetStar. When Air Force One, the giant, four-jet cruising liner the President usually flies, is being used, explained an aide, on purely political trips like this one the Air Force bills the Democratic National Committee for presidential transportation. The tab for Air Force One is $2,35[illegible] hour, for the JetStar only $522.

In fact, what the cost-conscious Lyndon Johnson saved was a drop in the bucket compared to what he raised in Detroit, 74 of the party faithful paying $1,000 apiece for cocktails and a presidential handshake. Then the Pre[illegible]

With civil rights on the way to enactment, the year-long legislative log-jam began to break. Last week the Congress also:

▶ Approved, by a 212-to-189 House vote, an Administration-backed $375 million urban-transit bill designed to aid cities in improving their municipal and suburban public-transport systems. Spread over three years, federal funds would cover up to two-thirds of the cost of transit-system renewal or expansion.

▶ Shelved, by a voice vote of the House Ways and Means Committee, the Administration's longstanding medicare bill. Instead, the committee approved a measure that would boost Social Security cash benefits by roughly 5%. Maximum family benefit would be increased gradually to $300 a month, and individual benefit would go up to $143, the rise financed by a slightly higher tax on employers and employees.

▶ Voted, 77 to 2, in a lively Senate session, to repeal the 10% federal ex-

WALTER BENNETT

HOUSE G.O.P. LEADER HALLECK
"Memories are real short around here."

cise taxes on a vast variety of consumer items ranging from cosmetics, handbags and luggage to mechanical pencils and pingpong balls.

▶ Overrode, in a House Appropriations subcommittee on foreign operations, the decade-old dictatorship of Chairman Otto Passman, a Louisiana Democrat whose only particular claim to fame is his effective hostility to the foreign-aid program. Always in the past Passman had been backed by Missouri Democrat Clarence Cannon, chairman of the full Appropriations Committee. But Cannon died last May and was succeeded by Texas Democrat George Mahon. At the urging of Fellow Texan Lyndon Johnson, Mahon persuaded the subcommittee to turn down Passman's demands for meat-ax foreign-aid cuts. The subcommittee approved all but $200 million of the $3.5 billion the Administration had requested, and the full committee swiftly followed suit. Undaunted, Passman vowed to take his fight to the House floor. "I am not," he cried, "a political prostitute!"

▶ Approved by unanimous vote of the Senate Post Office and Civil Service Committee a federal pay-raise bill earlier passed by the House. It would boost salaries of House and Senate members by $7,500—to $30,000—and provide increases ranging from 3% to 22½% for 1,700,000 federal employees. On Cabinet-level salaries, the committee recommended an increase of $10,000 a year—up from $7,500 in the House version—to $35,000, to attract top talent to Government service. Approval by the full Senate was expected this week.

▶ Raised, in a 48-to-21 Senate vote, the national debt ceiling from $315 billion to a record $324 billion for the coming fiscal year.

▶ Authorized, by a 78-to-3 Senate vote, a $5.2 billion space budget. Before the final vote, a move to chop 10% from the Apollo man-on-the-moon program was narrowly defeated 43 to 38. The surprising strength shown by opponents of the Apollo program, led by Arkansas' Democrat William Fulbright, indicated that the National Aeronautics and Space Administration may run into trouble when the time comes for Congress to appropriate the actual funds.

SEQUELS

Dialogue at the Door

Madame Ngo Dinh Nhu, presently residing in Paris, had been invited to the U.S. to address a "Truth Rally" sponsored by the Conservative Party club of Flushing, N.Y. In due course, she applied for a visa, and last week, in due course, the U.S. State Department turned her down on grounds that her presence would be "prejudicial to the public interest."

The lady was furious, issued broadsides from behind the closed doors of her fashionable Left Bank apartment, fired off letters of protest to President Johnson. But she was not so furious as to lose her head completely. An American correspondent, trying to get Madame Nhu's firsthand version of the whole affair, knocked on the apartment door, was met by her daughter Le Thuy, and the following conversation took place:

Le Thuy: Surely you know that Madame will not see journalists without payment in advance?

Reporter: How much, if we just talk about the visa?

Le Thuy: For how much time?

Reporter: Five minutes.

Le Thuy (after a brief consultation with her mother behind the door): Madame will not depart from her fee of $1,000.

There was no interview.

MEXICO

Meet the President

In Mexico's "guided democracy," there is only one real political party, only one real presidential candidate. Against token opposition, the chosen man could win overwhelmingly without ever showing his face. Yet after 50 years of rule, the country's all-powerful Institutional Revolutionary Party still strives mightily to keep its image bright and in its own uniquely Mexican way ask approval of the voters. Last week, on the eve of the July 5 presidential election, the sound of fiesta filled the land, and hardly a man who breathed could ignore the campaign.

ANTONIO HALIK

CAMPAIGNER DÍAZ ORDAZ
On with the fiesta.

Fireworks & Flash Cards. From the looks of things, the P.R.I. might be fighting for its political life. The candidate is Gustavo Díaz Ordaz, 52, government secretary in the Cabinet of incumbent President Adolfo López Mateos. His neon slogans glow atop scores of Mexico City buildings; they are whitewashed on hillsides, stone fences and adobe huts, strung across highways and back roads, plastered on thousands of homes, trees and cars. In major cities, P.R.I. advance men fan out in legions before each Díaz Ordaz appearance. At the textile town of Puebla last week, trumpets shrilled and firecrackers exploded to signal his arrival. Past the screaming, cheering crowds he drove in a blinding swirl of confetti—first white, then green, then red for the colors of the Mexican flag.

At the city's Ignacio Zaragoza Stadium, Díaz Ordaz made his way to the gaily draped platform. Facing him was a flash-card section of 2,000 people, flipping pictures of the President, then President-to-be. "Here," he began, "here in this little homeland, I conclude this pilgrimage through all the parts of our great land. I began in Dolores Hidalgo, seat and beginning point of our independence. And I conclude it in the state of Puebla, because here Mexico ratified before the entire world its right, its desire and its capacity to defend that independence." Then it was off to lay a wreath at a local monument, offer flowers at the shrine of a revolutionary hero, visit P.R.I. offices, lunch in a school auditorium, tour the local newspaper office, appear at a meeting of the Women's Council of Puebla, visit the Puebla University and finally dine with some P.R.I. big shots. "If we could only organize our industry this well," said one businessman after the Puebla rally, "all Mexicans would be rich."

Right & Left. When 11 million Mexicans go to the polls, they will give Díaz Ordaz some 90% of their votes. On Dec. 1 he will take over from López Mateos as Mexico's President for the next six years. The lawyer son of a government accountant, he is tough and shrewd—with enough humor to smile at his unprepossessing looks. An able administrator, his politics are somewhat to the right of López Mateos, who calls himself "left within the constitution." As government secretary, Díaz Ordaz crushed a 1959 railroad strike and arrested its leftist leaders; he jailed Mexico's top Communist (and top artist) David Siqueiros on a charge of "social dissolution," outlawed all Communist demonstrations.

At first mention of Díaz Ordaz as the P.R.I. candidate, the Communist weekly Política printed a grotesque cover photo of him, with the caption: "He will not be President." Though most far-leftists within the P.R.I. are still against him, some who had bitterly opposed López Mateos, have decided to play it cool and support the more conservative Díaz Ordaz.

As for Díaz Ordaz' relations with the U.S., Washington regards him as a friend but an independent one—which is just where most other recent Mexican Presidents have stood.

PERU

A Sensible Land-Reform Law

After eight months of political bickering, Peru last week had its first major land-reform program. The sensible new law is a patient compromise of three different bills introduced by President Fernando Belaúnde Terry and two major opposition parties.

Rather than give the government unlimited expropriation powers, the [illegible] islation scrupulously exempts the lar[illegible] highly mechanized coastal sugar ho[illegible] ings and efficiently run highland li[illegible] stock ranches that are vital to Per[illegible] economy. Instead, it aims mainly at [illegible] ciendas of 3,000 acres and up that [illegible] not pay their way, are either uncu[illegible] vated or marginally productive und[illegible] present ownership. The landholders—[illegible] whether private citizens, companies o[illegible] the Roman Catholic Church—will [illegible] paid fair market value for their exp[illegible] priated land in cash and 18- to 22-ye[illegible] bonds bearing 4% to 6% tax-free [illegible] terest; livestock, buildings and equ[illegible] ment will be paid for in cash.

By utilizing state-owned land alo[illegible] with the expropriated acres, Presid[illegible] Belaúnde hopes to eventually set[illegible] 1,000,000 landless peasants on the[illegible] own farms, giving up to 32 acres to [illegible] family in rich coastal areas, up to [illegible] acres in the highlands. If the progra[illegible] carried out successfully, the change[illegible] be dramatic. Most of the country's [illegible] able land has been concentrated in [illegible] hands of a few wealthy hacienda [illegible] ers ever since colonial days; the p[illegible] ants either worked as sharecroppers [illegible] scratched a bare living out of their [illegible] tiny plots, often no larger than a s[illegible] furrow. Today a peasant's life exp[illegible] ancy is only 32 years, and his incom[illegible] about $110 annually. To get maxim[illegible] effect from the new law, which [illegible] into effect next month, the governm[illegible] set up separate agencies offering c[illegible] and technical assistance to the [illegible] landowners.

BRAZIL

Part of What Was Wrong

"Compared with corruption, C[illegible] munist infiltration in Brazil has [illegible] insignificant," said Marshal Taurino [illegible] zende, chairman of the revolutio[illegible] government's Central Investiga[illegible] Committee. Brazilians could put it [illegible] other way: compared with corrupt[illegible] practically everything in Brazil has [illegible] insignificant. When the new governm[illegible] of President Humberto Castello Bra[illegible] had completed its housecleaning wi[illegible] tenth and final political "blacklist" [illegible] prominent Brazilians accused of C[illegible] munism or corruption prior to the [illegible] throw of President João ("Jan[illegible] Goulart, corruption indeed seemed [illegible] have first rank.

Peddlers & Sin Czars. In Goul[illegible] own official household, his presidet[illegible] press secretary, Raul Ryff, 52, do[illegible] —but in name only—as $6,000-a-[illegible] treasurer of one of Brazil's many se[illegible] security institutes; his real sideline[illegible] cording to the investigators, was [illegible] dling influence, and he picked up [illegible] 000 on one coffee deal alone. A se[illegible] member of Goulart's staff, his p[illegible] secretary, added $15,000 to his [illegible] $8,400 salary when Goulart name[illegible]

PRESS SECRETARY RYFF

Down with the crooks.

minister-counselor for economic affairs Brazil's Rome embassy; his nearest approach to the job was an all-expense seven-day *blast* in Rome, celebrating appointment. Still a third close Gou- art friend, the president of the General bor *Command*, was able to guarantee one a good government job—for $1,200 fee.

In Brazil's Congress, the investigators and that one of Goulart's Labor Party cuties had made a fortune by adding 35 people to his personal payroll in rn for a slice of their paychecks. fellow congressman, one Tenório alcanti, 58, required almost no in- gation: he was already well known fulltime gangster (13 killings to his t) and the sin czar who—fully ected by his congressional immunity t Duque de Caxias, on Rio's north- outskirts, into a wide-open vice ea famed for its brothels, gambling , brawling street fights and gen- fol-de-rol.

Smugglers & Taxidermists. On and went, from state Governors down il servants. The Governor of Ama- s state was found to have staked a huge ranch along the banks of Amazon, added an airstrip, dock warehouse, and used it to run up riwind trade in smuggled goods. er former state Governor coolly ted an entire $6,400,000 highway priation, once appointed 600 men e single post of state taxidermist— h to stuff every man, woman and in his state. Then there was the president of Brazil's state sav- anks, who became a millionaire ing into the till. His mistake was iting General Artur da Costa e to visit his sumptuous apartment, e off his wardrobe ("Fifty white uits alone," he beamed). Came olution, and Costa e Silva, now hardheaded War Minister, per- entered the banker's name on ge list.

he ten blacklists, 378 Brazilians been purged of their political for ten years, meaning that they hold public office or even vote

as ordinary citizens. At that, the list was not as long as expected. But as Marshal Rezende said: "If everything wrong with Brazil were removed, there would not be very much left."

OAS

Evidence to Consider

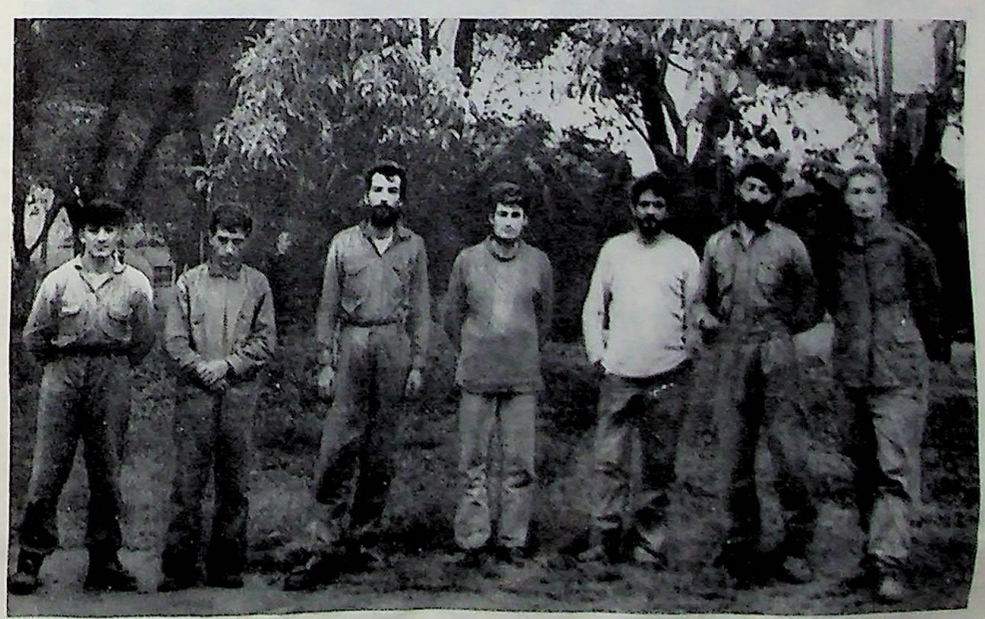
Last November Venezuela uncovered a three-ton Cuban arms cache on its northern shore, and took its evidence to the Organization of American States, charging Fidel Castro with "aggression." Last week, after seven long months of diplomatic maneuver, the OAS finally bowed to Venezuelan pressure and set July 21 as the date for a full-dress foreign-ministers meeting on Castroite subversion. Said Venezuela's OAS Ambassador Enrique Tejera París: "If the OAS cannot move now, we will become a laughingstock."

The OAS could go so far as to impose military sanctions against Castro, specifically a blockade to prevent further gunrunning. But the most that can be hoped for is a two-thirds OAS vote for an economic embargo to cut off Castro's remaining trade ($9,000,000 annually) with Latin American nations. The OAS may also recommend that Mexico, Chile, Bolivia and Uruguay complete Castro's diplomatic isolation by breaking their ties with Havana. When the final vote comes up, Mexico and Chile will probably abstain, and Uruguay and Bolivia are still question marks.

Even while the OAS was meeting in Washington, new evidence was building up against Castro. Last month officials in Surinam, *The Netherlands' self-governing colony on South America's northeast coast*, reported *that Castro gunrunners in high-speed launches are smuggling large amounts of arms down the Courantyne River for delivery to Communist terrorists in neighboring* British Guiana. The Dutch army has already sent 1,000 soldiers, plus two helicopters, to reinforce the border-river patrols, and a navy frigate has just steamed in with more much-needed help.

More specific was the first real evidence of Castro guerrillas in Argentina. *Last March Argentine national police captured six Castroites in a mountainous area of Salta province, near the* Bolivian border. Over *the next three* months, the police captured 27 more and identified several marauding bands. The captured men, some of whom had Castro-style beards, wore olive-drab uniforms, black-and-red armbands, and called themselves the "People's Guerrilla Army." As in Venezuela's F.A.L.N. terrorist group, *the men were between 25 and 35; at least one had been* trained in Cuba, another was *nicknamed* "El Cubano."

The guerrillas were armed wih submachine guns, pistols, grenades and explosives. Two of the guns were Belgian Fabrique Nationale automatic rifles that bore the Cuban military crest and were traced to a 1959 shipment to Castro. There were also five antitank projectiles of Russian make.



CAPTURED CASTROITES IN ARGENTINA

Up for a decision.

THE CONGO

Back Comes Moses the Beloved

In the predawn gloom at Leopoldville's Ndjili Airport, the DC-8 jetliner whined to a halt on the hardstand. Almost coyly, it poked its nose between a pair of aircraft chartered to ferry the last United Nations soldiers away from the Congo. From the hatch of the first-class compartment stepped a tall, plump man in a severe black suit, grinning like an African Fernandel. Burly, rifle-swinging Congolese cops and nervous *Sûreté* plainclothesmen hustled him into a black Chevy Impala with government plates, and off he sped into the flower- and sewage-scented dark. Thus last week with fanfare and foreboding did Moise Kapenda ("Moses the Beloved") Tshombe return to the Congo.

Come Home Again. A year ago, when he fled to Spain in exile, Tshombe was Moses the Hated. As the leader of copper-rich Katanga province's abortive secession, finally crushed by the U.N., he had been damned as a traitor to African nationalism and a stooge of the Belgians. But last week the stooge was being praised as a possible savior. In the chaotic Congo, that made as much sense as anything else.

Ironically, Tshombe came home on invitation of his onetime archenemy, Premier Cyrille Adoula, whose government now needs all the help it can get. Adoula's inept 35,000-man army has proved itself incapable of suppressing Communist-encouraged rebellions that already engulf three provinces and are spreading even farther. To many, it seemed that his only hope was reconciliation with the dissident elements that rack the land. Adoula apparently agreed, however reluctantly. As a trial balloon, he permitted his secretary-general to call openly for the liberation of long-imprisoned Leftist Antoine Gizenga, and amnesty for Rightist Albert Kalonji, onetime *Mulopwe* (god-emperor) of south Kasai.

"Free Us! Free Us!" The *Mulopwe* accepted readily, flew in from Europe in such haste that none of his political allies were on hand at the airport to meet him. Balancing the return of Kalonji and Tshombe was the elimination of Jason Sendwe, leader of Katanga's once rebellious Baluba tribe and provincial president of north Katanga. Captured two weeks ago, Sendwe and three of his lieutenants were knifed to death in Albertville by the *Jeunesse*, according to reliable reports. With the aid of the survivors, Adoula could form a compromise regime to keep some kind of order in the months ahead.

Tshombe, for one, was quite willing to be reconciled. After a four-hour meeting with Adoula, he called a press conference at Leopoldville's Zoo Restaurant. While monkeys chattered and brightly dressed Congolese couples twisted to the music of the *Conga Succès* jazz band, a grinning Tshombe shook hands, signed autographs and proclaimed: "I'm convinced that sincere, total reconciliation between all Congolese is the only absolute condition for saving the country from misery and anarchy." The crowd shouted back: "Free us! Free us!" This was heady stuff, but then everything in the months ahead would be.

TSHOMBE IN LEOPOLDVILLE
The stooge returned a possible savior.

CYPRUS

The Parable of the Blue Beads

There was once a sultan with a hare of jealous wives. Being a wise man, sultan secretly gave to each wife a b bead. When they sought proof of affection, he would say, "I love the o who has the blue bead." Thus he w able to live happily ever after.

In Washington last week, both Tu key's Premier Ismet Inönü, 79, a Greece's Premier George Papandre 76, wondered just who had Presid Lyndon Johnson's blue bead. They b come separately to the White Ho after the Cyprus crisis hotted up ea this month when Turkey prepared invade the island rather than all *enosis*—the union of Greece and C prus. Putting his prestige as an inte tional mediator on the line, Jo conferred first with Inönü. A wi wily little old man, Inönü tried to list U.S. support for the Turkish pl partition Cyprus, and had no basic j jection to Johnson's suggestion that Greeks and Turks settle their differe in bilateral talks.

President Johnson was considera less successful with Greece's Pa dreou, who bluntly rejected a propo meeting with Inönü, and implied U.S. interference in the dispute only marginally useful in view of United Nations' mediation efforts. S by this response, State Department cials let it be known that they sy thized with the Turks' plight, and h that Washington might no longer able to prevent a Turkish invasion Cyprus, which would almost certa precipitate war with Greece.

As both leaders headed for home was obvious that Johnson's mediat effort had failed. During his New Y stopover, Turkey's, Inönü comme that nothing could be settled a Cyprus "until the U.S. takes a st for either one side or the other. B rather than risk choosing between NATO partners, the U.S. quickly turned the Cyprus hot potato to U.N., which recently voted to con its peace-keeping operation on the land for an additional three months.

ITALY

Buccia di Banana

The six-month rule of Premier A Moro's coalition government reads *The Perils of Pauline*. The experts certain Moro would be brought d by strikes, growing inflation, the fa ing economy or just the incompatib of his coalition partners—the Socia and the Christian Democrats. But like Pauline, the Moro government vived every major crisis and even h to have a look of permanence. T last week, as Italians put it, the

VIET CONG PRISONER, CALL (ARMS CROSSED) & WESTMORELAND
Oil stains showed up on the Black Virgin.

its heights. Colonel Call was determined to make the Viet Cong pay for the lives they had taken and to gradually merge the oil stains.

Information extracted from Viet Cong prisoners by Vietnamese government interrogators convinced Colonel Call that two of the U.S. captives were dead. One Red prisoner admitted that he knew the actual location of their graves and offered himself as a guide. Followed by two battalions, Colonel Call flew in a helicopter to the spot indicated by the prisoner. Sure enough, there was a neat graveyard with a white gate. The helicopter sat down on a paddy near the graves. Suddenly shots rang out. Both pilots were slightly wounded, but Call and Chaplain Aubrey Smith made it back to the chopper, and the chaplain fired several shots at the enemy. "I was carried away," he explained.

It had been an ambush, with the phony cemetery as a lure. Quickly Call launched the South Vietnamese battalions, supported by five tanks and 14 armored personnel carriers against the Viet Cong defense positions. The Reds proved to be dug into three lines consisting of foxholes, dugouts and bunkers with escape tunnels. While the armor made a frontal assault, 15 helicopters and T-28s raked the Reds with machine guns, rockets and flaming napalm.

Call's armor broke through two of the Viet Cong lines and might well have carried the final one. But most of the tanks had to retire when they ran out of .50-cal. ammunition. The Viet Cong began moving around each flank, and the order came for government troops to disengage. Although the Reds remained in control of the field of battle, the cost had been catastrophic. The South Vietnamese lost only five dead and 29 wounded. Estimates of Viet Cong casualties were over 200. Though U.S. Viet Nam military chief Lieut. General William Westmoreland flew in especially to congratulate the troops, Colonel Call had little reason to relax. Intelligence reports said that the Viet Cong of Tayninh, aided by a long border with Cambodia, were for the first time building up to division strength, and were even equipped with artillery. "I've seen them," said one U.S. adviser, who had also spotted up-to-date road-building equipment. "Their roads," he said bitterly, "are better than the ones we've got."

BELGIUM

Peace

After 176 days of bitter haggling, Belgium's doctors got together last week with the government on its controversial health insurance plan. When it went into effect last Jan. 1, the plan triggered angry violence, culminating in a three-week strike in April. Most of Belgium's 12,000 physicians and dentists objected not only to the fees fixed by the plan (roughly half the rate before it went into effect) but claimed that it invaded their professional privacy: health insurance firms had full review authority over doctors' reports and diagnoses.

Countless minor compromises on both sides produced the new agreement, which still needs parliamentary approval. It offers the medical profession representation on top government medical-policy boards, grants participating medical men twelve hours a week to handle private patients, and provides an extra 50¢ travel allowance for each patient visited. Most important, the settlement saved face for the medics by re-establishing full professional and ethical secrecy.

SCANDINAVIA

And a Nurse to Tuck You In

(See Cover)

Like Norsemen of old toasting Balder, the god of light, Scandinavians celebrate summer with feasting and fireworks, music festivals and folk dancing until dawn. At lunch hour, heliotropic beauties stand on every sidewalk with closed eyes and hiked skirts, "mooning at the sun," as the Swedes say. Restaurant tables are laden with summer delicacies: crayfish, trout in sour cream, fresh eels, wild strawberries. In the milky gloaming that passes for night, Copenhagen cabarets work double shifts, and the nightlong sounds of revelry prompt a tourist official's tip: "Have fun in Denmark. Sleep in the next country."

It is the season when northerners finally shuck "winter sickness" and speak soulfully of the Good Life. Above all, the good life of summer is for the young. Graduating high school students, wearing old-fashioned visored caps, swarm through the cities celebrating their freedom. Stockholm's pimply *raggare*, teen-age rowdies who drive battered U.S. cars, roar up the Kungsgatan, stop to pick up a nymphet, then roar off again. Mothers and children troop off to cottages beside gleaming lakes and fjords to sail, swim and hike until fall. Except that they usually adjourn to summer palaces, Scandinavia's royal princes and princesses follow much the same routine. This summer has been different—but then, it's not every year that royal families get to marry off three daughters.

Red-ringed Date. First to be married in June was Princess Désirée, 26, third oldest granddaughter of Sweden's Gustaf VI Adolf. A beautiful, gifted textile designer, she married Baron Niclas Silfverschiöld, a rich, landowning aristocrat, and will live in a 40-room, 400-year-old castle. Desirée's elder sister Margaretha, 29, also will be in the headlines this week when she marries British Businessman John Ambler, 40. She will do the cooking in their Knightsbridge flat, but decided against promising to "obey" him in her marriage vow.

Red-ringed on every royal and near-royal engagement book in Europe is Sept. 18, date of the 21-cannon wedding that will reunite the ruling families of Greece and Denmark. In a Greek Orthodox ceremony in Athens, King Constantine of the Hellenes, 24, will take as his Queen Anne-Marie Dagmar Ingrid. Prettiest, youngest and liveliest of three royal sisters, leggy (5 ft. 8 in.), slim (120 lbs., 22-in. waist) Anne-Marie will also be the first at the altar—as well as the first Danish princess to marry a reigning monarch since 1680, when Sweden's King Karl XI took Ulrika Leonora as his Queen.

AP

SWEDEN'S PREMIER ERLANDER (CENTER) & KHRUSHCHEV

Before getting to the church on time, a gibing guest.

Grabbing the Oars. In the midst of the scramble to get Sweden's Margaretha to the church on time this week, Scandinavia's royals had to act relaxed and be nice to Nikita Khrushchev, who descended with his family for an 18-day good-will tour of Denmark, Sweden and Norway. There were moments of levity, such as the time when Khrushchev startled Swedish Premier Tage Erlander by grabbing the oars of a boat and rowing him nonstop across a 300-yd. lake. But all in all, Nikita was no great hit anywhere. He miffed the Danes right off by sneering that their prized, highly productive farms are too small. In Sweden, he again rankled his hosts at a dinner by declaring that Estonia, Latvia and Lithuania have been better off since Russia grabbed them in 1940.

Khrushchev's gibes at Scandinavian capitalism particularly galled the Swedes, who have remained neutral in the cold war and are doubly furious at having to spend $57 million to revise their defense planning as a result of Colonel Stig Wennerström's espionage for Moscow (TIME, May 9). Sweden is intensely proud of the humane, egalitarian society it calls "industrial democracy"—and with reason. From poverty so desperate that hundreds of thousands of its people fled to the U.S. in the 19th century, hard-working, ingenious Swedes have not only turned their predominantly capitalist economy into the world's second most prosperous (after the U.S.); they have also managed to distribute affluence more equitably than any other people on earth.

Denmark, Norway and Finland have prospered similarly, and in decades of unbroken Socialist rule they have also developed egalitarian, secure societies virtually unscarred by slums, unemployment, curable disease and illiteracy. The Danes, their aim is to ensure "the greatest possible happiness for the greatest number of people"; to Norwegians, to guarantee "security regardless of personal success."

Formidable physical barriers, most notably the great north-south mountain wall dividing Norway from Sweden, and old enmities have long separated the nations. Their different environments and histories have molded distinctive national characteristics. From their proximity to Western Europe and to each other in the north, most densely populated country, the Danes are the merriest, laziest, most sophisticated and animated (their compulsive small talk is known as *snak*). The non-Aryan Finns are of nomad Magyar stock and are caricatured as somnolent, introverted and dour. The isolated Norwegians have a reputation for being tough, brave and simple. The Swedes, who were greatly influenced in the 19th century by Germany, are thought of as stiff, shrewd and neurotic. If a Norwegian invents something, according to one theory, a Swede will patent it, and a Dane will be in charge of promotion.

In another parable, possibly told by a Finn, two Danes, two Norwegians and two Swedes are wrecked together on a desert island. By the time they are rescued, the Danes have formed a cooperative, the Norwegians are fighting, and the Swedes are waiting to be introduced.

Nonetheless, an agreement permits citizens of the Nordic bloc to live, work, pay taxes and draw welfare benefits anywhere in Scandinavia (including Iceland, which won its independence from Denmark in 1944). Danish-ruled Greenland and the self-autonomous Faroe Islands), and today they virtually have common citizenship. They are linked by similar parliamentary systems, laws, education, a Lutheran background, their hunger for books and food, the absence of class, race or religious frictions and governmental corruption. A passion for exercise explains the firm figures.

eyes and radiant complexions of their beautiful women.

Hard, Wild World. All save the Finns can understand the others' variant dialects of the same basic language. Most of all, they are united by centuries of wresting sustenance from rocky, grudging soil and hostile seas, in latitudes far north of any other ancient civilized society.* Norway, whose fjord-slashed, mountainous land is only 3% arable, has thrived largely on cheap, limitless hydroelectric power and its 14 million-ton merchant fleet, the world's most modern. Even in summer, most of Scandinavia is a hard, wild world of trees and water, the elements that drew the first settlers northward 10,000 years ago. Finland's 60,000 lakes take up more territory than all its farms. Since forests cover 71% of Finland—highest proportion in Europe—it has had to build a strong, well-rounded industrial base, helped, paradoxically, by Russia's ruthless insistence on huge postwar reparations. Denmark, fearful that it may lose markets for its bacon and dairy products, is also vigorously pressing industrialization.

Reindeer Tongue. The whole vast region, laced with glaciers and rushing rivers, reaches from Russia west to the Atlantic, from the bustling Baltic coast to snow-capped mountains high in the Arctic Circle, where the sun does not sink below the horizon for many summer weeks. The area, including 160,000 islands, is five times the size of Great Britain (pop. 52 million), but it has only 20 million inhabitants.

Nearly half that many Americans have Scandinavian blood. Yet, surprisingly, it has only been in the past few years that the U.S. tourist has discovered these rugged, lonely lands. As accessible as any of southern Europe's overpriced, overcrowded resorts, the Nordic nations have some of the Continent's newest and best-designed hotels. Many Scandinavian restaurants are world-famed, and even out-of-the-way farming and fishing villages often boast good inns specializing in robust local dishes, such as *gravlaks*, Norway's salt-and-spiced salmon; fresh cloudberries, a Finnish favorite; or Lapland reindeer tongue. Department stores bulge with elegant objects that would cost twice as much in the U.S. Almost any city boasts a tax-supported opera house and theater; at Tampere in Finland, one theater jutting across a lake has disposed with a revolving stage, has a revolving auditorium instead.

No Sauna Aloft. Express trains, which kill 2,000 reindeer annually, are fast and comfortable. SAS, jointly owned by Sweden, Denmark and Norway, is one of the world's best-run airlines, introduced direct Chicago-Scandinavia jet service this spring. (On SAS charts, one-seventh of Sweden, one-third of Norway and a quarter of Finland lie above the Arctic Circle.

flights to Finland, a leaflet apologizes for the fact that there is no room for a sauna.) Scandinavians are honest, hospitable, and most of them understand English. One of their most useful tourist services is the summer camp that specializes in taking children for a few days while parents gad about on their own.

Nowhere else in Europe does good design make itself so universally felt. The north has produced few great artists of the stature of Edvard Munch; but architects such as Finland's Alvar Aalto and Denmark's Arne Jacobsen are among the world's most admired. Dozens of northern artisans—ceramists, glass blowers, weavers, cabinetmakers and silversmiths—have made Scandinavia an international synonym for elegant functionalism. Whether in a car or a carpet, Scandinavian artisans at their best blend traditionally solid craftsmanship with a daring use of form or clever technique.

To U.S. eyes, Scandinavia, like its handicrafts, is a happy union of past and present, of comfortable conformity and bold innovation. Skyscrapers live in harmony with magnificent 8th century castles; sleek new streetcars glide silently over cobbled streets. In Sweden, the visitor may be whisked from a new nuclear power plant outside Stockholm to 500-year-old Uppsala University, where the founder of modern botany, Carolus Linnaeus, studied in the 18th century. ("God created," say the tidy Swedes. "Linnaeus put things in order.") Stockholm cops, though issued guns during Khrushchev's visit, normally cling grimly to their accustomed sabers. Proud Viking longboats are lovingly preserved in an Oslo museum. At Drottningholm, a summer palace across Mälaren Lake from Stockholm, 18th century operas are staged for the public with their original sets in the only surviving court theater of the period.

Chest of Tattoos. The three royal families are themselves a pleasantly nostalgic reminder of Scandinavia's great conqueror-kings. Long since shorn of all power, the democratic monarchs are universally liked by their subjects and show none of the condescension that surrounds the British throne. Danes seem happy enough that King Frederik lives in a wing of the Amalienborg Palace in downtown Copenhagen rather than in the gloomy, inconvenient Christiansborg Castle where the royal family lived in the past. And they did not revolt when a too-candid picture revealed that the towering (6 ft. 4 in.), rugged King had a chestful of tattoos. Norwegians felt genuinely sorry for King Olaf, a dedicated yachtsman and onetime Olympics champion, when Khrushchev's visit forced him to forgo a regatta at Hankö Island last week.

Princess Margrethe, Denmark's heiress apparent, was the hit of the evening on TV recently when she gave a lively, informal account of an exports-building trip she had made through the Far East. Danes have had a warm spot for Mar-

grethe's kid sister ever since the King allowed in public years ago that the little girl was "strong-minded" and had "bad habits." They worry that the princess may be in for political unpleasantness as Greece's Queen. Many Danish parents sided with their Queen when she tried to make Anne-Marie wait another year before getting engaged. As it was, the wedding was originally set for next January, and was only moved forward when Constantine mounted the throne after his father's death last March.

Victoria's Relations. In preparation for the marriage, which will be held 19 days after Anne-Marie's 18th birthday, she is taking a recorded Linguaphone course in conversational Greek, a present from a Copenhagen record distributor. Meanwhile, since Constantine speaks little French (hers is fluent) and no Danish, they chat in English, which both speak well.

Anne-Marie, who belongs to Europe's oldest dynasty, is a distant cousin of her husband-to-be,* and is also a descendant of Queen Victoria, Constantine's great-great-grandmother. They first met in July 1957, when she was not quite eleven and he was a naval cadet on a Greek training ship. The rumors started four years later. Anne-Marie, who was not overly bright as a student, attended two Swiss schools to learn French but got most of her education at the private coed Zahle School in Copenhagen. One day, startled by a piercing wolf whistle from outside, a Zahle teacher snapped in Danish: "Some kind of punk!" The whistler was Constantine, come to carry Anne-Marie's books back to Amalienborg Palace.

Two at the U.N. Scandinavia's royal families have played an influential part in the north's emergence from the traditional isolationism that ended with World War II. Since then, Norway and Denmark have bound themselves to Europe as charter members of NATO and EFTA, the Outer Seven trading bloc. Finland, Russia's only European neighbor that has not been plucked behind the Iron Curtain, has meticulously observed the neutrality agreement imposed on its government by Moscow after its valiant defense against the Red army. Nonetheless, the Finns are also associated with EFTA and have strong economic and emotional ties to the rest of Scandinavia.

Even Sweden, which last fought a war 150 years ago, is now determined to defend its neutrality, if necessary. Swedish troops performed ably as members of the U.N. peace-keeping mission in the Congo. Two Scandinavians, Norway's Trygve Lie and Sweden's Dag Hammarskjöld, ran the U.N. creditably for 15 years. When Hammarskjöld died in a 1961 plane crash, he had extended U.N. influence and broadened his countrymen's horizons. Younger Swedes, who previously showed little interest in world affairs, now generally support Western proposals for an ambitious Swedish foreign aid program in keeping with its affluence. "They used to turn instinctively inward," says Premier Tage Erlander. "I sense a great change."

Scandinavians are reaching out in other media. Ingmar Bergman's tortured film canon, topped by *The Silence*, has built a worldwide movie cult unequaled by any Scandinavian since Garbo's girlhood. Half a dozen Swedish singers, from Kerstin Thorborg to Birgit Nilsson, commute between Stockholm's Royal Opera and Manhattan's Metropolitan. Swedish Economist Gunnar Myrdal, author of a classic study of the U.S. Negro and his problems, who went on to become executive secretary of the U.N.'s Economic Commission for Europe, is currently writing what promises to be the definitive work on solutions for the underdeveloped world.

For all their geographical proximity, there is only a partial pattern in the customs, the people, the cultures of Scandinavia.

Norway has been called the Scotland of Scandinavia, and its people share the Highlander's hardihood, serenity and national pride. After 91 years of enforced "union" with Sweden, Norwegians won their independence in 1905 and actually elected their King, the late Haakon VI, who led its valiant wartime resistance movement. Ruled for 29 years by the Labor Party, Norway has an economy-model welfare state known as the Golden Mean that

* They had the same great-great-grandfather, Denmark's King Christian IX (1818-1906), whose skill at bagging the better thrones for his children earned him the sobriquet "Father-in-law of Europe." One of his daughters was *Queen Alexandra, wife* of Britain's King Edward *VII*; another, *Princess Dagmar*, married Russia's *Czar Alexander III*.

Gurukul Kangri Collection, Haridwar

costs 5.5% of national income, *v.* 8.2% in Sweden.

Scandinavia's smallest, most thinly settled population (3,600,000) is in Norway, a beautiful land that is 75% lakes, mountains and glaciers. To sustain its people, Norway exports lumber products, aluminum and 90% of the catch from rich fishing grounds such as the Lofoten Islands. But the nation's most vital resource is its merchant fleet. With 2,833 freighters in operation, Norway has more tonnage afloat than the U.S. One man who controls much of Norway's shipping is Niels Onstad, who lives in a spacious white mansion outside Oslo with his wife, onetime Skating Star Sonja Henie. Many of Norway's ships are local inventions such as "parcel" tankers, which can carry up to 40 different liquids simultaneously.

Norwegians are the most democratic and bourgeois of northerners, regard ostentation as a cardinal sin. They are also Scandinavia's most proficient athletes; everyone from five to 90 skis, swims and hikes. And many of them have summer cottages on the shores of the endless fjords; often businessmen commute to work by hydrofoil. Though 96% of the population is nominally Lutheran, the church plays little part in the nation's life. Says one churchman: "We are suffused with a pale benevolence instead of the antagonism we used to know."

Next to drunkenness, the national vice, Norway's biggest problem is that it has too many languages. Riksmål, of Danish origin, is spoken by educated townsfolk; nationalists have promoted an invented "Norwegian" tongue called Landsmål, based on rural speech. Both Riksmål and Landsmål are now official languages and taught in school. "If a man knows eight languages," they say, "seven of them are Norwegian."

Finland, a Swedish colony for 650 years, became a grand duchy of Russia in 1809, prompting the ringing plea: "Swedes we are no longer. Russians we can never be. Therefore we must become Finns." Finland finally proclaimed its independence in 1917, has been Finnish ever since. An earthy, engaging, moody people who have fought war after war, and always started again from the ruins, they regard *sisu*, plain *guts*, as the highest virtue. For, *say* Finns, "Whatever happens, *we will* be on the wrong side."

On the losing side against the Red army in World War II, the Finns in 1944 were forced to pay an exorbitant reparations bill: 17,680 square miles of territory and $300 million worth of goods, including industrial products that they had no means of producing. It took know-how as well as *sisu*, but they did it. The Russians, who had also occupied the naval stronghold of Porkkala just west of Helsinki, finally withdrew in 1956.

In the shadow of Soviet guns, Finns must be discreet. Even so, many outspokenly deplore President Kekkonen's servile attitude to Moscow. Kekkonen's attempt to sell Scandinavia Moscow's plan for an atom-free zone in northern Europe was roundly snubbed by the other Nordic countries.

The vast (118,000 sq. mi.), rugged land is becoming industrialized. However, wood products still account for three-quarters of its exports, and the government has only recently awakened to the fact that the forests have been badly overexploited. Finland's wage-price spiral rises unchecked, largely because of welfare state benefits that are beyond its means. The Finns are such heavy topers that the government wraps every bottle of liquor in a temperance tract. More worrisome for a nation of only 4,500,000 is the legal abortion rate, which has doubled in ten years, and at 71.6 per 1,000 is one of Europe's highest. There are an estimated 20,000 illegal abortions yearly as well.

As they have rebuilt and restocked their own country, Finnish architects and designers have stamped it with a clean, distinctively Finnish élegance that makes Leningrad, less than an hour's flight away, look drab. To the delight of sauna-worshiping Finns, the sauna vogue has become international, providing Finland with a new export.

Denmark has a special charm, a blend of Baltic wit and North Sea sauce. And the pride of Danes stems from more than possession of Tuborg and Carlsberg beer, or of Europe's oldest royal house. "The Danes are superb salesmen of themselves," sniffs a Swede. "They play their little-mermaid, Hans Christian Andersen image to the hilt." Some 4,500,000 people live in the tidy land north of Schleswig-Holstein, and they wallow in *hygge* (pronounced HUG-ga), which simply means coziness. It is an indispensable word in Danish that reaches everyone, everywhere. People plan a *hyggelig* evening with friends; an old farmhouse can be

hyggelig; one has a *hyggelig* time curled up in a chair with a book—free from worry and the trouble of thinking about annoying things.

Copenhagen is a swinging town with the gayest nightclubs in Scandinavia and an easy tolerance that leads Danish girls to say, "I'd rather have a Negro boy friend than a Swede any day." It also boasts the Berlingske Tidende, one of the great newspapers of Europe, and a Premier, Jens Otto Krag, who has not only outstanding skill but also one of Denmark's favorite actresses as a wife. Copenhagen's Tivoli Gardens may be the world's finest pleasure park; there, most summer nights the fireworks splash

NORDISK

CRAGGY SCANDINAVIA COAST
Where cloudberries grow and salmon spawn.

the city with light, and a cannon booms the midnight signal.

In Denmark, the social services began at the end of the 19th century, but were pulled together in the Social Reform Act of 1933. Denmark's efficient farmers, who own 90% of their land, have largely financed refinements in the system that have left virtually nothing undone, short of nurses to tuck the pampered citizenry into bed at night. Fact is, even that service is available—from members of the Home Help Service, a new wrinkle which provides domestic help for sick housewives.

Sweden is either miracle or mirage. In summer, all 173,423 sq. mi. of it seem to be filled with dimpled, unattached blondes. In fact, only 40% of Sweden's 3,700,000 women are blondes. The country also lacks such other vital resources as coal, oil and fertile farmland. Like the other Scandinavian countries, Sweden must export to survive. In desolate Arctic wilderness lies Sweden's treasure, the greatest reserve of high-grade iron ore in all Europe. In this wasteland of rock and ice lies Kiruna, which claims to be the world's biggest city (11,000 sq. mi.) and exists to exploit the lode. Under floodlights in winter and the midnight sun in summer, its hardy miners and technicians work night and day to bring the treasure to the surface.

In area, population and affluence, Sweden is the envied, energetic giant of the north. It has the highest wage scales, highest living standards and highest productivity in all Europe. In the past 25 years, its industrial output has trebled and has crossed the world. The auto industry's big success story is the Volvo, sparked by dynamic Gunnar Engellau, the first European automaker to build a North American assembly plant. Behind Swedish industry's plans to spend a billion dollars for new plant and equipment this year stand such powerful banking and business dynasties as that of the entrepreneurial House of Wallenberg.

Sweden's quiet miracle has been wrought by a potent triumvirate of employers, unions and government that has virtually eliminated strikes in Swedish industry, boosted productivity and assured its workers the best pay rates and fringe benefits in Europe. By milking the capitalist cow instead of nationalizing it, Sweden's labor government sustains the comprehensive social-welfare program that is creating "a home for its people."

What is the lesson of the north today? Much has been made of the sexual and suicidal pattern of the Nordic countries. Some argue that it is all the fault of the welfare state. The statistics are murky and conflicting. True, mating habits in rural Scandinavia may differ from accepted norms in Syracuse or Sacramento. This probably has more to do with rural isolation and the long winter months than with such newfangled ideas as pensions for Grandpa or socialized playpens. In any case, from Oslo to Stockholm to Copenhagen, no one seems to mind all that much. Busily building prosperity for all, Scandinavia has in large part become a place, as Denmark's Poet-Bishop N. F. S. Grundtvig foresaw a century ago, "Where few have too much, and still fewer too little."

MALAYSIA

The Visiting Armenian

It was a gala scene in Djakarta's plush Hotel Indonesia. A couple of hundred milling guests sipped lemonade or crowded around the guest of honor, Soviet Deputy Premier Anastas Mikoyan, flashing his toothy smile. Near by, a 28-girl choir in tight, bright sarongs of multicolored, hand-printed cotton reverently purred Djakarta's hit tune, *Crush Malaysia.*

It was just what everyone wanted to hear, for Sukarno had hardly returned from the recent Malaysia peace talks in Tokyo when he loosed his bandits again in the rain-drenched jungles of northern Borneo. One band of Indonesians ambushed a British patrol, killing five Gurkhas and wounding six others. Hitting back, Malaysian defenders killed at least seven Indonesian marauders in isolated clashes. There seemed no end to the dreary warfare.

Nor would there be if Mikoyan had his way. In Indonesia for an eleven-day good-will tour, he boasted that Moscow was supplying "very modern arms" to help Sukarno, vowed continued Soviet sympathy with "the struggle of the new emerging forces." When it came to promises of a more concrete kind, Mikoyan was a little vague. Apart from a massive arms aid, at least $300 million in Soviet development aid credits has vanished without trace in Indonesia's bottomless pit of corruption, inefficiency and poverty. On his current junket, the crafty Armenian could not help seeing that since his last visit to Sukarno's land two years ago, the swarms of scrawny, barefoot children had grown thinner and hungrier and the tens of thousands of beggars blocking the streets and sidewalks more pitiful and insistent in this the 19th year of the era of the affable Bung.

RUSSIA

The Case Against Brodsky

Since Nikita Khrushchev put a chill on the "thaw" in Russian letters last year, Soviet artists and writers have slowly, gradually been working back toward the level of relatively free expression that reached its high point with Poet Evgeny Evtushenko's mass readings in Mayakovsky Square. Recently, however, intellectuals have once again felt the cold wind of literary conservatism. This time it blew not on a politically outspoken, widely published writer, but rather on one of Russia's many literary "abstainers"—ostensible amateurs whose works are circulated by hand, thus precluding their being drafted into the government's agitprop machinery, as Evtushenko and others occasionally have been.

Like Boris Pasternak, Poet Joseph Brodsky was such an abstainer. A soft-spoken, red-haired Jewish youth who lived in Leningrad, he chose not to join a writers' union, refused to serve on editorial boards, earned his living as a stoker, a metalworker, or occasionally as a laborer on geological expeditions. Meanwhile, he wrote poetry for his own enjoyment and that of his friends, among them some of Russia's best-known literary lights.

The Charge. Brodsky's haunting, moody, calculatedly nonpolitical verses were circulated by hand through intellectual circles, won him a growing reputation. Inevitably, he came to the attention of the *druzhinniki*, the witch-hunting vigilantes whose jobs include directing traffic, controlling crowds and bringing recalcitrant intellectuals and other "hooligans" to justice.

Since they could not fault Brodsky on the content of his poetry, the *druzhinniki* invoked that convenient Catch 22 of Soviet law: "parasitism." The case against Brodsky last February charged him with being "a pseudo-poet in velveteen trousers" whose "earnings were casual, which shows that he did not fulfill the most important constitutional duty to work honestly for the good of the motherland."

The Trial. Last week a transcript of Brodsky's trial filtered out to the West. Published in Hamburg's responsible weekly Die Zeit, it spoke volumes about the fate of the abstainer in Russia today:

Judge: What is your profession?

Brodsky: I write poems, translate. I see it that . . .

Judge: Have you steady work?

Brodsky: I write poems.

Judge: That doesn't interest us. What interests us is with what institution you are connected.

Brodsky: None.

Judge: And who recognized you as a poet?

Brodsky: No one. And who placed me among the human race?

Prosecutor: Can one live from the money you earn? And doesn't one need shoes and suits?

Brodsky: I have one suit, an old one, but still a suit. I don't need a second one. I have worked. I have written poems . . . Building Communism doesn't only mean standing at a work bench or plowing the earth. There's also spiritual labor.

Judge: Forget the big words.

The Sentence. As the proceedings droned on, telegrams and letters arrived from the poet's prestigious friends —Composer Dmitry Shostakovich, Lenin Prizewinning Authors Samuel Marshak, Kornei Chukovsky and many others—protesting the absurdity of the trial. Such public boldness among artists took not only courage but conscience, but their protests were in vain. Brodsky was sentenced to five years of "useful labor." His job: carting manure at a camp near Archangel.

ANTARCTICA

Mercy Mission to McMurdo

For seven months of the year, the vast, ice-heavy continent of Antarctica is cut off from the rest of the world. Huddled in their outposts scattered along the continental shelf, scientists and technicians of a dozen different nations live a cocoonlike existence, surrounded by snow, space, mountains, glaciers and continuous night. The first historic break in their winter isolation came last week when a U.S. Navy plane landed on skis in the dark of night at the U.S. Antarctic base on McMurdo Sound, and then returned to the sunny outside world without mishap.

Orange Streamer. It was a mercy mission to save the life of Seabee Bethel McMullen of Port Hueneme, Calif., who had fallen from the second story of the McMurdo base fire station and landed so heavily that he nearly scalped himself and suffered cerebral concussion and a fractured spine. Because his legs were paralyzed, McMullen was placed in traction, and word was flashed to Washington that an immediate operation was necessary to save his life. There are no surgeons among the reduced 215-man winter staff on the icecap, and the Navy ordered a U.S. surgical team to risk the dangerous flight.

Two huge Hercules aircraft took off from Quonset Point, R.I., and reached the U.S. staging base at Christchurch, New Zealand, the following day. Flights from Christchurch to McMurdo have been made with almost monotonous regularity for the past eight years —but only in the sunlit months from December to March. During April the light shrinks to a thin orange streamer and then flickers out, to be succeeded by continuous night and a winter season of swift blizzards and howling gales with temperatures as low as −127° F. Not until August does the sun return.

The flight was led by Lieut. Robert Mayer, 40, of Yardville, N.J. Before takeoff, Mayer said, "No fears. I'll just be talking to the Man upstairs and let him guide me." Hurriedly, seamen at the Christchurch base dumped mail onto the plane for the isolated Americans, who hadn't seen a letter for five months. Messages from McMurdo urged, "Heavy on the eggs," but extra fuel, and a shipment of unrequested apples and mixed fruit pressed on the lads by the Salvation Army, left no room for that request. Flying south from Christchurch, Mayer, his 15-man crew and two surgeons were soon over the deep green of the Antarctic Sea. Below were the ships of New Zealand's navy, which had quickly deployed to rescue stations in case of trouble. Then the plane approached its landing point on the bleak continent that is twice the size of the U.S. and covered with a layer of ice up to two miles thick.

Frozen Beards. At McMurdo, men had worked all day under the ghostly lunar light extending the snowy runway

to 10,000 ft. On the strip, oil drums were set alight to make a landing flare path, and New Zealand's nearby Scott Base turned on all its lights as a beacon in case of trouble. "The place is lit up like a Christmas tree," exclaimed the pilot over his radio. Down to McMurdo between jagged peaks came the Hercules, as a small group of Americans on the ice breathed tensely through frozen beards. The landing was perfect, and, while ground crewmen serviced the plane, the Salvation Army's apples were off-loaded along with the mail and a helicopter carried Seabee McMullen from McMurdo's lone one-room hospital to the airfield, four miles away.

At once, the Hercules took flight, its injured passenger safely aboard, doubtless unaware that he had been the object of what was probably the greatest medical rescue in recent years. In the hospital at Christchurch, surgeons decided against operating on McMullen and expressed fears that the fall back at McMurdo may leave him paralyzed for life.

"I am greedy. I want to live while I'm alive," French Cinewaif **Leslie Caron**, 33, told Hollywood Columnist Sheilah Graham. Sheilah understood, but Leslie's husband, Director Peter Hall, didn't. Filing suit for one of those messy British divorces, he named Cinemactor Warren Beatty, 27, as the man with whom she had committed adultery in Chicago, Jamaica and Beverly Hills. Blue eyes somber beneath her gamine bangs, Leslie flew in to London from Paris to see her children, Jennifer, 5, and Christopher, 7. At Hall's request, a London court had barred her from taking them out of the country.

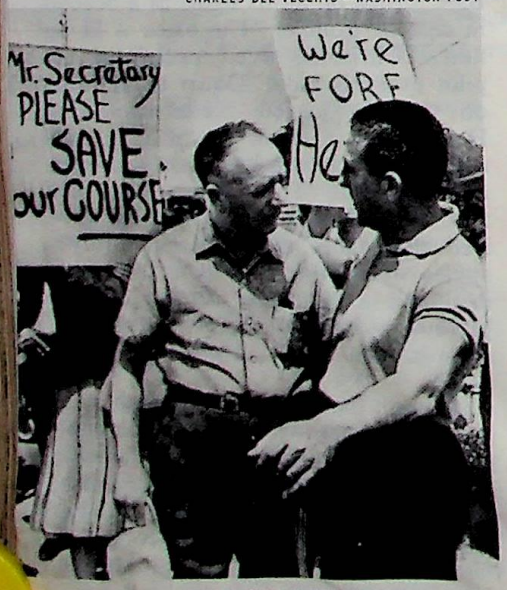
. . .

How ya gonna keep him down on the farm when he's out on $140,000 bail (and appealing his three mail-fraud convictions)? It's more than ordinarily tough when the country boy is Texas Fizz Kid **Billy Sol Estes**, 39. A 24-ft. sign now rising over an El Paso building reads "Billy Sol Estes, Importer and Exporter of Fine Products," and though Pecos Bill is listed only as an "employee" of the shop (one way to avoid a stampede of creditors), it looks as though he is starting up for real in the Mexican serape and sombrero business. A yellow sunburst on the sign, lit with 476 flashing lights, will surround the well-known, smiling face.

. . .

East Potomac is a neighborhood golf course that Washington Post Cartoonist **Herblock**, 54, likes to waffle around on. Westerner **Stewart Udall**, 44, thinks of conservation in terms of wide open spaces, not a metropolitan nine holes. The twain finally met, however, after the Interior Secretary okayed plans to build a parking lot and aquarium on the course, bringing an anguished letter from his friend Herb challenging Stew to a friendly round, "because I want him to see the course from a player's viewpoint." Udall shot a 46 to Herblock's 51, but the loser scored a tactical hole in one at the ninth. Flushed with triumph, Udall announced, "You were right and I was wrong. What we need is more golf courses."

CHARLES DEL VECCHIO—WASHINGTON POST



HERBLOCK & UDALL
"You were right."

. . .

Her memory, at 83, isn't quite what it once was, and she does have her quirks, such as keeping a Manhattan mansion vacant and boarded up on a $6,000,000 plot at Fifth Avenue and 61st Street. No matter. She is **Geraldine Rockefeller Dodge**, niece of John D., childless widow of Munitions Heir Marcellus Hartley Dodge, and in doughtier days she played hostess to the world's largest one-day dog show (4,456 entries in 1939) at her 500-acre estate in Madison, N.J. Today, she mothers 40-odd pedigreed German shepherds, retrievers, bloodhounds, beagles and a poodle, and kennel costs—nothing but prime cuts will do—ran to $50,000 in 1963. Her guardians want to put the mutts on soup bones, but a Manhattan judge ruled let them eat steak. Mrs. Dodge, said he, has so many millions that the savings from cheaper dog food would hardly be noticed.

. . .

Thousands packed the Iowa, Illinois and Wisconsin shores, and more than 100 small boats followed in pursuit, as three contenders puffed along in the first commercial riverboat race on the upper Mississippi in modern times, a six-mile feature of the Dubuque summer festival. The tug *Coal Queen* took an early lead, but the *Mary* soon pulled ahead, leaving the excursion liner *Julie N. Dubuque II* to finish third. Owner of the *Coal Queen* was Iowa's poet of the pajama game, Author-Playwright **Richard Bissell**, 51, a Harvardman you can always tell will go along gamely with whatever the city fathers dream up. His wife vowed they would win next year, and Bissell grimaced, "Hope springs eternal, but those new engines are going to cost me a lot of money."

PICTORIAL PARADE

LESLIE CARON
"I am greedy."

. . .

Helen Keller celebrated her 84th birthday in Easton, Conn., and though she no longer writes or lectures, she is, reports a friend, a woman "of great dignity, who is growing old with grace."

. . .

Subtle, processional monumentality, raved admirers. Instant Stonehenge, snapped critics of the proposed Franklin D. Roosevelt monument, eight huge slabs in a cluster, engraved with passages from F.D.R.'s speeches. Washington's Fine Arts Commission, which took the anti-druidic view in 1962, has now finally approved the design after some changes were made, including the addition of an 18-foot-tall statue of the President. But the memorial still didn't pass the last roundup. At a Hyde Park meeting, **Anna Roosevelt Halstead**, 58, **James**, 56, **Elliott**, 53, **John**, 48, and **Franklin D. Roosevelt Jr.**, 49, unanimously voted firm opposition. "We don't like it," said James. "And I'm sure father wouldn't either."

. . .

"Anyone who has threescore years and ten resents it," growled **Edward, Duke of Windsor**, vetoing cake and candles for his 70th birthday dinner at Maxim's. But somehow he seemed anything but resentful. At an 18th century costume ball for 600 given by Countess Sheila de Rochambeau at her chateau outside Paris, the duke in lace jabot and Royal Stewart tartan kilt danced the night away with his duchess, an enchantress ablaze in shimmering red cloak and white feathered wig designed by Yves St. Laurent.

ROMAN CATHOLICS

Answer on the Way

For many Roman Catholics, the possibility that their church might modify its stand against birth control is the most pressing current question of moral guidance. Last week Pope Paul VI said that an answer is on the way.

Speaking to 26 cardinals of the Roman Curia, the Pope announced that in light of new medical developments, birth control "is being subjected to study, as wide and profound as possible, as grave and honest as it must be on a subject of such importance." Without mentioning the birth-control pill by name, the Pope indicated that there might possibly be a need to reinterpret natural law "in the light of scientific, social and psychological truths, which in these times have undergone new and very ample study and documentation."

Until the study of the pill by Vatican theologians is completed—and Paul gave no indication whether it would be resolved by the time the Vatican Council reconvenes in September—Catholics were still bound to obey Pope Pius XII, who declared that the pill was a form of sterilization, and therefore an illicit means of birth control.

ATHEISTS

"We Fled"

Mrs. Madalyn Murray, the Baltimore atheist with the flawless legal touch when persuading courts to ban school prayers or cancel tax breaks for churches (TIME, May 15), suddenly found herself in a peck of trouble with the law. Last week, she packed up her mother, her brother, two sons, daughter-in-law, cat and dog and flew to Hawaii. Madalyn's family thereby forfeited jumped bail bonds totaling $8,750, and violated two Baltimore court orders, and fled a dozen charges ranging from assault to contempt of court.

Mrs. Murray explained it all in her own profane way: "We fled persecution. We fled for our god-damned lives." The persecution, as she put it, began a month ago when a Baltimore anesthetist named Leonard Abramovitz and his wife accused Madalyn of inducing their 17-year-old daughter Susan to give up her Jewish faith and move into the Murray household. A Baltimore court placed the girl in the custody of her aunt and uncle, and forbade the Murrays to have any contact with her. Instead of staying with her relatives, a fortnight ago, Susan upped and married Madalyn's son Bill, 18.

"Hit 'Em Harder." Last weekend the police came by the Murray home to see if Susan was there. She was, but since the cops had no warrant, Madalyn had no intention of turning her in. The discussion led to a push here, a shove there and finally to a full-fledged brawl, as neighbors shouted, "Kill them! Hit 'em harder! Get that bitch!"

Taken to court to hear the charges against the family, Son Bill did not help matters by locking his legs around a table and howling: "I won't go back to that cell." As six policemen carried him out of the courtroom, Bill yelled at Judge Joseph Finnerty: "You Christian! You Catholic!" The judge promptly added a contempt-of-court charge to the list of Bill's other offenses.

Released on bail, Mrs. Murray decided that enough was enough. "If I go before that kangaroo court, I wouldn't stand a chance," she said. "The police would bring in 250 witnesses—neighbors who hate me." At the Washington airport, she announced that Hawaii would be a good place to carry on her work as head of two nationwide atheist organizations, since "80% of the Hawaiians are Buddhist, and Buddhists are absolute atheists."

HENRY GROSSMAN

MRS. MURRAY, SONS & SUSAN
Jumping bail to be among Buddhists.

Unpleasant Surprises. Reaching Honolulu, Madalyn faced a few unpleasant surprises. Buddhists, who do not like to think of themselves as atheists, constitute only about one-third of the island's population. The majority of the rest of Hawaiians are Catholic. And back home in Baltimore, a judge added two more contempt-of-court citations to the charges, arising out of the police melee, that a grand jury returned. Mrs. Murray may never have to face the music. Although she is legally subject to extradition, Baltimore seldom tries to recapture defendants on the lam except for serious crimes, and the state's attorney general says that Mrs. Murray "isn't worth extraditing." Besides, many felt that it might be better to let the whole matter drop; the Baltimore Sun declared that the city had "treated Mrs. Murray shabbily."

PROTESTANTS

Preach, Teach, Live, Win

That subspecies of fundamentalism, the "holiness" church, lays such stress on goodness, consecration and sanctity that most Christians boggle at the thought of meeting the standards. But the Church of the Nazarene has no fewer than 405,000 members who are willing to try. Last week, at its 16th quadrennial general assembly, more than 22,000 of them squeezed into the Portland, Ore., Memorial Coliseum for a mammoth communion service. Six hundred ministers, most of them dressed in business suits rather than clerical garb, distributed the wafers, along with 45 gallons of grape juice in tiny plastic cups, to the faithful.

"Heart Holiness." The Memorial Coliseum was decorated for the occasion with banners that read "Preach, Teach, Live, Win" and "In the Power of the Spirit"—slogans that sum up the Nazarene way of life. Conservative in doctrine, the church interprets the Bible literally, believes in "heart holiness"—that God's gift of the Holy Spirit allows man to overcome his inclinations toward evil and achieve perfection on earth. In pursuit of perfection, the hymn-loving Nazarenes do not smoke, drink, go to movies or even read the Sunday papers. Many families have altars at home, regard a 10% tithe as the floor rather than the ceiling to church donations. Among major U.S. churches, they lead the nation in Christian giving, with a per capita average of $147.78 per year, compared for example, to $88.08 for United Presbyterians.

The Nazarene Church grew out of the 19th century's holiness movement, a frontier-wide rebellion against the formalism of mainstream Protestant churches. Organized in 1908 by a group of dissident ministers, many of them Methodists and Baptists, the church is strongest in small Midwestern towns, but missions are now scattered from India to Peru.

A New Goal. As their church approaches middle-age, some Nazarenes worry that the light of faith may be dimming slightly. "Already we're showing hardening of the arteries," said Dr. Samuel Young of Kansas City, board chairman of the church's six general superintendents (roughly equivalent to bishops). "We're at the stage when we start to slow down." To halt any decline, the Nazarenes are considering merger with such like-minded groups as the Pilgrim Holiness Church, the Free Methodist Church and the Wesleyan Methodist Church. Nazarenes will vigorously pursue their home visitation program aimed at rooting out unchurched believers and luring more children into Sunday school. That gave rise to a glowing new Nazarene slogan: "One million souls for Christ," by 1968. Judging by past performances, it is a not impossible goal; there are 824,000 Nazarene youngsters in Sunday schools already.

BASEBALL

How to Win Friends

Psychiatrists call it "masochistic identification." What that means, in plain, simple English, is love those Mets, hate those Yankees. The Yanks have won eight pennants in the last nine years, and things are so bad that they are giving away free tickets. The Mets, who have been playing in the National League for three years and haven't found the cellar steps yet, are packing them into Shea Stadium at the rate of 765,162 fans in their first 29 home dates, second only to the world-champion Los Angeles Dodgers.

But the Yanks are wising up. They have Yogi Berra as their manager now; he starts sentences with "I may not be much of a manager, but . . ." They even get the ball out of the infield, and the Yankees still won 6-5. "It was incredible," said Manager Berra.

That last victory put the Yankees in first place for the first time all season, and off they went to Baltimore, their new image in dire jeopardy. Baltimore Manager Hank Bauer had predicted that New York would win the pennant, said that his Orioles could not possibly finish better than third. But in the first game, trailing 7-2 with two out in the eighth inning, the Orioles were treated to seven hits and seven runs by the accommodating Yanks. Final score: Baltimore 9, New York 8. "You can't win 'em all," sighed Berra happily.

Next day was even better. Whitey Ford started for New York, and he naturally found it hardest to lose—in eleven decisions, he had made the twice). The Orioles made short work of the game: Boog Powell homered in the first, and Brooks Robinson came along in the second to startle the somnolent Yankee bullpen with a blow that soared well over Hector Lopez's dejected wrist. After that, the final 3-1 victory was a breeze. Next night, against Detroit, the Yanks made four errors (three of them in the space of two innings), left 14 men stranded on the bases, and lost gloriously, 1-0, in eleven innings.

That was more like it: the Yanks had fallen back to second, 3½ games behind the Orioles. But they still have a lot of losing to do before they can win New York's heart away from the Mets. By last week the Mets had dropped 14 out of their last 16 games, and what's more, they had suffered the kind of final, superlative indignity to which the Yanks, at their most ingenious, could not possibly aspire. At Shea Stadium on Father's Day, they ran into Proud

AP

ROBINSON'S HOMER DROPPING IN

BUNNING GETTING LAST OUT

Gaining by losses.

have a .189 hitter in the starting lineup (not even the Mets can match that), and they have a bullpen full of people who are reasonably skilled in the difficult art of throwing gopher balls. It is a slow process, but the Yankees are learning how to lose. So far this season, they have already dropped six out of ten to the sixth-place Boston Red Sox, three out of seven to the last-place Kansas City Athletics—one by the score of 11-0.

"It Was Incredible." Of course they couldn't help themselves in Chicago last week—where they won four straight and ran their season's record against Al Lopez' White Sox to 10-0. But most of those ten games were close; four were decided by one run, three went into extra innings. And Berra certainly did his bit: in the last game, when the Yankees built up a 6-2 lead after eight innings, he shipped Starting Pitcher Steve Hamilton off to the showers and sent in Reliever Hal Reniff. Even that was not quite enough: the White Sox loaded the bases right off, but none of the last three Chicago batters could plunge only once. This time he did the next best thing: he retired after two innings, with the game tied 4-4. That left it up to Relief Pitcher Stan Williams, whose special talent is that he does not know how to field a bunt. In the eighth inning, he picked up a trickler—and threw the ball into left field. Then, he picked up another—and threw it into right field. Final score: Baltimore 7, New York 4. Said Berra: "It ain't time to worry yet. I mean, it isn't time to worry yet."

Tootling on the Dugout. Why worry? Why, indeed, when Steve Barber was pitching next day for the Orioles? Even last year, when the Yankees won the pennant by 10½ games, Barber beat them three times. Baltimore's biggest crowd of the season—36,369 strong—showed up for the occasion, and a jazz band kept things alive by tootling gaily from the top of the Yankee dugout. Pretty girls danced in the aisles, and Mickey Mantle sounded the only sour note when he complained that a fan in the bleachers was popping flashbulbs at him each time he swung (he struck out Papa (of seven) Jim Bunning, a journeyman pitcher who spent nine seasons with the Detroit Tigers and now toils for the Philadelphia Phillies. Retiring 27 Mets in a row, striking out ten of them, Bunning pitched the second no-hitter of his career—and the National League's first perfect game since 1880. Now that's the way to lose.

Burden of Proof

What does a young man do when he stands 6 ft. 3 in. and weighs 215 lbs., can run the 100-yd. dash in 9.8 sec., catch footballs like Del Shofner, and belt a baseball out of sight? He could, of course, become an orthopedic surgeon like his old man. But there are easier ways to make a lot of money. Just by signing his name to a contract with the Los Angeles Angels last week, Fred ("Rick") Reichardt of Stevens Point, Wis., picked up a cool $175,000 —which may be the biggest bonus ever paid to a baseball rookie.

He could have had more. A junior at the University of Wisconsin, Reichardt, 21, batted .472 for the Badgers this

CC-0. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

spring, winning the Big Ten batting championship for the second straight year (last year's average: .429). As if that weren't enough, he was a star flanker back in football, and one pro scout called him "a sure No. 1 draft choice" if he played out his senior year. Reichardt is also a psychology major, and he must have stayed wide awake in some of his classes.

At least 18 big-league clubs begged for his services, and Reichardt played them off against each other with clinical calm. The bidding, he announced, would start at $100,000. This was too much of "a business and financial risk" for the home-state Milwaukee Braves. But the other teams barely blinked. Kansas City Owner Charles Finley made two trips to Stevens Point in a week. The Angels flew Rick to Palm Springs in Owner Gene Autry's private plane, gave him a tour of Hollywood, brunch in Bel Air, and dinner in Studio City. The New York Mets offered him everything but the seats in Shea Stadium, and the Yankees retaliated with a reported bid of $250,000.

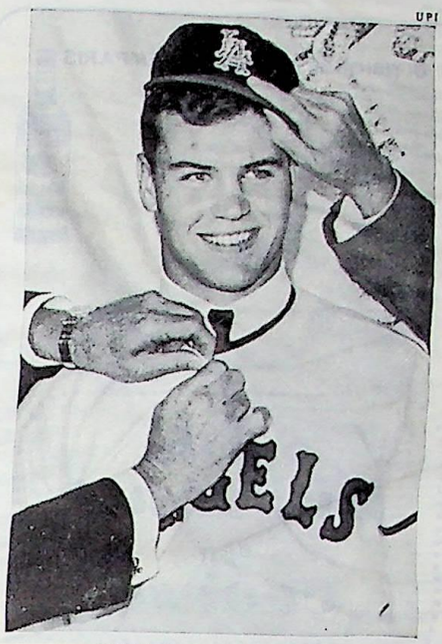
But Reichardt picked the Angels. "I felt my best opportunity for advancement was with a young club," he said. "Now the burden of proof is on me." Whereupon he stepped into the batting cage at Chavez Ravine and clouted three balls out of the park—one of them over the 410-ft. sign in center field.

TRACK & FIELD

Exercise in Physics

Springtime is full of transitory delights: the rookie who bats .400 in May and learns all about curves in June, the horse that wins six straight in California but turns out to be allergic to bluegrass in Kentucky. Fred Hansen's destiny seems more secure, if for no other reason than the fact that it has taken him years to get much of anywhere at all. A virtual unknown when he showed up for the big spring meets, Pole Vaulter Hansen, 23, startled track experts by leaping 17 ft. 1 in. in Houston last month, breaking John Pennel's world record by ¼ in. Week after in San Diego, Hansen did it again, soaring over the bar at 17 ft. 2 in., and beating Pennel himself. Last week he handily won the A.A.U. championships at Rutgers with a 17-ft. vault, then barely missed at a towering 17 ft. 6¾ in.

Trouble with Glass. Hansen has been vaulting ever since he was a sixth grader in Cuero, Texas. "It's always fascinated me," he says, "because it isn't something that everybody can do. I fixed me up an old cane pole and started working out. At first, I only did distance jumping, to see how far I could go from one spot to another, using the pole to boost me along. Then my father built me a regular pit out of sand, and I was hooked." In high school, Hansen jumped 13 ft. 6 in. with a Swedish steel pole, went on to 14 ft. in his sophomore year at Rice University. After that he joined the parade to the catapult-like fiber glass pole and ran into trouble. "It took me forever to get used to it," he says. "I didn't really learn to bend the pole until this year." In mid-May at Modesto, Calif., he hit 16 ft. 4½ in.—and he has not been that low since.



UPI

BONUS-BOY REICHARDT
Belting them out of sight.

For a man who makes his mark with muscle, Hansen owns a busy head. He already has spent five years in college, has a degree in business administration, plus a year of pre-dental science. He is an apostle of Norman Vincent Peale ("He's got the right idea about things"), and he talks about vaulting as though it were mostly an exercise in practical physics. He grips his 16-ft. Silaflex pole as near the end as possible, uses a long, 140-ft. approach to gain the velocity necessary to give "a maximum bend at the vertical position. I'm trying to translate linear force into vertical force," he says, and he is hard at work on an essay entitled "Compound Pendulum Mechanics of Pole Vaulting."

ROGER WRENN

VAULTER HANSEN SETTING RECORD
Converting the forces.

Horse & Rings. Like most top vaulters of the fiber glass era, Hansen is a jumper-gymnast. He works out as much as four hours a day—on the trampoline, the long horse and the flying rings, lifts weights, does isometric exercises. He has even dieted down from 175 lbs. to 167 lbs. on the sensible theory that the lighter he is, the less work he has to do to get himself up where he wants to go. At night he watches home movies of his rivals in action, says proudly that "they probably have movies of me too."

And, maybe most important, he is learning to curb his generosity. Until he smashed the record last month, Hansen's main claim to fame was that he lent John Pennel the pole he used to set the old record of 17 ft. ¾ in. From now on, Pennel will have to buy his own. Says Hansen: "You know, he never did give that darned pole back."

SCOREBOARD

Who Won

▶ France's Jean Guichet and Italy's Nino Vaccarella: the Twenty-Four Hours of Le Mans, pushing their blood-red, 320-h.p. Ferrari prototype 2,915.8 miles at an average speed of 121.49 m.p.h. over the 8.3-mile circuit southwest of Paris. The much-touted duel between Ferrari and Ford turned out to be a bust when none of the three new Ford racers—first team entry by a major U.S. manufacturer at Le Mans since 1928—managed to finish. California's Dan Gurney and Bob Bondurant saved a scrap of prestige for the U.S., placing fourth overall and winning the grand-touring championship in a Ford-powered A. C. Cobra. But Ferraris finished one-two-three, giving old Enzo Ferrari a record fifth straight Le Mans victory.

▶ Santa Claus: the 1½-mile Irish Sweeps Derby by a lazy-loping four lengths, making him the first horse in history to capture both the English and Irish Derbies; in Curragh, Ireland. A 4-7 favorite, the three-year-old colt watched the rest of the field run away at the gate, was third from last in the 19-horse field after the first two furlongs, then easily swept into the lead with a furlong-and-a-half to go. The $149,730 victory brought Santa's winnings to $376,423 this year—and meant a present of $140,000 to each of 24 lucky ticket holders in the worldwide Irish Sweepstakes lottery.

▶ Milton Ernstof's *Burgoo*: the Newport-Bermuda yacht race, over 142 of the world's fastest racing yachts—biggest field in the event's 58-year history. A Class E, 38-ft. fiber-glass yawl, one of the smallest boats in the race, *Burgoo* proved to be just right for the light, fluffy breezes that turned the 635-mile ocean race into an uneventful weekend cruise. Short-tacking furiously for the last 20 miles, *Burgoo* crossed the finish line in 109th position—almost 20 hrs. behind the scratch boat, Cornelius Bruynzeel's 73-ft. *Stormvogel*—still won by 30 min. on corrected time.

EDUCATION

COLLEGES

Seed Money

Arland F. Christ-Janer, president of eastern Iowa's small (870 students) Cornell College,* proclaims "one of education's least spectacular messages." Says Christ-Janer: "We are mightily impressed by dramatic advances in such areas as missilery and medicine, but as a liberal arts college our business is to bring these new facts of life into meaningful focus. Nothing more."

The Ford Foundation usually gives money for tightly defined goals, but it has a soft spot for humanistic ambitions like Cornell's. Last year the foundation promised Cornell $1,400,000 if the school could raise double that much in three years. Christ-Janer was off and running. He logged 100,000 miles in ten months, collected $3,400,000 in cash and pledges from loyal alumni and Iowa farmers, who turned the pockets of their bib overalls inside out to match the foundation's challenge. Then he set about to advance the "business of the liberal arts college." He raised faculty salaries 10% (enough to satisfy several would-be defectors), gave more students more scholarships, and started, far ahead of schedule, a long-range construction program, including a fine arts building and dorms. With the Ford grant as a catalyst, Cornell became a better school, faster.

Giving good colleges seed money is the aim of the Ford Foundation's Special Program in Education. Since the program began, four years ago, 42 rigorously selected small, private liberal arts colleges and nine major private universities have received grants totaling $164,200,000, and have raised additional matching funds of $401,400,000. Last week the foundation added 20 more schools to its list of beneficiaries.

▶ Five liberal arts colleges—Colgate, Middlebury, Mills, St. Olaf and Vassar—got Cornell-style matching grants totaling $10,800,000. Of the $100 million originally set aside for small colleges, $91 million have now been given out, none to segregated schools; the foundation this year slowed the pace of giving in hopes that before all the money is granted, some can be handed out to racially integrated Southern colleges.

▶ Eight Negro colleges and the Atlanta University Center (consisting of six independent schools, including top-rated Morehouse and Spelman colleges, that share academic resources) received $13 million. The Ford Foundation waived the usual matching requirement, considering the meager fund-raising capability of Negro colleges. The foundation also insisted that the money be spent on

academic improvements, such as fellowships and visiting professorships, rather than on physical facilities.

▸ The biggest grant of all, $25 million, went to New York University, largest private university in the U.S., to help solve some of the painful problems of a big-city school. N.Y.U.'s 41,700 students are scattered in 15 graduate and undergraduate divisions on two campuses. Most students commute from the metropolitan area and study at home because of inadequate library facilities; among 14 new buildings, N.Y.U. plans a library and study center accommodating 3,000 students at a sitting. Two 30-story residence towers will provide 358 badly needed faculty apartments, at rentals lower than commercial rates.

The Ford gift, which requires N.Y.U. to raise $75 million in the next five years, was a leg up for the school's ambitious new president, James Hester, 40, who came to Washington Square less than three years ago. Pinning his hopes on a 408-page blueprint for development, he submitted it to the Ford Foundation and held his breath. Since Foundation President Henry Heald himself had been a president of N.Y.U., Hester's plans got a stiff going-over to fend off charges of favoritism. Now Hester can go ahead with the massive task of "creating a university environment on the city pavement."

EDUCATION ABROAD

Light in Diliman

A hostile delegation of leftist students called on Carlos P. Romulo just after he became president of the University of the Philippines two years ago. "Are you going to the left or to the right?" they demanded. "I'm going forward," said Romulo. With the drive that made him a brigadier general under Douglas MacArthur, the first Asian President of the United Nations General Assembly (in 1949-50), Philippine Foreign Minister and twice ambassador to Washington, Romulo is pushing the Philippine national university forward faster than ever before.

Books for Fuel. For most of its 56-year history, the school was housed in a jumble of buildings in downtown Manila. U.S. airmen bombed them during World War II, and between bombings Manila's Japanese occupiers burned many of the library's 160,000 books for fuel. In 1948 the university made a clean break by moving to a sprawling new 1,125-acre campus on the outskirts of Manila.

The neighborhood is called Diliman, which in Tagalog means darkness, and when Romulo took over, the school was living up to the name. His first task was to persuade the Manila Electric Co. to put in $25,000 worth of outdoor lighting equipment. Since then, 37 modern, low-lying buildings have gone up.

For funds, Romulo put the bite on sugar barons, who contributed $250,000 after he bluntly reminded them of the favors he did for the industry while negotiating the Philippine sugar quota when he was ambassador to Washington. Lobbying in the Philippine Congress, Romulo got extra money for scholarships, fellowships, better facilities for research and graduate study, raises for the faculty.

Big U.S. foundations also opened their pocketbooks. Ford and Rockefeller gave almost $11 million to finance curriculum improvements, schools of public administration, medicine, and an International Rice Research Institute, which is studying 8,000 varieties of rice. Last week, on a fund-raising trip to the U.S., Romulo clinched a $5,000,000 loan from the World Bank for his agricultural college.

Diplomas in Tagalog. If the university's funds were low when Romulo took over, so was its morale. The salary raises squelched some faculty grumbling, and Romulo named a batch of 18 faculty committees to give the faction-ridden teachers a sense of responsible participation in the administration. He was equally tactful toward the young rebels in the student body of 18,000, shamed them into abandoning a demonstration against Visiting Prince Akihito of Japan by offering to help with the picket signs if the students promised to keep their protest dignified. Philippine nationalists, who opposed Romulo as a "brown American" because of his close ties with the U.S., became his supporters after he encouraged the study of national history and literature, offered to print diplomas in Tagalog instead of English if a student requested it (only 20 out of 1,500 graduates did).

Once, years ago, at a party in Texas, Romulo, who is 5 ft. 4 in. tall, found himself in a group composed entirely of six-footers. Someone asked him how he felt. "Like a dime among nickels," was his spunky reply. He does not feel dwarfed by his tough new job, either. At 65, he considers it "the best assignment I ever had," and wants to make the University of the Philippines "the anchor of democratic faith in this part of the world."

MODERN LIVING

THE LAND

The Spoilers

About 99 million vacationers will visit the 201 U.S. national parks this year. They will bring with them a love of nature and a sense of wonder at the beauty that has been preserved against the onrush of progress. They will also bring with them thousands of cans of spray paint and the lust to desecrate.

The aerosol paint can is science's contribution to the ancient art of public defacement, and the vacant-minded or vicious are taking to it in ever-increasing numbers—gleefully spraying their names, initials, class numerals and favorite biological functions over national monuments and natural wonders. The taxpayers' bill for cleaning up after them is getting higher all the time.

Immortal in Lipstick. Cleaning up is not easy, either. Only this spring has the Park Service figured out how to cope with the problem of Box Canyon. Box Canyon, in Mount Rainier National Park, contains such a remarkable example of glacial action that in 1957 the park ran a blacktop trail into the canyon and put up a marker calling attention to the phenomenon.

Visitors soon discovered that the smooth expanse of soft rock carved and polished by the glacier could easily be inscribed with personal data, and within no time there was a 300-ft.-long sweep of modern hieroglyphics. Last summer the first of the four-letter words appeared, to be followed by such a flood of pornographic graffiti that the better Boy Scout leaders struck Box Canyon off their lists of educational outings.

Sandblasting is no solution; it leaves behind it a whitened area that merely invites a new literary effort. But a new technique has now been devised, which combines light sandblasting with a stain made of umber and regional soils, and Box Canyon will soon look almost the way it did before—with the addition of a fence to keep the public at arm's length.

Also being tested in national park rest rooms is a new gravel-impregnated wall paint, designed to break a lipstick, crayon or pencil at the first stroke. But such anti-lipstick measures are useless against the girls who like to add their smears to ancient Indian carvings in rock so porous that the lipstick sinks in and becomes indelible.

Geyser Dousers & Sign Reversers. Literary and artistic work is just a part of the swath of destruction left by carefree vacationers. They tear out bathroom fixtures and pull up flowering plants. They use blasting powder to collect specimens of Indian hieroglyphics. They feed chocolate-covered laxatives to bear cubs and dump detergent into geysers. Sometimes they block up geysers with rocks and logs. They reverse signs on trails—a form of humor that has led to at least one near fatality. In Gettysburg they love to push over monuments.

And as they go, they leave behind them a spoor of debris. According to an organization called Keep America Beautiful, Inc., no less than half a billion dollars was spent during 1963 to pick up discarded litter.

DESIGN

The Atrium Way

The blueprint is as old as the hills, and the ancient hills of Rome at that. But the atrium house is fast becoming the newest thing in suburban housing, and nearly as popular as it was when Romulus was little more than a babe.

The theory is simpler than rolling off a logarithm: set a small square within a larger one and, instead of living in the middle with a garden all around, live all around and put the garden in the middle. It is a natural solution to the problem of how to achieve privacy in crowded areas, but it has been slow coming to the U.S., which started off as a small-town country whose settlers and their houses were few and far between—a place where people had to sit out front on a summer evening to see what was going on. Over the years, however, the front porch faded from importance and today, with more people living in more houses, with housing developments creeping into lakes and rivers and across the land, window shades are almost the only means of privacy. And no one cares much for waving at passers-by.

Jungles and an Aviary. Individual architects such as Edward D. Stone and Philip C. Johnson have designed custom-built atrium houses for private clients in years past. But only lately have mass builders begun to adopt the style. Pacesetter Homes set 169 atria on a tract in San Clemente, Calif., and Builder William J. Levitt—of the Levittown Levitts—includes a version of the house in his 1,450-unit development currently abuilding near Cape Kennedy, Fla. Greatest enthusiast is California's Joseph L. Eichler, who has built some 3,000 houses in 31 development tracts in the last six years, sold every one of them (at anywhere from $23,000 to $55,000 each), sometimes even before construction began.

In fact, Eichler's Lucas Valley, some 20 miles north of San Francisco, is a demonstration of just how handsome tract-housing can be. Surrounded on two sides by mountains, the site is spacious and richly wooded. But what is most impressive is not the way the houses look from the outside but the other way around; and inside-out, the view is spectacular. No two of the $50 approximately 300-sq.-ft. patios are the same: the Frederick Bradleys' holds a slender Japanese maple and a jungle of flowers, while the John Hamrens have surfaced theirs with pebbles, Irish moss, lava rocks and a fountain ("We did have

CC-0. Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

fish in there," says Mrs. Hamren, "but we have four cats, and now we don't have fish in there"). Other families found the courtyards made perfect playgrounds and barbecue pits; some installed a sliding roof and built a hothouse underneath, and one couple put a screen over the open-air top and bequeathed the area to their pet bird as an aviary.

Rhapsody & Shrugs. Whatever the use, atrium owners agree that the advantages are great. Says Mrs. Bradley, "We can sunbathe and the neighbors can't see, have the outside fragrance go all through the house, leave the toddlers outside and keep an eye on them from practically anywhere inside. And when it rains," she adds rhapsodically, "the maple leaves turn dark and glistening, the outside comes right indoors and makes all this our very own world."

Builder Eichler is even more exuberant, but then the atria have helped net him an annual $20 million in sales, and he's entitled to be expansive. "There's no other way to live," he says enthusiastically. "Let's say it's Sunday, and you wanna throw a barbecue. With the atrium, you've got a protected area, and regardless of the weather, you're guaranteed an outdoor party." What about rain? "You go inside," Eichler shrugs, "just like other people."

CUSTOMS

Safe & Sane

A crowd of about 500,000 applauded delightedly one night last week when a bargeful of fireworks exploded in Manhattan's Hudson River, killing two of the crew and injuring four others. The witnesses assumed, of course, that the gigantic bang was part of the annual pre-Fourth of July show being put on by Macy's department store. And the youngsters among them were especially surprised when they learned of the tragedy caused by a faulty rocket that fell back on the barge. So thoroughly institutional have fireworks become these days that the postwar generations hardly think of them as dangerous.

Unknown to the modern young is the pungent incense of punk and the acrid reek of exploded salute. Not even the harmless, dancing crackle and spit of lady crackers, limp in their red-gold Oriental wrappings, has lifted their Fourth-of-July hearts—not to mention the delicious danger of the thrown cherry bomb, or the thrilling thop-thop of the hand-held, Roman candle.

Bonfires & Gushing Tears. The Safe and Sane Fourth is all but universal now; blow-up-yourself fireworks are banned in 27 states, and there is some kind of restriction in every state but Alaska and Nevada. There is still a busy interstate traffic in illegal noisemakers, but the overall results in terms of safety have been impressive and persuasive. Pennsylvania, for instance, was one of the first states to limit fireworks to public displays, adopted a code in 1938, when there were six deaths and 1,702 injuries from fireworks. The next year this dropped to 85 injuries and no deaths at all.

So the Glorious Fourth that Daniel Webster predicted would be celebrated "with thanksgiving, with festivity, with bonfires and illuminations, and copious, gushing tears" has come to be the day for the big ball game, the teeming beach, the crawling traffic, the long drink—in short, like every summer weekend only more so, slightly set apart perhaps by the American Legion parade and a public display of professional fireworks.

Private Pyrotechnics? One group fighting hard to bring back private pyrotechnics is, unsurprisingly, the fireworks manufacturers. "Safe and sane" fireworks are what they are plugging—mostly some variant of sparklers—and they have been successful in getting some state legislatures to mitigate their blanket bans.

Says Patrick Moriarty, president of the Atlas Fire Works Co. of Lynwood, Calif.: "The trend is toward putting fireworks back into the hands of the people. The sales of these safe and sane items are going so fast we just can't keep up. In five to ten years, they'll be legal all through the country."

FASHION

The Pajama Game

First it was suffrage, next cigarettes, and then man's final inalienable rights: to know baseball, follow the market, haggle over prices, talk and be heard, swagger, stare, shout at will and stay out all night. And with women behind their wheels, at their desks and in their way, with their razors confiscated and even their private clubs invaded, men conceded defeat, loosened their belts and handed over their pants as well.

All that, of course, was long ago. Today, what used to separate the men from the boys barely separates the boys from the girls. For pants, by now, are a staple in every woman's wardrobe, so popular from coast to coast and in between that the far out teen-ager is the one who sticks to dirndls. Still, there are pants that will not do, and while shorts and slacks in every length and any size (so long as they coincide roughly with the wearer's own) are sportswear standards, there are places that not even the handsomest of them can go, or at least go unnoticed. On an afternoon stroll in midtown Manhattan, for instance, or out to dinner, a theater or nightclub. There is one place, however, where pants are actually being urged to make themselves at home—and that is at home.

There, full-length, generally full-skirted pants are the newest, chicquest, sleek and swishest way to stay in style. And there are hundreds of styles to choose from—harem trousers and bell-bottom slacks, pantaloons, culottes and jump suits among them. Dressed-up pajamas all, most are sold with tops and accompanying overskirts; available in fancy fabrics like embroidered lace (by Courrèges, for $800) as well as lighter weight silk jersey (by Pucci, for $210), Fortrel and cotton (by Sportwhirl, for $35) and Arnel knit (by Loomtogs, for $36), they bloom with checks and flowers, glitter with pearls and gold, or stand out like the moon, all white and stark. Graceful to look at and comfortable to lounge in, the party pajamas fit loosely, serve only as a costume, not (like last year's hip-huggers) as a tourniquet.

They are, in short, a long and lazy-looking high-fashion triumph. They may not seem quite so devastating on the girl next door as they did on Garbo. But on Garbo, after all, pants weren't pants but a way of life.

MEDICINE

ORTHOPEDICS

A Very Special Patient

The latest accident case at the Cooley Dickinson Hospital in Northampton, Mass., was clearly someone special. Ted Kennedy was not only a U.S. Senator and a brother of the late President, he was one of the hospital's rare air-crash patients (TIME, June 26), and he was in desperate condition.

Youth & Strength. "Senator Kennedy," said the hospital's senior surgeon, Dr. Thomas Corriden, "was in deep shock when he was admitted. His pulse varied a great deal; his blood pressure was almost negligible." Some of his ribs were fractured, along with three vertebrae in his lower back. One kidney was bruised, and a lung was punctured. He was in such bad shape that no time was wasted trying to stitch up a 6-in. gash in his right hand. He was given several transfusions, fluid and air were removed from his chest cavity to help his breathing, and he was put in an oxygen tent.

In a matter of days Ted Kennedy's condition changed from "serious" to "good." But the doctors credited the quick recovery not so much to their treatment as their patient's youth and strength—and his generous supply of luck.

Rigid but Sore-Free. It was sheer good fortune that the broken vertebrae were in the lumbar region and did not damage the end of the spinal cord—a far less serious situation than if they had been in the cervical or thoracic areas, where the cord might have been severed by dislocation of the bones. A break of any of the cervical vertebrae could have paralyzed Teddy's body from the neck down, while a fracture of any of the twelve thoracic vertebrae might well have paralyzed his trunk or legs.

When Kennedy was first admitted to the hospital, he was strapped in a canvas and metal stretcher called a Stryker frame, but later he was switched to a larger Foster frame to accommodate his 6-ft. 2-in., 230-lb. bulk. Named for the Houston surgeon who devised it in 1939 for recuperating back-fracture patients, the Foster frame is a kind of reversible bed in which the patient is immobilized between a pair of sturdy canvas slings. Besides keeping the spine rigid—which is absolutely essential during the bone-healing period—the Foster frame helps prevent the patient from getting bedsores.

How long Teddy will have to stay in the pipe and canvas contraption, no one can yet be sure. But he will not be moved for at least six weeks, and there is still a chance that his fractures will require surgical repair. He may be outfitted with a brace or plaster cast, but in any case he faces three to six months in bed, possibly in a Foster frame.

AP

PATIENT IN FOSTER FRAME

Out of pipe and canvas, a reversible bed.

• • •

Although the pilot and Teddy's aide, Edward Moss, were killed in the crash, the Kennedy luck stretched far enough to cover his other traveling companions, Indiana Senator and Mrs. Birch Bayh. Strapped down by their seat belts, the Bayhs suffered torn back muscles, but they were saved from serious or fatal injuries. What puzzled the doctors, though, was how the Senator had been able to help Kennedy get away from the wreck. Once he got to the hospital and had time to realize how badly he had been banged up, Bayh was in too much pain to move.

DRUGS

Do the Pills Cause Cancer?

Are the 3,000,000 or more U.S. women who are taking birth-control pills running an increased risk of developing cancer? Doctors at last week's A.M.A. meeting had a double reason for supplying answers. Many of them have been prescribing the pills for years, and it was an A.M.A. publication that unintentionally started the latest cancer scare. The consensus was more than reassuring: women who take oral contraceptives do not incur any added risk of cancer, said the experts, and there are even glimmers of hopeful though preliminary evidence that the pills may actually be protective against some forms of the disease.

What They Meant. The trouble began with a brief abstract in the A.M.A. *Journal* of a report on work done by a University of Oregon team of researchers. Delivered in San Francisco, the detailed paper described experiments done on a particular and unusual form of cancer in a particular strain of laboratory rats. Like some human cancers, this one will grow faster if the animals are given certain hormones, and will all but disappear under doses of other hormones.

The Oregon researchers wanted to find out whether hormones tagged with a radioactive phosphorus compound would concentrate in the cancers to effect a faster cure. But first they had to make the cancers grow lustily, and this they did by giving the rats a variety of hormones. Among them were progestin and an estrogen, hormones which are combined in G. D. Searle & Co.'s famed Enovid (pronounced En-*ah*-vid) contraceptive pills.

By the time the Oregon team got to San Francisco to give their full report, any medical significance of their work had been overshadowed by such screaming headlines as the Miami News's eight-column two-liner:

REPORT TO A.M.A. STIRS FUROR
BIRTH PILL STOCKS TUMBLE

Dr. J. Englebert Dunphy, the university's chief of surgery, had to spend all his time explaining what his researchers had not meant to do, rather than what they accomplished—which was to satisfy themselves that hormones combined with radioactive phosphorus would slow or stop the growth of some rat tumors.

What's to Be Learned. "Millions of people are taking these drugs for good reason, and to discontinue their use arbitrarily would cause untold hardship, if not outright tragedy," said Dr. Dunphy. "All of us must be entirely responsible in reporting any information on the subject. Such information must be kept in context and in perspective." To keep the rat studies in perspective, cancer experts reminded their colleagues that rat cancers do not necessarily behave the same as human cancers, and there is even evidence that in some cases they react in a way that is exactly the opposite to human cancers under the same hormone treatment.

Because there is still a doubt as to just what effect pills such as Enovid and its competitors may have on human breast cancer, manufacturers specify that they should not be given to women with this disease. Whether this caution should be modified will be determined soon—not in laboratory rats, not in the stock market, but in the health records of thousands of women who have been taking the pills since 1956.

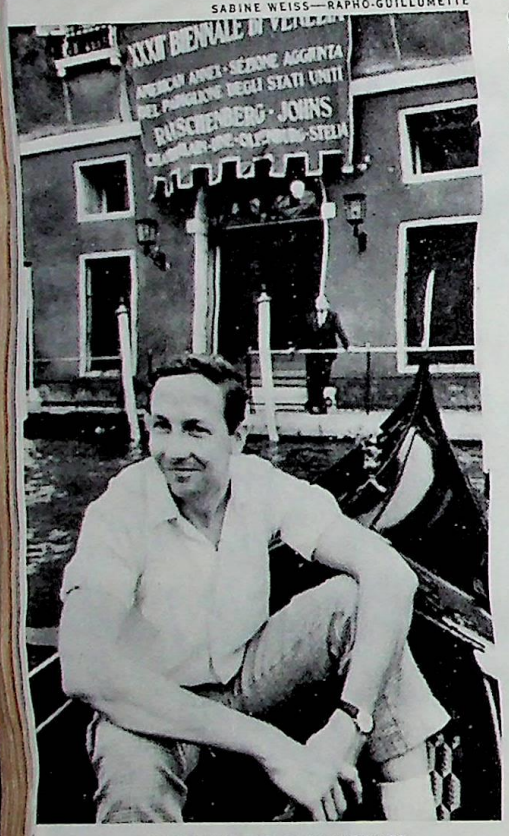
ART

EXHIBITIONS

Pop Goes the Biennale

This was a Venice Biennale where the critics booed, the cardinal banned, the Americans beamed, and nearly everyone boozed. Apparently incensed by some rubbishy but relatively innocuous nudes, Giovanni Cardinal Urbani, the Roman Catholic Patriarch of Venice, declared the international art show off limits to all priests and nuns. President Antonio Segni thereupon absented himself as official host and prize giver. But this scarcely dimmed the carnival spirits of the cocktail set. Greek-born Iris

SABINE WEISS—RAPHO-GUILLUMETTE



RAUSCHENBERG IN VENICE
Chaos with order.

Clert won the unofficial party-thrower prize by hiring a yacht, tying it up in the Grand Canal, and calling it the *Biennale Flottante;* inevitably, one of her guests was soon *flottante* too.

The real show was almost as predictable. With 3,000 paintings, 500 artists and 34 countries represented, the Biennale promised, as usual, to be an embarrassment of riches, and proved, as it often has, to be a mass preview of oblivion. Endless arid abstractions vied with the fossil art of mere representation. Into this esthetic drab land came some young Americans whose vision was fresh even if their art was not fine. The Biennale judges succumbed, and for the third time in the 69-year history of the show awarded the prize to an American, Robert Rauschenberg, 38, "the *old master* of pop art."*

* Previous U.S. winners: James McNeill Whistler (1895) and Mark Tobey (1958).

Melting Typewriter. The canonization of pop art had been rumored for weeks, and Pop Art Dealer Leo Castelli had campaigned assiduously for the winner. Nevertheless, the European critics fumed. Paris' Combat said the prize to Rauschenberg was "an offense to the dignity of artistic creation." Rome's pro-Communist Paese Sera called it "a grotesque *Biennale*," and the Vatican's L'Osservatore Romano editorialized on "the total and general defeat of culture."

The pop artists, a cool and casual lot, could not have cared less about their critics, or even about the rest of the Biennale, which few of them bothered to attend. John Chamberlain, a sculptor of automobile parts, slept on the Lido beach, declared the marble-patterned Piazza San Marco to be the "world's greatest hopscotch arena" and hopscotched around it like a great shambling bear. Claes Oldenburg, as softly pudgy as his sculptures of melting typewriters made of vinyl plastic, politely ate his way through the festival. Rauschenberg himself was busy at Venice's elegant Teatro La Fenice, working with Merce Cunningham's avant-garde ballet troupe, for which he designs props and occasionally does choreography. Since his suitcase had gone astray between Paris and Venice, he was using a safety pin to hold up his pants.

Jarring Juxtaposition. His pants are just about the only thing Robert Rauschenberg has not worked into his paintings, collages, and what he calls "combines." Crumpled newspapers, photographs, street signs, clocks, radios, buckets, neckties, stuffed birds and electric fans have all found their way into his works. Rauschenberg insists that he intends no shock effect, satire or even comment. "I get jarred by the juxtaposition of certain objects. Once you isolate something, you can really see it. I think a picture is more like the real world when it's made out of the real world." To the charge of ugliness, he retorts: "I really feel sorry for people who think things like soap dishes or mirrors or Coke bottles are ugly, because they're surrounded by things like that all day long, and it must make them miserable."

The task of art is to match sight with insight, to illuminate, intensify and transmute the raw materials of existence into a higher order of reality and truth, and in that sense most pop art does less with a Campbell's Soup can than Campbell's does. The best pop art, such as Robert Rauschenberg's, is an Art of the Absurd full of the jarring juxtapositions, mechanized tempi, free-floating reveries and strange discontinuities of modern life, as if someone had spliced together unrelated strips of film and run them off on an erratic projector. But too many pop artists seem not to know whether chaos is their subject or their object.

ARCHITECTURE

Sunlight in Stone

The most dazzling new sight in Paris is—Paris. For decades, the face of the city was as grey as its ubiquitous cats. But since 1959, squads of yellow-slicked workmen have scrambled up metal scaffoldings to hose down and sand-rub buildings and monuments encrusted with the industrial soot of the 20th century. The grime fighters have now cleaned more than a third of Paris' buildings, and visitors to Paris are discovering a beauteous city they never saw before, the city that De Balzac called the color of cream.

Paris skies may still be grey, but there is sunlight in its stones. As if ready to abandon his Gallic faith in wine, one slightly awed *clochard* said, "And to think that water can do all this!"

Surprises Under the Grime. It took more than water. It took a long-ignored Second Empire decree signed by Napoleon III in 1852 requiring façades to be washed every ten years, and impassioned pressure from Minister of Culture André Malraux. In practice, the government rarely has to fine building owners, for landlords can ease the cost of cleaning by borrowing as much as 40% of the tab. Face-washing a private apartment house costs about $2,000. To clean the 18th century building in the Place de la Concorde that houses the Morgan Bank,* the Automobile Club of France and the famed Hôtel Crillon, cost about $60,000.

To its chagrin, the Crillon discovered that some of its columns were made of wood cleverly painted to simulate stone. The façade of the Invalides, where Napoleon lies buried, provided another embarrassing surprise. Pock-marked by gunfire during the liberation of Paris, it had been repaired on the cheap, with cement.

Some Like It Dirty. Inevitably, the big cleanup has divided Paris into two camps: black and white. At the start, white was a dirty word, particularly since Montmartre's white Sacré-Coeur basilica has long been regarded as a bulbous eyesore. When it was suggested that Notre-Dame be scoured, a venerable member of the Paris city council counterproposed: "Paint Sacré-Coeur black instead." Notre-Dame may yet remain the great unwashed building, since architects fear that its 800-year-old lacy filigree would crumble. The pro-blacks argue that character, dignity and age are lost by cleaning. Sputters one irreconcilable rear-guardist: "It is immoral, like face lifting. Old people shouldn't look young."

Pro-whites contend that style, not dirt, gives a building distinction. Says Bernard Vitry, who directed the cleaning of the Madeleine: "I love stone too much not to wish to see it." Malraux says that art is "the presence in our lives of what should belong to death."

* And until December 1962, the Time Inc. office, now on the Avenue Matignon.

and holds that classic buildings cloaked in mantles of soot are deadened, if not dead. To look on beauty bare, as it is emerging in Paris, is to see what is agelessly and vibrantly alive, what T. S. Eliot called "the present moment of the past."

Saving Utrillo's House. For Malraux, "our monuments are France's greatest dreams." Like De Gaulle, whom he serves more like a gauntleted knight than a Cabinet minister, Malraux wants to spur the French will to new greatness through shining images of past glories. He resurrects, he conserves, he dramatizes what he believes is the universal genius of French art. This year's summer cleaning schedule includes the theater of the Comédie-Française, the Panthéon, the Hôtel Sully, the Fontaine des Innocents and the Oratoire du Louvre. As such monuments return to their pristine freshness, Malraux hopes Parisians will see their city anew.

Since his ministry is responsible for everything from the Louvre to provincial cultural centers, from national archives to Sèvres porcelain works, from the Comédie-Française to thousands of historical monuments, Malraux is chronically hamstrung by a budget that at $80 million a year comes to just one-third of 1% of the national budget. He cannot prevent bad aluminum-and-glass boxes from being constructed on the Champs-Elysées. What he tries to save is France's cultural real estate. Through a legal device known as the Inventory of Beaux-Arts, he has managed to preserve Utrillo's house, Verlaine's bench, the window from which Renoir studied the Moulin de la Galette, the mansard on the Boulevard St. Germain where Apollinaire lived, Picasso's Montmartre studio, and a number of *art nouveau* Métro stations.

Of all the things André Malraux has been—adventurer, revolutionary, novelist, a squadron commander in Republican Spain's air force, resistance hero, Gaullist propagandist, esthetician—it may be that he will be best remembered as the tastemaker of the Fifth Republic. In the age of the blast-off and the count-down, he has made art's "voices of silence" audible. In the youthful, glowing vistas of a freshly scrubbed Paris, he has thrown open a "museum without walls" for Everyman.

PAINTERS

Epitaph in Jazz

"What inspired me most in the area of art and culture in America was jazz music," Stuart Davis once said. It was hot jazz, city jazz, that Davis painted, right up until his death at the age of 69 last week. He was rooted in the American soil, but that soil was concrete. He loathed the country and loved the city, specifically Manhattan, and his abstract but objective works are syncopations of urban life.

To see his paintings is to hear them. They screech and honk with the aggressive dissonance of city traffic. They have the staccato beat of a pneumatic drill. The strident reds, blues, and yellows blare with neon. And the stray words that seem squiggled from a toothpaste tube onto his paintings are like the hip, harsh expletives that slum kids spew into the summer air. Davis had violence without anger, gaiety without abandon, and his paintings swing and jump with such durable joy that it is as if he had dipped his brush in some eternal fountain of youth.

What first fired his imagination was the famed Armory Show of 1913. Then and there, he decided to be a modern painter. But to train his hand to follow his esthetic vision required enormous feats of self-discipline. Davis told how in 1927 he "nailed a rubber glove, an electric fan and an egg beater to a table and, like Monet with his haystack, stuck

MARTHA HOLMES

STUART DAVIS
Gaiety without abandon.

with that single subject for a whole year." What he learned was how to explore, distort and transform the objects into endless arrangements on the canvas. His aim was abstraction, but his eye was riveted to the real. And what fascinated his eye was everyday America—gas pumps, factories, skyscrapers, movies, kitchen utensils, and "fast travel by train, auto, and airplane, which brought new and multiple perspectives." This very nearly makes him the legitimate father of pop art.

Unlike some pop artists, Davis was a meticulous craftsman who worked the hard way with paint out of the tube and small brushes. The jazz improvisations in his pictures are in the mood, never in the planning and execution. He took a razzle-dazzle man-made world of cities, honky-tonks and brightly packaged products, a confection of vulgarities, and out of their impermanence made something arrestingly permanent.

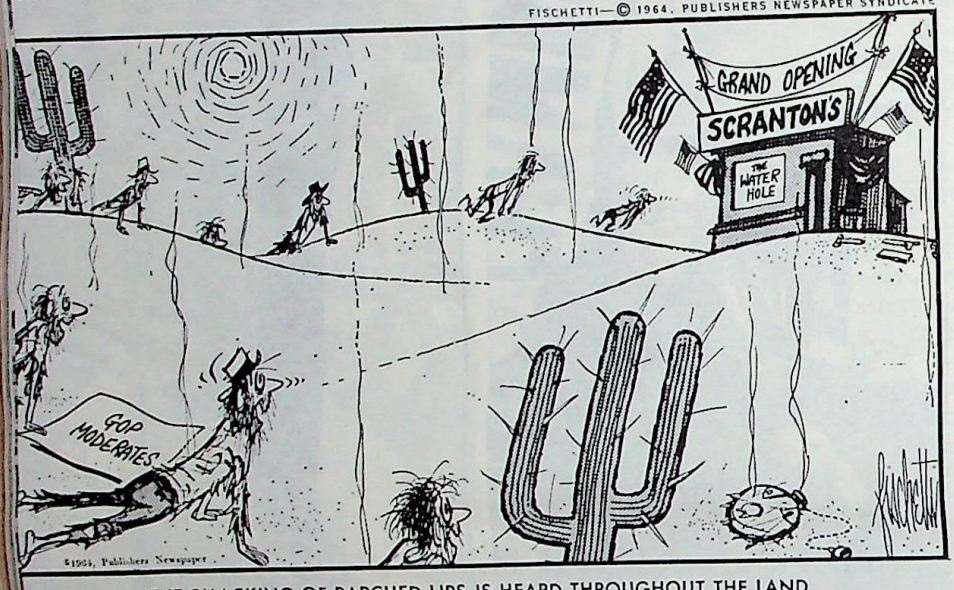
NEWSPAPERS

Out of the Doldrums

"Hallelujah!" sang the New York Herald Tribune. "The reluctant candidate not only came out of his Harrisburg shelter, but he came out swinging." Short days before, convinced that Barry Goldwater was about to be nominated, the Trib had despaired for the Republican Party. *But now that Pennsylvania Governor William Scranton had put himself in the ring at last, there was cause for rejoicing.* Scranton, said the Trib, "has just the qualities needed to halt the party from its headlong gallop toward doom."

In the general press sigh of relief at the emergence of an honest-to-goodness Goldwater competitor, similar sentiment resounded all over the nation's pages. "The shattered moderate leadership of the party," gloomed the Milwaukee Journal, "may be unable to pick itself up off the floor and do serious battle." The Nashville Tennessean cast Scranton in the role of "boy at the dike," and predicted that "it will take a miracle to make his effort more than a sad exercise in futility." Said the Detroit Free Press: "Wishful Willie Scranton closed his eyes, screwed up his courage and dived. The only trouble is that Barry Goldwater might have *pulled the plug.*"

Nor did the Republicans' new contender lack for forthright press critics. WATCH THE LIP, GOVERNOR, warned the New York Daily News, which has expressed steady editorial satisfaction with Goldwater. The News took exception to a Scranton remark that Senator



THE SMACKING OF PARCHED LIPS IS HEARD THROUGHOUT THE LAND

Goldwater, having voted against the civil rights bill, might give the cause of racial equality less than his all: "This is smear talk of a pretty debased kind, if you ask us." In Omaha, the World-Herald classified Scranton's candidacy as "a platter of cold fish, garnished with clichés." The Manchester, N.H., Union Leader, which stands leagues to the right of Goldwater, predicted that Scranton's nomination "would be an insult to the intelligence of the American public and a disaster from which our nation would be long in recovering."

One a Day. However the nation's newspapers felt about Bill Scranton, though, they also had to deal with him as a news story. In New York, the Times, which had hollered the loudest against Goldwater, played Scranton on Page One for six days, and then consigned him deep inside; in one issue, the first Scranton story ran on page 70.

By contrast, the New York Herald Tribune, which is as thin as the Times is bulky, kept the Scranton story on Page One ten out of twelve days running—and during this period gave him 1,000 column inches to the Times's 600. The Los Angeles Times reprinted Scranton's announcement speech in its entirety, a labor of love that demanded two full pages in the execution. In South Carolina, the Charlotte Observer seemed to go out of its way to keep Scranton in a favorable light: BARRY HEAVILY FAVORED, STILL, BUT SCRANTON COULD WIN (June 13); HOPE BUOYED, SCRANTON SAYS BARRY'S SLIPPING (June 17); SCRANTON: NICE YOUNG RICH MAN (June 24).

For the most part, however, the papers seemed to be playing the Scranton candidacy for its news value, no matter where their editorial hearts happened to lie. Their performance was best exemplified, perhaps, by the Houston Post, which apparently trotted out its tape measure to keep things just: one Goldwater story to one Scranton story, both of meticulously equal length. In all, Scranton's press coverage confirmed the heartfelt if nonpartisan observation of the Miami Herald: "There's life left in a political summer which was dying of the doldrums."

The Founder's Daughter

The men in the city room of Tokyo's Asahi Shimbun (Rising Sun Newspaper) have always enjoyed a welcome insulation from meddling. Co-Founder Ryohei Murayama believed firmly that the editorial content of his paper belonged to the editors alone, and with that formula he built the paper into the largest in Japan (present circ. 4,700,000). Before he joined his ancestors in 1933, Murayama tried to make sure that his no-meddling policy would survive: he vested control of the paper in a board of directors drawn from Asahi's ranks. But that same year meddling began. Although Asahi's editors did not like it, and could have stopped it at any time, they suffered it politely. For the meddler was Ofuji Murayama, the founder's daughter.

Kekko Desu. An only child, Ofuji Murayama had long been accustomed to having her own way, and she saw no reason why the paper should be an exception. Her obedient husband agreed, and he was in a position to help. After marrying Ofuji and taking the family name—an old Japanese custom—he replaced his father-in-law as publisher and president. Whatever Ofuji wanted was absolutely *kekko desu* with him.

Mrs. Murayama's hints, suggestions and commands were rarely followed, but that only increased their volume—and the irritation of Asahi's editors. When members of a Japanese Antarctic expedition radioed home that an advance party was in trouble and might have to abandon their dogs, Mrs. Murayama, who is an ardent dog lover, ordered the paper to contact the expedition. Tell them to rescue the dogs, she said, and, if necessary, to abandon the Japanese. Asahi's editors refused. They also refused when she demanded a Page One story on her experience at

KYODO

OFUJI MURAYAMA.
Born to meddle.

an art show attended by Emperor Hirohito: when she approached too near the imperial presence, Mrs. Murayama was rudely jostled by a guard.

Declaration of War. Asahi's private power struggle became the talk of Japan, and the paper's indecisive editors, who had the courage to veto Mrs. Murayama's mandates but could not find a way to keep her quiet, lost considerable face. To recover some, five board directors, who had resigned in protest against her highhanded ways, changed their minds and went back to work. After that, Mrs. Murayama publicly declared war. She got her husband to bring suit against the five directors, on the ground that he had accepted their resignations and that their return was therefore illegal.

In Tokyo's Osaka District Court last week, Judge Taneo Sawai brought the wholly avoidable 30-year feud to an end. Having previously warned Mrs. Murayama that any verdict was bound to go against her, the judge directed both sides to work out an amicable settlement. That meant that the five directors would stay. It also meant an end to Ofuji's meddling. And it probably meant that old Ryohei Murayama could relax at last with his ancestors.

MANAGED NEWS

A New Law, An Old Complaint

From Luxembourg, Monaco, Andorra and the Saar, powerful radio transmitters beam across the border into France. Their presence infuriates the French government, which, except for those uncontrollable transmitters, hogs the country's air. But Frenchmen by the grateful millions tune in to the foreign wave lengths. It is the only way that they can listen to something their own government-owned network almost never sends: an undoctored dose of news.

Half a Minute. Newcasts over Radiodiffusion Télévision Française, the government monopoly, have long been regarded with Gallic cynicism. "We are given slanted, incomplete or false news," said a Deputy in the National Assembly. Under De Gaulle, as under all his predecessors, RTF is employed as a highly useful instrument of state. Its TV eye is fixed hypnotically on the movements of the President, and its transmitters endlessly broadcast his public utterances. Any De Gaulle press conference is generally put on the air at least twice.

Nor does Director-General Robert Bordaz, a government appointee, have to be reminded what kind of newscasts the general prefers. Since France granted recognition to Communist China last winter, RTF's larger TV chain has carried documentaries on France's new Oriental friend that might have been produced by Mao Tse-tung himself. They showed Red China in such a flattering light that televiewers sent bitter letters to the press.

Against such competition, President De Gaulle's opponents and critics find it next to impossible to get a hearing. Last January RTF gave just half a minute of TV coverage to the speech in which Socialist Gaston Defferre announced his political designs on De Gaulle's office. The camera, sweeping swiftly through the crowd, somehow managed to miss the speaker's face.

Only Promise. Moved by a swelling tide of protest against RTF's disciplined news, Minister of Information Alain Peyrefitte recently presented the National Assembly with a statute that he claimed would relax government control of the network. At first glance, the new law, which would change RTF's name to L'Office de Radiodiffusion Télévision Française, or ORTF, looked promising. It would, for instance, permit camera crews to chase big stories without first securing the signatures of seven government functionaries. But the promise was only that. Reaffirmed was the government's old right to keep all competitive transmitters out of France, and to appoint the network's director-general. "You are changing the label," said Assembly Deputy Maurice Faure, "but not the bottle."

Last week the new ORTF statute became law. But even before that happened, Director-General Dordaz had gone to Moscow to be the guest of Mikhail Kharlamov, chairman of the Soviet State Committee on Broadcasting and Television.

MAGAZINES

For & By Teen-Agers

The country's 24 million teen-agers do not lack for magazines aimed directly at their age group. *Co-ed, Dig, 'Teen, Fifteen, Seventeen, Teen Talk, Teenage Times* and *Ingenue*—the varied titles add up to several dozen, but they all share a common trait: they are published by adults who may or may not have retained their passports to the juvenile mind. Last week in Denver, newsstands displayed a new comer to the list: a teen-age magazine that is put out by teen-agers.

At a skinny 20 pages, *Tempo* ca no greater shadow than a high scho freshman at the beach. But it had commendably professional sheen, an its contents sought to grapple with som of the problems and interests of i peers: a Denver boy's account of ho it feels to be a high school dropout, page of verse composed by an 18-yea old girl, a random assortment of teen age views on public school integratio All this may not have looked like ser ous competition to the call of the juk joint, but the first run of 5,000 copi sold briskly at 25¢ each.

Tempo is the extracurricular wor of two honor students at Denver George Washington High School, Ha old Goldberg, 18, and Richard Goul 17. It was started on the strength of a earlier publishing success: the bo cleared $57 on a tabloid newspap they sold throughout the city's eigh high schools. To start their magazin Goldberg and Gould first signed up 57 advance subscriptions, hustled ads fro local merchants and talked the print into a $200 loan. *Tempo's* debut ab sorbed all $720 of the starting capita but Goldberg and Gould are alread laying out two more issues.

Come fall, the magazine will face crisis that is surely unique in the anna of periodical publishing: both of i proprietors have to go back to schoo "We hope to sell *Tempo* to someon with enough money to carry on," sai young Goldberg hopefully. "Probabl an adult who'll hire teen-agers to put out. I don't think any adult could ru *Tempo*." Added young Gould some what more realistically: "That's righ But we'll sell to anybody."

READINGS

Something to Write Home About

Dear Mother,

I'm sorry I haven't written, but it has taken me days to get over the wonderful thing that happened. Earlier this week, I saw Elizabeth Taylor and Richard Burton do a poetry reading at the Hunt-Fontanne Theater on Broadway. Mother, I *don't care what you* say about them, I want to *tell* you it was really beautiful.

A man at the office took me with him because *his* wife was *sick*. The reading was a *benefit* performance for the American Musical and Dramatic Academy, an acting school which is run by Mr. Philip Burton, the foster father who gave Richard Burton his name and trained him as an actor. We got in $50 seats. All the ones in front of us were worth $100. If that sounds like a lot of money to you, it sure does to me, too, but in retrospect, I guess it seems worth it. Not only *did* the theater academy get more *than* $30,000 out of it, but also *these* two really courageous *people really* proved themselves before everybody.

And I mean everybody. It was the classiest audience you could imagine. Everyone was tan and nifty, and half of them seemed to have put their evening clothes on over their bathing suits. I alone saw Dina Merrill, Carroll Baker, Lauren Bacall, Hume Cronyn, Red Buttons, Bea Lillie, Lee Remick, Montgomery Clift, and Kitty Carlisle with a man I didn't recognize, but I heard someone say it was Alan Jay Lerner. Carol Channing was there in a white stovepipe hat two feet high and an enormous pair of wrap-around sunglasses that would embarrass a Greyhound bus driver. I learned later that President Kennedy's sisters Pat and Jean were there, Anita Loos, Walter Wanger, Myrna Loy, Adolph Green, and Elizabeth Taylor's mother and father. Some of the other women there were really risqué in those new gowns that show so much.

The Burtons read verses alternately in a sort of ping-poem match (hah-hah!). Many of the items had apparently been selected for their meaning to the Burtons. Richard, for example, started off by reciting *To His Coy Mistress* by Andrew Marvell, and one of the poems Elizabeth read was Thomas Hardy's *The Ruined Maid:*

> *"And now you've gay bracelets and bright feathers three!"*
> *"Yes, that's how we dress when we're ruined," said she.*

Elizabeth read that one in a very accomplished cockney accent and showed herself to be more of an actress than I thought she was. She read William Butler Yeats's *Three Bushes,* about two women who loved the same man, and really belted out the line, "What could I do but drop down dead if I lost my chastity?" All evening, as she read, Richard's foster father sat behind her mouthing every word she said. He was just afraid she would make a mistake, but he looked like a ventriloquist.

Together, the Burtons read T. S. Eliot's *Portrait of a Lady,* which, in case you have forgotten, Mother, starts off with a quote from an Elizabethan play: "Thou has committed fornication, but that was in another country." You see what I mean about courage.

Very tenderly, Elizabeth read, "How do I love *thee*? Let me count the ways,"

HENRY GROSSMAN

THE BURTONS THREE
Ping-poem match.

by Elizabeth Barrett Browning, and Philip Sidney's beautiful sonnet which begins:

> *My true-love hath my heart, and I have his,*
> *By just exchange one for the other given.*

Richard was even better than she was. He did the "death of kings" speech from *Richard II* and the St. Crispin's Day speech from *Henry V,* and he really sounded like an orchestra, although he stumbled over an unbelievable number of lines. Oddly, he was at his best reading not Shakespeare but D. H. Lawrence—a poem called *Snake,* which is one of his favorites in all literature. But the high point of the evening came when he and Elizabeth read the 23rd Psalm. He would read a line in Welsh, then she would read a line in English, and they went through the whole psalm that way. The man with me said they sounded like a Paiute Indian and an acolyte, which surprised me, because I was really moved.

Elizabeth wore two gowns, both the same sort of Roman-matron style, one blue and the other white. She changed offstage. This was the first time she had ever faced a theater audience. She looks heavier than she does in movies but not nearly as old as she is. She is 32. She was beautiful, but not as beautiful as she is supposed to be, if you know what I mean. But how could *anybody* be that beautiful?

The evening was especially fun because there was so much pleasant banter between Richard and Elizabeth. Once she stopped a poem and said, "Sorry, may I start again? I got all screwed up."

"I could say that in *Hamlet* every night," said Richard.

After she finished reading one poem (near the beginning), he said, "I didn't know she was going to be this good." A little later, she said to the audience, "See—you did get something for your money." That said it for me, and it wasn't even my money.

Afterwards, outside in the street, the crowds were as big as they always are (the theater is the same one where Burton plays Hamlet), trying to glimpse Richard and Elizabeth. I read in the paper that Richard said it is a mystery to him why the crowds are there every night. "At first I thought the somewhat illicit quality of our relationship before we were married was bringing them," he told a reporter from the Times. "We assumed that once we were married it would stop."

At this point Elizabeth Taylor apparently popped in and said, "That doesn't have anything to do with it, darling. You're the one they're coming to see. You're the Frank Sinatra of Shakespeare."

"The what?" said Richard.

"I said the Frank Sinatra of Shakespeare," said Elizabeth.

"Oh come now," he said, "get ahold of yourself, luv."

All for now—
Agnes

P.S. I don't miss college one bit.

TELEVISION

Nielsen's Newest

CBS thinks Barbra Streisand is "the major star to come on the horizon in the last five years." So last week, after an arduous courtship of her and an all-out battle with rival suitors, the network was happy to announce a ten-year marriage contract.

To make her television appearances exclusively theirs, the network gave Barbra $5,000,000 and the longest-working contract in television history. She can do as little or as much as she likes, and she has that favorite clause—prized more in the concept than in the execution—giving her "artistic control."

Barbra, who will start out with three "specials" over the next two years, seemed faintly bored by it all. "It's O.K. I guess," she said. "But you can live just as well on $50,000 as on $300,000—you know what I mean? I mean how many cars can you have?" As of now, Barbra has none.

CHEMICAL ENGINEERING

Auto-Intoxication in Los Angeles

For many a sun-worshiping Southern Californian, the thick, eye-irritating blanket that often covers Los Angeles and has already pushed past the mountains into the San Fernando Valley is almost a way of life. The acrid murk is concocted in the area's own natural pressure cooker. A pair of the state's most abundant resources, sunshine and automobiles, cooperate on the job.

Daily, 10,000 tons of chemical compounds—hydrocarbons and nitrogen oxides—pour from 3.5 million exhaust pipes. When there is no breeze, and the exhaust-laden air is trapped in the mountain-rimmed Los Angeles basin, the bright Southern California sunshine, which could be expected to burn off a simple, old-fashioned fog, goes to work on the invisible gases until a giant photochemical reaction takes place. The pallid, evil-smelling vapor that results is known as smog.

New & Expensive. California has just taken a small but hopeful step toward bringing the blue back to its skies. The state Motor Vehicle Pollution Control Board approved four "afterburner" devices to help eliminate unburned hydrocarbons from auto exhausts. All 1966 cars sold next year in California must be equipped with one of the approved devices; later they will probably be mandatory for old cars as well. The prices will be enough to bring tears to the eyes of California car owners even on smog-free days: factory-installed jobs will add up to $120 to the cost of a new car, while installation on used cars may run as much as $81.50. In addition, it will probably cost as much as $42.50 a year to keep the afterburners tuned up and functioning efficiently. Even then, how well the devices will work is not certain. Smog officials point out that laboratory tests are not the same as everyday use in the public's poorly maintained and carelessly managed cars.

Los Angeles, California's smog capital, has been trying for years to get rid of its trapped pollution. Since 1957, the state Air Pollution Control District has prohibited the 1,500,000 backyard rubbish burners that produced 600 tons of acrid smoke a day. It extinguished dump fires, went after smoking factory chimneys, enforced a stiff set of regulations that kept oil refineries from letting more than a trickle of smoke and fumes escape into the air. These measures did some good. For one thing, they changed the color and character of the smog. Los Angeles smog is still maddeningly irritating to the eyes, but now, at least it is "clean," a glaring whitish color with practically no soot or smoke particles in it.

But in spite of the banishment of smoke and soot, Los Angeles smog has grown progressively worse, and the same kind of air pollution has appeared in other parts of California. Chemist Philip A. Leighton of Stanford University believes that unless something drastic is done, smog will soon shroud most of the inhabited parts of the state. Other even gloomier prophets foresee a California unfit for human life.

Smart & Switch. Somehow the state must learn how to get along while burning less smog-producing fuel. This could be accomplished by shifting to atomic energy for the generation of electric power and by setting up efficient public transportation to clear the clogged freeways. Radical smog fighters have even dared to suggest that Californians might some day soon be persuaded to drive smaller, less powerful and more practical cars. But big cars, like smog, are a big part of California living, and most Californians would rather smart than switch.

GENETICS

Radiation Won't Kill the Race

Mice had good news for men this week. Reporting on the results of a six-year study of the effects of radiation on mice, Dr. John Frederick Spalding, 44, of the University of California's Los Alamos Scientific Laboratory, said that radiation may not be the genetic bugaboo it has been made out. In a nuclear world, man may survive, and even continue to look like man—whatever the mistakes of soldiers and diplomats.

Starting with a brother-sister pair of mice in the "mouse house" at Los Alamos, Geneticist Spalding raised generation after generation of mice, the equivalent of 900 years of mankind. When the males of one line of Spalding's mice were about 26 days old, they were dosed with one-third the amount of X rays that would have been necessary to kill them—as much as they could take and still reproduce. Females were not irradiated since a similar dose would have left them sterile.

Once a male was irradiated, he was caged with his sisters; the resulting litters were carefully studied and the young males were irradiated before they were allowed to breed. Another line of mice, a control group, received no radiation at all. Then 32 generations of both radiated and non-radiated mice were carefully inbred to accumulate evidence of genetic damage as rapidly as possible. For all the obvious differences between mice and men, the genetic mechanics in all mammals are the same, and in humans and mice the genetic material is basically alike.

Spalding found that irradiated mice matured at a greater age, were fertile longer, had more conceptions and more litters than normal mice. But in the irradiated mice the litters were smaller, more babies were stillborn, and more were cannibalized by the parents. Except for a few cases of hydrocephalus, Spalding found no malformed offspring in 32 generations; on the other hand, the non-radiated control group developed a strain of bald mice that was a spontaneous mutation.

"I do not want to imply that irradiation does not cause genetic damage," says Spalding, "because it does. But the damage is eliminated through lethality and by natural genetic processes. Though there were more stillbirths and smaller litters, the fact that the irradiated mice remained productive over a longer period and actually produced more offspring is an apparent attempt by nature to compensate. If the human race is to eliminate itself genetically, it will probably have to look for a more effective method than radiation."

SUPREME COURT

ıssports for Communists

Editorial writers and columnists ross the nation echoed a familiar com- aint: the Supreme Court, they said, ıs being soft on Communists. By a te of 6 to 3 last week, the court ruled at Congress had exceeded its power forbidding passports to all U.S. Com- ınists. Disturbing as their *decision* was many Americans, the majority of the stices were *not* ruling on the nature of *ommunism* or *its* threat to the U.S.;

AP

PARTY CHAIRMAN FLYNN
Winning the right to travel.

hat bothered them was one single par- raph in the *Subversive Activities Con- ol Act of 1950.*

Severe Sanction. Section 6 of the act ovided that any member of a Com- unist-action, Communist-front, or ommunist-infiltrated organization who es a U.S. passport, or even applies r one, is guilty of a felony and pun- hable by a maximum $10,000 fine and e years in prison. In early 1962, sev- al months after Section 6 became law, e State Department revoked the pass- orts of leading American Communists, cluding those of Party Chairman Eliz- eth Gurley Flynn, 74, and Herbert ptheker, 48, editor of the Communist onthly *Political Affairs*. Miss Flynn nd Aptheker sued the State Depart- ent, charging an unconstitutional dep- vation of their rights. After a federal istrict court upheld State's action, they ppealed to the Supreme Court.

Speaking for the majority, Justice Ar- hur Goldberg found a great deal wrong ith Section 6. It penalized a person or his associations rather than for his cts, warned Justice Goldberg. And it ailed to consider that even a Commu- ist might want to travel abroad for no nore sinister purpose than "to read rare manuscripts in the Bodleian Library of Oxford University." So cautious is the court about reversing acts of Congress hat it has done so only nine times in he past 28 years. But because Section 6 "sweeps too widely and too indiscrimi- nately across the liberty guaranteed in the Fifth Amendment," the court in- voked its most powerful sanction and declared the section unconstitutional.

Bibliophile Alibi. Even as it swept away Section 6, the court intimated that Congress could write a new law which would pass constitutional muster. "The appellants in this case," said the court pointedly, "should not be required to assume the burden of demonstrating that Congress could have written a stat- ute which might constitutionally have prohibited their travel."

Justice Tom Clark, joined by Justices Harlan and White in dissenting, was puzzled. "Which Communist Party mem- ber is worthy of trust?" he asked. "Since the party is a secret, conspiratorial or- ganization subject to rigid discipline by Moscow, the Congress merely deter- mined that it was not wise to take the risk which foreign travel by Commu- nists entailed."

Confessions from Suspects

One January evening in 1960 a 22-year-old laborer named Danny Escobe- do was taken into custody by Chicago police. Under intensive questioning he confessed to complicity in the slaying of his brother-in-law. He was sentenced to 20 years in prison for first-degree mur- der. Escobedo appealed on the grounds that the police had refused his requests to allow him to consult his lawyer dur- ing the interrogation and that his con- fession had not been voluntary. The Illinois Supreme Court agreed that the confession was involuntary and reversed his conviction; then the state asked for a rehearing, persuaded the court to re- verse itself and uphold the sentence.

New Rules. Last week, in a ruling that will cause profound changes in American criminal procedures, the U.S. Supreme Court reversed Danny's con- viction. In last year's landmark *Gideon* v. *Wainwright* decision, the court held that every defendant in a state or fed- eral criminal trial is entitled to counsel. In Danny's case, the court extended the *Gideon* principle and ruled that a per- son is entitled to consult with counsel as soon as an investigation makes him a prime suspect.

Taking note of warnings that giving suspects such a right to counsel would greatly diminish the number of confes- sions obtained by police between arrest and formal indictment, Justice Gold- berg, who wrote the five-man majority opinion, said, "This argument cuts two ways. The fact that many confessions are obtained during this period points up its critical nature at a stage when legal aid and advice are surely needed." Law enforcement "which comes to de- pend on the confession," declared Jus- tice Goldberg, "will, in the long run, be less reliable and more subject to abuses than a system which depends on ex- trinsic evidence independently secured through skillful investigation. If the ex- ercise of constitutional rights will thwart the effectiveness of a system of law en- forcement, then there is something very wrong with that system."

Strong Dissents. The four dissenting justices felt very strongly that there was something wrong with the majority's reasoning. The new ruling is unwork- able, said Justice Byron White, "unless police cars are equipped with public de- fenders." Said Justice John Marshall Harlan: "I think the rule is most ill- conceived and that it seriously and un- justifiedly fetters perfectly legitimate methods of criminal law enforcement."

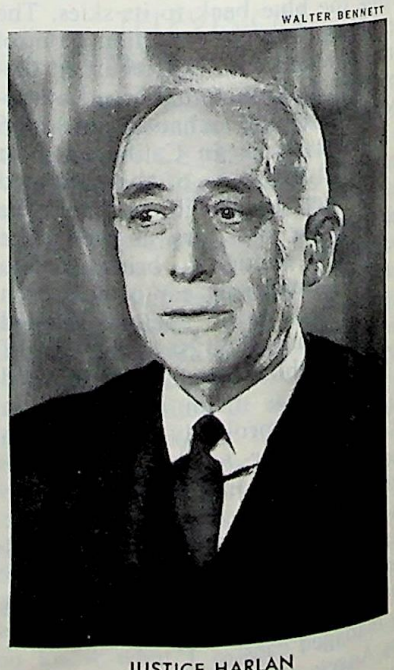
Across the country, the dissenters' worries were echoed by police and pros- ecutors alike. "Naturally we would like to talk to a person before his lawyer does," said Houston Police Chief Hob- son McGill, "because we know that many a lawyer is unscrupulous and will advise his client to say nothing, even when he knows that his client is guilty." The ruling, sighed Los Angeles County Counsel John Collins, "gives the crimi- nal one more advantage." Perhaps so, answered Los Angeles Superior Court Judge Macklin Fleming, but he added that it was a problem competent and hard-working police should be able to take in stride.

The Dissenter

"These decisions give support to a current mistaken view of the Constitu- tion and the constitutional function," said Justice John Marshall Harlan. "This view, in a nutshell, is that every major social ill in this country can find its cure in some constitutional 'princi- ple,' and that this Court should 'take the lead' in promoting reform when other branches fail to act.

"If the time comes when this Court is looked upon by well-meaning people —or, worse yet, by the Court itself— as the repository of all reforms, I think

WALTER BENNETT



JUSTICE HARLAN
Judge of judges.

Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the seeds of trouble are being sown for this institution."

Justice Harlan, in this instance, was addressing himself to the court's redistricting ruling (TIME, June 26), but his scarcely concealed scorn could apply to much of the Court's recent activity.

Harlan's frequent dissents are his creed; he is the disciple of judicial restraint on a court that he finds increasingly willing to reshape just about everything that comes to its attention. In the judicial year that ended last week, Harlan wrote 20 dissenting opinions, twice as many as any other Justice. The year before, he wrote 22 dissents. Sometimes Harlan is supported in them by Justices White, Clark and Stewart, but he is regularly beaten by the five so-called "activists": Chief Justice Warren and Justices Douglas, Black, Brennan and Goldberg.

Harlan, now 65, might have come to his contrariness by inheritance; he is the grandson of the first Justice John Marshall Harlan (1833-1911), the Supreme Court's "Great Dissenter" (316 dissents in 33 years). But Harlan's opposition to Court trends stems, in fact, from his belief that a judicial decision must be based on "uniformly applied legal principle, not on *ad hoc* notions of what is right or wrong in a particular case." The main difference between Justice Harlan and the rest of the court, says a former Harlan law clerk, is that he "is confined by what he considers his limited role, which is to apply statutes as he thinks Congress meant them."

The role of the dissenter seems not to be a happy one. Court observers notice that Harlan reads his opinions in an increasingly snappish tone. But he has never yet let his displeasure with the majority's reasoning disturb his own judicious approach to cases he is considering. Last month when Harvard University honored him with a doctorate, it saluted him as "a judge's judge."

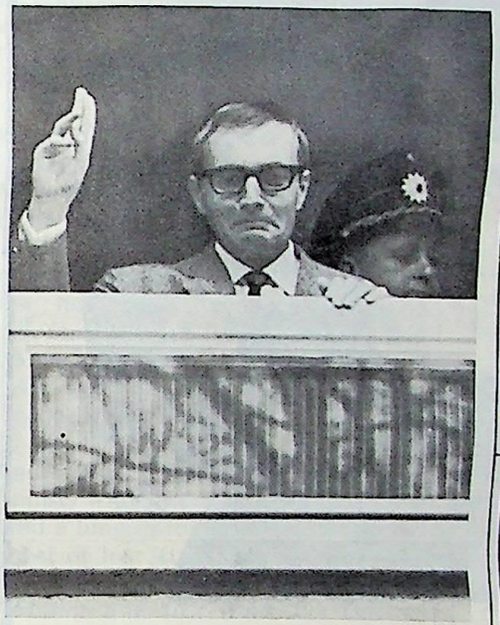
CRIMINAL PROCEDURE

Reform in West Germany

"No one wants to hinder the course of justice, but must it run amok?" The language of Hamburg's Welt am Sonntag was inordinately strong, but then the German press and public had taken an inordinately long time to get upset. The cause of the outcry was an old German legal custom called *Untersuchungshaft* (investigative arrest), which has its roots in Roman law and allows a prosecutor to jail a mere suspect for years—so long as he can convince a judge that the man might flee the country or tamper with evidence and witnesses.

Sensational Arrests. Germans are distressingly familiar with *Untersuchungshaft*; it inevitably became a favorite Gestapo tactic. But only recently, as the result of a number of sensational investigative arrests, has a reform movement been started. Half a dozen ranking executives of West Germany's big Henschel Werke (locomotives, trucks, land movers) have been jailed on suspicion of defrauding the West German Defense Ministry, including President Fritz-Aurel Goergen, who was hauled away from a banquet honoring Chancellor Ludwig Erhard (TIME, May 8). Germany's biggest clothing manufacturer, Alfons Müller-Wipperfürth, was grabbed from a hospital bed and jailed on suspicion of tax evasion. In 1962, after Germany's saucy newsmagazine *Der Spiegel* questioned West Germany's military preparedness, police jailed Publisher Rudolf Augstein and five other *Spiegel* staffers on suspicion of treason. Released within three months, they still have not been formally charged.

Executives are not the *only* ones arrested. Roughly *50,000* Germans are arrested *each* year for investigation, and each spends an average 71 days



PUBLISHER AUGSTEIN UNDER ARREST
Curbing a favorite Gestapo tactic.

in jail. Less than 4% of those convicted are sentenced to terms longer than the time they have already served, yet there is no compensation for prisoners who have outserved their sentences. A suspect is usually jailed with convicts and may not see his lawyer alone.

Only the Beginning. In a unanimous gesture almost without parallel in postwar Germany, the Bundestag last week passed a bill that does not abolish investigative arrest but will certainly curb its abuses. The bill now goes to the Bundesrat (upper house), where it is certain to be quickly approved. Once the new law is in effect, before a judge may permit a suspect to be jailed the prosecutor must submit concrete factual evidence that the suspect intends to flee or tamper with testimony. A suspect will be guaranteed the right to refuse to testify against himself, the opportunity to refute the charges at the initial hearing, and the privilege of private consultation with his lawyer. More important, leading German legislators regard the bill as only the beginning in overhauling the country's archaic legal system.

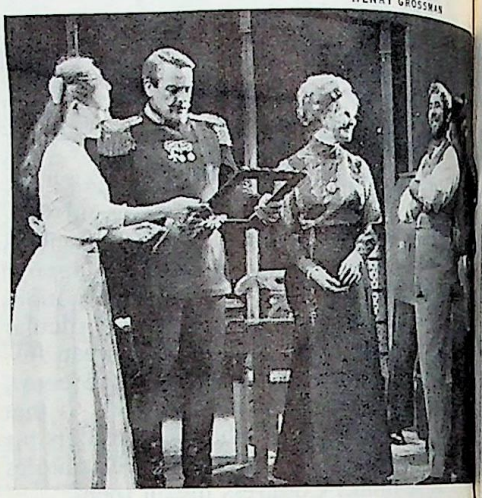
Joyless in Purgatory

The Three Sisters. If the Hemingway hero was the man to whom things happened, the Chekhov hero and heroine are people to whom nothing happens. His *Sisters* exist in a sad purgatory of might-have-beens and never-will-bes. Masha (Kim Stanley), married at 18 to a bureaucratic clod, alternately tongue-lashes him as a clownish bore and lapses broodily into tears. Irina (Shirley Knight) has made a hysterical religion of work. Olga (Geraldine Page) is a kind of involuntary nun of duty, serving joylessly as the local school headmistress. The cultured, well-educated sis-

HENRY GROSSMAN



CAST OF "THREE SISTERS"*

Small sinners, great talkers.

ters are too weak to demand life on their own terms, too proud to beg for it, and too honorable to steal happiness on the sly. They dream of going to Moscow, the perennial illusion of the despairing that life is more real, rich and exciting somewhere else.

It is Chekhov's comic irony to show how sorry his characters feel for themselves. It is his genius for finding the human pulse to make playgoers feel sorry for them too. But if a masterpiece may have a flaw, it is perhaps that Chekhov tries to make pathos do the work of tragedy. If the sisters and the men around them draw their breath in pain, they rarely raise a finger against fate. They are small sinners and great talkers. Masha comes closest to making a breakthrough to life by falling in love with an unhappily married colonel (Kevin McCarthy).

This Actors Studio production attains a sense of loneliness, emptiness, inertia, and the parched, anguishing inability to enjoy life but only from moment to moment rather than continuously. Chekhov is the drama's Chopin, fragile, lyrical, nocturnal, romantic, ineffably sad. This mood music hovers in the air of this Broadway revival, but it does not permeate the play.

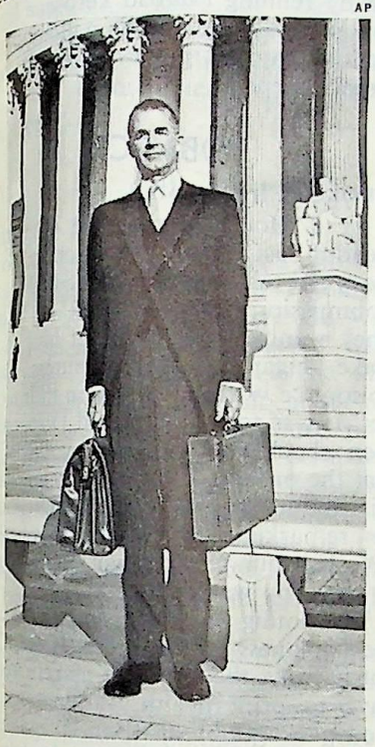
MERGERS

New Powers for Trustbusters

Out of the competitive economics of baby food jars and beer cans, aluminum cable and sodium chlorate, the U.S. Supreme Court is fashioning a broad extension of the Government's trustbusting powers. In two decisions last week, and a third in the past month, the court looked sternly upon mergers, whether in the same or in rival industries; it also raised new barriers against the acquisition of smaller competitors or the form-

AP



SOLICITOR GENERAL COX
Making it hard to concentrate.

ing of joint ventures. In effect, it put corporate giants on notice that most future growth must come from within rather than by merger.

Main points of the court's rulings:

▶ *Major companies will find it tougher to initiate joint ventures.* Last week's case in point involved the Penn-Olin Chemical Co., set up on a fifty-fifty basis by Olin Mathieson Chemical Corp. and Pennsalt Chemicals in 1960 to make sodium chlorate for use in the pulp and paper industry. A lower court had dismissed a complaint against the creation of the firm. But the Supreme Court said, in effect, that companies cannot enter joint ventures if there was a "reasonable probability" that either would have gone into the line of business alone. While the case was sent back to the lower court for new evidence of that probability, Associate Justice Tom C. Clark declared for the 6-3 majority that "the same considerations apply to joint ventures as to mergers."

▶ *A major manufacturer cannot acquire the producer of a different but possibly competitive product.* Specifically, the court disapproved of the 1956 merger between Continental Can and Hazel-Atlas Glass, ruling 7-2 that Continental's cans and Hazel's bottles were not in separate industries but were all part of the "competitive overlap" in the packaging market.

▶ *In a highly concentrated industry, a large company may not acquire a relatively small competitor.* A month ago, the court held that Aluminum Co. of America violated antitrust laws by its 1959 acquisition of the Rome Cable Corp. Rome had only 1.3% of the aluminum cable market *v.* Alcoa's 27.8%. But Associate Justice William O. Douglas, writing the 6-3 majority opinion, applied a principle used in recent antimerger decisions: "If concentration is already great, the importance of preventing even slight increases in concentration is correspondingly great." Justice Department lawyers believe that the decision will help win similar cases against Kaiser Aluminum, which hopes to acquire U.S. Rubber's aluminum fabricating plant, and Kennecott Copper, which intends to merge with the cable-making Okonite Co.

The court's tougher line stems from the 1950 amendments to the Clayton Act, particularly to the broad and vaguely worded Section 7. It now prohibits a corporation from acquiring stock or assets of another "where in any line of commerce . . . the effect . . . may be substantially to lessen competition, or to tend to create a monopoly." In case after case, the trustbusters are applying Section 7 with success. It was the basis for the 1957 decision forcing Du Pont to sell its 23% of outstanding stock in General Motors; in the important 1962 Brown Shoe-Kinney case, the court used it to rule out a merger between a manufacturer and a retailer in the same line of business. During the past year, the court relied on Section 7 to break up bank mergers in Philadelphia and Lexington, Ky.

Justice Department lawyers boast that they have not lost any important antitrust case since 1953, and U.S. Solicitor General Archibald Cox has a string of 15 straight Supreme Court victories. "If I were in private practice," says a trustbusting lawyer, "I would advise my clients in concentrated industries that nearly any merger undertaken today is apt to be challenged successfully unless cleared with us beforehand."

Nearly all businessmen do check first with the trustbusters, whose increased authority makes merging far more difficult but not impossible. There have been 667 mergers announced this year, compared with 482 in the same 1963 period, and every one has undergone at least preliminary Government scrutiny. In most cases, the trustbusters found that the companies were either too small or too diverse for them to take action. Instead, they zero in on bigger targets, where they feel that they have a good chance to win. Justice Department lawyers have a long list of investigations pending, have filed seven new suits this year, including several very big ones in the chemical and oil industries. Once in the Supreme Court, the busters are hard to beat.

Made to Measure

Fanciers of men's clothing may wonder who Hart, Schaffner and Marx really were. Well, late in the 19th century in Chicago, Max and Harry Hart, Joseph Schaffner and Marcus Marx pioneered as high-volume manufacturers of men's clothing ("One just price and just one price"). They brought out the first honest-to-goodness virgin-wool suits in 1900, and a tropical-weight suit in 1917. About the same time in Rochester, two other clothiers, Jeremiah Hickey and Jacob Freeman, were sewing up their own vested interests. Last week the two companies that these men founded joined hands across the rack in an

Digitized by Arya Samaj Foundation Chennai and eGangotri

$11 million stock-swapping merger deal.

The original Hart, Schaffner and Marx are long gone, but their publicly owned firm under President John D. Gray now does a $107 million manufacturing and retail business, has 101 stores in 43 cities, including Wallachs in Manhattan, Baskin in Chicago, and Stevens in New Orleans. Smaller Hickey-Freeman is still a private family firm, run by President Walter B. D. Hickey (son of Jeremiah) and Vice President Albert Freeman (nephew of *Jacob*).

As merger mates, the two companies are made to measure. While Hart Schaffner suits sell for $80 to $150, Hickey-Freeman specializes in the luxury brackets, with suits retailing at $150 to $235, sports coats at $110 to $215 and vicuna overcoats priced up to $550. Last year it sold $20 million worth of everything, including plenty in its own three stores—F. R. Tripler in Manhattan and Capper & Capper in Chicago and Detroit.

Now Hickey-Freeman will stitch on to Hart Schaffner as a subsidiary, get a drawerful of shares and some new outlets. Said Hart Schaffner's John Gray: "We have absolutely no plans for changing the product, distribution, policies or management of Hickey-Freeman." Certainly those familiar names on the labels will remain the same.

SERVICES

The Cleaner Cleans Up

One of the biggest cleanup operations in the world is run by Daniel Fraad Jr., 52, a onetime Brown University football standout and Columbia University anatomy instructor. He heads a company called Allied Maintenance, which, among other activities, sweeps and cleans offices, stores, auditoriums, airline terminals, ballparks. The 16,000 people who work for Fraad's publicly owned Allied do everything from tidying up Houston's Humble building to taking atomic waste away from the Yankee Electric plant at Rowe, Mass. "Minding other people's business" is the company's slogan, and in the fiscal year just past, its sales swept from $47 million to $60 million.

Fair Fight. Its most important contract, for an undisclosed sum in the millions, is to clean and maintain the grounds and many of the buildings at the New York World's Fair. Last week newspapers around the U.S. blossomed with stories about angry Fair exhibitors who charged that they were being taken to the cleaners by their cleaners. Some of them growled about exorbitant charges for such simple chores as unstopping a sink and emptying garbage. The most general complaint was against the high cost of temporary help, called in to perform specialized, emergency jobs. To get a carpenter on a short-term, hourly basis, exhibitors have to pay $11.51 an hour—and double time of $23.02 after 3:30 p.m.

Dan Fraad (rhymes with Claude) steadfastly denies the charges of overcharges. All his 3,885 workers at the Fair are paid the union-labor rates prevailing in New York, where costs might seem a bit steep to a foreigner or out-of-towner (sample: $93.40 a week for a porter). The only extraordinary charge is an 18% "idle-time fee" that Allied tacks on to the regular charges for its pool of 66 carpenters, mechanics and ironworkers who make hurry-up, emergency repairs. The extra is designed to compensate for the idle time between service calls. Fraad says that some of the displeased foreign exhibitors have their figures mixed; the Malaysian pavilion's director, for example, complained that he was paying $570 weekly for window washing—but the bill is actually $570 monthly. According to Fraad, Allied will make only fair profits on its Fair income: 2%.

Like Grandpa. All over the country, Allied is largely a middleman between companies that need maintenance help and the many unions that supply it; at the Fair alone, it deals with 35 unions. The company has been filling this unique need for three generations. It was started in 1888 by Danish Immigrant David Fraad, who contracted with the Pennsylvania Railroad to clean and fill lamps at its Jersey City terminal. Later, he and his four sons branched out, began cleaning offices, stores and the mansions of the Fricks, Rockefellers and Astors.

Grandson Dan Fraad started in the business at the end of a mop handle, is called "Junior" by his wife and friends. His chores are not all that different from Grandfather's, though on a much grander scale. The company that started out by refilling railroad kerosene lamps now pumps three million gallons of fuel per day into jet planes at major commercial airports.

TOBACCO

Smoke & Ire

At a House Commerce Committee meeting last week, several critical Congressmen talked tough to Federal Trade Commission Chief Paul Rand Dixon. They wanted him to forget his plan to make cigarette manufacturers place poisonlike warning labels on their product. It was too late, replied Dixon, who then shocked everybody by disclosing that the order had already been written. Distributing copies to the Congressmen, he remarked somewhat sarcastically: "We had our printers working all night in case you wanted one."

The timing was surprising, and so was the harshness of the order. If the FTC got its way, the cigarette makers would have to print health warnings on all their packages by next Jan. 1, and write them into all advertisements by July 1, 1965. While the wording was left up to the companies, the FTC made clear that the messages would have to indicate clearly that "cigarette smoking is dangerous to health and may cause death from cancer and other diseases."

Speaking for the industry, Reynolds Tobacco Chairman Bowman Gray called the order "unwise, unwarranted." Tobacco men charged that the FTC had exceeded its authority, made plans to test the case in the courts. They got plenty of support from Southern Governors and Congressmen. Officials in the departments of Agriculture, Commerce and Health, Education and Welfare wondered whether they should have jurisdiction in the matter instead of the independent FTC—or whether any labeling rule should be enforced at all. Even some of the sharpest critics of the industry questioned the legality and propriety of the order. Surgeon General Luther Terry, whose fact-finding body triggered it all with the report last January on smoking and health, doubted that the FTC had jurisdiction, suggested that the matter be turned over to the Food and Drug Administration.

With a long dispute certain in the

LOVE BROWN LOEB MILLIGAN

Moving toward the big three questions.

courts and Congress, Dixon himself agreed that the FTC order would not take effect for years—if ever. Meanwhile, climbing sales of cigarettes showed that Americans may be enjoying it less now, but they are smoking more than before the Surgeon General's report.

OIL

A Lure for Pure

"We expect 1964 to be a difficult year," admitted Pure Oil Co. President Robert L. Milligan recently. He was more prescient than he suspected. Last week Pure Oil's board faced the difficult question of what to do about an attempt by a group of celebrated outsiders to buy the 50-year-old company for a walloping $700 million. Milligan and his managers are understandably apprehensive. The mechanics of the transaction are intricate, and how many of Pure Oil's present managers would stay on is uncertain.

High-Note Trio. For six months, reports of heavy secret purchases and an impending offer have swirled from Wall Street to Houston, pumped up Pure's stock from 41 to 54. Last week the identity of the bidders was finally disclosed when the offer was made to Pure Oil—without the usual advance sounding-out of the current management. Leading a syndicate of three major companies is Wall Street's Carl M. Loeb, Rhoades & Co., which is headed by canny John Loeb Sr. The other two participants are: 1) Chairman George Love's profitably diversifying Consolidation Coal Co., which also owns a dominant 8% of Chrysler Corp., and 2) President Chester Brown's Allied Chemical Corp., the nation's fifth largest chemical producer. Having discreetly bought up almost 10% of Pure's scattered stock, Loeb, Rhoades is by far the biggest shareholder in the oil company, with an interest now worth $54 million.

The company that the syndicate is after has more promise than profit. Though Pure's sales in the last decade have almost doubled to $733 million, earnings have not kept pace with the general boom in the oil industry. Last year profits increased less than 3% to $30 million, and in this year's first quarter they were off 50% because of slow heating-oil sales and high charges for servicing the company's debt.

Crude Shortage. Pure Oil's problem has been too little production, too many gasoline wars. As old wells thinned out and not enough new ones were brought in to replace them, the company was forced to turn to competitors for two-thirds of the supplies for its gas stations. At the retail level, Pure also had to cut oil and gas prices to match competitors.

Chief Executive Milligan, 63, has been correcting the imbalances. In the last five years, Pure Oil has spent $230 million searching for oil from Beirut to Brisbane, has increased production 17%. Last year it brought in about two-thirds of the 137 wells it drilled. While building production, Milligan has been reducing costs. He has chopped Pure's marketing staff by 37%, shuttered or sold 1,800 unprofitable gas stations (leaving 16,300), and concentrated on selling such higher-profit products as premium gasoline and jet fuel.

Clever Plan. Now Milligan and his board are being asked to recommend that Pure's shareholders sell out. What the Loeb-Consolidation-Allied group hopes to bring off is a deal that is complex but fairly common in high finance. First, the group would buy Pure's assets for $700 million, using those same assets as collateral for loans to finance the transaction. Pure then would take the $700 million, use $90 million to pay off its funded debt, and distribute the rest to holders of its 10 million shares on a $60-per-share basis. Result: a form of liquidation. The Loeb group would set up a new company, with the shares divided equally among Loeb, Consolidation and Allied. By effecting the transfer of power in that way, Pure would not have to pay a corporate capital gains tax on the money it collects from the Loeb group.

Whether this clever deal will come off depends on the answers to three questions: Will stockholders bite? Will Milligan fight? If he does, how successful will he be? Waiting for the outcome, the bidders are bullish. "You know what they say about the oil business," grinned Joseph Oliver, a Consolidation vice president. "When it's good, it's great; and when it's lousy, it's still pretty darned good."

AVIATION

Lots of Class

Alas, the poor airline passenger. He has to choose from a bewildering array of fares that on New York to Miami flights alone spread out to hundreds of different price possibilities, including piston day coach, jet night coach (rear end), businessman's special and economy prop. Last week it became evident that the fare confusion would get cloudier before it gets clearer.

United Air Lines, which last year made a gallant try to bring order out of chaos by introducing "one-class," one-fare flights on many runs, reversed its thrust, asked the Civil Aeronautics Board for permission to begin three-class service in August. Should the CAB approve, as expected, United will become the first airline to offer first-class, "standard," and coach seats on transcontinental runs, will join TWA, American, and Continental Air Lines in three-class service on shorter flights.

United's one-class, which offered almost as much comfort but not as many frills as first-class, flew high at the start. But it leveled off after American and TWA were allowed to lower their first-class fares this year. From New York to Los Angeles, for example, the first-class fare including taxes dropped from $196.25 to $168.95 one-way, very close to the one-class $160.65.* On that coast-to-coast route in the future, the first-class fare will remain the same, United's one-class will become "standard," and coach will cost $152.36. With all that and many other fares to choose from, buying can be trying even if jetting is not upsetting.

* Despite some fare cuts, or more probably because they helped stimulate business, U.S. domestic trunk airlines earned $19 million in the first four months this year, *v.* a $10.5 million loss in the same span last year.

CORPORATIONS

Spin at Sperry

Sperry Rand Corp. produces a range of goods from hay balers and electric shavers to gyroscopes and Univac computers, but lately it seems to be turning out people faster than anything else. The first notable exit was staged last fall by George M. Bunker, whose Martin Marietta Corp. had bought 800,000 Sperry shares with a view toward a merger that both companies appeared to want. Soon discovering that he could not get along with Sperry's top management, Bunker resigned as a director and sold off Martin's shares in what was the biggest single liquidation in Wall Street annals. A month ago, Sperry Executive Vice President Kenneth R. Herman retired and, in a rare move, sold all his 29,539 shares. This week Univac Division President Louis T. Rader leaves to become chief of the industrial electronics division at competing General Electric.

DAVID GAHR

HARRY VICKERS

What's wrong with better mousetraps?

This series of shifts and sales has focused attention on the man who has remained stolid and stationary, President Harry Vickers, 65. A self-made engineer, Vickers achieved success 40 years ago by inventing advanced hydraulic controls for trucks. He formed Vickers Manufacturing Co. and through a series of mergers ultimately came to the top of Sperry Rand. Today he controls the company because he is the largest shareholder, with one-half of 1% of the widely scattered stock, and has a permissive board that includes several friends. Even when General Douglas MacArthur was chairman, Vickers was the single-minded commander.

Luck & Layoffs. Vickers is fond of saying that "success is 92½% luck—and the rest is hard work." He worked hard to bring about a merger nine years ago between his Sperry Corp. and Remington Rand Corp., but the marriage has had uneven luck. Remington Rand attracted him because it was such an early leader in the computer field that its Univacs were once synonymous with computers. Like many companies, however, Sperry Rand found it easier to make than to market a good product. Cracks the departing Louis Rader: "Whoever said that if you build a better mousetrap the world will beat a path to your door was out of his cotton-picking mind."

Sperry has often been edged out by the superior selling drive of IBM, which has 75% of the market, and has paid Sperry $9,000,000 since 1956 for patent infringements. Though its late-model Univac IIIs and 1004s are rated among the best computers in the field, Sperry's Univac division trails in some key areas; General Electric, for example, is well ahead in the promising "process control" computers that can run pipeline systems or steel mills. Under Rader, Univac had made great progress toward closing the gaps, and thus his move to G.E. is a double blow.

At the same time, the company has been hit by the U.S.'s planned 10% reduction in defense orders. Sperry Rand counts on the Pentagon for half of its sales. In the past year its defense backlog has dropped 14% to $515 million, and it has laid off 300 engineers, as well as 1,300 production workers.

30% Drop. On the plus side, Sperry has made remarkable gains in its earnings by improving the servicing of its products and increasing business overseas. Vickers says that the company is now making money everywhere except in the brutally competitive typewriter and computer fields—but that Univac will be in the black by year's end. Recently the company announced that while last year's sales rose only fractionally to $1.28 billion, profits almost doubled to $26 million. That is still a lower rate of profit than competitors have, but the improvement might seem sufficient to please investors.

It has not. Gruff, slow-talking Harry Vickers charges that Wall Streeters have been knocking Sperry stock in hopes of buying it on the cheap. Wall Streeters, who think about as highly of Vickers as he does of them, reply that the stock has been hurt by the recent executive departures and divestitures. Last week Sperry stock closed at 14¾—off more than 30% since Jan. 1.

Typewriter with a Memory

The office-machine competition will become even hotter when IBM this week introduces a typewriter with a memory tape. Dubbed the "Magnetic Tape Selectric," it can store up typed words and figures, then tap out copies at up to 180 words per minute. The typewriter operator can also revise or insert names, addresses, prices or other data. Or the body of a letter can be stored on one tape, different addresses and inserts on another tape, and the machine can then produce a series of finished letters without the aid of human hands. Good for repetitive forms, legal briefs and contracts, the typewriter will rent for up to $233 a month, sell for up to $9,535.

PERSONALITIES

IN high school at Glen Clove, L.I., Samuel Riley Pierce Jr. wanted to be a songwriter: "It's one of those things you grow out of when you grow into others." He soon put away his unpublished scores, grew into law and government. Last week Lawyer Pierce, at 41, became the first Negro elected to the board of a major U.S. manufacturing company—U.S. Industries Inc., producer of automation equipment, with 1963 sales of $96 million. He is a partner in the Manhattan law firm that handles U.S. Industries' labor matters. A star halfback and Phi Beta Kappa student at Cornell, he later served as anti-trust counsel to the House Judiciary Committee, became a campaigning Republican, and in 1959 was appointed a judge in New York City. As trim as a college athlete, Pierce still finds time to teach a law course at New York University; last January he argued a civil rights case before the U.S. Supreme Court. A day after Pierce's election, the W. T. Grant chain also named a Negro as a director: Asa Spaulding, 61, president of the Negro-owned North Carolina Mutual Life Insurance Co. (TIME, Feb. 7).

BEN MARTIN

SAMUEL PIERCE JR.

BOB BENYAS

PAUL LORENZ

FORD MOTOR CO.'s problem is to make the Mercury rise in Detroit's hotly competitive climate. Last week Henry Ford II picked a man for the job, promoting Paul Francis Lorenz, 47, from assistant general manager of the Lincoln-Mercury Division to vice president and chief of the whole division. He replaces Ben Mills, 49, one of the original Whiz Kids, who was moved up to vice president in charge of Ford Motor purchasing. A Phi Bete (Chicago, '41), Lorenz is a finance-trained protégé of former Ford President Robert McNamara, was his personal assistant for three years, even wears his hair slicked back like McNamara's. "I had the rare opportunity to see at first hand an unequaled standard of management excellence," says Lorenz, himself an articulate and analytical executive. Now that his division's Comet and luxury Lincoln are running smoothly, he will concentrate on tuning up the medium-priced Mercury. Hoping to emulate the success of competing Pontiac, he wants to give Mercury a distinctive "personality," offer a wider range of models.

WESTERN EUROPE

Bears on the Bourse

Western Europe at midyear is a sight to behold—especially through the eyes of the businessman. In the seventh straight year of boom, the Common Market is producing 11% more steel and 10% more autos than last year. Clamoring consumers have created shortages of such an everyday product as beefsteak. Almost everyone seems to be earning more and spending more than ever before. By most measures, Europe continues to expand faster than the U.S.

But one thing seems strange: while business snorts bullishly, Europe's stock markets are bearish. At the same time that the U.S. market set an alltime high last week, with the Dow-Jones industrials closing at 830.99, Europe's markets were in the doldrums. More and more businessmen found themselves in the position of France's Arnaud de Vogüé, president of the St. Gobain glassmaking giant, who reported that profits are up 45% for the year but that the company's stock has dropped 12.5% in the past eight months.

Political Fears. Since Jan. 1, the Zurich market has plunged more than 10%, the Paris Bourse 20%, the Milan Borsa 35%. West German stocks have dropped 10% in the last ten weeks. Why the decline? In many cases, investors have paid less heed to the bright business picture than to present or prospective problems in politics. Italy's stocks have fallen steadily since the government nationalized electric utilities two years ago. In Britain, fears of nationalization moves in the event of a Labor victory have depressed steel shares. New tax laws have also chipped at stocks. Belgium is now taxing all dividends, and West Germany has frightened many investors by proposing a 25% capital gains tax on stock sales by foreigners.

Another depressant is Europe's inflation, and government measures to curb it. De Gaulle's "Stabilization Plan" froze prices but not labor costs, thus pinched profits and further reduced industry's short supplies of expansion capital. In Italy the government has tightened credit to slow Europe's worst inflation. Says Fiat Vice Chairman Giovanni Agnelli: "There's such a shortage of investment capital now that many industrialists are selling shares at any price to get money."

Mutual Suspicion. Buyers are few, for European businessmen still have a royalist attitude toward broad public ownership by modest investors. A few Swiss chemical shares sell for $10,000 apiece, and no effort is made to split them to widen ownership. Hoping to keep out of the public eye, Belgium's biggest producers of chemicals, matches, beer and sugar do not even list their shares on the Brussels Bourse. The tradition of secrecy is stronger than the desire to attract mattress money; European companies commonly report only the skimpiest information about profits or forthcoming products. The suspicion is mutual. Many newcomers to Europe's almost affluent middle class prefer to put their money *into* tangible goods and real estate instead of stock certificates. Only one out of 40 Europeans owns common stock, compared with one in ten in the U.S.

The stock slump makes it difficult for European businessmen to raise cash by floating new issues. But except for the worried Italians, most business leaders do not think that the market situation will slow Europe's economy by much. More than a few welcome at least some decline from what they had thought were previously inflated prices.

WEST GERMANY

Hot Route in the Cold War

Flying some of the cold war's hottest routes, Pan American World Airways meets political turbulence as often as the natural kind. Pan Am hardly inaugurated its new thrice-weekly New York-Berlin service before Moscow thundered that the nine-hour jet flights violated four-power agreements on Berlin and warned darkly that it could not be responsible for any dire consequences. Predictably, the airline kept right on flying last week, and the Communists did nothing.

Although the Russians have long harassed Pan Am's flights from eight West German cities through the 110-mile air corridor to Berlin, its Berlin run has become one of the most traveled, most curious and most profitable air services in the world. Pan Am's internal German service is the biggest of three flown into Berlin by the Western allies (the West Germans are banned by the four-power treaty); British European Airways and Air France also operate into the divided city. The U.S. flag carrier gets 60% of the business, largely because it has the most flights. Currently, Pan Am has 44 round trips daily, hauls 2,000,000 passengers a year. The load factor is an airman's dream: 70%.

Tourists & Tinsel. Business generates itself. To demonstrate West Berlin's viability, the West German government encourages festivals and scientific seminars there; and to stimulate travel, it pays the airline subsidies up to 30% on each ticket. West Berlin businessmen, doing 80% of their business outside the city, shuttle continuously by air to West Germany. For foreign tourists in Germany, the Berlin Wall has become a sightseeing must. Pan Am, flying 15 older DC-6Bs that are more economical than Air France's Caravelles or BEA's Viscounts, profits handsomely on yearly revenues of around $15 million.

There are lumps in all that gravy.

WEST BERLIN CARTOON*

Some lumps in all that gravy.

Pilots descending toward Tempelhof airfield at night have been deliberately and dangerously blinded by East German spotlights. Their navigational aids, essential in a political corridor only 20 miles wide, have been knocked out by tinsel strewn from Russian planes. Worst of all, MIG fighters have buzzed the commercial planes or escorted them wing tip to wing tip in an effort to unnerve pilots. "Crisis," sighs one Pan Am executive, "is a way of life."

Beards & Banns. To keep morale flying high in that way of life, Pan Am operates its "airline within an airline" with reckoned informality and a tolerant disregard for some rules that bind most other air crews. The 166 flight crewmen, some of whom have flown the Berlin run for more than a decade, have a certain derring-do, and Pan Am even allows them to cultivate combat-veteran beards. The 109 German stewardesses are permitted to fly after they marry. Indeed, many are married to their own pilots.

Low & Inside

The Carpetbaggers, based on the baldly sleazy bestseller by Harold Robbins, is the kind of movie that you cannot put down. Like the book, it scores its cheap success as a swift, irresistibly vulgar compilation of all the racy stories anyone has ever heard about wicked old Hollywood of the '20s and '30s. The titillation is masked as the biography of a fresh young tycoon whose interests —airlines, moviemaking, starlets—bear certain obvious though wildly embellished parallels to the career of Howard Hughes.

When his father suffers a fatal stroke, Jonas Cord Jr. (George Peppard) rushes straight home from the factory to make a pass at daddy's flammable blonde wife, Carroll Baker. "You

BAKER & PEPPARD IN "CARPETBAGGERS"
After buffalo innards, pop psychology.

wouldn't dare!" she screams. But in a movie like this, a statement like that means let's dance. In no time at all, the lady appears in black chiffon to ask: "How d'ya like my widow's weeds?" As the girl eventually transformed into Rina Marlowe, a doomed Hollywood sex goddess, Actress Baker seems uncertain about which actress living or dead she is not supposed to resemble. Although her widely publicized nude scene has been disnuded, she wears costumes that thinly conceal the loss, and also delivers some of the film's funniest asides. Sinking into the horn-and-hide trappings of a limousine belonging to Western He-man Nevada Smith (Alan Ladd), she burbles in her best *Baby Doll* manner: "I feel like I've been swallowed by a buffalo."

Meanwhile Peppard bullishly amasses a fortune, exploiting "this new product —plastic," building up a transcontinental airline, and making lots of people miserable. His victims include Lew Ayres, Bob Cummings and Martha Hyer, a high-priced call girl who is summoned for stardom. To prevent all the plots and subplots from collapsing, Director Edward Dmytryk keeps a narrator warmed up to respond to the question, "How did it all happen?" with quick summaries of Robbins' lip-smacking prose. Thus Scenarist John Michael Hayes leaps 30 to 40 pages at a clip and distills the rest of it in dialogue that ranges from archly metaphoric repartee to raw one-line gags.

The only *Carpetbagger* exhaling unpolluted air is Broadway Actress Elizabeth Ashley. Given an insipid role as the cast-off wife who keeps stumbling over platinum blondes in Peppard's hotel suites, she turns her rough-velvet charm to advantage in a performance that bleach cannot beat. Peppard himself works manfully to conquer the handicaps of a script climaxed by preposterous revelations fraught with pop psychology, an excess that even the book avoided. Seems Peppard isn't such a bad sort, after all. He became rich, ruthless and depraved because his father had hated him ever since—ah, well. Presumably, after savoring nearly three hours of feisty smut, the audience will be delighted to learn that it couldn't have been dished out by a nicer fella.

A Man of 39 Needs His Sleep

Crazy Desire. "You look ten years younger when you laugh—you look fortyish," purrs the teen-ager. The man smiles grimly: "I'm 39," he says. As hero of this little-league Italian comedy that pits age against youth, Ugo Tognazzi plays a late-maturing young businessman who boasts that he can get by with only four hours' sleep, though his physician deflates him by insisting that he needs eight, plus a nap after lunch.

One weekend, while Tognazzi is en route to his son's boarding school, lissome Catherine Spaak flags down his car. He gives her and her friends gas for their jalopy, joins them at a beach house where they natter about Sammy Davis Jr., improvise hymns to Brigitte Bardot, and listen to the recorded speeches of Adolf Hitler. During a frenetic weekend, Tognazzi nearly drowns when he goes for a swim after eating raw peppers. He competes in a humiliating Mr. Universe contest against hoods half his age, all to win favor with Spaak—a French actress so dear to Italian hearts that she appears to go from film to film with scarcely enough time to put on her clothes.

Tognazzi proposes to the delectable nymphet, suggesting, "We'll honeymoon in Disneyland." But all the hopeless attempts to recapture his youth end when he wakes up on the beach in a cold dawn, wearing a wet blanket and an Indian headdress, and surrounded by a ring of torches, symbolically extinguished. Needless to say, he feels very old, tired, embarrassed, and drives off determined to forget the whole experience. Not a bad idea, since *Crazy Desire* is really just a compendium of childish whims.

Sicily with Garlic

Mafioso. Sicily is the Dead Man's Gulch of Europe. It's hot, it's dry, it's wild. Instead of good guys and bad guys, there are *carabinieri* and *mafiosi*. Instead of Hollywood moviemakers there are Italian moviemakers who scuttle about the landscape manufacturing folklore. Most of them produce ludicrously crude goat operas, but once in a while somebody really gets Sicily on acetate. Pietro Germi did it once (*Divorce—Italian Style*); Luchino Visconti did it twice (*La Terra Trema*, *The Leopard*); and now Alberto Lattuada serves up ten or a dozen small but gloriously garlicky slices of Sicilian village life.

Ignore the plot: something standard about a Sicilian boy (Alberto Sordi)

ALBERTO SORDI IN "MAFIOSO"
With feudal terrors, black spaghetti.

who makes good in Milan, comes home to visit the old folks, and suddenly finds himself, his pretty young wife and his two darling daughters involved in the insidious toils of *La Mafia*, the feudality of terror that for several centuries has ruled Sicily with poniard, pistol and poison. Smile a bit sadly when Sordi, a born comedian, tries to play the hero straight. And wink when the director, obviously afraid his customers will get sick of all that lumpy peasant *pasta*, slyly introduces a piece of smooth Brazilian cheesecake (Norma Bengell).

But don't miss a splotch of the local color: a massive bowl of sinister black spaghetti that turns out to be white spaghetti slathered with an old Sicilian specialty, squid-ink sauce; a battle-royal between two skinny, toothless, fierce old men who roll about the rocky landscape hissing and ripping and snapping at each other like a couple of scorpions; a statue of the Virgin held in particular veneration by the Mafia: she has big soft, sentimental eyes—and her hand supports a skull.

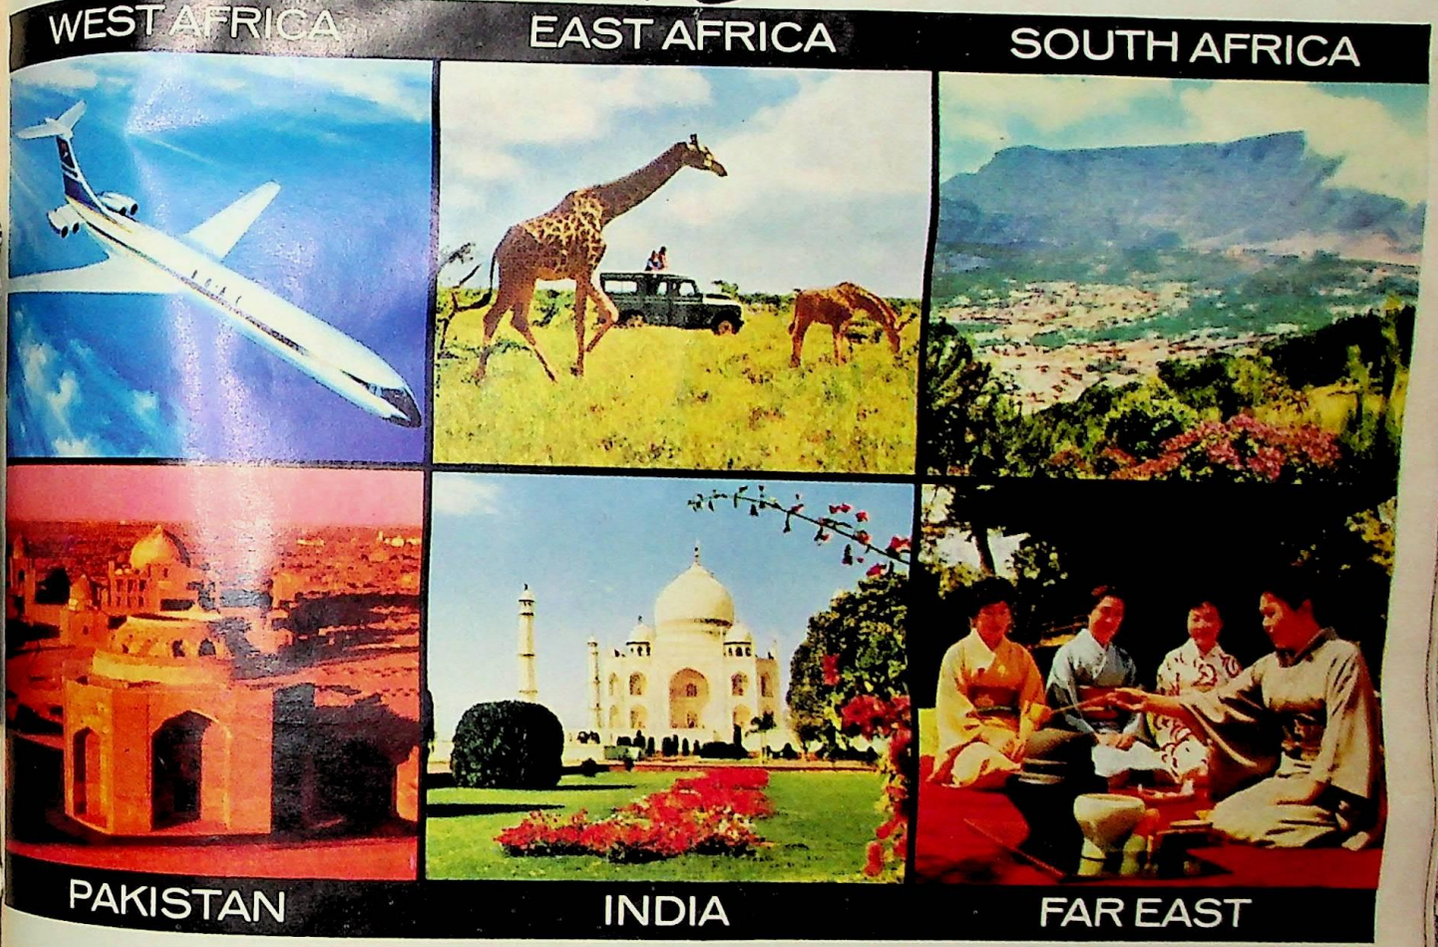
Setting the pace around the world...



B·O·A·C VC10

triumphantly swift, silent, serene

Month by month on more and more routes BOAC introduce the VC10. You will find the VC10 the quietest, most serene airliner you have ever flown in. The thrust of the VC10 comes from four *rear-mounted* Rolls-Royce engines; you fly in the comfort and silence ahead of the power. The VC10 also brings new luxury to Economy class travel, with a completely new type of seating—seating that assures you a much more comfortable flight. You get extra legroom —better support—deeper cushioning—improved sleeping position—personal tables. With the VC10, BOAC moves a clear six years ahead of any other airline.

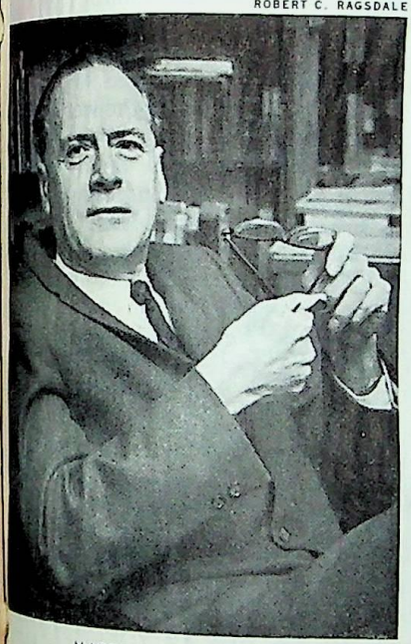
Blowing Hot & Cold

UNDERSTANDING MEDIA *by Marshall McLuhan.* 359 pages. *McGraw-Hill.* $7.50.

Every so often, the semi-intellectual communities at the fringes of the arts, the universities, and the communications industries are hit by a new book, which becomes a fad or a parlor game. This summer's possible candidate, with what may be just the right combination of intelligence, arrogance and pseudo science, is Marshall McLuhan's *Understanding Media.*

Seamless Web. Author McLuhan is a University of Toronto professor and literary critic, who writes books (first was *The Gutenberg Galaxy*) to prove that books are responsible for most of the ills of modern man. Nationalism, war, industrialization, population explosion, the breakdown of human relations in urbanized chaos—McLuhan blames them all on Gutenberg's invention of

ROBERT C. RAGSDALE



MARSHALL McLUHAN
Back to the tribe.

movable type, and the resulting growth of both the audience and the technology for communication-by-print.

The trouble is that print is what McLuhan calls a "hot" medium of communication: sharp in definition, filled with data, exclusively visual and verbal, and (a key and debatable point) psychologically damaging and low in audience participation. Other hot media by McLuhan's rules are photography, movies, competitive spectator sports and radio. Hot media make men think logically and independently, instead of tribally, "mythically" and communally. This is bad. What McLuhan likes are cool media. These are fuzzy, low in information, but richly demanding on the audience to fill in what is missing. The telephone, modern painting, but pre-eminently television are cool and good. Television and other "electric media" are oral-auditory, tactile, visceral, and involve the individual almost without volition. As a result McLuhan believes that the world is rapidly becoming a "global village," in which mankind communicates in a supermodern version of the way tribal societies were once related. In the coming overthrow of typographic and literate communications McLuhan expresses his grotesque hope that modern man can be put "back into the tribal or oral pattern with its seamless web of kinship and interdependence."

Pseudo Science. As an intellectual game called "cool and hot," the system has great possibilities for a chatty weekend at Big Sur or Martha's Vineyard. Clocks (hot), money (hot), clothes (getting cooler in the U.S.), nudity (very cool), and almost anything else can be interpreted as media by McLuhan's rules. "Backward countries are cool, and we are hot." Autos are hot. The "blurry, shaggy texture of Kennedy" was a natural for cool TV, which is why "sharp, intense" Nixon lost the debates. Private enterprise is hot; public debt is cool. Iago is cool, but Othello hot. Girls who wear glasses don't get passes—because they are hot.

Yet McLuhan is not playing games. He is in humorless earnest. And if the book is taken seriously, it must be judged as fuzzy-minded, lacking in perspective, low in definition and data, redundant, and contemptuous of logical sequence—which is to say that McLuhan has perfectly illustrated the cool qualities he most values in communications. McLuhan's solemn pseudo science at work: "What do we know about the social or psychic energies that develop by electric fusion or implosion when literate individuals are suddenly gripped by an electromagnetic field, such as occurs in the new Common Market pressure in Europe?" Or: "Had TV occurred on a large scale during Hitler's reign, he would have vanished quickly."

Better Left Unsaid

HARLOW *by Irving Shulman.* 408 pages. *Bernard Geis.* $5.95.

Jean Harlow, first sex goddess of the talkies, had a life that epitomized Thomas Hobbes's phrase for the life of the "natural" man: poor, nasty, brutish and short. Her mother was domineering and obsessed with sex; her stepfather was a sponging promoter of fake gold mines. Jean's second husband, Producer Paul Bern, shot himself two months after the wedding. She could not act, but her platinum hair, husky voice, and refusal to wear a brassière were enough to gross millions at the box office for Howard Hughes and Louis B. Mayer. She died in 1937, age 26, of a kidney infection, leaving less than $30,000.

Now all the scarlet detail of Harlow's

JEAN HARLOW
In search of the primal.

careening career, including much that was never hinted at in the gossip columns and some that is clearly imaginary, is revealed for the prurient-minded in this "intimate biography" by Irving Shulman (*The Amboy Dukes*). Shulman includes facts that Harlow's doctors evidently did not have—some not even her hairdresser could know for sure. He asserts that Harlow had bouts of nymphomania. He says that Paul Bern was impotent and a sadist whose beatings caused Harlow kidney injuries —which ultimately killed her because Jean's mother, a Christian Scientist, refused to allow the star to be treated in time.

The only seemingly sympathetic person in this thoroughly unpleasant book is Harlow's agent, Arthur Landau, who appears as the tormented girl's friend, confidant, moneylender, sometime savior and sole defender. Don't be fooled. Landau, now 76 and living in Hollywood, is the one who spilled all the dirt to Author Shulman. What they didn't know between them, they improvised.

Paris in the Fall

WITCHES' SABBATH *by Maurice Sachs.* 315 pages. *Stein & Day.* $7.50.

Maurice Sachs enjoys a curious underground notoriety in the French literary world. Although he died young (at 36, in 1943) and wrote little—a number of moderately successful plays and several volumes of middling poetry—he knew most of the Parisian literary lights of the late '20s and early '30s and became, by his own testimony, "an ear into which they dropped their most private avowals." More important, he recorded some of those avowals in his autobiography, which he called his "moral memo" to the world. Published posthumously in France in 1946 and now translated into English for the first time, *Witches' Sabbath* is a bizarre compound of self-pity, fantasy and

CC-0. In Public Domain. Gurukul Kangri Collection, Harid

Digitized by Arya Samaj Foundation Chennai and eGangotri

braggadocio, relieved by occasional passages of honest self-appraisal and sound literary sense. It constitutes, as one French literary critic put it, an anecdotal "*chronique scandaleuse*" of Sachs's own place and time.

Sacred Bodies. Born into a family of wealthy Jewish diamond merchants, Sachs adopted the complete works of the Marquis de Sade as "the bible of my early youth." Armed with that perverse testament, he descended on Paris intent on a literary career. It was a time, Sachs recalls, when young men like himself sat on bar stools at Le Boeuf sur le Toit eying the great—Picasso, Cocteau, Milhaud, Satie, Radiguet—like "some Chinese under the Empire viewing the Emperor's sacred Body." Sachs got to know most of the sacred bodies. Cocteau gave him some secretarial work to do, and he repaid his benefactor by painting him as a kind of cultural public-relations man who took the "rediscovered imagery" of "tough, miserable men" like Apollinaire and Max Jacob and "vulgarized the knowledge of it." André Malraux, too, "was something of the charlatan," but Gide was the wholly incorruptible artist, a man with a face that "no fattening passion burdened" and with lips "straight as those of someone who has never lied."

Although Sachs never knew Proust, he knew several of his homosexual servants, including one who ran a house of male prostitution originally financed by the novelist. From the servants' recollections, Sachs draws a picture of "an unknown Marcel Proust of the great, terrible depths," whose sadism led him to butcher shops where he watched calves being slaughtered and who once had a rat brought to him so that he could stab it to death with a hatpin. Proust, says Sachs, was "a kind of monster child, whose mind had all the experiences of a man, and whose soul was ten years old."

Too Much Dung. The description will do for Sachs himself. At one time or another he was a prominent editor, a leading art dealer, a playwright and producer. But he was also consumed with self-loathing—and with sufficient reason ("I always," he writes, "had a little too much dung on my soul"). He drank prodigiously (he could down a full bottle of whisky before breakfast), swindled his friends indiscriminately, and records with obvious relish how he gulled the daughter of a Presbyterian minister into a marriage of convenience only to desert her two months later for a homosexual alliance with a boy he met in California. A collaborator with the Germans after the fall of France, he became a nightclub manager in Hamburg's notorious St. Pauli district and apparently died in Germany after he was arrested for black-marketeering.

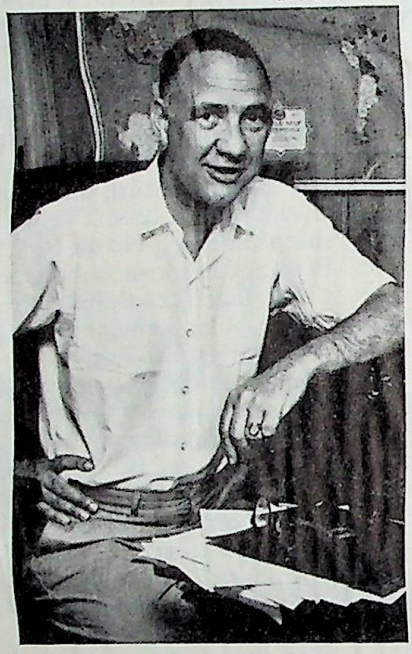
Cocteau, shortly after he met Sachs, made what was perhaps the kindest judgment of him. He was, he said, "a deep-sea fish, luminous but blind."

Also Current

MINE EYES HAVE SEEN THE GLORY by Tristram Coffin. 303 pages. Macmillan. $5.95.

Chief and most unbelievable character in this self-proclaimed "novel of the new American revolution" is Arkansas Representative Timotheus Denney, who is cast as the legislative wizard and bourbon-breathing Grand Dragon of all the sheetless Klansmen on Capitol Hill. This Ozark Ozymandias wants the Government to build him a $2 billion Denney Dam back in Yell County, Ark. But he faces an ironic choice: the dam will be voted out of committee only if Denney pledges support for a civil rights bill. Never, he yells, and threatens to touch off race war if the dam doesn't

WALTER BENNETT



TRISTRAM COFFIN
Unneeded champion.

go through. But before Denney can rouse his rabble, he learns that his son David (he has another son, but he is half-Negro and does not count) has been arrested with a bunch of freedom riders and beaten to sour mash in jail. It is enough to make a man get religion—and that is what old Tim Denney does. Before anyone could say John Brown, he votes for civil rights, gets his dam, retires from politics, and is named Best Christian of the Year. Author Coffin, who once put in time as a legman for Drew Pearson, is obviously sincere in his fictionalized pamphleteering. Fortunately, the cause of civil rights does not desperately need his help.

FOR THE GOOD OF THE CAUSE by Alexander Solzhenitsyn. 190 pages. Praeger. $3.95.

Alexander Solzhenitsyn is doubtless the least favorite novelist of Russia's remaining Stalinists: he always makes them the villains. In his much-publicized first novel, *One Day in the Life of Ivan Denisovich*, he catalogued the horrors of a Stalinist labor camp. His second novel (after a pair of anti-Stalinist short stories) is slighter and shorter, but the target is still recognizable. The concentration camps are no longer in evidence, but the Stalinist greasy-collared thugs have only turned into white-collar bureaucrats: bald, corpulent, obtuse paper shufflers. Their opponents are a dent provincial youths who scoff at party propaganda and joke about the Virgin Lands program—but who eagerly take direct action, in the old "Hero of Labor" tradition, to build themselves a new school. Just as they are fitting the final doorknob, word comes that the party plans to take over the new building to house a chemical-research institute. The youths protest, but the party district leader is a petty Stalin, and from his decision there is no appeal. Or rather, Author Solzhenitsyn implies, from this kind of implacable obstructionism there is only one appeal, and his novel is voicing it.

THRILLING CITIES by Ian Fleming. 246 pages. New American Library. $4.95.

Advertised as "a James Bond tour of the world's 14 most sinful cities," this book is, instead, possibly the year's most flagrant fake. Five years ago, the London Sunday Times asked Author Fleming to take a round-the-world tour to write some local-color travel pieces for the titillation of its family audience. Fleming did; the aging essays reprinted here are the result. About the closest Fleming got to sin was a $2 taxi dance in Macao and a $100 bet in Las Vegas. Most of the time he hardly troubled to conceal his boredom. Honolulu he found "just another reservation for the pensioners," which he left "without many regrets." Berlin's night life "is certainly not what it used to be." In New York, "I enjoyed myself least of all." As travel writing, the book is silly and vulgar; as a guidebook, hopelessly inadequate and out of date; as a promotion package, probably a moneymaker.

THE MORTAL WOUND by Raffaele La Capria. 191 pages. Farrar, Straus. $4.95.

This novel of decay, disillusion and a spurious *dolce vita* attracted a wide audience of Italian readers, and won the Strega literary prize in 1961. The nominal heroine is a girl with a blonde ponytail, a little boy's face and a woman's body, who exists as a fixation of love in the narrator's past; the real heroine, however, is the blowzy city of Naples, which either "mortally wounds you or puts you to sleep." The dialogue (in better-than-average translation) has a crisp, contemporary cadence, and the writing can be perceptive and well-tooled, but La Capria pushes his confusingly large cast on stage in the manner of a cinematographer who dabbles in impressionism. Though the satire shows talent and the technique is modishly modern, the mortal wounds of the characters emerge finally as that most difficult of subjects —futility.

Enough isn't enough!

Bread. The staff of life. But will today's harvests yield enough for tomorrow's added millions? Esso is working toward that goal. With high analysis fertilizers that can increase crop yields substantially. With efficient chemicals that make insecticides more effective. The future? Esso is testing a new petroleum mulch that may convert arid wasteland into productive soil. And developing a new food source that holds great promise for the future—a biological process to make protein and vitamin supplements from petroleum products. Intensive attention to pressing problems: another reason why Esso is the **World's First Choice!** Our local organization will gladly advise you on your petroleum and chemical product needs.

Secret of airline service unique in all the world

Wherever in the world Tomiko Tsuchida and her sister hostesses welcome you aboard Japan Air Lines, you discover Japan itself... its serene beauty and unmatched hospitality.

From first sight, every Jet Courier of Japan Air Lines is a promise of swift, dependable, modern-world travel. But step aboard, and discover the magic "extra" of flying JAL. Suddenly you are in the timeless, gracious world of classic Japan.

All around you are rich brocades, ancient designs, historic family crests...all a perfect setting for kimono-clad hostesses like Tomiko Tsuchida as they offer the graces of Japan. An *o-shibori* hot towel to refresh you. Warmed *sake* or your favorite beverage. JAL's superb continental cuisine. And always the warm, personal attention of a charming hostess trained since childhood in the art of pleasing others.

Her pride in perfect performance is matched by everyone at JAL. Your skilled flight captain... expert ground technicians who service every major airline to Tokyo... indeed by expert, courteous personnel at JAL facilities everywhere.

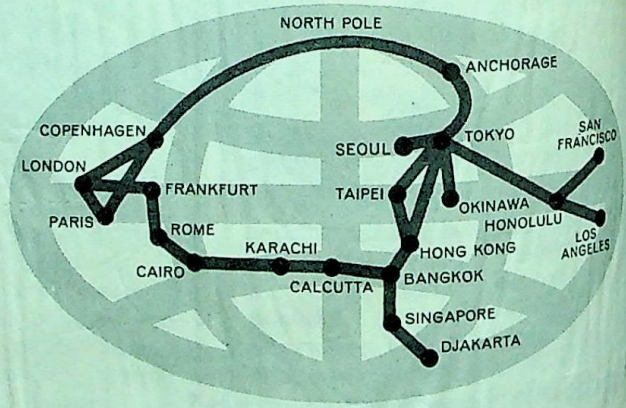
This unique JAL "extra" is now yours to enjoy the world around. In the Orient, JAL's swift Jet Couriers shuttle between Tokyo and Hong Kong—direct, or via Taipei—and between Hong Kong, Bangkok, Singapore, and Djakarta. JAL jets also link Tokyo with Okinawa and, now, Tokyo with Seoul. As Japan's largest domestic airline, JAL also offers over 50 flights a day between major Japanese cities.

The pleasures of JAL go far beyond the Orient. Now 14 JAL flights leave Tokyo every week for the U.S.A. —all via sunny Hawaii where you can stop over, if you wish, at no extra fare. Morning and evening Tokyo departures give you added flexibility in planning for convenient stopovers and fast connections.

If you're bound for Europe, you can choose from two JAL routes. Follow the course of ancient caravans on JAL's "Silk Road" through the Middle East via Calcutta and Karachi. Or, from Tokyo, fly to Europe direct, over the fast Polar route. Fly one way, return the other, with stopovers at any of the fascinating cities along the way.

Wherever you fly, enjoy the unique pleasures of flying JAL, "amid the calm beauty of Japan at almost the speed of sound." Your travel agent or your nearest JAL office can give you complete details.

The global services of JAL



JAPAN AIR LINES

Now—four of JAL's fourteen transPacific jets originate in Hong Kong. No stopovers. The same plane, JAL's "Sunset Express," goes all the way.

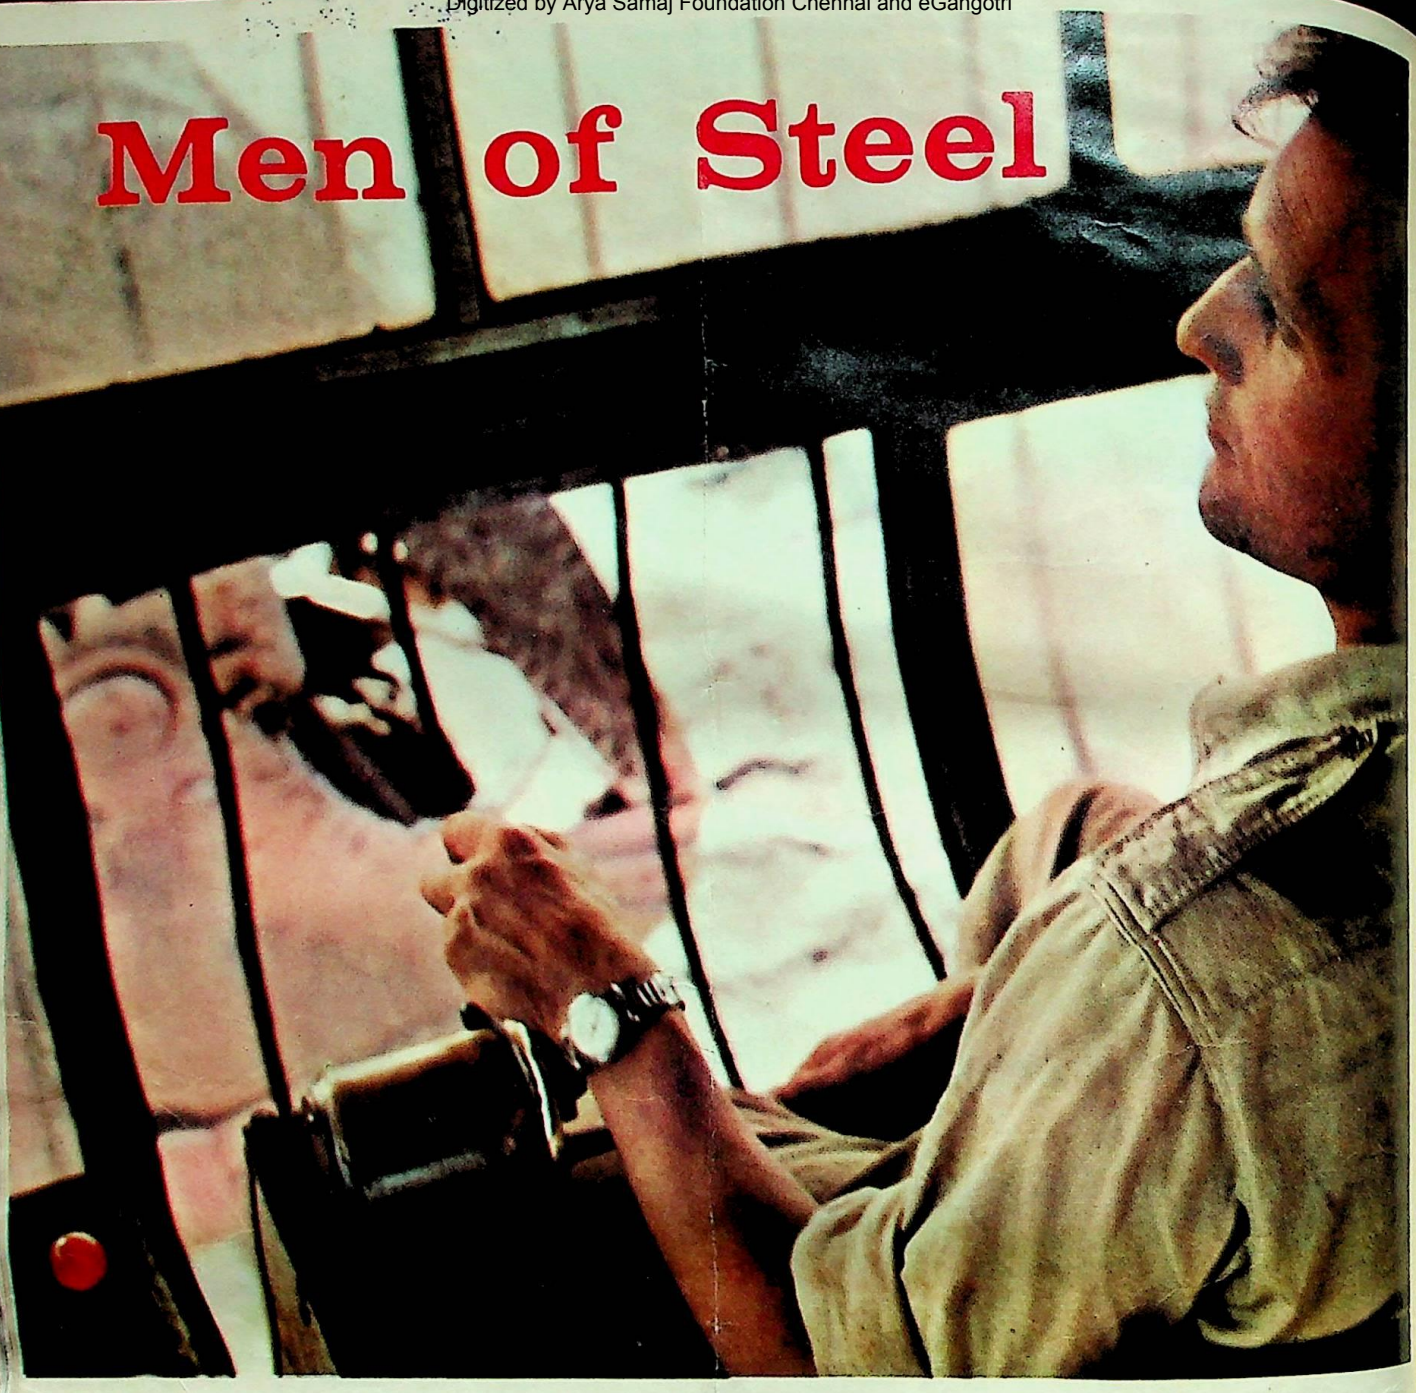
Men of Steel



Below him the man-made foothills of iron ore required to feed B.H.P.'s insatiable blast furnaces. Hematite of sixty-four per cent iron content. Eighteen tons of ore in every grab. Nine thousand tons every eight-hours shift — to make B.H.P. steel. 98 per cent of Australia's steel.

B.H.P. — a public company with forty-four thousand employees, is owned by some ninety-seven thousand shareholders. During 1963 the equivalent of almost one hundred million U.S. dollars was invested in new capital works.
Current output of B.H.P. steel is at the rate of five million long tons of steel ingots a year. And increasing.

The Broken Hill Proprietary Company Limited and subsidiaries: a group of companies engaged in a complete operation comprising mining and shipping of raw materials and the manufacture of iron and steel.

PRIME MINISTER TO A GROWING WORLD

Throughout the world, the real long-term measure is the market. Not decrees. Not legislation. NO individual. ■ In empires, kingdoms, and republics, what works best sells best. Fiat learned this first by producing an automobile that now sells in 125 different countries. As Fiat's cars got around, Fiat became familiar with the transportation needs of all those nations. ■ Next to the need for transport was the need for agricultural mechanization, and advances in industrial and marine power. That is why Fiat cars, trains, trams, trucks, buses, tractors, diesel-powered ships, gas turbines, and jet aircraft operate under just about every flag. ■ No one appoints you to a post like this. You find yourself in it. You have to work hard to hold it. Everyone is watching you. ■ **FIAT S.p.A. Turin, Italy**

TIME LISTINGS

TELEVISION

Programs devoted to the Republican National Convention dominate television this week, with leftover time filled by repeats. The highlights:

Wednesday, July 8

GREAT CONVENTIONS (CBS, 7:30-8:30 p.m.).* A study of the patterns of Republican politics, as reflected in conventions from 1920 to 1948.

ON BROADWAY TONIGHT (CBS, 8:30-9:30 p.m.). Première of a variety show introducing young talent. Rudy Vallee is host, Paul Anka celebrity guest. Performers include Comic Rich Little and Singer Kitty Lester.

THE CAMPAIGN AND THE CANDIDATES (NBC, 9-10 p.m.). Preliminary assessment of the convention.

POLITICS '64 (ABC, 11:15-11:30 p.m.). First of a series of pre-convention programs highlighting the important events of the day.

Thursday, July 9

KRAFT SUSPENSE THEATER (NBC, 10-11 p.m.). Four scientists and a security guard trapped by an underground explosion calculate there is only enough oxygen left for four and proceed to conduct a death lottery. Color. Repeat.

POLITICS '64 (ABC, 10:30-11 p.m.). What happens to San Francisco at convention time.

Friday, July 10

THE JACK PAAR PROGRAM (NBC, 10-11 p.m.). Repeat of Attorney General Robert Kennedy's guest appearance discussing the humorous side of his late brother, President Kennedy. Color.

Saturday, July 11

ABC'S WIDE WORLD OF SPORTS (ABC, 5-6:30 p.m.). The British Open Golf championship from St. Andrews, Scotland.

THE WOMAN'S TOUCH IN POLITICS (ABC, 7:30-8 p.m.). Reporter Lisa Howard discusses women's contributions to politics with Senator Margaret Chase Smith and the Republican candidates' wives.

Sunday, July 12

LOOK UP AND LIVE (CBS, 10:30-11 a.m.). First of an eight-part series on the "Images of Man," including highlights from Ingmar Bergman's *Winter Light* and the recent off-Broadway adaptation of Friedrich Nietzsche's parable *The Madman*.

DISCOVERY (ABC, 1-1:30 p.m.). From his home in Gettysburg, former President Eisenhower discusses the role of conventions in the U.S. democratic process in a program aimed at explaining the proceedings to youngsters.

CBS SPORTS SPECTACULAR (CBS, 5-5:30 p.m.). The National Professional Grass Court Tennis championships, videotaped from the Longwood Cricket Club in Chestnut Hill, Mass.

MEET THE PRESS (NBC, 5:30-6:30 p.m.). Originating from convention headquarters, *Meet The Press* reporters will interview Governor William Scranton and other leading candidates.

* All times E.D.T.

Monday, July 13

TODAY (NBC, 7-9 a.m.). The show originates all week from San Francisco and features interviews with leading candidates and delegates.

REPUBLICAN NATIONAL CONVENTION (ABC, 1-3:30 p.m. and 8 to midnight; NBC, 1-4 p.m. and 7-11 p.m.; CBS, 1-3:30 p.m. and 7:30 to 11 p.m.). Coverage from the convention floor. Appearing as cub reporters for ABC will be Dwight Eisenhower and James Hagerty.

Tuesday, July 14

ABC, NBC and CBS will continue to devote their evenings to live coverage of the convention.

THEATER

Straw Hat

The plays that summer theater rolls on are mostly retreads, but each year there are a few brand-new tires being tested to see if they're puncture-proof enough for Broadway. Some of the most promising and their scheduled stops:

DAYS OF DANCING, with Shelley Winters and Robert Walker *fils*, a new play by TV Writer James Bridges (*Alfred Hitchcock Show*), is about a fortuneteller (Winters) in Venice, Calif., who tries to teach the local rock-'n'-roll set (including Walker) the meaning of love. Milburn, N.J.; Mineola, L.I.

THURSDAY IS A GOOD NIGHT, with Tom Ewell and Sheree North and directed by George Abbott's daughter Judy, is by Broadway Propman Abe Einhorn and Freelance Writer Donald Segall. It's about a Manhattan bookie whose hotel room is invaded by a mixed bag of girls, Russian spies, FBI men, a crusading journalist, a nosy bellhop and a Chinese waiter. Paramus, N.J.; Corning, N.Y.; Mountainhome, Pa.; Dennis, Mass.; Toronto; East Rochester; Westport, Conn.; Latham, N.Y.

THE WAYWARD STORK, with Hal March and Marjorie Lord, is a comedy by TV Writer Harry Tugend (*Jack Benny Show*) about a childless couple who, in pursuit of parenthood, consult a doctor, get involved in a misconception. Falmouth, Mass.; Southfield, Mich.; Ivoryton, Conn.; Westport; Laconia, N.H.; Fitchburg, Mass.; and Charlotte, N.C.

A GIRL COULD GET LUCKY, with Betty Garrett and Pat Hingle, is a two-character play by Playwright Don Appell (*Milk and Honey*) about a secretary and a cab driver and the adjustments their courtship demands of them. Opens next week in Westport, then on to two-week stands in Milburn and Mineola.

WATCH THE BIRDIE, with Joan Blondell, Peggy Ann Garner and Alan (son of Robert) Alda, is a comedy by Norman Krasna about a divorce lawyer's secretary (Garner) who needs money to go to Europe and starts moonlighting by taking over for her boss's regular co-respondent (Blondell). Opens next week at Miami's Cocoanut Grove, then to Falmouth, Fayetteville, N.Y., and Paramus.

MATING DANCE, with Joan Hackett, Anthony George and John Conte, is a romantic comedy by Magazine Freelancer Eleanor Harris and Movie Actress Helen Mack. Joan Hackett plays a career girl whose romance with a TV personality (Conte) already married to a lady U.S. Senator requires legal aid (George) beyond the scope of the Committee on Interior Affairs. Opens next week in Vineland, Ont., then plays Syracuse, Falmouth and Skowhegan, Maine.

HEART'S DELIGHT, with Michael Rennie, Nan Marten and Hiram Sherman, a mystery by Broadway Playwright Charles Robinson (*Sailor Beware*), is about a college English professor (Rennie) who murders his wife because she won't abandon her garden to accompany him on his sabbatical. Opens early next month in Westport, then goes to Mineola and Milburn.

Only a fraction of the summer tryouts survive blowouts and make it to Broadway. But the smell of old rubber, however roadworthy, hangs so heavily over the straw-hat trail that the risk of seeing a new one go *pfft* seems worth taking.

CINEMA

THAT MAN FROM RIO. Poisoned darts and snappish Brazilian crocodiles are among the dangers faced by Jean-Paul Belmondo in Director Philippe de Broca's hilarious spoof of all the next-earthquake-please action pictures ever made.

NOTHING BUT THE BEST. Playing stylish, often mordantly funny variations on *Room at the Top*, this cheeky British comedy studies a roguish climber (Alan Bates) who hires an upper-crust crumb to teach him the niceties of Establishment snobbery.

THE ORGANIZER. Director Mario Monicelli's vividly dramatic portrait of 19th century Italy has warmth, humor, and a superb performance by Marcello Mastroianni as a socialist Savonarola who leads a strike of textile workers in Turin.

YESTERDAY, TODAY AND TOMORROW. Mastroianni again, teamed with Sophia Loren in three frolicsome tales celebrating the game of love as though Italians had invented it out of pure mischief.

THE NIGHT WATCH. Using their jail cell as a base for excavations, five French losers dig up enough walloping suspense and bitter insight to make this prison thriller one of the best of its kind.

BECKET. This pungent, stunningly filmed spectacle dramatizes the church-state conflict that becomes a death struggle between England's 12th century Archbishop of Canterbury (Richard Burton) and King Henry II (Peter O'Toole).

THE SERVANT. Dirk Bogarde deftly combines good manners with menace in Director Joseph Losey's class-conscious melodrama about an evil London valet who attends mainly to his master's vice.

FROM RUSSIA WITH LOVE. In exotic Istanbul, Secret Agent 007, alias James Bond, alias Actor Sean Connery, sticks to a gourmet diet of sex, violence and other yeasty nonsense derived from Ian Fleming's fiction.

THE SILENCE. Two women and a child travel to a seemingly godforsaken city that is the geographical center of this dark allegory directed with breathtaking virtuosity by Ingmar Bergman.

BOOKS

Best Reading

TWO NOVELS, by Brigid Brophy. These short novels contain glittering prose, a variety of verbal tricks, and almost too many *tours de force* to digest at one reading. Already known as the most tart-tongued of British critics, Author Brophy has now hit a fictional stride that should

TIME, JULY 10, 1964

...and subscription inquiries should be mailed to TIME International, Sullivan 3, Mexico 4, D.F., Mexico. TIME Asia Edition ... at Chicago, Illinois and at

CC-0. Kapoor Collection, Panchkula.

Digitized by Arya Samaj Foundation Chennai and eGangotri

place her well up in the ranks of Britain's formidable array of lady novelists.

TO AN EARLY GRAVE, by Wallace Markfield. A funny, unpretentious novel about a small clutch of men who make their living in Greenwich Village by being "intellectual." Author Markfield has clearly read his Joyce very closely, but his style is lighter and his wit strictly 1964.

THE SCARPERER, by Brendan Behan. To "scarper" in Gaelic is to escape, and Behan runs off with some Dublin weirdos glorifying their past and dreaming their future. This short novel is vintage Behan (1953), when that bibulous writer wrote his most ebullient prose.

THE INCONGRUOUS SPY, by John Le Carré. A reissue of the author's first two books in one volume. Admirers of *The Spy Who Came In from the Cold* will be especially drawn to *A Murder for Quality*, which has its own suspenseful plot, but at the same time reads like a first draft for *Spy*—characters, Cold and all.

A MOVEABLE FEAST, by Ernest Hemingway. This memoir of Paris, which the author suggested should be read as fiction, has a ghostly quality: it reads as if the author had written in the '20s what, in fact, he wrote in the '50s. All the famous writers are there: James Joyce, Ezra Pound, Gertrude Stein, the Fitzgeralds, characterized memorably, if sometimes nastily, in Hemingway style.

RAINER MARIA RILKE, THE YEARS IN SWITZERLAND, by J. R. von Salis. This biography covers Rilke's last seven years, when he wrote his greatest poetry—including most of his masterpiece, *The Duino Elegies*. Von Salis, who knew Rilke, conveys well Rilke's temperament, but he lacks perspective on his genius.

JULIAN, by Gore Vidal. In his fleeting reign as Emperor of Rome (A.D. 361-363), Julian crammed enough wars and grandiose plans almost to make Alexander the Great seem inert and unimaginative. Gore Vidal's novel records, with elegance and flourish, every last adventure, including the notorious attempt to abolish Christianity, but he does not quite capture his elusive subject.

'e can show you many ways to get there

e can put you on the high yield road. · point out the low energy route.

onsanto has lots of interesting reac- ons. And the intermediates that ake them possible.

'e sell the intermediates. The reac- ons that go with them are enough · make anyone ecstatic.

ou might even say that "intermedi- es" is our middle name.

We're well-supplied in the basics, benzene, toluene and xylene; been experimenting around with aromatics for years. And you should see our bills for alcohols, methyl, ethyl, propyl and butyl, by the tankload, just for our research.

This is called research in depth. And it gets results.

We've got intermediates and reactions we haven't even used yet. And theoretical yields that are hard to believe.

But best of all is the way we make our intermediates.

They're so good that you'll be back to order more just to see if we can do it again.

We can.

LETTERS

The Downstretch

Sir: With Goldwater's pro-Americanism philosophy and Scranton's meaningful criticism of the present Administration, I hope to be able to vote for both men this November. Our country needs people who are willing to stand on their beliefs despite pressure from minority forces.

(A/3C) W. B. KOEHLER

McCoy A.F.B., Fla.

Sir: To this European, Senator Barry Goldwater appears not as a fascist ogre, but as perhaps the last hope of the American people to pull their country out of its headlong dive into that oblivion where everybody and everything, races, parties and states, shall be mongrelized into a drab grey uniformity, watched over, of course, by Big Daddy in the White House.

JACK O'HANLON

Dublin

Sir: If the Republican Convention defeats Goldwater and adopts another "liberal" platform, it will be through the coalition of jealous, selfish, incompetent kingmakers, who will ruin all unity.

LOUISE BRUNING CABLE, M.D.

Los Angeles

Sir: We had nothing but cowards in the past Administrations concerning foreign affairs. Any so-called American who fears Senator Goldwater because of his ideas in foreign affairs is not a true American.

C. ROBINSON

Attleboro, Mass.

Sir: In voting against the civil rights bill, Goldwater has upheld the Constitution of this country. The Communists hate him; they hate anyone who is against Communism. They also hate the John Birch Society, which is the only organization actively fighting Communism in this country.

HAROLD CIRIELLO

Belmont, Mass.

Sir: I find Senator Goldwater's candidacy for the G.O.P. nomination not unlike the topless bathing suit: scandalous and with no widespread support.

NEIL MELTON

Fresno, Calif.

Sir: Goldwater's victory in the California primary and his overwhelming support among G.O.P. delegates makes us realize that our doubts about America's political maturity are not completely groundless. It is a frightening idea for us who are so dependent on the U.S.A. that such a man could possibly become President.

PIETER J. BOELEN

Rotterdam

Sir: Recalling Dwight D. Eisenhower's pride in his own invention, "modern Republicanism," it seems to me utterly strange that he, being the one person who could decisively influence the Republican Party's development now, chooses to remain silent when the party seems to be marching straight toward the very opposite of modern Republicanism.

GUSTAF DONNER

Helsinki

Sir: Goldwater's statement that discrimination is morally wrong but constitutionally right ineluctably implies that our Constitution is immoral!

ROBERT HARARI

Los Angeles

Sir: As Goldwater says, he gives us a clear choice. If he is the Republican nominee, my choice—though I am a registered Republican—will be his opponent.

R. A. SEELIG

Washington, D.C.

Sir: Unless the Republican Party can come up with a strong but moderate candidate or can draft a platform for Goldwater, he will go down as a disaster in political history.

JOHN BROWNING

Troy, Ala.

Sir: Governor Scranton's favorite thumbnail self-description, "I am a liberal on civil rights, a conservative on fiscal policies and an internationalist on foreign affairs [June 19]," sounds mighty like Lyndon Johnson to me!

ROBERT B. FINNEY

Bartlesville, Okla.

One Vote Per Voter

Sir: One Ohio U.S. Senator still represents 4,900,000 citizens, while one U.S. Senator from Nevada represents only 143,000 citizens. This is gross voter discrimination. Perhaps somebody will start court action to force all U.S. Senators to run at large or, better still, to determine if the Constitution is still constitutional.

ROGER B. WILLIAMS

Columbus

Sir: Now that the Supreme Court has once again rewritten the Constitution, I demand that it apply the same principle on the federal level. It should give California 40 Senators to Nevada's 0 on the grounds that more than half the people in Nevada are Californians supporting the indigent natives with gambling losses—a monstrous form of taxation without representation.

JACK R. LOVETT

China Lake, Calif.

ICBM Program

Sir: In TIME, May 22, you quoted my December 1945 statement to the effect that accurate intercontinental ballistic missiles were a long period off, and that "I wish the American public would leave that out of their thinking." Your article went on to say that "because of the arguments—like Bush's—against it, it was not until May 1954 . . . that the Air Force launched a crash program to develop the Atlas ICBM."

At the time of my 1945 statement, some eminent generals were telling the Senate that intercontinental ballistic missiles would be available in a year or two. My statement should be read with this, and the following, in mind: a crash program meant hardware and large costs. Reasonable men in development work do not enter this phase until the central problems are solved. At the time there was no known means of guiding such a missile successfully. There were also large problems on re-entry and on fuels. The fact that I was interested, and was encouraging such research, is illustrated by one invention I myself made on guidance, and assigned the patent rights on it to the Navy. I did not oppose development of guided missiles.

VANNEVAR BUSH

Belmont, Mass.

▶ TIME *regrets giving an inaccurate impression of Dr. Bush's position on missile development, and is glad to have his correction of the record.*—ED.

Fleetfooted Victims

Sir: I have taken to heart the Baltimore cops' advice to run when attacked [June 26] and am now vigorously practicing wind sprints. However, one difficulty has arisen: my fiancée, who is addicted to wearing high heels, is hard pressed to comprehend that when trouble appears I shall be forced to abandon her.

PAUL H. RIMELSPACH

New York City

Power of Ideas

Sir: Re your comment that "economists collectively have far more influence than Keynes & Co. could ever have dreamed of [June 26]," Lord Keynes stated in 1935: "The ideas of economists and political philosophers are more powerful than is commonly understood. Indeed the world is ruled by little else. Practical men, who believe themselves to be quite exempt from any intellectual influences, are usually the slaves of some defunct economist. Madmen in authority, who hear voices in the air, are distilling their frenzy from some academic scribbler of a few years back. I am sure that the power of vested interests is vastly exaggerated compared with the gradual encroachment of ideas."

MICHAEL G. DWORKIN
ALBERT M. KATZ

Wayne State University
Detroit

The Cardinal & the Priest

Sir: Although many lay Catholics have been chagrined by Cardinal McIntyre's reluctance to actively endorse civil rights as a fundamental moral issue [June 26], the views of the church are hardly so equivocal. As exemplified by Archbishop Rum-

Toshiba
QUALITY SINCE 1875

mel in New Orleans, the church traditionally supports, often actively, the essential dignity of man.

ROBERT E. EDMANDS, M.D.

Westminster, Calif.

Sir: Cardinal McIntyre represents the best thinking of the 4th century.

MRS. DANIEL C. HOULIHAN

Pearl River, N.Y.

Sir: It is such policies and attitudes as those of Cardinal McIntyre that are driving the more thoughtful of the Catholic laity toward an anticlericalism that is too vehement to be healthy.

JAMES P. WARD

Wilmington, Del.

Sir: Cheers for Cardinal McIntyre. And pox on these so-called clergy who, under the guise of moral leadership, insinuate that they represent the majority and exert powerful pressures on our legislative bodies to pass minority legislation. Muzzle them or remove them. The clergy has no business meddling with politics or agitating violence.

HARLEY D. TAYLOR

Austin, Texas

Sir: We cannot legislate love—to accomplish this we look to our religious leaders. What we find is a system riddled with weak-kneed little men. Unfortunately, Cardinal McIntyre represents the majority of clergymen who do not serve God by teaching right but serve the cause of ignorance, either by remaining silent or by supplying twisted interpretations of the Bible to justify the prejudices of their congregations. My prayers and praises go to Father Du Bay and all clergymen who have recognized their responsibilities in this war against hate.

NANCY S. GRISSINO

Huntington, N.Y.

All Things Flow

Sir: Your article covering Dr. Hoyle's theory of gravitation [June 26] was very informative, but it seems to me that Dr. Hoyle was preceded by Lucretius, who in 70 B.C. said: No single thing abides, but all things flow. Fragment to fragment clings; the things thus grow until we know and name them. By degrees they melt and are no more the thing we know.

N. H. GHYST

St. Louis

What's up Front Counts

Sir: After seeing your picture of the topless bathing suit [June 26], I can easily guess what comes next: the gownless evening strap.

NORMAN D. NEXON

Glencoe, Ill.

Sir: I wouldn't even think of wearing a topless bathing suit. I believe the only reason for this fad is to lead men on. When and where will virginity go to?

DENISE PINCINA

Woonsocket, R.I.

Boo Who

Sir: Mme. Callas enjoyed a tremendous success in Paris as Norma [June 26]; the boos came from the anti-Callas faction in the gallery. They may boo her, but they really pay her the highest compliment by paying "Callas prices" at the box office. They may hate her, but they just can't stay away.

A letter from the PUBLISHER

Bernhard M. Auer

We have always felt that the 19th century author Alexander Smith didn't say it quite right when he wrote, "It is not of so much consequence what you say, as how you say it." Shifting the emphasis, we believe that what you say is important but how you say it makes a whale of a difference. Some examples from this week's TIME:

Like a Polaris missile, the great fish roars out of the water, sometimes jumping twelve feet or more as he goes raging and tail-walking across the ocean.—*See* SPORT, **All Out for Banzai!**

•

For those who would savor the texture of the land and recover their sense of place, there are the shunpike and the minor road, a network of Indian trails and reconstructed canal routes: tortuous drives that skirt oceans below and wind around mountains, cross plains and valleys, run after rivers through national parks and state museums, ghost towns, rain forests and whaling ports. —*See* MODERN LIVING, **Sights on the Shunpike.**

•

The primary symbol of France today is an image, from the movie screen, of a young man slouching in a café chair, his socks sagging over broken shoelaces, his shirt open to the waist, his arms dangling to the floor, where his knuckles drag. A Gauloise rests in his gibbon lips and its smoke meanders from his attractively broken, *Z*-shaped nose.—*See* SHOW BUSINESS, **Breathless Man.**

•

Learning one step at a time, at their own pace, they become more self-reliant and confident. A three-year-old lies on a rubber mat, arranging a washbasin and cups; a five-year-old, blindfolded with a blue eye shade, feels a sphere, a cube, a cylinder, following out some blueprint in his mind.—*See* EDUCATION, **Montessori in the Slums.**

•

Like the Bard, pre-Bach music is not to be forgotten. Drawing from the works of Shakespeare's contemporaries—Thomas Morley, William Byrd, Tobias Hume, John Wilbye, John Dowland—Pro Musica shook the dust off a score of Elizabethan madrigals and lute songs, embellishing the rarefied melodies with a rhythmic liveliness and delicate twining of voices and instruments to produce, in Shakespeare's words, "sounds and sweet airs that give delight and hurt not."—*See* MUSIC, **The Ancient's Mariner.**

•

To sit through the film is something like holding an elephant on your lap for two hours and 15 minutes. You can hardly measure what you have there, but it leaves a definite impression: it's big, it's warmhearted, and tons of fun for the kids.—*See* CINEMA, **Sawdust Spectacular.**

•

His tangled white curls were damp with perspiration, his face was pale. The pouches beneath his eyes were dark; his voice was hoarse but strong. —*See* THE U.S., **The Ev and Barry Show.**

•

Roar. Rattle. Bump-bump-bump. Bee-eep beep. Clang. Rat-tat-tat. The illuminated sign at a Nishi-Ginza intersection in downtown Tokyo blinks a tentative 80, then flashes to 82. Red light. Screech! North-south traffic stops. The number blinks: 8[illegible] 79, 78. Ready, east-west? Engine whine. Clutches out. Getaway! Flash goes the sign: 79, 81, 82—84!—*See* THE WORLD, **The Fresh Start.**

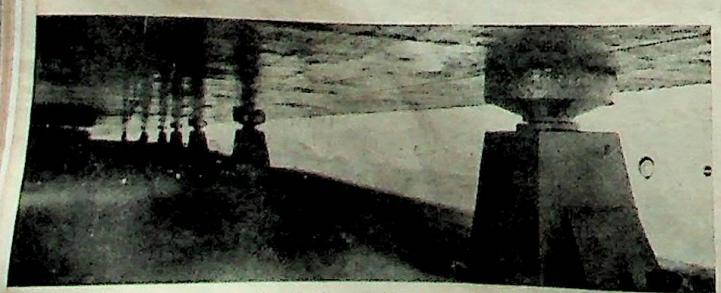
ICTURE OF A MAN SUPPORTING A 100,000-TON SHI

reyou ever heard of *jacking-* a ship? Not a normal mari- e term—as yet. But it may ll be soon, because that's t what this shipyard worker is doing. And he's doing it with air. For at Rotterdam's Verolme yard the method of dry docking is as unconventional as it is fast.



d for supporting vessels in dry dock, special shoring jacks with ball-jointed heads driven by compressed air.

Manhandling of blocks and timbers for shoring has given way to mechanization. Two rows of jacks are aligned in the dry dock to follow the form of the vessel to be lowered onto the keeling block. At the pull of a lever, Atlas Copco air motors drive the jacks upwards to support the vessel's hull.

Three men instead of five cut man-hours per docking by over 55 and time in dock by 11 to 12 hours. With some fifty dockings a year and, say, an 8-hour day, that can mean a gain of two months in time and nearly 3,000 man-hours in labour—which, in terms of cash, is progress.

Atlas Copco's job is, of course, help rationalise working metho with compressed air—not only ships in dock or at sea, but also every kind of industry the wo over. The end in view is always same—simply greater efficiency less cost.

Atlas Copc

puts **compressed** to work for the wo

THE U.S.

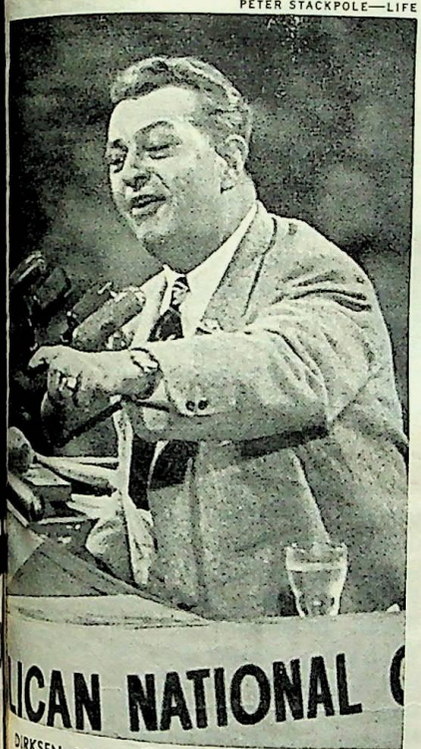
REPUBLICANS

Some Facts of History

History, as everyone knows, does not repeat itself. Yet the circumstances of history can, and often do, run in parallels. This may lead the careless, casual or wishful observer, spotting similar sets of circumstances, to jump to wrong conclusions.

The similarities between the 1952 and 1964 contests for the Republican presidential nomination seem striking in

PETER STACKPOLE—LIFE



DIRKSEN: 1952 NATIONAL CONVENTION
"Down the path to defeat."

many ways. Will history repeat itself? Can William Scranton do this year what Dwight Eisenhower did in '52? The answer, as of last week, was: almost certainly not.

The Similarities. Remember 1952? There was Bob Taft, Mr. Republican, idol of his party's conservative wing, career politician, leading member of the U.S. Senate, a Midwesterner through and through, an outspoken individualist, who had worked long and hard for the nomination, thought he had it won, and was convinced that he deserved it by reason of service to his party and championship of his cause.

And there was Dwight Eisenhower, a late and reluctant entry, the choice of the G.O.P.'s Northeastern kingmakers, of Tom Dewey and Herb Brownell and Cabot Lodge, the man who could take over the presidency of the U.S. for the Republicans, while, as the charge went, "Taft can't win."

Ike, of course, was an international hero, perhaps the most popular man of his day. But Taft had a head start, and he seemed to have the delegates. Eisenhower's backers desperately needed a new and spectacular issue—and they found it in the Taft backers' so-called "steal" of the Texas delegation. The strategy was successful, but it engendered a bitterness rare in the history of any political party. Thus the most memorable sight and sound of the '52 convention was Illinois' Senator Everett Dirksen, who, in pleading Taft's cause, pointed his finger at Tom Dewey and cried, in an anguish of anger and disappointment: "We followed you before, and you took us down the path to defeat."

The Differences. In many ways, the candidacies of Bill Scranton and Barry Goldwater are similar to those of Ike and Taft. But there are also decisive differences. It goes without saying that Goldwater is by no means a Taft—but then, neither has Scranton anything like the stature of an Eisenhower. In 1952, Republicans scented certain victory, if only they would pick the right candidate. In 1964, many Republicans despair of victory, no matter who the candidate.

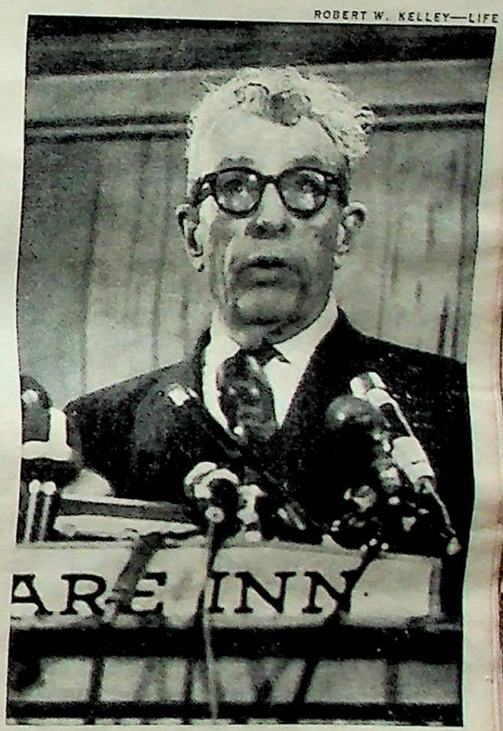
As he began his belated campaign, it was Scranton's major mission to convince such pessimistic Republicans that they are wrong—that he, Bill Scranton, could defeat Lyndon Johnson in November. Scranton did his best. His effort has been energetic and articulate. He dramatically demonstrated his own conviction that the 1964 G.O.P. nomination is worth fighting for, and worth fighting for on behalf of progressive Republicanism. He will continue doing his best until the last ballot is counted in San Francisco. But in the short time he chose to fight, his best has not been good enough.

The Disappointments. The facts were plain and simple. Goldwater got off to a long head start, showing poorly in the primaries but piling up delegate votes against little or no opposition in state conventions. At no time in 1952 did Taft have anything approaching Goldwater's delegate strength.

Scranton's entry made little, if any, dent in that Goldwater strength—a fact that politicians across the land were quick to realize. And since it is part of the profession of politics to stay off the losing side, Scranton has suffered one disappointment after another.

In highly urbanized New Jersey, for example, Scranton's brand of Republicanism is popular. Senator Clifford Case

ROBERT W. KELLEY—LIFE



DIRKSEN: 1964 ILLINOIS CAUCUS
"The grey ghost of me-tooism."

is a dedicated Scranton supporter, and many other delegates are known to favor the Pennsylvanian. Yet last week, after Goldwater appeared and spoke before the delegation, it voted to go to San Francisco uncommitted, thereby denying Scranton a breakthrough just when he needed one. In Delaware, Goldwater picked up a handful of delegates without lifting a finger; Senator John Williams, who had been set up as a favorite son in a holding action against Goldwater, announced for Barry and promised to release the delegation. In Michigan, Governor George Romney, who has been vociferous in his anti-Goldwater sentiments, warmly

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

welcomed Barry into his state, posed proudly with him, insisted that he couldn't pick a candidate until he saw what the G.O.P. platform had to say. What overriding problem did Romney want the Platform Committee to tackle first? Said Romney: "The breakup of family life, leading to increased juvenile delinquency and other social evils."

The biggest blow to Scranton's candidacy came in Illinois. There, old Ev Dirksen proved the truth of Santayana's maxim: "Those who cannot remember the past are condemned to repeat it." Dirksen may not read much Santayana, but he remembers his past political history, and he has no intention of repeating it. This time he fully intends to be on what he feels is the winning side.

The Ev & Barry Show

(See Cover)

His tangled white curls were damp with perspiration; his face was pale. The pouches beneath his eyes were dark; his voice was hoarse but strong. "Too long have we ridden the grey ghost of me-tooism," he said. "When the roll is called, I shall cast my vote for Barry Goldwater!"

So spoke Ev Dirksen at suburban Chicago's O'Hare Inn, where the 58-member Illinois delegation to the Republican National Convention met in caucus. Goldwater backers burst into wild applause, followed quickly with a roll call that produced 48 diamond-hard convention votes for Barry; the other ten delegates remained publicly committed to no one, but there was every possibility that Goldwater would wind up with at least 51.

ROBERT W. KELLEY—LIFE

UNSWITCHABLE GOLDWATER FANS
Better a black eye than a bright new face.

Being Consistent. That vote all but crushed Bill Scranton's chances for the G.O.P. nomination. He had gambled heavily on the possibility that he might steal some of Goldwater's delegate strength in Illinois, thereby giving his campaign a psychological lift that would have impact elsewhere. He had known for several days that Dirksen would probably vote for Barry. But, if only because of Goldwater's vote against the civil rights bill, of which Dirksen was the major architect, Scranton had hoped that Dirksen would be somewhat less than enthusiastic about Barry. As it turned out, Ev's strong and lengthy endorsement of Barry not only stunned the Scranton people but surprised the Goldwater forces.

Actually, Dirksen was being perfectly consistent. He is a Midwestern Republican—and one not notable for his admiration of the G.O.P.'s Northeastern "kingmakers." Moreover, Ev and Barry have long been warm Senate friends. Dirksen was instrumental in 1955 in making Goldwater chairman of the Republican Senatorial Campaign Committee, a job that put Barry into constant contact with Republicans all over the U.S. and gave him hundreds of far-flung pulpits from which to preach his views. Finally, Dirksen had said for months that he would back whichever candidate he thought would help the most Republican Senate nominees. He realized that Goldwater might hurt the chances of such Northeast Republican incumbents as New York's Ken Keating and Pennsylvania's Hugh Scott. But he also felt that the G.O.P.'s best chance this year for increasing its Senate membership was in the Midwest and Far West—where Barry is relatively strong.

Still, there were days of cautious Goldwater dickering to assure Dirksen's support. After his vote against the civil rights bill, Goldwater assiduously worked on Dirksen, visited the minority leader's office often, had drinks and dinner with him. Said one top Goldwater aide of Dirksen: "You never quite know what the old rascal is going to do, and it doesn't do to press him. But we were pretty sure he'd be with us when it came time to vote."

"A Rookie or a Patsy?" Ironically, one factor in solidifying Dirksen's stand for Goldwater came from Scranton himself. On June 22 Scranton flew to Washington, dropped in at Dirksen's office and tried to sell the Senator on becoming a favorite-son candidate in Illinois—an obvious ploy to withhold first-ballot votes from Goldwater. This annoyed Ev. When Scranton left, he phoned a friend and thundered: "What do they think I am? A rookie or a patsy? I certainly am not impressed."

Next morning Dirksen was on the phone again, this time trumpeting to a man in Illinois: "The whole world knows that I'm for Barry Goldwater." As a matter of fact, the whole world didn't. But to make certain that the world soon would, Goldwater staffers moved quickly that same day. Campaign Manager Denison Kitchel stopped in at Dirksen's office, said Barry had been wondering how Ev would feel about making the nomination speech for Goldwater at the convention. Dirksen did not quite say yes, but he certainly didn't say no. A few hours later, Barry himself buttonholed Dirksen on the Senate floor, asked him outright to make the nominating address. Dirksen agreed on the spot.

Thus Dirksen's starring role in last week's drama at the O'Hare Inn was written a week before the Illinois delegation actually met. To add to the irony, that meeting—which turned out so badly for Bill Scranton—was originally set up by Scranton himself. From the moment he became an avowed candidate on June 12, he knew he would have to make some spectacular inroads into what had been counted as a big Goldwater delegation. Illinois seemed to be the most likely possibility.

Most Important People. The day of the caucus, Goldwater got to the motel first. At his heels surged a crowd of rooters, many sporting blackened eyes and chest ribbons that proclaimed I WOULD RATHER FIGHT THAN SWITCH. They took over the lobby, seemed so excitable that when Scranton arrived, he went in the back door against the possibility that he might be bopped over the head by a placard. Dirksen, Goldwater and Republican Gubernatorial Candidate Charles H. Percy huddled for a while before the candidates addressed the delegation separately.

Shortly before 1 p.m., Dirksen and Percy escorted Barry to the Grecian Room, presented him to the delegates. Wearing a PERCY FOR GOVERNOR button, Goldwater rambled for a few minutes about the need for party unity and harmony, especially mentioned his civil rights vote, and said: "I will accept the civil rights plank of the platform, and as President will uphold and enforce the civil rights law. As President, I would want an Attorney General who would enforce the law. My Attorney General would uphold the law or I would get another one." He said that segregation is "foolishness in these times, just as anti-Semitism or anti-Catholicism are foolish. We just can't afford these prejudices at this time."

At midafternoon Bill Scranton made his pitch. "You are," he told the delegates, "the 58 most important people in the United States today." Conscious of the pro-Goldwater atmosphere, he downplayed his differences with Barry, elaborated at length about their po-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

sonal friendship, then said, "But I have a strong feeling we should win this election—in 1964 and not in 1968." He answered questions about his gubernatorial record in Pennsylvania and his voting record as a Congressman—which Goldwater literature had begun to attack as that of "a reluctant Republican who voted against his own party on 31 key issues." After 45 minutes, Scranton left. Behind him, the trap snapped shut —for Ev Dirksen rose to make his talk.

"You Know . . ." Dirksen poohpoohed the importance of Goldwater's vote against cloture on the Senate civil rights filibuster. "You've got to remember," Ev orated, "that a vote on cloture is a procedural matter. My own disposition generally is against cloture in the Senate." Arizona Senators, he told the caucus, traditionally vote against cloture. "I once asked my esteemed colleague, Carl Hayden, the president pro tempore of the Senate, about this. Senator Hayden said that if cloture had been invoked on the issue of admitting New Mexico to the Union, Arizona never would have entered the Union. The reason—it was proposed to admit New Mexico to the Union with Arizona included within its boundaries. Had that happened, there would be no Arizona today."

Soothing and smooth, Dirksen made Barry's vote against the bill sound like an act of statesmanship. "I urged Senator Goldwater several times to vote for the bill. But Senator Goldwater had reservations on two titles of the bill—the fair employment and accommodations sections. I was well aware of this," Dirksen said. "You know, it is not my business to quarrel with my fellow Senators. They have convictions. I wouldn't think much of a fellow who didn't have convictions and who didn't assert them."

That said, Dirksen allowed that he'd now like to talk a bit about opinion polls—to bring them "into a little better focus, just a little better focus." Goldwater has recently trailed Late Entry Bill Scranton in the sentiments of rank-and-file Republicans, but Ev recalled that when he won his Senate seat in 1950 from powerful Democrat Scott Lucas, polls showed him behind by as much as 10 to 1. "Why, some polls even showed me behind the eight ball in 1962!" Ev cried. Then, like a philosophical father, he assured the delegates they needn't fret about Barry's popularity. "I remember," pealed Ev, "a chap telling me last month that he was on his way to California to bet a bundle on Nelson Rockefeller. I told that chap that I would assume he knew what he was doing since the amount he was prepared to wager was not inconsiderable. But I also asked him where he got his information. He replied, 'From the best pollsters of all —the boys in Las Vegas.' Well, polls are polls, and at no time have the pollsters done well in 1964—and the best cure for polls is a strong, fighting candidate."

Because He Wanted To. Dirksen's words were still ringing in their ears when the delegates went through their pro-Goldwater roll call. Chuck Percy, as surprised as anyone by Ev's passion and vehemence, passed when his name was first called, recalled that during his primary campaign he had pledged to vote for the choice of a majority of the Illinois delegation. Said he last week: "I now instruct the secretary to cast my ballot as soon as a majority vote is cast for one candidate—for that same candidate." When the 30th Goldwater vote was registered, Percy—knowing that his chances of winning in November may be seriously hurt by a Goldwater presidential ticket—went on record for Barry.

ROBERT W. KELLEY—LIFE

DIRKSEN, PERCY & SCRANTON
Better go along with the majority.

As soon as the roll call was over, Dirksen hurried out to talk to waiting reporters. Said Ev: "We took care of all unfinished business. There was a motion to take a poll for the purpose of clearing the air and making some contribution to national thinking in this area." A reporter asked why Dirksen voted for Barry Goldwater, and the Senator boomed happily, "Well, because I wanted to."

Predictably, there were instant rumors that Ev Dirksen would become Goldwater's vice-presidential running mate. But Ev is 68 years old and ailing with an ulcer. More important, he loves his role in the Senate, and only hours after the Illinois caucus, Dirksen himself scotched the stories that he would like to be Vice President. "I'd have to dedicate roads and courthouses and bow to visiting princes and kings," he said in mock sadness. "I am not a candidate."

Barry, well aware of the enormous boost his candidacy had gotten, said confidently, "This just means that I have more delegates than I thought I did—maybe 690, something along in there. But I'd like a few more; then I'd say I was over the hump." Later Goldwater was even more confident. "Scranton just hadn't been moving," he said. "He needed a big break, and the only state where he could possibly get it would be Illinois. We had expected to get 40 of those delegates. We got 48. Three others we know we have, so that makes 51—and five of the remaining are leaning to us. So when Dirksen agreed to nominate me, I think that was it. After all, here's a party leader who says, 'You're going to win, and I want to be with you.' "

Still in There Fighting

Despite his setbacks, Bill Scranton kept up the fight. Said he to a newsman: "There isn't much time remaining, I know, but I have been told by professionals that I am further along at this time than Willkie and Eisenhower were before they were nominated."

Scranton even managed to put the best light on his Chicago defeat, saying calmly: "I came to Illinois with the calculation that 54 delegates would vote for my opponent. Our plan for the visit was to begin to demonstrate to the delegates at first hand that a vast majority of Republicans in Illinois, as elsewhere, prefer my candidacy. Dick Nixon said on television in Chicago last week that if ten Illinois delegates did not vote for Goldwater—watch out. This was what I was watching for also—then we would be on our way. Ten did not vote for him."

Out of Step. This week Scranton planned a second assault on Illinois. No matter what Ev Dirksen might say about polls, Scranton figured that he had some new ammunition in a statewide survey calculated to create second thoughts among delegates. According to Scranton, Illinois Republican and independent voters preferred Scranton over Goldwater, 65% to 35%. Moreover, when the two men were matched against Lyndon Johnson, the same voters picked Johnson over Goldwater, 38% to 25% (37% were undecided), while they favored Scranton over Johnson, 33% to 24% (43% were undecided). This was one of the first times since Lyndon took office that any Republican has beaten him in any poll. Scranton figured to barnstorm Illinois early in the week, hitting "as many

CC-0. In Public Domain. Gurukul Kangri Collection, Harid

Digitized by Arya Samaj Foundation Chennai and eGangotri

places as possible," top his campaign off with a nationwide telecast, then head for San Francisco.

Last week, in a high-speed delegate-wooing tour, Scranton traveled 7,000 miles, visited ten cities in ten states. From North Carolina to North Dakota, he kept up a blistering attack on Goldwater's candidacy. In a nationally televised speech from his home near Scranton, Pa., he laced into Barry: "If a man marching in a parade discovers that his cadence is different from every other marcher, who is he to say that the rest are out of step? But despite all this—despite the knowledge across the country that he lacks public support—despite his reckless pronouncements in the area of war and peace—despite his unorthodox and unusual views of what the Republican Party stands for—despite all of this, Senator Goldwater today is the front runner in the contest for the Republican presidential nomination. This can be changed. For the sake of our party and of our nation, it must be changed!"

At the end of the telecast, he urged people to fire off telegrams supporting him, later reported happily that wires were piling up at the rate of 1,500 an hour.

"Reckless Proposals." Next morning he breakfasted with delegates in Charlotte, N.C., then flew to Atlanta, where he got a roaring welcome from a confetti-throwing crowd. Cried Scranton to Georgia's convention delegates: "Of course we Republicans believe that the states should exercise maximum responsibilities. But we also believe in federal responsibility. We believe that the honorable doctrine of states' rights should not be used to set South against North, to set East against West, to set black man against white man."

That afternoon he was in Knoxville, Tenn., where he blasted Barry for suggesting that the TVA should be sold. Snapped Scranton: "I cannot ascribe these views of my opponent, all placed firmly on the record, to malice. He is not that kind of man. I think that ignorance must be the explanation."

SCRANTON IN BALLOON OVER SIOUX FALLS
"For the sake of our party and nation."

After the affair in Chicago, Scranton flew to Salt Lake City, attacked Goldwater's foreign policy stands. "I know that my opponent in his heart wants peace. He is a gentle man. But isn't he playing the warmongers' game when he proposes authorizing field commanders to use tactical nuclear weapons on their own initiative, when he suggests sending the marines to capture the Guantánamo water supply? These are reckless proposals. They are the very opposite of the calm strength with which President Eisenhower for eight years maintained the world's peace."

After a session with delegates and a balloon ride in Sioux Falls, S. Dak. to dramatize his high-flying hopes, Scranton pushed on to Fargo, N. Dak., where he spoke of the potential reaction to Goldwater's civil rights bill vote. "When you arouse emotions in that very vital and human field," cried the Governor, "it can create disruptive disorder, even violence, which we all want to avoid."

Words with Ike. Among the hopes held by Scranton backers was the possibility that Dwight Eisenhower might yet be persuaded to endorse their candidate. Scranton was irked by Ike's refusal to move. Said he: "I wasn't able to stay neutral, and I feel very strongly about this, and if I were somebody else I would assume I'd act like myself—that is, get out and do something about it."

That was Backer Cabot Lodge's main assignment from Scranton headquarters—to get Ike to speak out for Scranton. Lodge had convinced Eisenhower that he should run in 1952, and he seemed a logical man for the job now. He made a stab at it last week at Washington's Walter Reed Hospital. The meeting did not go well.

When Ike arrived at the hospital Lodge was waiting inside. But outside on the steps were dozens of reporters. Ike flushed deeply when he saw them. He strode past, paused only when a reporter asked about the meeting with Lodge. At that, Ike whirled about, said angrily: "I'd just like to know how you knew about it. That's all!" Then he stomped inside.

The two men talked for 45 minutes and Lodge went all out, even urging Ike to nominate Scranton. When he left the hospital, Lodge described the meeting in cryptic terms. "You will probably not be surprised to hear that we talked politics," he said. "I can give no details on that. Events will disclose what took place." What had actually happened was very little: Eisenhower had budged hardly at all, agreeing only to meet with Lodge again, probably late this week in San Francisco.

One Platform for All

In one of his most eloquent statements, William Scranton last spring warned that the inability of his party to speak with one voice had made it appear as a negative force in U.S. life. Declared he: "All of that can change. Republicans should form a new coalition—with themselves."

Few Republicans would agree more heartily with that sentiment than Melvin Laird, a bright, balding Congressman from Wisconsin, chairman of the 1964 Republican Platform Committee and a man who means to write a document acceptable to all G.O.P. factions. Says Laird: "We're not writing a Goldwater platform, a Rockefeller platform, a Scranton platform or a G.O.P. Governors platform—we're writing a Republican platform."

"The American Position." Laird describes himself as "a creative conservative"; he is tightfisted on fiscal matters

and extremely knowledgeable in foreign affairs. Although only 41, he is serving his sixth term from central Wisconsin's dairy-minded Seventh District, which contains Marshfield (pop. 14,600), his birthplace and still his home. He earned a B.A. from Minnesota's Carleton College, a Purple Heart in a kamikaze attack on his destroyer in World War II, entered politics through the Wisconsin state senate. Last year he wrote an introduction to a collection of scholarly essays known as *The Conservative Papers*, in which he expressed the hope that "the conservative position will come to be known more accurately as the American position."

In 1960 Laird was serving as vice chairman of the G.O.P. Platform Committee when Richard Nixon flew to Manhattan, huddled with Nelson Rockefeller, and arrived at the famed "Treaty of Fifth Avenue," which considerably liberalized a platform already drafted. Incumbent President Eisenhower was irked by its implied criticism of his defense policies. Conservatives on the platform went into open revolt, and the situation got so out of hand that Laird had to step in and take over the chairman's gavel from Illinois' inexperienced Charles Percy. Within 20 hours, acting both as cop and conciliator, Laird worked things out. Again, in 1962, he was the chief architect of a Declaration of Republican Principle and Policy, which has been endorsed both by Goldwater and his moderate Republican opponents.

Pinpointing the Principles. This year, to avoid a disruptive clash, Laird consulted frequently with Rockefeller and Goldwater, more recently with Scranton, to pinpoint principles upon which all can agree. He has pleaded with state leaders to name reasonable, rather than emotional delegates to the 106-member Platform Committee (each state selects one man and one woman, as does the District of Columbia, Puerto Rico and the Virgin Islands). The committee will include 16 members of Congress—largest number in the party's history—and Laird is high on its overall competence.

The timetable for this week's public hearings calls for testimony from Rockefeller, Lodge, Scranton and Goldwater at morning sessions, and from some 150 representatives of special-interest groups in the afternoons. Each night an eleven-member drafting committee will digest the day's hearings, relating them to position papers already on hand from the candidates, from academic sources, Congressional Republicans, and the prestigious Critical Issues Council, which, under the direction of Milton Eisenhower, has issued eleven detailed papers on such topics as Cuba, civil rights and the Far East.

The Drafting Committee hopes to sit down in earnest Friday night. Its three principal writers are: Bryce Harlow, a former Eisenhower speechwriter; Malcolm Moos, another one-time Eisenhower speechwriter, who has been advising Scranton; Karl Hess, a former Washington newsman and one of Goldwater's key advisers. The drafting group will report to the full Platform Committee, hopefully on Saturday. If sharp disputes between Goldwater and moderates break out, Goldwater should be in excellent shape, since a hefty majority of the committee members favor his candidacy.

"Take the Platform." Actually, Goldwater will go to considerable lengths to avoid a platform fight, since a clash over an emotional issue seems to be the only thing that could blow the convention open and give Scranton a chance. Top Goldwater aides are likely to seek compromise rather than a fight, and to suggest: "You take the platform; we'll take the nomination."

From the preconvention campaign, the various position papers, the 1962 Declaration of Republican Principle and Policy, and the 1960 platform, the outlines of this year's platform discussions already seem clear. They include:

• CIVIL RIGHTS. Goldwater's vote against the civil rights bill set this up as the key issue. If there is to be a major platform battle, Laird believes that it will be between Goldwater delegates who insist that the party advocate repeal of parts of the new bill and moderates who may propose much tougher measures than are included in the bill. Already, Pennsylvania's Senator Hugh Scott, the Scranton spokesman on the Platform Committee, has urged a flat statement that the party considers the bill constitutional, which would go directly against Goldwater's declaration in the Senate that it is not. Laird hopes that all factions can get together on a simple statement pledging vigorous enforcement of the new bill. Goldwater has indicated that he can readily agree to that. Laird may also propose new measures to secure Negro voting rights in the South, another proposal that Goldwater would accept. Since it takes two to tangle, there may not be much of a fight.

• SCHOOL PRAYERS. Laird reports that he has had more requests to be heard by witnesses who want to condemn the 1963 Supreme Court decision banning a state-sponsored recitation of prayer in public schools than on any other issue in contention. He considers the issue a real "sleeper." Conservatives may seek blunt criticism of the decision. Laird himself is sympathetic to the complaints, has warned: "In this world, it is becoming more and more unpopular to be a Christian. Soon it may become dangerous."

• SOUTHEAST ASIA. The platform will undoubtedly criticize the Democratic Administration for the deterioration in the U.S. position in Southeast Asia, and particularly for the worsening military situation in Viet Nam. Neither Henry Cabot Lodge's role as ambassador in Saigon nor his view that it is not a practical subject for partisan debate is likely to deter the delegates. Republicans most likely will advocate a tougher prosecution of that war, or at the least, urge that a basic decision be made either to win the war or pull out.

• MEDICARE. If liberal Republicans are looking for a scrap, they could easily get one by proposing that the G.O.P. endorse a social security-financed system of medical care for the aged. "We'd be bound to resist that," says Goldwater's top platform spokesman, Arizona Congressman John Rhodes. The 1960 platform insisted that any such program must be voluntary so that private medical groups and commercial insurance companies could expand their coverage.

• ETHICS IN GOVERNMENT. One point upon which all delegates will agree is that the platform should roundly condemn the Democrats for failure to investigate fully all ramifications of the Bobby Baker case.

• CUBA. All factions of the party are eager to blast the Democrats for allowing Fidel Castro to maintain a Communist stranglehold on Cuba. More positively, the party seems likely to endorse steps recommended by the Critical Is-

sues Council. They include a U.S. declaration that the U.S. is prepared to use military power "as a last resort" to free Cuba from Communism, the creation and support of a free Cuban government-in-exile, non-intervention with exile raids on Cuba, and the enlistment of allies in tightening the economic boycott of the island.

Laird rejects a proposal made by Goldwater last spring that the platform be limited to a 250-word statement of general principles, but hopes to keep it under 7,000 words. (The 1960 G.O.P. platform ran to some 15,000 words, the Democratic, 21,000.) Laird wants it to include a statement of principles, a section on domestic problems, another on foreign affairs and national security. His major innovation is to lump all of the criticisms of the Democrats into one section.

Welcome to Daly City

From the north wall of the Cow Palace jutted a $250,000 broadcast booth, newly completed for three TV networks. In the south wing, office cubicles for radio, newspaper and magazine reporters took shape. Telephone men installed 36,000 miles of wire, 3,000 phones. Overhead, a 40-ft.-by-100-ft. banner swung into place, bearing a likeness of Lincoln and the legend "Of the people, by the people, and for the people."

"This convention will be a record breaker—no doubt about it," said John Laxalt, a Nevada lawyer, who is a member of the convention's housing committee.

Laxalt was not glowing: as a matter of fact, he sounded pretty apprehensive. For, as usual, the convention promises plenty of headaches. Until the 1,200-room San Francisco Hilton was completed this year, only two major hotels had risen in San Francisco since the Sir Francis Drake went up in 1928. Moreover, many of the facilities are inadequate. The famed Mark Hopkins, for instance, has only three elevators to service its 23 floors; at the 1956 Republican Convention, patrons had to wait for as long as 1½ hours to catch a ride. There are still only three elevators, and with a bigger crowd expected, the wait could be even longer.

Despite (or perhaps because of) its "sophistication," San Francisco can be a gouge town—a fact to which many a World War II serviceman can attest. Thus many homeowners are moving out for convention week, asking $100 a day and more for three-bedroom digs. Under the best of circumstances, parking places are virtually nonexistent. Fleets of rental cars are streaming into the city. A brigade of some 500 chartered buses will be shuttling constantly between downtown San Francisco and the Cow Palace, 6½ miles away.

Still, San Francisco is popular, if only because of its peculiarities. The old cable cars still rattle up 45-degree hills. There is Chinatown, which these days sells Japanese-made trinkets. There is Fisherman's Wharf, for abalone and prawns. There are some of the best restaurants in the U.S. There are the swinging nightspots of North Beach, where the most popular dance is that variation of the twist called "the Swim," which, until last week at least, was taught at The Condor by an instructress in a topless swimming suit atop the piano.

San Francisco is happy to be host, and well it might be. By conservative estimate, the conventioners will generate $5,000,000 in new business. One who is nonetheless disgruntled is Micheal DeBernardi, 38, the publicity-conscious mayor of Daly City (pop. 57,200) outside San Francisco. Daly City recently annexed the unincorporated area on which the Cow Palace stands. And whatever the handouts say, insists DeBernardi, the Republican Convention is not really being held in San Francisco at all. Welcome to Daly City.

FOREIGN RELATIONS

The Tourist

At times, Attorney General Bobby Kennedy seemed more like an eager office hunter on the hustings than a tourist in Poland. As thousands of Poles cheered him on a half-day visit to Cracow, Kennedy turned to the city's mayor and joked, "I am going to announce my candidacy for the mayoralty of Cracow."

Building Bridges. Fresh from Germany, where he had unveiled a memorial plaque to President Kennedy on the façade of the West Berlin City Hall,

SAN FRANCISCO FROM THE BAY
The Gate is open wide and solid Golden.

Bobby was mobbed by enthusiastic Poles from the moment he landed at Warsaw airport. Despite press silence on the visit, a throng of several hundred was on hand to meet him and to be reminded of "a kind of historic harmony between our two countries, a rhythm of events that causes our destinies to march together." When Kennedy, his wife Ethel and their three oldest children went to Sunday Mass at Warsaw's St. John's Cathedral, they emerged to find a crowd of 5,000 waiting for a glimpse of them. The Kennedys clambered atop Ambassador John Moors Cabot's limousine, and were serenaded with a chorus of *Sto Lat*, a sort of Polish version of *For He's a Jolly Good Fellow*. Kennedy asked how many there had relatives in the U.S. About one-third raised their hands.

Throughout his four-day visit, Kennedy stressed the traditional and bloody ties between Poland and the U.S., asking for help in building the "bridges of reconciliation" between eastern and western Europe. The spontaneous approval roared back by the crowds predictably ruffled official Polish feelings. At a dinner given by Ambassador Cabot, Deputy Foreign Minister Jozef Winiewicz proposed a toast reminding Kennedy of "the strict political reali-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of our links with Socialism and with the Soviet Union."

"Misfit." Before leaving for London on his way back to the U.S., Kennedy visited with Stefan Cardinal Wyszynski, Primate of Poland and symbol of the Roman Catholic Church's opposition to the Communist government. Polish officials urged him not to see the cardinal, insisting it would be against the best interests of U.S.-Polish relations. Kennedy disagreed, pointed out he was a Catholic on a private trip to Poland. He and the cardinal talked for an hour at the Jasna Gora monastery in southern Poland.

Bobby also expressed a few views on U.S. domestic matters and his own future. The head of the Polish Student Union at the university city of Cracow wanted to know about his brother's assassination. "I believe it was done by a man with the name of Oswald," Kennedy replied, "who was a misfit in society. There is no question that he did it on his own and by himself." He said, for the dozenth time, that he would step down as Attorney General after the November elections. Later, still musing about the possibilities, he said he just might spend a year in England.

The Homecoming

"All I've done since I came home," said Henry Cabot Lodge, "is to talk." And when he wasn't talking Republican politics, he was talking foreign policy —in a way that made fellow Republicans, who intend to use the Vietnamese war as a campaign issue, wince.

"On the Right Track." In his defense of Administration policy in South Viet Nam, Lodge told reporters: "If we persist, there isn't any question that this pacification effort can succeed, and I think we will persist. I think the thing is well organized now. I think the doctrines are very clear. The means are at hand to do it. There is a very fine understanding between the Vietnamese and the Americans, and I believe that the whole thing is on the right track."

There are, said Lodge, "a whole range of things, a range of many things, that can be done in the future, which I think we're going to do and which can be quite effective." Among other things, Lodge said, he had recommended that "very politically mature" Americans be sent with their families into each of the four Army corps areas of South Viet Nam to advise the Vietnamese on how to build a viable political system. If such measures are taken, Lodge said, "I think you can clean up the provinces around Saigon maybe in two years, and if you did that you would have gone a long way toward breaking the back of the snake."

Lodge scoffed at Barry Goldwater's suggestion that low-yield atomic weapons might be used to defoliate jungle supply trails. Said he: "We defoliate every day. Using an atomic bomb to defoliate is like using an atomic bomb to light a cigarette. We use weed killer." Lodge also clashed head on with the report of a committee of 13 Republican Congressmen, led by Michigan's Gerald Ford, which scored the Kennedy Administration for actively aiding the overthrow of the Diem regime. Lodge angrily denied that the Administration had been involved in any way. Ford advised that American officers now be given direct command of Vietnamese troops, instead of remaining merely as advisers. To that, Lodge retorted: "If we do that, we become a colonial power. I think it is pretty well established that colonialism is over."

One Trouble. His round of press conferences over, Lodge and his wife Emily headed for a long weekend at their home in Beverly, Mass., with their two sons and ten grandchildren. With them went two Tibetan pups named Buster Brown and Rover Boy, gifts to Mrs. Lodge from an orphanage she aided in Saigon. The Lodges couldn't spell the breed name of the pups—Lhasa Apso. But a quick look at their genealogy showed they had the makings of ideal companions in such uncertain spots as Saigon. The intelligent, sharp-eared dogs were bred in the lamaseries around the sacred city of Lhasa, teamed with the fierce Tibetan mastiff as watchdogs. The mastiffs were chained outside while the small dogs were indoor sentinels. Only trouble is, neither Buster Brown nor Rover Boy is housebroken.

GENERAL & MRS. MAXWELL TAYLOR
With no illusions, off to a great, hard task.

The Leavetaking

"I believe," said Montana's Mike Mansfield to the Senate shortly after noon one day last week, "that in this statesman-soldier we have a man of extraordinary ability and integrity who well understands the situation in that area, and who will represent us with great patriotism and great devotion. I believe this is a truly outstanding appointment for which this country can be proud."

Majority Leader Mansfield was speaking of General Maxwell Davenport Taylor, 62, whose nomination as U.S. Ambassador to South Viet Nam, succeeding Henry Cabot Lodge, had just been unanimously confirmed.

Next day, with a precision born of 40 years as a soldier, Taylor strode out of the Pentagon's river entrance exactly at 10 a.m., escorted by Defense Secretary Robert McNamara. Lined up before him was an honor guard of ceremonial units from each service and the U.S. Army band. Three 105-mm. howitzers roared a 19-gun salute over the muggy Potomac.

Max Taylor was retiring from the Army for the second time. The first time was in 1959. Taylor, then Army Chief of Staff and bitter over President Eisenhower's defense policies, quit three years before reaching the normal re-

Digitized by Arya Samaj Foundation Chennai and eGangotri

tirement age of 60. Two years later, John Kennedy brought him back to Washington as his military adviser, afterward named him chairman of the Joint Chiefs of Staff.

As part of the full-honors retirement ceremony, Taylor reviewed the troops, stopping occasionally to talk with a soldier, inspected some howitzers and found them spotless. That done, he received from McNamara his third oak-leaf cluster in lieu of a fourth Distinguished Service Medal. Said McNamara, borrowing the title of Taylor's *The Uncertain Trumpet*, his post-retirement analysis of U.S. defense ills: "Maxwell Taylor has never sounded an uncertain trumpet. He will always be one of the first to whom we turn with the hard tasks, the great challenges."

That afternoon President Johnson echoed that same sentiment at a Rose Garden swearing-in ceremony for the new ambassador. Said Johnson of Max Taylor's new job: "There are no illusions about the difficulty of the challenge. There are, likewise, no illusions about the responsibility or the importance of the assignment."

Taylor ordered his wife, mother, son and daughter-in-law "front and center" for pictures with the President, went back to the Pentagon to clean out his desk before flying to Saigon on July 5.

THE PRESIDENCY

Doin' the Bird

Lyndon Johnson, it is well known, likes dancing parties. But in Washington these sweltering days, even the two-step is hot work. Thus, after a state dinner for visiting Costa Rican President Francisco Orlich and his wife Marita, President Johnson took his guests out onto the low-lying rooftop adjoining the east wing, only a few hundred feet from the street, where they danced under Japanese lanterns that swayed in the cooling breeze.

Jimmy Durante was there. So was Evangelist Billy Graham, Author John Dos Passos, Banker David Rockefeller, Senator Hubert Humphrey, Under Secretary of Commerce Franklin D. Roosevelt Jr., and onetime Vice President Henry A. Wallace. Luci Baines Johnson, two days before her 17th birthday, had 25 of her teen-age friends in tow.

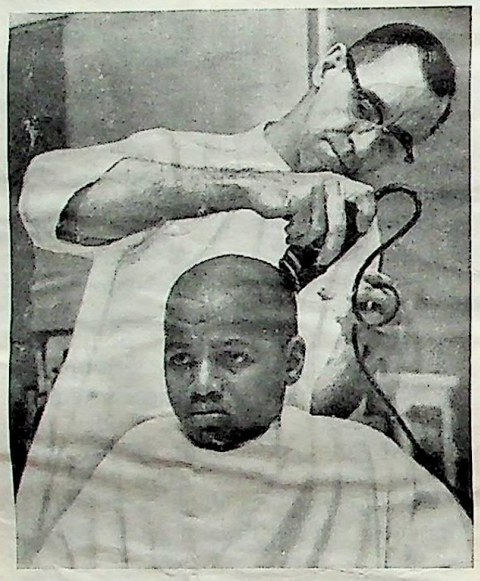
Artificial grass carpeting and cabaret tables ringed the dance floor. To the distress of Secret Service men, tourists strolling along Pennsylvania Avenue had what amounted to ringside seats. The evergreens set out as a screen at the last minute were too skimpy to block the view. As it turned out, it was quite a show.

Humphrey and his partner got applause for their performance of the "Humphrey special" to *Alexander's Ragtime Band*. Luci and her friends gyrated through the twist and the frug; then the President himself came on with a stomp of uncertain origin that might have been a presidential version of a step teen-agers have dubbed the "bird." To the racy tune of the old Edith Piaf favorite *Milord*, Lyndon took Luci in a modified bear hug and whirled her around while flapping time to the music with his elbows.

That was about all the dancing Lyndon did. He had caught a cold in California, he said, and didn't want to spread it around.

In the mansion home of the chief of state, it somehow seemed a remarkable affair. But for Lyndon and Lady Bird Johnson it all fit easily and naturally as a woodsman's felt crusher. In seven months in the White House they have put on at least 25 major wingdings, including eight state dinners—each with a minimum of preening, a maximum of fun and easy conviviality. After all, who else in the world could comfortably mix Jimmy Durante, John Dos Passos and David Rockefeller with a teen-age twist party?

AP



HAIRCUT IN KANSAS CITY
End of a sorry era.

CIVIL RIGHTS

Time of Testing

In the barbershop of Kansas City's Muehlebach Hotel, a 13-year-old Negro boy, Eugene Young, hopped into a chair, opened his fist to display two $1 bills, and ordered a haircut. Without hesitating, Barber Lloyd Soper covered the lad with a white apron, took out his clippers and went to work.

Only the day before, Eugene had been refused service in the same shop. But in the intervening 24 hours, the most far-reaching civil rights bill in U.S. history had become the law of the land—and, as the Negro boy climbed into the chair, the time of testing had begun.

Fitful Doodling. During its 118¼-day legislative voyage from the House to the Senate and then back to the House again, the bill had been desperately fought all the way. Among its final foes was wily old Virginia Democrat Howard Smith, chairman of the House Rules Committee. At a 6½-hour session last week, Smith used every parliamentary trick to delay committee approval of the Senate-amended measure.

The hearing's first witness was Brooklyn Democrat Emanuel Celler, chairman of the House Judiciary Committee which wrote the original version of the bill. Celler read the bill section by section while Smith doodled fitfully. When Celler began enumerating the Attorney General's powers, Smith scribbled cryptically on his note pad: "Atty. Gen. —Czar." When Celler had finished, Mississippi's William Colmer blew up. "If it's not politics," he cried, "then what is behind all this rape of the constitutional and legislative processes? God pity this young republic!"

But the segregationists' battle was lost, and they knew it. The committee voted 10 to 5—with California Republican H. Allen Smith joining four Democrats in opposition—to send the bill to the House floor with a recommendation for approval. And next day, by a lopsided 289 to 126 (with 153 Democrats and 136 Republicans voting aye, 91 Democrats and 35 Republicans voting nay), a cheering House of Representatives gave final and historic approval.

A Reassuring Note. Four and a half hours later, the civil rights bill lay on President Johnson's desk. Staring deep into the eyes of television cameras, Johnson spoke slowly and somberly to the nation. Millions of Americans have been denied equal opportunity because of their color, said the President, "but it cannot continue. Our Constitution, the foundation of our Republic, forbids it; the principles of our freedom forbid it, and the law I will sign tonight forbids it."

"The purpose of this law," he said, "is simple. It does not restrict the freedom of any American, so long as he respects the rights of others. It does not give special treatment to any citizen. It does say the only limit to a man's hope for happiness, and for the future of his children, shall be his own ability. It does say that those who are equal before God shall now also be equal in the polling booths, in the classroom, in the factories, and in hotels, restaurants, movie theaters, and other places that provide service to the public." To help communities over hurdles in implementing the new law, Johnson said, he was naming LeRoy Collins, former Florida Governor and now president of the National Association of Broadcasters, to head the Community Relations Service established by the bill.

Not all of the upcoming tests of the civil rights bill would be as trouble-free as young Eugene Young's haircut. But a reassuring note was struck by Georgia's Representative Charles Weltner, who turned to his Southern colleagues on the House floor and said: "I would urge that we now move on to the unfinished task of building a new South. We must not remain forever bound to another lost cause."

The Search

Gripping heavy wooden clubs to fend off water moccasins and rattlesnakes, 400 sailors sludged through eastern Mississippi swampland last week, poking and peering. From 14-ft. aluminum skiffs, equipped with walkie-talkies, search teams dipped grappling hooks into the sluggish, brown Pearl River. State highway patrolmen went back to knocking on doors, searching for a clue they might have missed. For the fourth time President Johnson dispatched new contingents of FBI agents, who set about quizzing every employee at the two principal manufacturing plants in nearby Philadelphia, Miss. But still there was no trace of the three young civil rights workers whose station wagon had been found charred and abandoned a week earlier.

For a time, attention turned to Sheriff Lawrence Rainey of Neshoba County, where the car was found. Rainey, it was learned, had killed two Negroes in the county in the past four years. Explaining it, he said: "The first had me down choking me, and the second was shooting at me." Rainey still had not joined in the search.

There was a flurry of excitement when the mutilated body of a young white man was found at Oakland, Miss., about 100 miles from the search area. At first it appeared that it might be the body of Michael Schwerner, one of the missing trio. It was later identified as that of a carnival worker run over in a highway accident.

During the week, some 300 more volunteer civil rights workers—most of them white students—poured into Mississippi, and violence continued. In Hattiesburg, two white men fired shotgun blasts into student automobiles parked outside a civil rights headquarters. From rural southwestern Mississippi came muttered reports of militant white segregationists arming with automatic weapons and hand grenades.

Increasingly fearful, civil rights leaders in Mississippi got off letters to the parents of students already in the state, warning them of the potential danger. Then they announced that planned forays into rural areas had been delayed and, finally, that no more volunteers would be accepted for this summer's "Mississippi project."

TROOPERS GUARDING ST. AUGUSTINE WADE-IN
Hours of uneasy peace.

This Time, Things Changed

At week's end St. Augustine was once more a sleepy seashore city. But its peace was uneasy, and behind lay a pattern of racial violence that could erupt again at any time.

Since mid-June, Negro and white demonstrators under the guidance of Martin Luther King Jr. had staged daily wade-ins at the predominantly white beach, paraded nightly through historic Slave Market park. One night two weeks ago, some 400 whites were whipped to a frenzy by a California rabble-rouser named Connie Lynch, who cried: "I favor violence to preserve the white race any time, any place, anywhere. Now I grant you, some niggers are gonna get killed in the process, but when war's on, that's what happens." The mob surged forth, threw itself at 250 civil rights demonstrators. For 15 minutes, a pitched battle was waged. Police tried to stop it but were overwhelmed by the mob. Finally the Negroes retreated, taking along 40 wounded.

Stalking at Night. In the nights that followed, shotgun-toting whites and Negroes stalked each other. White youths in a pickup truck fired into a Negro home; a Negro blasted a carload of whites with a shotgun, hitting one man in both legs; rifle shots from the darkness wounded a Negro riding in a car.

At the same time, another victim of St. Augustine's racial hatred, the Rev. Charles M. Seymour Jr., was fighting a different battle—to stay in his pulpit. Father Seymour, for 15 years rector of St. Augustine's Trinity Episcopal Church, had admitted Negroes to services a week before, now was under attack by the church's vestry, who were pressuring him to resign. Last week Florida's Episcopal bishop, the Right Rev. Edward Hamilton West, gave Father Seymour his "absolute support." Said Seymour: "The doors of the Episcopal Church are open to anyone, any time."

Whites at Bay. As last week began, Negroes staged their usual march to the beach. This time things were different. State troopers, part of a 230-man contingent ordered into the city by Florida's Governor Farris Bryant, waded into the water with the demonstrators, formed a ring around them and kept angry whites at bay with police dogs. That night, the Negroes marched on the Slave Market. Whites were waiting, but again the troopers kept the peace.

Next day Governor Bryant announced that a biracial committee had been formed to try to talk out St. Augustine's conflict. King called off further demonstrations, told his followers: "Every 1,000-mile journey begins with a first step. This is the first step on our journey here in St. Augustine."

CUBA

The Bitter Family

The passenger manifest on Cubana Airlines' twice-weekly Flight 464 from Havana to Mexico City included the usual Communist Chinese businessmen, returning Latin American "students," and privileged Cubans permitted to travel abroad. Among them was a chubby young woman with a Cuban diplomatic passport. "I came to see my sister Emma," she told the Mexican immigration man. He nodded idly and passed her through. He knew her by sight, and so did Mexican reporters. Fidel Castro's sister Juanita had made the trip before. "It looked to me like she had watery eyes, as if she was ready to cry or to say something," a newsman told his city editor that night. "Those Cubans," snorted the editor. "You never know what they are going to do."

Ten days later, Juanita Castro Ruz called a press conference and tearfully announced that she had defected from Cuba. "I cannot longer remain indifferent to what is happening in my country," she said. "My brothers Fidel and Raúl have made it an enormous prison surrounded by water. The people are nailed to a cross of torment imposed by international Communism."

Never Close. The news caused an instant, shocked sensation in Latin America, where by tradition, if not always in fact, middle-class families are large, close-knit—and tight-lipped. But the Castros of Birán (pop. 2,000), in eastern Oriente province were never very close. Cubans who remember them in the 1920s and '30s paint a picture of a hard, avaricious father, Angel Castro, and his bitter, complaining, common-law wife, Lina Ruz. Angel started by selling railroad ties to United Fruit Co., soon bought into a sugar-cane property, expanded into cattle, built himself a general store, and by various, sometimes shady deals had amassed more than $500,000 at his death in 1958.

There were seven children—Angelita, 40, Ramón, 39, Fidel, 37, Raúl, 33, Juanita, 31, Emma, 29, Agustina, 25—and two others fathered by Angel during a first marriage, Pedro Emilio and Lidia, both fortyish. That first marriage was not ended by divorce until Lina had already borne Angel five children. Then, finally, Angel married her, despite his loud-spoken accusations that Raúl had been sired by one of Lina's many other lovers. Neighbors remember that this gnawing suspicion later brought Angel to file, then cancel, a divorce suit. In the midst of such braying accusations and inconstancy, Fidel soon grew indifferent to the family—all except his worshipful brother Raúl. Nevertheless, when Fidel and Raúl went into the Sierra Maestra, most of the family rallied to their cause, sending food and supplies, raising money, going up in the hills to help organize his guerrilla camps. In 1958 Juanita, then 24, even traveled to the U.S., to plead for funds.

Disaffection set in soon after Fidel came to power. When the two revolutionaries insisted on imposing "agrarian reform" on some of the family estates, Ramón, who had worked hard maintaining the property, angrily exploded: "Raúl is a dirty little Communist. Some day I am going to kill him." Emma, only mildly involved to begin with, met and married a Mexican, then moved out of the country. Next, the bearded Fidel's antireligious measures infuriated his mother. When Castro declared himself a true Marxist-Leninist, Juanita too threw up her hands in despair.

Angry Scenes. Quietly, she turned her Havana home into an underground refuge. She protected anti-Castro rebels fleeing the police, slipped out bits of intelligence information, and is credited with helping at least 200 people to escape the island. Fidel obviously knew much of what was going on. Yet to arrest the Maximum Leader's own sister would stir a major scandal. His agents kept her under surveillance, but she came and went as she pleased. Last August, after the mother died, there was a violent episode when Fidel decided to expropriate the family land once and for all. Juanita started selling the cattle; Fidel flew into a rage, denounced her as a "counterrevolutionary worm," and rushed to the Oriente farm.

On that occasion, her protector was Raúl, who was still fond of her, and warned her in time to flee into hiding in nearby Camagüey province until Fidel simmered down. It was probably Raúl who also cleared the way for her final trip to Mexico. Her ruse of making a "visit" was far too flimsy to fool anyone. She took along 21 bags.

Fidel may not have known. "This incident for me is personally very bitter," he told reporters with controlled fury last week, charging that "her statements were written in the United States Embassy in Mexico City." He then ordered the press never to ask him about the matter again.

BRAZIL

Help from Abroad

Few countries are deeper in debt than Brazil. It owes the U.S. $1.2 billion, Europe and Japan $711 million, various international lending agencies $437 million—then there's another $1 billion in short-term debts and interest. The total comes to $3.4 billion, of which $892 million falls due this year, another $554 million next year.

Last week Brazil's major creditors met in Paris to see what they could do about saving the nation from bankruptcy—and give President Castello Branco's revolutionary government a chance to work some sorely needed reforms. At U.S. urging, the economists agreed to recommend to their governments that some 40% of Brazil's debt, which normally would fall due in the next two years, be carried over until 1967 and then paid off during the next five years. As an added boost, the U.S. has also just approved a $90 million Food-for-Peace program for Brazil, along with a new $50 million loan to help brace the cruzeiro currency.

It seems like a good gamble. In the three months since Brazil's army toppled Leftist President João Goulart, the government has pushed through a 30,000-unit low-cost housing program and is now steering broad agrarian and banking reforms toward a vote in Congress. Businessmen are beginning to regain their confidence in the country, and the cruzeiro, which snapped back from 1,700 to the dollar just before the revolution to 1,300 on the day of Goulart's ouster, has remained steady ever since.

DOMINICAN REPUBLIC

Then There Were None

In the three years since Dictator Rafael Leonidas Trujillo was assassinated, the Dominican Republic has been governed by one interim President (forced to resign), one seven-man provisional Council (which held elections), one constitutional President (toppled by military coup), and one civilian triumvirate of which not a single original member remains. The last of the three men who took over administration of the unhappy little Caribbean nation ten months ago resigned last week. He was Manuel Tavares Espaillat, 40, a cultured, U.S.-educated (Yale) scholar and the only real administrator and planner in the original triumvirate. He quit because he was disgusted with the endless bickering and backbiting that keeps the country from making any real recovery after more than 30 years of dictatorship.

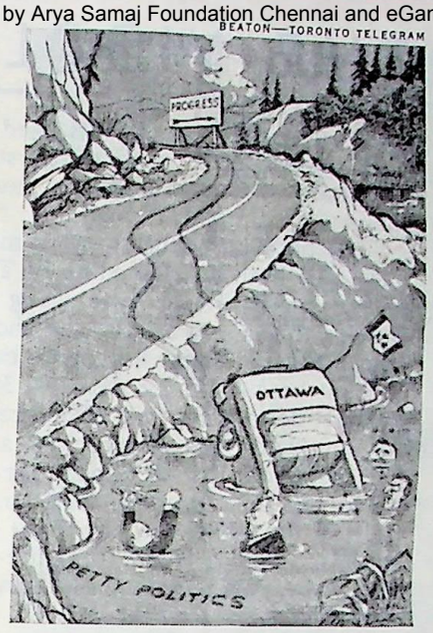
"Politics," said Tavares, "seeps into everything that is done in the Dominican Republic today, so that even if one is interested in the administrative and economic side of government, one can't avoid it. And I just wasn't cut out for politics." While in office, Tavares helped get an international economic mission in the Dominican Republic, restored the ailing sugar industry to private enterprise (under Trujillo, it was almost a personal monopoly), created an industrial-incentive program with lower taxes to encourage foreign investment, and promoted a student-credit institute to help his countrymen get an education. But at every turn, he found himself hampered by squabbling generals and politicians.

Tavares' resignation leaves Donald Reid Cabral, 41, who joined the triumvirate last December, as the man completely in charge. A shrewd, tough-minded onetime auto dealer, Reid is trying to lead the country into new elections by mid-1965. Six political parties have ratified a plan for two elections—for the Constituent Assembly and the presidency. But deposed President Juan Bosch's supporters and two other parties are withholding their support. Bosch followers are demanding full political freedom for their exiled leader; the other holdouts want more guarantees that a free election will be held. Not until the three parties agree to the plan will it go into effect.

CANADA

Mr. Pearson's Troubles

"We all need a holiday, I guess," sighed Canada's Prime Minister last week. Mike Pearson had reason to feel weary. Since taking office early last year, his minority Liberal government has weathered no fewer than 25 votes of confidence; its defenses are often weak and clumsy in the uncontrolled parliamentary debates, its legislative program is making only the slowest progress. And like Pearson, Canada's politicians, its press and public are beginning to get tired of the game.



CANADIAN CARTOONS
Often weak, and less than candid.

The one man who seems to enjoy it all immensely is old John Diefenbaker, the ex-Prime Minister who suffered the same wasp-stinging from Pearson and now leads the Conservative opposition. When Diefenbaker was under attack, there were major issues at stake such as Canada's nuclear commitment to the U.S. Now the rough and tumble in the House of Commons often sounds more like a schoolyard squabble. Diefenbaker makes the most of it to bedevil Pearson and ridicule him before the splinter parties on which he depends for support.

Kites & Flags. When Pearson's government recently hinted that "the realities of the situation" might force Canada to depart from its policy of nonrecognition of Red China, Diefenbaker rose in Commons to demand "whether this was just a case of kite flying, or does it represent a change of viewpoint on the part of the government?" Replied Pearson: "It does not represent a change of viewpoint." "So it is kite flying," snapped Diefenbaker. When Pearson revealed in the House that the government is making a study of the growing secessionist pressures in French Quebec and how secession would affect Canada economically, Diefenbaker all but accused him of plotting secession and forced embarrassed attempts to "clarify." The loudest and longest hassle erupted last May when Pearson proposed a new maple leaf national flag to replace the Red Ensign. "Flags," roared Diefenbaker, "cannot be imposed on the Canadian people by the simple, capricious personal choice of the Prime Minister! His personal choice will divide the nation." And with help from Diefenbaker, it did.

Even so seemingly minor a matter as a Canadian Broadcasting Co. TV film of a day in the life of the Prime Minister threw Parliament into a tizzy. Conservatives charged that Pearson had first tried to censor the film, then persuaded CBC to kill it altogether—meanwhile "deliberately misinforming" Commons about the incident. Pearson's unnecessarily hesitant replies (he had seen an early version but not the final version) left Canadians with the vaguely uneasy feeling that perhaps there was something to the fuss after all. Said an exasperated member of the Pearson-supporting New Democrats: "Here we have a situation that could have been cleared up right off by a candid, complete statement of about 200 words by the Prime Minister. But instead he backed away and backed away. Ever since they got in, the Liberals have flubbed on point after point."

"Grey, Quiet Failure." After more than 90 working days this year, Parliament has passed only five relatively minor bills. Completely neglected in the leaderless confusion were such major items as a new pension plan for Canada, armed forces unification, a federal student aid program, and a twelve-mile fishing limit. In Ottawa's press gallery, newsmen long endeared to Pearson are starting to make the same acid wisecracks they once leveled at Diefenbaker ("Well, fellows, we've got a government to overthrow"). Wrote Diefenbaker Biographer Peter Newman (*Renegade in Power: The Diefenbaker Years*) in the current issue of *Maclean's* magazine: "Although there have been almost none of the brass-band disasters of the Diefenbaker years, the domestic policies of the Liberals have been a grey, quiet failure."

One way for Pearson to cut the parliamentary Gordian knot and reassert his flagging leadership would be to call an election, in hopes of producing a clear Liberal majority. But the polls are discouraging; the Liberals would probably win, yet only enough to form another fragile minority government. "Canadians do not want another election," said Pearson. "I do not want an election. The Cabinet and caucus do not want an election. Though it is getting harder and harder, we remain determined to carry on as if we had a clear majority."

JAPAN

The Fresh Start

Roar. Rattle. Bump-bump-bump. Beeeep beep. Clang. Rat-tat-tat. The illuminated sign at a Nishi-Ginza intersection in downtown Tokyo blinks a tentative 80, then flashes to 82.

Red light. Screech! North-south traffic stops. The number blinks: 81, 79, 78. Ready, east-west? Engines whine. Clutches out. Getaway! Flash goes the sign: 79, 81, 82—84!

Tokyo being Tokyo and gadget-minded Japanese being gadget-minded Japanese, some campaigner for municipal quiet has dreamed up the idea of erecting an electronic billboard to measure Nishi-Ginza's sound level, translate it into phons (decibels), and transmit it in illuminated numbers to a populace presumably shamed into silence. There it stands, beside a bold sign proclaiming BE MORE QUIET! THE NOISE AT THIS MOMENT: 78 PHONS. STANDARD FOR RESIDENTIAL AREA: 50 PHONS. BUSY CORNERS: 70 PHONS.

Bedrooms and Highways. Nowadays, as Japan prepares for the XVIII Olympiad in October, Metropolitan Tokyo's 10 million-plus citizens don't even look up at the noise-measuring machine. It remains for the newcomer to stand, dazed and deafened, gazing at the measurement of the world's biggest city tearing itself down, building itself up, air-hammering its streets into rubble, ripping out its innards, and riveting itself into ever-more-sprawling, ever-more-ugly bigness.

The tumult and the clamor have been going on ever since Tokyo began rebuilding the wreckage of World War II. But the phons intensified as the Olympics neared. The problem was the low-slung nature of Tokyo itself: a megalopolis covering a radius of about 65 miles, with sidewalkless streets barely broad enough for two rickshas to pass cautiously, most of them lined with open-fronted shoe stores, rice stores, restaurants, confectionaries, raw-fish shops.

Superhighways worth $470 million had to be built over 58 miles of Tokyo to cut the traveling time along vital arteries to Haneda airport and the outlying Olympic sites. Bedrooms had to be built for part of the expected 30,000 visitors; dormitories had to be prepared for 7,000 athletes to sleep in, a pool for them to swim in, arenas for them to wrestle in, ranges for them to shoot on. All the while, the city raced ahead with its normal frenzy of office-building, subway-building, sewer-laying and department-store erecting.

Bear with Us. The result is a pace of life twice as dizzying as New York, thrice as noisy as Chicago. Each evening, out of nowhere, a mob of workmen materializes on a downtown street. Looking for all the world like shrunken Erich von Stroheims in yellow hard hats, puttees and jodhpur-like work pants, they throw up signs reading: FOR THE SAKE OF THE OLYMPICS, PLEASE BEAR WITH US. With that, work lights burst into brilliant glare, diesel compressors roar into life, air hammers rip into the pavement, and dust begins to rise. Comes the dawn. Trucks rumble up loaded with thick lengths of timber. Racing against the clock, the workmen literally pave the torn-up street with the square logs—just in time to let the morning torrent of traffic flood through.

Can Tokyo possibly finish the building job by October? There have been doubters. Workmen are still scrambling all over the swooping, tent-shaped roof of the vast Olympic swimming pool and the upward-spiraling conch-shell roof of the Olympic basketball court. A fleet of five truck-trailer, mobile public rest rooms is still under construction for the Olympic games area (nobody seemed to have included enough public toilets in the original building pl and in the hope of stopping a pra that might offend foreign guests, po are going up in the subways, plea "Let's refrain from urinating in pu The $19.4 million Shiba Prince H and the $38 million Otani Hotel racing to join the already fini Tokyo Hilton and Okura.

Lure of Wheels. But at least s of the halls, arenas and playing fi are ready for the athletes and crowds. Last gaps in the new $55 mi monorail from refurbished Haneda port to downtown Tokyo Station being closed. Partially completed vated highways have cut the road t from airport to city to 40 minutes so. The high-speed railway that carry passengers the 300 miles fr Tokyo to Osaka in three hours is rea to run—but company officials must fi ure out how to curb suicide-minde Nipponese who want to be among t first to fling themselves under the fa cinating wheels.

So clear has the rebuilding goal be come that a new song, *Fresh Tok* has been recorded by Pop Singer Sayu Yoshinaga:

Fresh morning comes.
Oh, fresh morning!
Why is Tokyo so appealing and a tractive?
Why does it make one dream?
Because, with all its flowery stree
Tokyo marks a fresh start as
A new Tokyo this year.

"The American Crime"

Seven daring but inept Tokyo th planned a kidnaping that would s the nation. Their intended victim: E peror Hirohito's youngest daughter former Princess Suga. She was t held for $138,888, the biggest ran in Japanese history. Disguised as a ter reader, one plotter entered and c the princess' house. The gang moved

YOMIURI SHIMBUN

for the snatch three times, only to have something go awry. Before they could make a fourth try, the police were tipped off and collared the gang, building an airtight case with full confessions. Yet last spring the accused were convicted only of trespassing and illegal possession of weapons. They got mild sentences of eight months to three years.

Unlike the U.S., where the sentence might be death, Japan is so lighthearted about kidnaping that sentences for the most successful snatches (unless they involve murder) seldom exceed six months. Japanese law is modeled on the German criminal code of 1907, which viewed kidnaping as a minor crime because it was so rare. But in postwar Japan, the soft law and a yen for yen have sharply increased what the French call "the American crime." Over a ten-year period, Japan recorded 4,728 kidnap cases, and the maximum penalty of ten years was given only 2% of the perpetrators.

For a while, it all seemed an unpleasant but harmless game, since the vast majority of the victims got home unscathed. But in two grisly cases last year, one victim was raped and murdered, and no trace has ever been found of the other. Clumsy police work encouraged cries for reform. One of the judges in the Suga case lamented, "Our criminal-code statutes are sadly out of line with our sense of values."

The Diet last week approved far stiffer laws, including a kidnap penalty of three years to life, and the country's first kidnap-conspiracy rap (one month to two years). But if kidnapers give their victim a break, they will still get a break from the law: those who surrender and do not harm their victims will have their sentences halved. With time off for good behavior, a kidnaper sentenced to life may be sprung in seven years.

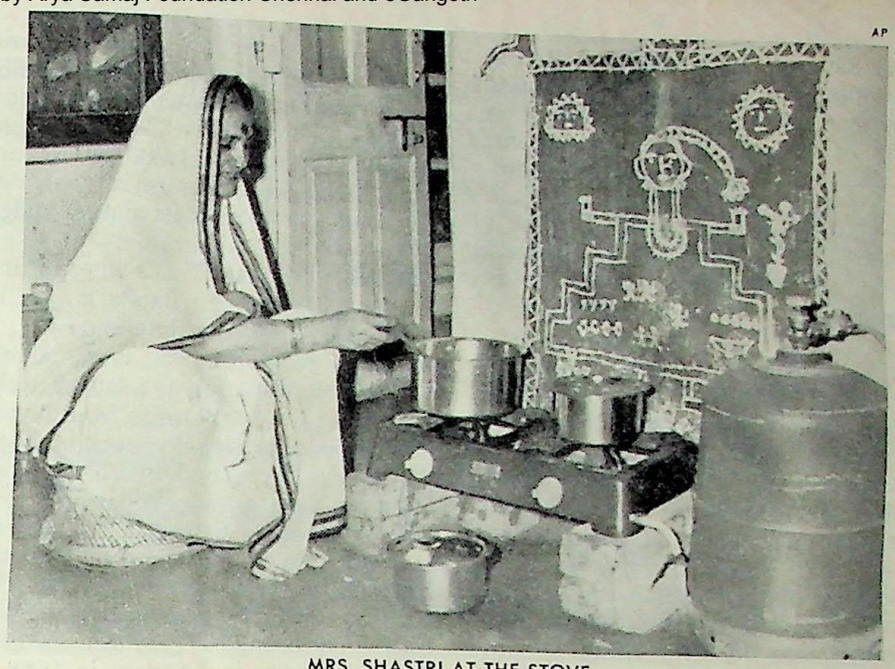
INDIA

After Shastri, Who?

For years, the question in New Delhi was, "After Nehru, who?" It was answered on Nehru's death by the unanimous election of tiny, humble Lal Bahadur Shastri as Prime Minister. Last week, after only 24 days in office, worried Indians were already asking, "After Shastri, who?"

With shy, childlike excitement, Shastri had been preparing for this week's London meeting of the Commonwealth heads of state. The trip was vitally important, since Shastri was to confer personally with Pakistan's President Ayub Khan in hopes of finding a solution to the Kashmir dispute that has so long divided their countries. Shastri, who has only once in his life been beyond India's borders, and then only to neighboring Nepal, was especially looking forward to spending a night at Chequers, the country estate of Britain's Prime Ministers.

Suddenly, Shastri fell ill. At first Indians feared it might be a heart attack



AP

MRS. SHASTRI AT THE STOVE

Soothing bulletins, a gently chiding press.

similar to the one he suffered in 1959. But the doctors put the blame on inoculations for cholera and typhoid, in preparation for the London trip. As soothing medical bulletins continued to be issued, the Indian newspapers did not press for details, and editorial comment gently chided Shastri for his 18-hour working days.

Then, last week, in the midst of a blistering heat wave that made New Delhi a furnace, it was abruptly announced that Shastri would not go to London after all, but would be represented there by Finance Minister T. T. Krishnamachari and Nehru's daughter, Information Minister Indira Gandhi. Shastri's statement said he was bowing to the wish of his doctors and added, "I myself feel well enough, but they are unyielding."

Shastri's comfortable, old-shoe quality was best shown by his insistence that he convalesce in his bungalow in New Delhi, where his retiring wife, Lalita Devi, does all the cooking, not only for her husband but for more than a dozen relatives and all the servants and secretaries. "Don't they all belong to one family?" she asks, and seems unperturbed by the stream of visitors who come to commiserate with Shastri, rub his back or simply exchange with him the palms-together *namaste* salute.

At week's end Indians were disturbed by an authoritative leak that the trip was canceled because Shastri had indeed had a heart attack and must rest for at least six weeks and cut down on his tireless pace if he hopes to lead a normal life. With the shadow of Nehru's death still hanging over the country, India was unnerved at the prospect of so soon again having to search for a leader. If Shastri is incapacitated and must resign, candidates for the prime ministership would be legion, ranging from ex-Finance Minister Morarji Desai, who had been eager to run against Shastri, to Indira Gandhi and Home Minister Gulzari Lal Nanda, currently the No. 2 man in the Cabinet.

Downing the *Daos*

The most warlike Baptists in the world can probably be found among the Naga tribesmen in the northeastern corner of India. From the protective cover of their primeval forests and rocky hills, the Nagas have fought a twelve-year guerrilla war and withstood air raids by Indian planes and ground attacks by about 40,000 Indian troops. Though they started out armed only with some old Japanese rifles and their traditional *dao*, a long knife shaped like a meat ax, the estimated 5,000 rebels now have relatively modern weapons, some captured from the Indians, but most supplied by India's subcontinental rival, Pakistan. Last week, with the Baptist Church serving as mediator, the Naga rebels agreed to lay down their *daos* for a month-long armistice and an official peace conference.

The quarrel dates back to 1947, when the Nagas expected to get their independence at the same time as India. Instead, the 370,000 Nagas were incorporated into the Indian state of Assam. Fighting began in 1952, when the Assam Rifles tried to enforce Indian rule. Under the British raj, the Nagas were left more or less alone. Their chief contact with the outside world came through U.S. and British Baptist missionaries, who built schools and clinics and tried to put clothes on the Naga, which in Sanskrit means "naked." A vigorous and intelligent people, thought to be distantly related to the Indonesians, the Nagas are avid for education, skilled at terrace farming, and use dogs for eating as well as hunting. Naga men, like Americans, always turn to look at the back of a girl's leg—a well-shaped calf is the epitome of beauty in Nagaland.

India has always felt somewhat guilty about its Naga war, especially since Gandhi himself had promised the hill people independence if they wanted it. Last year Nehru gave in to the extent of creating Nagaland state, with its cap-

ital at Kohima. In February, a Baptist convention proposed that a three-man committee consisting of two Indians and Britain's champion of the underdog, the Rev. Michael Scott, explore the prospects of talks with the rebels. The Naga leader, Angami Zapu Phizo, who is known to his followers as "The One," and who lives in exile in London, was promised immunity if he returned to India.

In New Delhi last week the Indian government confirmed that the Naga armistice will begin on July 26. During that period the Indian government will suspend military operations, reconnaissance flights, imposition of fines on villages that misbehave, and restrict patrolling to a thousand yards from the perimeters of army defense posts. For their part, the Naga rebels will suspend ambushes, sniping, kidnaping of hostages and attacking army posts and administrative centers.

MALAWI

Nation No. 35

With dozens of former African colonies and territories declaring their independence since World War II, the ceremony has become more or less ritualized. And so it was last week in Malawi, formerly the British central African protectorate of Nyasaland, now African nation No. 35. At the stroke of midnight, as fireworks lit the sky over Blantyre's Central Stadium, the Union Jack was hauled down in the presence of Prince Philip, Duke of Edinburgh. In its place rose the black, red and green banner of the newly sovereign nation of Malawi.

The new nation's credentials for sovereignty are typically African. Landlocked Malawi is small, poor and mainly agricultural. Its potential is mainly untapped; its 9,000 whites are vastly outnumbered by its 11,000 Asians and 3,900,000 blacks. It must rely on outside help even to meet its annual budget deficit of $12.6 million.

WILLIAM FARNWORTH

PRIME MINISTER BANDA
The doctor held the spades.

Jail & a Promise. That's where Prime Minister H. Kamuzu Banda comes in, and that's where the difference lies. A compact gnome of a man, Banda showed determination as a lad of twelve by walking the 1,000 miles from Nyasaland to South Africa, by working in the gold mines there and by saving some of his earnings to pay his passage to the U.S. Methodists helped get him to the U.S. and put him through high school; he went on to the University of Chicago and Meharry Medical College in Nashville, Tenn. He practiced medicine for seven years in London, in 1958 returned home to try and pull Nyasaland out of the Central African Federation controlled by white-dominated Southern Rhodesia. He battled Federation Prime Minister Roy Welensky at home and in London and went to jail as a result. But with his people behind him, Banda held the spades; finally he won a promise of independence from Britain.

Looking Outward. Something of a demagogue, natty little Kamuzu Banda, nevertheless, is wise enough to know where his country's wherewithal must come from. He has asked for and received a large and immensely popular contingent from the U.S. Peace Corps. He has persuaded the British to make up budget deficits of Malawi for its first five years of nationhood. He has established friendly relations with the Portuguese, who control his only outlet to the sea. He has persuaded London's Colonial Development Corporation to advance the bulk of the cash needed for a Shire River power project now abuilding. He is negotiating a loan from West Germany, has received technical assistance from the U.S.

When Malawi takes its seat at the U.N., says Banda, it will be "on the side of the nation which is right in international disputes. It so happens that the West is right most of the time."

THE CONGO

Reluctant to Reconcile

As the last 143 United Nations troops pulled out of the Congo last week, a departing Nigerian captain sniffed: "It's high time the Congolese put on their thinking caps for themselves." Actually, there were plenty of thinking caps being worn in that chaotic nation, but the thoughts they generated had little to do with one another. Everybody was certainly thinking the same question: Who could and/or would finally lead the Congo to stability?

Premier Cyrille Adoula hardly seemed the man. His government had been unable to suppress the vicious Communist-encouraged rebellions in Kwilu, Kivu and North Katanga provinces that threaten total tribal anarchy. Indeed, Adoula resigned his premiership last week on the fourth anniversary of Congolese independence. And who was now touted to succeed him? None but that onetime renegade Moise Tshombe of Katanga fame.

Wooed back to the Congo, Tshombe claimed the allegiance of every major faction. Wheeling and dealing as if every card were a wild deuce, Tshombe seemed to hold a royal flush ranging from Kasai's rightist "King" Albert Kalonji through such "moderate" face cards as Army Boss Joseph Mobutu and Justice Minister Justin Bomboko to the Communist-backed National Liberation Committee's André Lubaya. But the N.L.C. could still prove a joker in Tshombe's hand: Leftist Antoine Gizenga still languished in forced exile last week on an island at the mouth of the Congo River. Not until the conditions of his freedom are established can any new government count on genuine reconciliation.

Reluctantly recognizing Tshombe's claims for broad-based support, President Joseph Kasavubu appointed him *informateur*—the man charged with sounding out all political parties on the possibilities of forming a new government. Such an appointment might only be an attempt to provide Tshombe with enough political rope to hang himself. One could not really say that the promises of allegiance that Tshombe was getting would remain firmly in his control. But even if he fails in his search for reconciliation, he still has his political base of Katanga to fall back upon. And mineral-rich Katanga is the linchpin on which the Congo's economy hangs.

Only Lufthansa's 'Europa Jet' cruises at 600 mph without putting its nose outside Europe

Touching 600 mph is just cruising to the 'Europa Jet', Lufthansa's name for the Boeing 727. Yet Lufthansa will use this new, fast medium-range aircraft on short-hop flights – from Germany to Madrid, Barcelona, London, Copenhagen, Stockholm, Milan, Rome and the Near East. Why? Because you get all the speed, power and importance of a big intercontinental flight, even when you're going only a short distance.

In just 12 minutes 'Europa Jet' can set down and pick up its passengers or cargo. Built-in passenger steps emerge immediately after the arrival. Electric starters speed the jet into flight. The three jet engines have a reserve power unique among passenger-carrying aircraft. Thanks to Lufthansa's 'Europa Jet', intercontinental standards will now apply to air travel from one European city to another. You'll sink back into the cushioned luxury of spacious cabins, and measure in minutes the flying time to Madrid, Milan, Stockholm or London.

Special hole, special purpose!

Man's best friend doesn't need to be told that his bone must fit inside that hole! That hole is the hiding-place for tomorrow's lunch . . . a special hole with a special purpose! The moral for engineers? If your bread and butter depends on special holes, make a good job of it by using a drill that's tailor-made for the purpose. You'll find it in the P&N range. P&N make a wide variety of special-purpose drills . . . step, sub-land, taper and straight shank; slow and quick spiral, and stub drills, all in right or left-hand spirals . . . to name just a few of them. If the drill you want isn't in our range we'll make it for you. And naturally, every drill by P&N has been made to the highest standards, the finest tolerances, from only the best materials. For that special hole, use the specialised drill, Australian-made by Patience & Nicholson Limited.

Available in Black Jet or Silver Jet precision finish by P&N, holders of sole Australian rights to the Rohde & Dorrenberg roll forging process . . . for maximum economy and longer drill life.

For further details of R & D processed drills ask for P&N Tool Data Sheet No. 115.

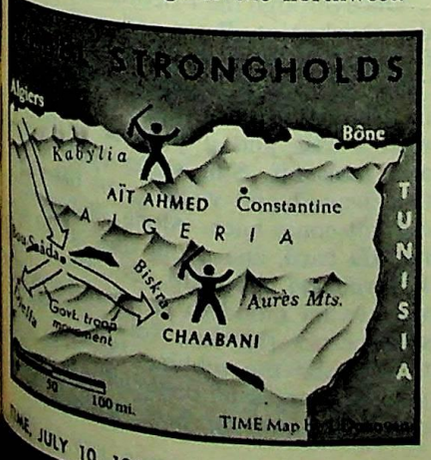
COLONEL CHAABANI
Resistance, rebellion or death.

ALGERIA

The Man on the Mountain

Into the Saharan oasis town of Biskra rolled a cautious column of halftracks loaded with olive-uniformed Algerian troops. Spears of sunlight flashed from the lenses of binoculars as nervous officers searched the streets for signs of the enemy. But the town was empty of armed opposition, and all eyes lifted to the sere, sawback massif that reared beyond. Up there, among the blue defiles of the Aurès Mountains, waited the latest defector from Premier Ahmed Ben Bella's socialist paradise, and with him were 9,000 well-armed veterans ready for resistance, rebellion or death.

"Historic Chief." The man on the mountain was Colonel Mohammed Chaabani, 32, onetime member of Ben Bella's ruling Politburo and the Algerian army's general staff. A tough, capable guerrilla leader during Algeria's 7½-year war with France, Chaabani had turned the Aurès and part of the Sahara south of the range into his personal fief. His men—historically mutinous Chaouïa tribesmen whose ancestors had rebelled against Romans, Byzantines and Arabs alike—are equipped with armored cars, tanks and artillery, thus representing a more serious military threat to Ben Bella than the 2,000 Berber rebels under Hocine Aït Ahmed's command in the Great Kabylia range to the northwest.



Chaabani's rebellion grew from his resentment of Ben Bella's Defense Minister Houari Boumedienne, who after independence was won two years ago removed combat-hardened but unschooled officers from the army and replaced them with French-trained officers, many of whom had spent the war in exile. Chaabani was also opposed to the Marxist extremes of Ben Bella's regime, a sentiment he shared with former Party Bigwig Mohammed Khider.

Khider, one of the nine "historic chiefs" of the National Liberation Front, had shared a prison cell with Ben Bella during the dark days of the Algerian revolution, and lent his considerable political skills to Ben Bella in his rise to power in the F.L.N. Breaking with Ben Bella at the cataclysmic party congress of April 1963, Khider went into intermittent exile, but until this week was reluctant to endorse armed rebellion against the regime. At a Paris press conference held in an abandoned classroom on the Rue de Babylone, Khider broke once and for all with Ben Bella.

"Criminal Adventure." "The regime is now moving irresistibly down the dangerous path toward fascism and totalitarian rule," he said. "Such a regime must be abolished." Khider sided openly with the armed rebellions of Aït Ahmed and Chaabani.

Ben Bella himself was quick to react. Going on television, he damned Chaabani for undertaking a "criminal adventure" and drummed him *in absentia* out of the army, the Politburo and the Central Committee. At the same time, a police roundup of other critics of the regime seemed imminent. Missing from their homes last week were Ferhat Abbas, onetime F.L.N. chief and former president of the National Assembly, and Mohammed Boudiaf, a former Politburo member. Another former Ben Bella prison mate, ex-Vice Premier Rabah Bitat, was reported under house arrest.

But tough as he was in the cities, Ben Bella faced a much more difficult prospect in the mountains. At week's end, as government troops sat nervously in Biskra, and occupied the isolated towns of Bou-Saâda and Djelfa as well, it was clear that Chaabani is as safe in the Aurès heights as Aït Ahmed is in the Kabylia. Both know their high redoubts inside out. And a punitive expedition mounted by Ben Bella could lead to a long guerrilla war like the very one that gained Algeria its independence.

FRANCE

Better than the Firing Squad

Take that, and that. If all this will not do,
I'll drown you in the malmsey butt within.
—Richard III

In the square, oak-paneled courtroom in Paris' ornate Palais de Justice, the light from four wrought-iron chandeliers set shadows flickering across the defendant's face. A fleshy six-footer with rimless glasses and a bushy black pompadour, he sat impassively as five judges discussed his crimes. Jean-Marie Curutchet, 33, former paratroop captain in the French army and a top terrorist of the Secret Army Organization, stood indicted on 50 counts ranging from desertion through plastic bombings and machine-gunning of police stations. But grisliest of all was a crime for which he could not be tried: in 1957 Curutchet was responsible for the deaths of 41 Algerian rebel suspects in the village of Ain-Isser. The mode of execution was worthy of Shakespeare's Richard III:* they were stuffed overnight in wine storage rooms and allowed to suffocate.

Feeling Heat. Curutchet beat that rap in a court-martial whitewash during the Algerian war, but the Paris tribunal had plenty of evidence pointing to assorted other assassinations as he came to trial last week. The prosecutor droned out the dreary list, explaining that in September 1961 Curutchet deserted to join the underground S.A.O. network in France and soon rose to become one of the leaders. By the fall of 1962, the French security forces had smashed the S.A.O. network in France and Curutchet had taken refuge abroad, living in Switzerland, West Germany and Italy, where Paris' extradition efforts came to nought. Like bloodhounds, the French security forces kept on the heels of their prey. In February 1963, they got their hands on Curutchet's old S.A.O. boss, ex-Colonel Antoine Argoud, beat him to a pulp and delivered him tied like a rib roast, for the trial and conviction that earned him a life sentence.

ARGOUD & CURUTCHET IN MUNICH (1962)
Bombing, shooting and suffocation.

Feeling the heat, Curutchet made

hat he thought was a deal with his ursuers last November. He agreed to o from Rome to far-off Uruguay, here he would presumably be harmss, in return for a French passport nd an all-expenses-paid trip for himelf and his family. But barely had his litalia jet touched down in Dakar, in rdently Gaullist Senegal, than a dechment of gendarmes boarded the lane, grabbed Curutchet and dragged im off. Within 24 hours Curutchet was ehind bars in Paris, and last week the idges filed out to ponder the evience. It took them three hours to find urutchet guilty and to decide on life nprisonment. The terrorist's wife, hav-ng feared death by firing squad, wept ith joy.

SWEDEN

he Princess & the Trucker

The marrying season of Scandinaian princesses rolled on last week with rainy ceremony on Öland island, 145 iles south of Stockholm. As King Gusaf VI Adolf of Sweden led his eldst granddaughter, Princess Margaretha, 9, down the aisle of the 13th cenury church of Gärdslosa, the pink-faced room, British Trucking Executive John mbler, 40, waited beside an altar rimmed with wild flowers and flanked ith birch trees. Television lights leamed on the bride's golden crown nd her simple wedding dress and veil f Brussels lace. Standing before Luheran Archbishop Gunnar Hultgren, Margaretha answered the traditional uestion with a soft *"Ja."* Ambler said, I will."

Although his valet, Miles, was among he wedding guests, none of Ambler's amily was present. He had explained hat his 68-year-old mother was too aged and frail to make the journey. The groom's uncle, Norman Ambler, who reeds dogs at Cap d'Antibes on the French Riviera and was also uninvited, scoffed at the story. He described his sister-in-law as spry and active, but added, "However, she is something of a religious fanatic—she is liable to start quoting the Scriptures at everyone. That may be one of the reasons John didn't invite her."

There were enough relatives of the bride to make up for any lack, ranging from her sister, Princess Désirée, who last month married a Swedish nobleman, to Denmark's Queen Ingrid, whose daughter Princess Anne-Marie weds King Constantine of Greece in September. Also on hand: a U.S. housewife from California who had won her invitation to the wedding on ABC-TV's *Queen for a Day* program.

The bride was serene until she reached the church vestibule, when she broke down and had a good cry. Margaretha then joined 150 guests at a reception under a domed, plastic tent. "Typical English weather," muttered Ambler, eyeing the falling rain. Then the newlyweds dashed for their car, which had been

UPI

"I feel like a wounded pheasant."

decorated with a sheaf of wheat, symbol of fertility. As they drove away, Ambler caught a handful of rice in the face, remarked, "It makes me feel like a wounded pheasant." After honeymooning in Sardinia, Mr. and Mrs. John Ambler will be at home at Wilton Crescent in London's Belgravia. As compensation for having stayed put in Britain and watched the wedding on TV, the groom's family will meet the bride at a party next fall.

NORWAY

Reverse Response

The Norwegians had had enough of Nikita Khrushchev even before he arrived. Television had shown the Russian Premier touring Sweden and Denmark, had reported his boorish belittling of Danish farming and his sneering remarks on Swedish defenses. When he clambered onto the quay in Oslo, a ragged cheer broke out from assembled Iron Curtain diplomats—but not from the 3,000 curious Norwegians who had gathered to examine the visitor. One little old lady was moved to waggle her umbrella at Khrushchev and shout "Murderer" until a manners-minded policeman placed his white-gloved hand firmly over her mouth.

But, as always, Khrushchev on tour turned out to be part frolicking peasant, part common scold. In his lighter moments, he was engagingly frank. With half a glass of beer inside him, he was asked at an after-dinner party whether the Russians had ever solved their succession problem. Khrushchev's response was a jocular account of the 1957 attempt by Bulganin, Molotov, Malenkov and Kaganovich to depose him. "Bulganin," said Khrushchev, "was and is a very good bookkeeper. He was even being a bookkeeper during the anti-party revolt. He thought that four was bigger than seven. He knows better now." Malenkov was "a weak man who could not make decisions. But we've solved that. That power plant he supervises is fully automated."

At Bergen's famed fish market, there was more heavy-handed fun. Khrushchev greeted an aquarium-housed Volga beluga as a fellow countryman, saw a market stall collapse and a photographer topple into a pile of fish, roared with laughter when the owner of another stall chased off a newsman by wildly swinging a fish as a weapon.

But in more serious moments, Khrushchev threw his hosts into a wintry Norwegian chill. On Cuba, he gave the impression that he would approve if Castro shot down an overflying U.S. reconnaissance plane, and would come to his aid if the U.S. retaliated. He denounced recent NATO maneuvers near the Russian-Norway border, and, as he had the Danes, advised Norwegians to get out of the Atlantic Pact altogether. The Norwegians neither needed nor wanted the advice—and their response was just the reverse of what Khrushchev was suggesting. The Russian, said an outraged Norwegian government official, succeeded only in "solidifying all of our ministers in favor of NATO. If anyone had been wavering—and I don't think they were—then they are now totally determined."

BERLIN

The Cad Who Came In from the Cold

It was love at first sight, or so it seemed. Dashing, suave Peter Hansen, 25, a construction engineer, swept curvaceous Dorothea Voss, 17, off her feet with dancing by candlelight, dinners for two and sweet talk of marriage. Then off they motored from the West German town of Heide to West Berlin for a day's outing, with the blessing of the girl's parents. After lingering in sidewalk cafés, Peter suggested they go over to Communist East Berlin. "It'll be really interesting, darling," he whispered, tenderly pressing her hand.

Once through the Friedrichstrasse border checkpoint, Peter collected his girl friend's West German identity card to "keep her from losing it," parked her in a gloomy café on Karl Marx Allee with a kiss and a promise to return, and took off. Still starry-eyed, Dorothea waited and waited, but her Peter did not come back. Alone, and without her ID card, she could only go to the *Volkspolizei* for help. But the Vopos were in no mood to give courteous assistance to the lost traveler. Instead they tossed the sobbing Dorothea into jail on charges of complicity in an escape, for half an hour earlier, Peter

and we can't tell you how pleased we are.

******After three years of study India chooses Pentaconta† automatic telephone switching equipment.*

The Government of India left nothing to chance. Every aspect of our equipment and competence was challenged.

With the selection of Pentaconta from ITT's Bell Telephone Mfg. Co., India has provided for a modern system for generations to come. A system that's low in cost and maintenance, that's flexible, easily expanded and well-suited to handle heavy traffic. This ITT System company will provide six local exchanges totaling 48,000 lines and four trunk exchanges with 6500 junctions.

The exchanges will be installed in Bombay, Delhi and Madras with another trunk exchange in Kanpur.

India will also build a plant to manufacture its own Pentaconta equipment. ITT, with its successful history in establishing many Pentaconta manufacturing facilities, will provide machinery, tools and production know-how. ITT will also assist India with the training of technical personnel for their new factory.

Pentaconta—made by the world's largest international supplier of electronic and telecommunication equipment. For information, contact your ITT representative or write: ITT Far East and Pacific, Inc., 24 Des Voeux Road, Central, Hong Kong. World Headquarters: International Telephone and Telegraph Corporation, 320 Park Ave., New York, New York 10022.

Hansen had passed through the Berlin wall with quite another Dorothea Voss.

Actually Hansen was an already happily married East German escapee named Peter Selle. Upon leaving the real Dorothea, he had dashed to an East Berlin rendezvous with his wife Barbara, whom he had left behind when he fled to West Germany a year ago. Pondering various schemes to get Barbara out, he had hit on the idea of finding a West German girl who resembled her closely, luring the girl to East Berlin and then filching her documents. Winsome Dorothea Voss seemed to fit the bill, and the scheme worked perfectly. Once in West Berlin the reunited couple sped to Tempelhof Airport and winged their way to West Germany.

Their bliss was only temporary, for by now West German police had been alerted by Dorothea's parents. Catching up with Selle, the cops threw the cad into the Flensburg jail, then appealed to the East German authorities on Dorothea's behalf. For once, Red Boss Walter Ulbricht's stern Vopos listened sympathetically, last week released a sadder but wiser Dorothea after six weeks behind bars.

SOUTH VIET NAM

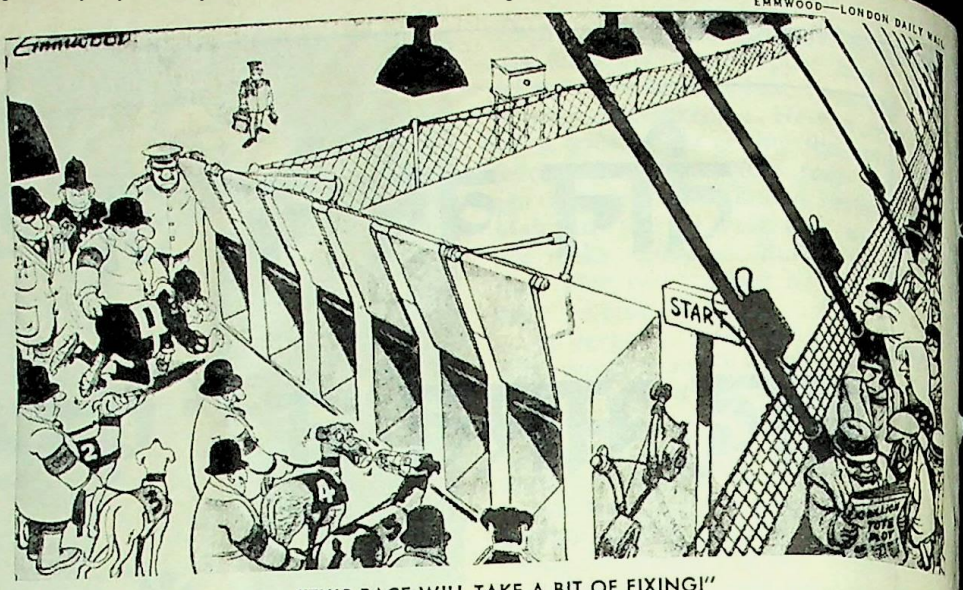
One Mission Too Many

His name was Kelly—Major Charles Kelly, of Sylvania, Ga.—but in the manner of combat soldiers the world over, his men seldom called him by anything but his nicknames. One was "Little Napoleon," because he was only a shade over 5 ft. 6 in. tall, had intense blue eyes and a shock of unruly black hair. They also called him "Madman Kelly," for during his six months in the South Viet Nam war, he flew more helicopter missions than any of the men he led.

As commanding officer of the U.S. Army's 57th Medical Detachment, Kelly insisted on rotating his men on dangerous night rescue missions, but kept his own name at the top of every flight roster. Of the 1,600 casualties his five UH-1B choppers had lifted from the paddies of the Mekong Delta this year, more than 500 were carried by Kelly himself. "He worked day and night, seven days a week," said one of his lieutenants. "He wouldn't even take a beer in the evening for fear it might affect his flying. He had only one purpose: to get wounded men under medical care."

One day last week a familiar message came over the field radio in Kelly's headquarters: five Vietnamese and one American soldier had been shot in a fire fight near Cantho. As usual, Madman Kelly led the flight. As his "Huey" fluttered loudly into the paddyfield, the big red crosses on its side shone brightly in the high noon sun. Twenty feet away, the survivors and the wounded lay pinned down in their foxholes as Viet Cong ground fire crackled from a nearby wood line. So Kelly calmly lifted the Huey off the ground and began to "walk" it sideways toward the wounded men.

Now the Viet Cong shifted their sights, began socking bullets into the helicopter. A steel-jacketed slug snapped through the Plexiglas, and Kelly slumped over the controls. The Huey crashed and rolled over, injuring the rest of the crewmen. Somehow they managed to pull the major from the wreckage, and went to work on Kelly's wound. It was in vain, for he was shot through the heart—the 149th American to die in action.



"THIS RACE WILL TAKE A BIT OF FIXING!"

GREAT BRITAIN

Operation Sandpaper

In London last week, one bookmaker phoned another and said, "Something's up at Dagenham today. I don't know what it is or what race, but something's up." It was indeed. At the Greyhound Stadium in London's thriving industrial suburb of Dagenham, a determined band of bettors was about to attempt one of the greatest coups in the history of gambling.

Before the sixth race of the day, which had an entry of six greyhounds, innocent dog players at the track also began to notice that something was up: they found it impossible to get to any of the 31 betting windows. Already ahead of them in line were tough characters who were taking their own sweet time placing two-shilling (28¢) bets, counting out the sums in small coins and brushing off protests with a snarl. The insiders were placing all their money on "forecast combinations" on the three dogs most likely to lose, thereby running up the odds on the three favorites. A forecast bet is similar to a quinella in the U.S., that is, picking the first two finishers in order. They did their job so well that only a single ticket was sold on the winning combination of Buckwheat and Handsome Lass, and the pari-mutuel payoff came to nearly $2,800 for a 28¢ bet.

Busy Signal. Meanwhile, other insiders were flooding London's legal bookmakers with bets on the winning dogs. The bookies, who pay track odds, frantically tried to lay off some of the money at Dagenham itself. But the telephone circuits serving the tote at the track were blocked and busy for a crucial ten minutes before race time.*

When the tote payoff was announced at the staggering odds of 9,872 to 1, the stunned bookmakers realized they were on the hook for a possible $28 million. Gleeful gamblers were already calling the caper "Operation Sandpaper" because it rubbed the bookmakers the wrong way. Fifty of the biggest bookies in England—from Joe Coral and Ladbroke's to Jack Swift and William Hill—gathered that evening at London's Victoria Club. The bookies agreed to call the betting on that particular race null and void. All money wagered on the race would be refunded.

Noisy Protest. London's Daily Express claimed that Operation Sandpaper had been masterminded by "a retired army officer, now a Midlands businessman," and said the team that had tied up Dagenham's betting windows numbered 170 men. The coup had taken three months to prepare, and the bankroll was £6,000 ($16,800)—"£4,000 for betting, £2,000 for expenses."

Can the bookies legally avoid payment? Britons argued the pros and cons in bus queues and on commuter trains. Under Britain's Gaming Act legislation, a bettor cannot sue a bookmaker and vice versa. The police indicated that they saw no grounds for action against anybody, but the bettors' bible, *The Sporting Life*, warned that in refusing to pay, the bookmakers "have done themselves and their calling the greatest disservice possible." Besides loss of public confidence, the bookies might have to face a protest when their licenses come up for renewals in February.

* U.S. bookmakers labeled the Dagenham caper a "builder play," and have occasionally taken a licking from the same technique. The most notable builder play took place in 1932 at Agua Caliente race track in Mexico. Staged by West Coast Gamblers Baron Long and Harry Fink, it boosted the odds on a horse called Linden Tree from a logical 7 to 10 to almost 10 to 1. By betting Linden Tree heavily with U.S. bookmakers, Long and Fink made a killing.

Mathematicolour

MATHEMATICS is the study of patterns, real and abstract. Now, in a world of electronic computation, the structure and relation of numbers has been harnessed to the formulation of colour in paint.

Today, the Berger, Jenson & Nicholson Group use an analogue computer to eliminate the possibility of human error in the art of defining and matching colours. Their new Colourant Mixture Computer is one of the few yet made. It is programmed by B.J.N. technical operators and solves sixteen mathematical equations, simultaneously. The results of these establish the exact amount of colourant required to produce any given colour, ensuring that every batch of paint precisely matches the agreed colour standard.

B.J.N. invest hundreds of thousands of pounds annually in paint science and research. The Colourant Mixture Computer is just one of many recent B.J.N. paint technology advances. Ford, Kodak, B.M.C., Jaguar, Singer, Hoover, Triang, Electrolux, Tasman Pulp and Paper, Sen-Raleigh are some famous names in world industry served by B.J.N. The resources and products of the B.J.N. Group are serving industry in Great Britain, Ireland, India, Pakistan, West Indies, France, Australia, New Zealand, Portugal and East Africa.

How many ways to more efficient transport?

This is the rugged chassis of a L 405/407. On it you can build any number of bodystyles to carry almost any kind of load. It's a vehicle that can save money, because it's not only flexible and fast, but remarkably economical to run, too.

You can buy the Mercedes-Benz Transporter L 405/407 with diesel or petrol engine. You can buy it as a van, a platform truck, a low loader or just as a chassis for special bodies. You can get a wheelbase of up to 3,6 metres and platforms between 3 and 4 metres long.

PEOPLE

When *le Chef* greeted **Princess Bopha Devi**, 21, star of the visiting Royal Cambodian Ballet at the Paris Opera, with "You have a very beautiful costume, Mademoiselle," the daughter of Prince Norodom Sihanouk tittered prettily. Proud Papa, however, smiled, "My daughter has two children!" "Mademoiselle" was not *le mot juste*, but De Gaulle was right about the costume, which weighed 35 lbs., mostly in gold and precious jewels, with a 6th century headdress valued at $200,000.

. . .

The London Times ran it as an obit that black July 4, 1914, when the Harvard junior varsity became the first American crew to win the Grand Challenge Cup at Henley. But the Empire survived, and so did the eight stout oarsmen, captained by a wiry Yankee who became Massachusetts Senator **Leverett Saltonstall**, 72. And back to Henley they all went to celebrate their 50th anniversary with a row on the Thames and to donate a new Grand Challenge Cup to replace the leaky 125-year-old original. For Salty, it was enough just to be back, sipping champagne with strawberries and watching the English "Old Boys" and the ladies in their impossible hats. "It doesn't seem to have changed very much," he mused. "More motorboats and less punts, but still the same Henley."

. . .

A slimy 99° in Manhattan is strictly for lizards, but 2,500 hot-blooded types ...less turned out for the $100-...e of *Night of the Iguana* ... The ...tics ...to ..., ...

PARIS-MATCH

BOPHA DEVI
Me?

in star-spangled blue, presided until Dickie showed up after curtains at *Hamlet*. But honors for the evening went to **Ava Gardner**, 41, in aqua satin, looking generations lovelier than the blowsy harridan she played on-screen. With the hordes outside hollering "We want Ava," she could hardly wait until after supper to flee to the peace of a Broadway jazz house.

. . .

In a local TV interview, Boston's **Richard Cardinal Cushing**, 68, let it be known that "eight years ago" (actually, it was 1954), he was operated on for the removal of a cancerous kidney, an area in which malignancy is fatal 63% of the time. "They gave me eight months to live," he said. "Somehow I survived. The Lord chooses the foolish to confound the wise."

. . .

On crisis mission or courtesy call, U.N. Secretary-General **U Thant**, 55, has flown to a dozen capitals in the past three years, but never to his home ...wn, Rangoon. Between July 25 and ...however, he plans a small detour ...ute to a visit to Moscow. He wants ... his mother, now well past 80, ... the first time, the grave of his ... Tin Maung (Timmy), who was ... years ago at 21 in a Rangoon ...t.

. . .

...attendants swarmed all over ... pulled into a Norwich, ...tation. Battery checked? ...ld wiped? And wiped. ...And wiped. Seems the ...er had on one of those ...suits, and while Yo- ...ops were fine for kids, ...mmer madness does ... to weed the men ...cemen, politicians, ...ir views, from the ...ore that "no nice ... them" (25 suits ...cal store racks) ...who announced ... his beach, "I ...turally." The ...ry, Dr. Mi- ... asked if a Christian should express disgust, replied, "A Christian should express disgust at anything indecent, but short of that, the less disapproval the better."

. . .

Just like any other middle-aged couple seeing the U.S.A. in a Chevrolet, Soviet Ambassador **Anatoly Dobrynin**, 44, and his wife Irina ate hot dogs, stayed at motels, and plotted their way on A.A.A. maps for a 1,366-mile Western drive-it-yourself tour in a rented Chevy. Well, maybe there were a few small differences, home being where the heart is, and all. "It's a beautiful country," said Dobrynin. "Very much like Russia." The Rockies reminded him of the Caucasus, Wyoming of the Steppes, and Yellowstone's panhandling bears "are from Siberia." When it came to civilization, of course, the U.S. was outclassed by the masses. Vodka martinis, said Mrs. Dobrynin, "are the perfect way to ruin good vodka."

. . .

Poor girl. She would like to pass as all grown up, but when she was born, on May 9, 1946, her father and his monocled friend were wisecracking at the top of the air waves, and news of her arrival splashed over the tabs. Now her age can be looked up, and reporters are starting to, because while Charlie McCarthy never got past eighth grade, **Candice Bergen**, Edgar's real-life daughter, grew up to be a living doll. Candice wants to earn enough modeling to study photography. "I am interested in the intellectual side of the camera," says she. But she may find the other end of the lens hard to leave. In the two months since she arrived in Manhattan from California, she has posed for the covers of *Mademoiselle*, *Ladies' Home Journal* and *Glamour*, earned $1,800 in May alone.

ENSEMBLES

The Ancient's Mariner

"At sea," says Noah Greenberg, "you have a great deal of time to think —and I thought." What he thought about during his five years as machinist-messboy with the merchant marine was forming a group of professional musicians and singers to revive the all but forgotten music composed and played during the five centuries before the birth of Bach.

The group he formed was the New York Pro Musica. In a performance last week of Elizabethan music in honor of Shakespeare's 400th birthday at Tanglewood in Lenox, Mass., the six singers and four instrumentalists served eloquent notice that pre-Bach music was not to be forgotten. Drawing from the works of Shakespeare's contemporaries—Thomas Morley, William Byrd, Tobias Hume, John Wilbye, John Dowland—Pro Musica shook the dust off a score of Elizabethan madrigals and lute songs, embellishing the rarefied melodies with a rhythmic liveliness and delicate twining of voices and instruments to produce, in Shakespeare's words, "sounds and sweet airs that give delight and hurt not."

Hit Unearthed. Pre-Bach compositions, Greenberg insists, are "not little delicate museum pieces. This was music of an exciting time, full of violent contrasts." The Tanglewood program presented by Pro Musica ranged from the solemn *Lamentations of Jeremiah* to the sprightly "hey ding a ding" of *It Was a Lover and His Lass*, an exquisitely chiseled duologue for recorder and flute, a blatantly comic *Tobacco Is Like Love*, and a spirited *London Street Cries*, alive with the calls of street vendors and town criers.

Since its founding in 1952, Pro Musica has introduced a steadily growing audience to the curious delights of a long and varied line-up of forgotten composers, such as the polyphonic wizardry of Ludwig Senfl, composer to the court of Maximilian I, the mystical motets of Martin de Rivaflecha, chapelmaster at the Cathedral of Valencia, and the Rabelaisian merriment of Adriano Banchieri, abbot of an Olivetan monastery. Its most ambitious undertaking was *The Play of Daniel*, a 12th century music-drama that was unearthed in the British Museum. Elegantly staged in medieval setting and dress in a Manhattan church, *Daniel* was a solid off-Broadway hit of the 1959 season, won further acclaim during a 40-performance tour of Europe. Today Pro Musica can boast a season of some concerts in New York and 16 y on tour. In September the ensemb barks on a seven-week State ment trip to Yugoslavia and Ru an increased complement of si and 13 instrumentalists.

Exotic Wildlife. The pr pre-Bach music, explains G that "you're never certain scoring the composer has the notes are there, but very rarely put down w or play them." To the of determining the and instrumentation scores, Greenberg br skill, a musicologist and instinctive goo for clues to instru through such obsc purchasing order English town ba

To come as texture of the has amassed strange med names sound zinke, rebec, shawm, sackbut, reg krummhorn, *Rauschpfeife*.* In ad tion, Greenberg's Renaissance ense ble, which in costume looks as if it h just stepped out of a Fra Angel painting, comes armed with a medie bagpipe, hurdy-gurdy, viola da gam harpsichord, dulcian, portative orga psaltery, and a family of recorders. but a few of the pieces are reproc tions made by European craftsmen fr museum originals or copied from inst ments depicted in paintings.

Dark Corners. A native New York Greenberg, 45, studied piano as a ch first became intrigued with anti sounds while learning composition a conducting from a Renaissance-min teacher. While in the merchant mari (1944-49), he spent his off-duty ho on board ship poring over armfuls old manuscripts and tomes covering

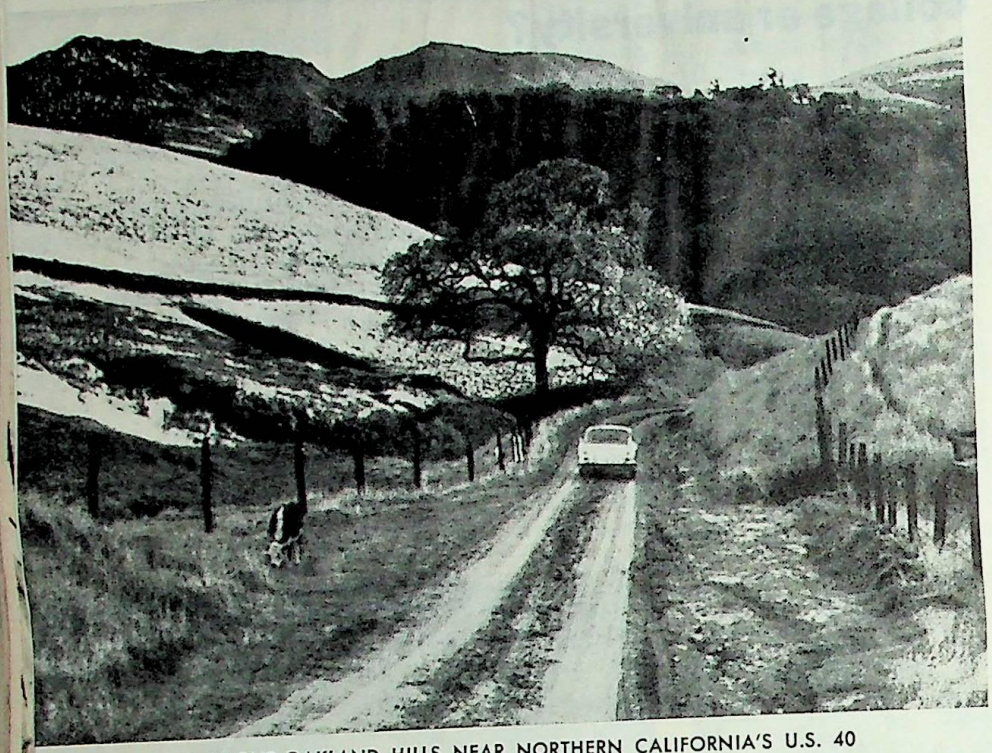
MODERN LIVING

FRANCES COLEBERD—BEAUTIFUL CALIFORNIA, SUNSET BOOKS



RICHMOND-OAKLAND HILLS NEAR NORTHERN CALIFORNIA'S U.S. 40

Along routes through the past, roots for today.

TRAVEL

Sights on the Shunpikes

Modern man may have mapped the unknown, ridden higher than the wind and lower than the seas, had a look through the heavens at earth and caught the moon's underbelly on film. But the average American is most apt to boast not of what he saw or where he went but of how quickly he made the trip. More people more on the move, in more cars and on more roads, have made pleasure driving seem a thing of the past, a foolish endeavor for old ladies on Sundays or strangers to the land who have not yet learned that the shortest distance between two points is a turnpike.

But for strangers, or even Americans who want to see America first, the turnpike has its limitations. Many superhighways are hermetically sealed off from the countryside by artful landscaping, so that a traveler can scarcely tell whether he is in New Hampshire or Alabama. When all the projected superroads are built, a foreigner driving coast to coast might return home with his chief memory of the U.S. as one endlessly unwinding ribbon of concrete, punctuated by three hurried meals a day at nearly identical roadside restaurants, and a late night stop at a motel. And at superhighway speed, what scenery there is has to be the kind you can see without turning your head.

Slow Beauty. This need not be. For those who would savor the texture of the land and recover their sense of place, there are the shunpike and the minor road, a network of Indian trails and reconstructed canal routes: tortuous drives that skirt oceans below and wind around mountains, cross plains and valleys, run after rivers through national parks and state museums, ghost towns, rain forests and whaling ports. Some end with a vista at a canyon, a watering hole or a battlefield. Some lead nowhere at all, trail off in a thicket or stop short at the sea. Some, like Virginia's Route 5 (*see color*), put the past in perspective with a slow panorama, a relic here and there, and beauty all around. Every one is worth the trip.

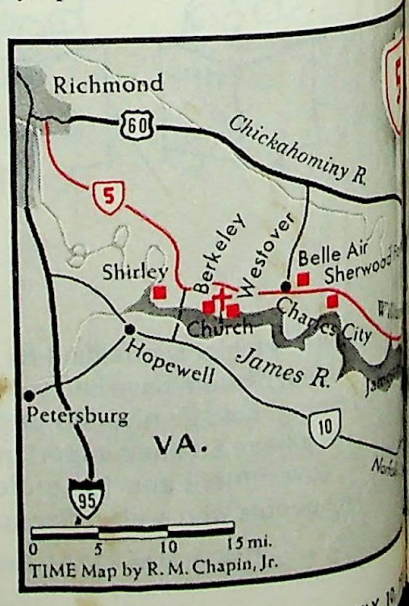
In the West, would-be gamblers can hustle up U.S. 99 from Los Angeles to Sacramento, cut across to U.S. 40 and get to Reno's gaming tables before the bets go down. More esthetic types will take U.S. 395. A route for all seasons, all climates and tastes, it passes through a complex of environments—marine desert, coastal mountains, pine forest, rain forest and prairie—as varied as a trip from Tangier to Andalusia to Sinkiang to the Alps to the Iranian plateau to the Australian Outback to Finland. Rimmed with mountains, caves, craters, lakes and lava beds, the road swings past Mt. Whitney, edges past Sequoia National Park and Yosemite, where the huge granitic upthrust of the Sierra bursts from the desert floor.

Perilous Loneliness. Even in the bustling San Francisco Bay Area, the pristine, almost deserted Richmond-Oakland hills are only a few minutes away from the roar of U.S. 40. Motorists driving from Los Angeles to San Francisco can turn off U.S. 101 and, at the price of a few extra hours, follow California Route 1 along the coast from San Luis Obispo to Monterey. Most spectacular is the 102-mile stretch from William Randolph Hearst's San Simeon estate through the Big Sur country to Carmel: with bare, steep cliffs on one side and a dizzying drop to the sea on the other, the narrow ribbon loops and spirals like a drunk. Subject to landslides and often shrouded in fog, it is closed at the first hint of rain, infrequently traveled, perilous and lonely, yet exhilarating as a first trip to Chartres.

U.S. 85 takes travelers most briskly from Denver to Albuquerque, but at Raton, U.S. 64 offers a detour into Taos for a look at the Pueblo cliff homes, which were America's first apartment houses, then jogs on down the Rio Grande Canyon to Santa Fe. Colorado's Million-Dollar Highway, a 25-mile stretch along U.S. 550, skirts Mt. Wilson past plunging canyons, leaping waterfalls, and the reproachful nostalgia of abandoned mining camps.

Minnesota's U.S. 61 clings close to the Mississippi River from Minneapolis to New Orleans, spanning swamps and lowlands to hug the shore. Illinois' U.S. 20 crosses the bridge when it comes to it, rolls on past Ulysses Grant's home and Savanna's white pines. Motorists in northern Wisconsin can bid farewell to U.S. 51 near Woodruff and meander along State Highway 70 through country so studded with lakes that the road seems a bridge, and so rich in woods that they spill right up to the road's edge until the turnoff at Eagle River onto U.S. 45. U.S. 460 in Indiana meanders over hills only a step away from Kentucky to the Lincoln Boyhood National Memorial, which includes the site of the log cabin where the young Lincoln studied by candlelight, and the grave of his mother, Nancy Hanks. Farther along is the New Harmony settlement, a 19th century Utopian experiment that has been memorialized by a garden shrine designed by Architect Philip Johnson.

Steeple & Post. With more than [illegible] "shunpike" routes plotted across the state, Massachusetts is the pleasure cruiser's best friend and the country's finest driving range. There are roads to pick flowers by and roads to watch the leaves turn from, roads to maple syrup territory, seafood, flower and



CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

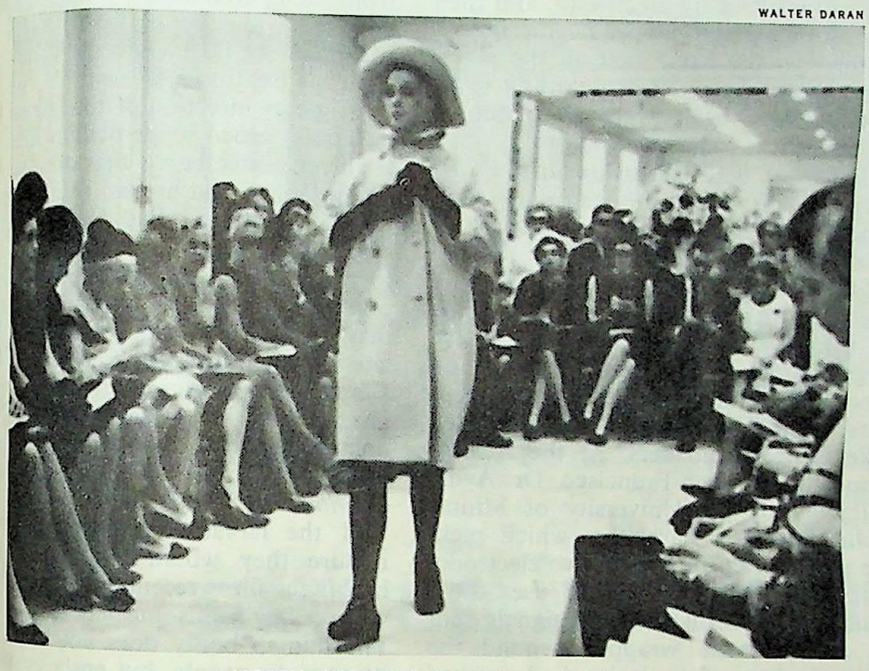
Digitized by Arya Samaj Foundation Chennai and eGangotri

festivals, a road for the Thanksgiving dash straight to Plymouth Rock. There is the original Mohawk Trail from Boston to the Berkshire Hills, brought up to date and dubbed Mass. Route 2. An alternate, Route 2A, links Revolutionary landmarks from Battle Green at Lexington to Concord's Minutemen monument. Route 20 shadows the Massachusetts Turnpike, navigates the Berkshires to the Tanglewood Music Festival at Lenox. Sturbridge Village, a few miles off the highway, is an early 19th century town beautifully re-created from steeple to hitching post, complete with craftsmen who duplicate antique pewter spoons and horse-drawn wagons for kids to ride in.

The northern end of the New York turnpike can be abandoned at any point from Albany to Buffalo for U.S. 20, which wanders through the Finger Lakes region, or at Weedsport, N.Y., for Route 31, which follows the Erie Canal.

Pennsylvania's "Granddaddy" Turnpike affords a turnoff at U.S. 23 to Valley Forge and on through rambling fields and decent towns with indecent names like Bareville and Intercourse in the Pennsylvania Dutch country, whose Amish farmers scorn electricity, never cut their beards, and travel when they must by horse and buggy. For them, perhaps, the beaten path holds adventure. Even the turnpikes might prove a treat.

WALTER DARAN



NORELL SHOWING IN MANHATTAN

Also a sable muff any sable would envy.

FASHION

Norman the Conqueror

Wearing baubles, bangles and basic black, the guests seemed a chain of paper dolls, cut out along dotted lines and attached by tabs to the proper gilt chair. Chums for an instant, they crossed their silken legs as one, juggled cigarettes and sipped champagne. Rivals in fact, the 145 department store executives, buyers and fashion journalists who jammed the salon were on hand for the showing of Norman Norell's fall collection. The last of Manhattan's month-long season, it was also, as nearly always, the best.

Outside the trade, not everyone has heard his name. For Norell is concerned with style, not the spotlight, and with grace, not gimmicks. Never fussy without purpose, his talent lies in taste and a discriminating eye, in a flair for fabric and a sense of color, in a subtle bit of seamwork, an intricate set of pleats, a bead, a button, some spangles, a feather. Norell is neither set in his ways, like Mainbocher, nor out to amaze like Rudi Gernreich (of the topless-suit Gernreichs). He is a fashion moderate in step with the day, inventive but practical, inspired but patient. His virtues have paid off in a long line of fashion hits: the evening shirtwaist, the empire look, the chemise, the wool evening dress, the sequined sheath and culottes.

Last week's collection combined the standard and the special: a coat, a dress, and long jersey stockings to match; quilted linings for storm coats; a smock over tights; a sable muff any sable would envy. Biggest news were the new culottes, tighter and more hippy, and a spate of long pants, from grey flannel trousers for day to bugle-beaded pajamas for play. Prices: $900 for a suit, $850 for a coat.

A mild-mannered man, Norell, 64, collects French antiques, steers clear of the jet set, counts Lady Bird Johnson, Lena Horne and Dinah Shore as steady patrons, Lauren Bacall, Carol Channing and Lee Remick as friends as well. Less dramatic than Balenciaga and less subtle than Givenchy, he is the only U.S. designer Paris couturiers admit to their league. Some go so far as to rank him with Dior. No other U.S. designer, in Paris' view, can make that claim.

After Movado's spectacular launching of the new model, Kingmatic «S»

Scientists now believe in the future of the flat automatic watch

Only yesterday they believed that, to make an automatic model slimmer, the mechanism had to be miniaturized thus becoming more delicate and complicated. Today the new Movado Kingmatic «S» has convinced them of the contrary: it is flatter, slimmer yet sturdier, simpler and more accurate than its predecessors.

A rare combination of new solutions

During the years of research on the Kingmatic «S», the Movado engineers have registered an impressive number of patents, both Swiss and international. Combined, they reveal the many secrets of an admirable construction which, to make best use of the available space has introduced a new arrangement, for certain organs of the watch, which is both logical and highly efficient.

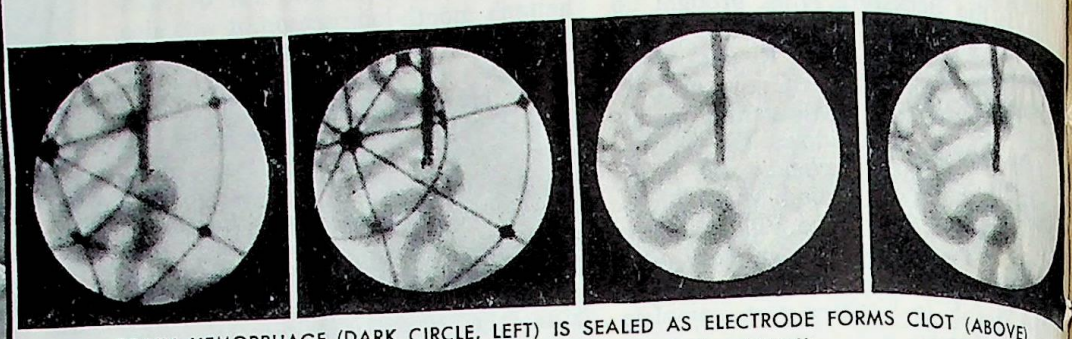
MEDICINE



BRAIN HEMORRHAGE (DARK CIRCLE, LEFT) IS SEALED AS ELECTRODE FORMS CLOT (ABOVE)

Needlework in the cerebral Circle of Willis.

SURGERY

Wired for Health

Physicians and surgeons have long used innumerable electrical gadgets in diagnosis and treatment, but they have usually kept the current outside the patient's body. Now they are developing new and daring ways to use electricity inside the body—and, in some cases, to make the electrical gadget a permanent implant with rechargeable batteries.

For Brain Hemorrhages. A weak electrical current, suggests Irish-born Dr. Sean F. Mullan of the University of Chicago, may be the answer to an age-old problem: how to stop bleeding in a brain artery. These hemorrhages, usually at a spot where a cerebral artery has ballooned out and leaked or burst, are notoriously hard to shut off promptly. The most obvious plug for a burst artery is a blood clot, but with a clot the problem is how to make it and how to keep it from traveling and causing still more brain damage. Dr. Mullan and fellow workers noted that not only does electricity promote clotting, but also, unaccountably, so does a piece of copper, cadmium or beryllium, even without an electric current to help the process.

The Chicago doctors have stopped bleeding from aneurysms (ballooned-out arteries) in the brain's arterial roundabout, the Circle of Willis, by drilling a hole in the patient's skull under a local anesthetic and inserting a stainless steel needle (*see diagram*). This has a hairlike electrode tip only 1/250 in. in diameter, which is positioned precisely by a double-grid system of X rays (*see photos*). The tip is the positive electrode for a minute current. The negative electrode is attached outside the skull. Within half an hour the iron in the electrode is "plated off" (in effect, dissolved), and much of it goes into the electrically induced blood clot that seals the artery.

With electrodes of steel, the electrocoagulation method offers the advantage of forming a clot quickly. This constitutes a sort of neurosurgical first aid for the aneurysm patient, enough to tide him over the first and most dangerous days after a hemorrhage. But clots formed in this way are apt not to be permanent, whereas if a piece of copper is implanted in the aneurysm and left there for a week, without an electric current, it forms a more permanent clot. So Dr. Mullan's team is now combining the two methods: forming a quick clot by electricity, and then leaving in place a copper needle inserted through the same hole in the skull. The two forms of electro-clotting technique have worked well in 16 out of 19 patients.

For High Blood Pressure. In the vast majority of cases, the cause of high blood pressure is unknown. The one thing certain is that the pressure can be influenced by the carotid nerves and the carotid nerve sinuses on each side of the neck. Two research teams have begun work almost simultaneously on electrical control of these "baroreceptors" with "baropacers" to be implanted like heart pacemakers. At the A.M.A. convention in San Francisco, Dr. Aydin Bilgutay of the University of Minnesota showed a baropacer which picks up pulses of current from two electrodes implanted in the heart and uses those pulses to control electrical signals sent to an electrode wrapped around the carotid sinus. The device had worked well in dogs and he was ready to try it in man.

Then Dr. Seymour Schwartz of the University of Rochester reported that he had already implanted similar devices in two human patients. The major difference is that the Rochester pressure pacer uses no electrodes in the heart, but relies on its own battery pack, which can be recharged from outside the skin. A man with blood pressure running 220/120, despite drug treatment, had a pacer implanted on the right side of his neck two months ago, and is now reading 150/100 or lower. A woman patient who got the implant a month ago is doing equally well.

PARASITOLOGY

The Human Botfly

Horses are the victims of a botfly that lays its eggs on their legs, and sheep are the prey of another kind of botfly that lays its eggs in their noses. The eggs hatch into maggots which mature in the animals' bodies causing severe illness and sometimes death. So far, the U.S. has been spared the activities of yet another botfly, still more repulsive that makes man its unwilling and miserable host. But in this week's A.M.A. *Journal*, a Florida doctor reports that the U.S. has just had a narrow escape from being colonized by the unpleasant critters.

Dr. Harry D. L. Kaye of Coral Gables was treating a 54-year-old engineer for a messy infection of the left ear that had not yielded to penicillin. Then the engineer remembered that on a hunting trip in Venezuela he had been bitten on the ear, and later had felt a wriggling sensation inside it. Surgeon Kaye set to work to clean out what seemed like a purulent cyst, and in it he found a white maggot, almost an inch long. Two days later, he removed another maggot. The Department of Agriculture's Entomologist Richard P. Higgins identified the doctor's find as larvae of the human botfly, known to scientists as *Dermatobia hominis*.

If the larvae had been allowed to mature they would have turned into half-inch flies resembling bluebottles, with yellow heads and blue-grey bodies. The human botfly does not bite or lay its eggs on people, but enslaves smaller flies and mosquitoes by gluing its eggs to their bodies. When the slave bites a victim, the eggs hatch into larvae which bore into him. And, says Dr. Kaye, two of them might have been enough to start a general infestation of the U.S. with another painful pest.

EXHIBITIONS

Rosetta Stone at Kassel

Over the revelry at the Venice Biennale fortnight ago hung the disconcerting possibility that even as this famed old exhibition displayed its own mediocrity and disorganization, a lesser-known art festival 400-odd miles to the north was preparing to put on a top-grade show. The newer exhibition is at Kassel, where the Brothers Grimm lived, located at the geographic heart of Germany, and it is called Dokumenta III. Two previous Dokumentas, in 1955 and 1959, had shown what Teutonic seriousness could do to fuse, focus and interpret significant modern art trends. The new show, which will go on for 100 days, may be the most important European art exhibition of the decade.

Housed in the Graustarkian palace ruins of the pomp-crazed nobles of Hesse, Dokumenta III features 1,500 intelligently selected paintings, sculptures and drawings from 250 artists who are either the acknowledged masters or the exploratory frontiersmen of modern art. The shaping hand behind it and the earlier Dokumentas belongs to Professor Arnold Bode, 60, an erudite man with Napoleonic looks and energy who rules Kassel with scrupulous esthetic integrity. A jury of 15 members (four non-Germans, including Peter Selz from Manhattan's Museum of Modern Art) aided Bode in choosing the entries, but shunned awarding prizes. Qualitative excellence is the aim at Kassel, and the one fixed premise is unconditional internationalism. Says Bode: "Valid art must be supranational."

Dokumenta III ranges supranationally from Arp to Wols, from Braque to Giacometti, from Cézanne to Soutine, from an early Picasso to the latest Henry Moore, on such a scale that no museum or private collection in the world can match it. An enormous black two-story hall houses a kind of cabinet of Dr. Caligari, the *Absurd Berlin Diary* of Emilio Vedova, with collapsible hinged parts jagging out in a variety of Gothic shapes. *Three Paintings in Space* by Ernst Wilhelm Nay are obliquely suspended from the ceiling of an otherwise entirely empty hall.

What begins as a subliminal feeling at Kassel gradually forces its way to consciousness: the sense of a unifying modern vision and temper that link seemingly disparate and dissonant works of art. The bewildering array of influences and counterinfluences in contemporary art, from the School of Paris to the New York School, from abstract expressionism to symbolic African primitivism, from the revival of *art nouveau* to the revival of Dadaism, all seem to call for a Rosetta stone, a hieroglyphic key to release meaning from mystery. Dokumenta III comes close to being that Rosetta stone.

GUNTHER BECKER

THEOLOGY

Linguistic Analysis: A Way For Some to Affirm Their Faith

In the Middle Ages, philosophy was dubbed the handmaiden of theology. The servant rebelled during the 17th century, and most of the time since then, the two disciplines have gone their separate, sometimes hostile ways. But during this century, philosophy and theology have been groping toward a new and nonsubservient dialogue. The German disciples of Biblical Theologian Rudolf Bultmann found in existentialism a way to rephrase the eternal Christian message. In Britain and the U.S., other theologians are enthusiastically exploring a different direction—applying the philosophic method known as linguistic analysis to the clarification of religious thought.

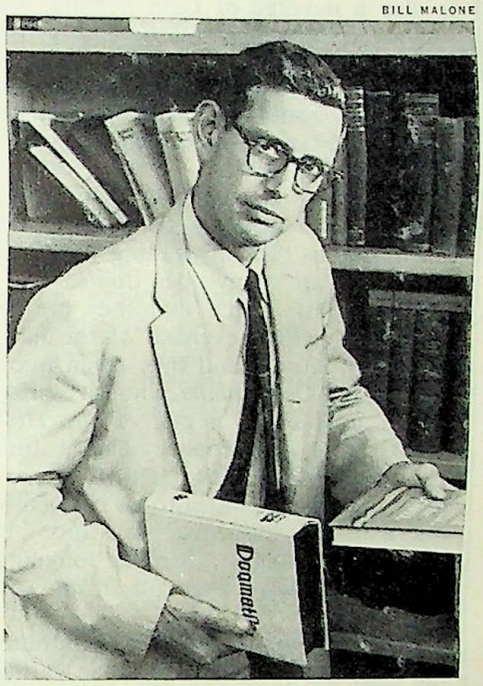
A technique rather than a metaphysic, analysis rejects the traditional approach to such philosophic questions as the nature of being or the meaning of life, which they say cannot be studied in such universal terms at all. Instead, analysis limits itself to a modest but possibly more productive intellectual task: discovering the meaning of words and sentences by examining how they are ordinarily used, and by classifying different kinds of statements. Linguistic analysis grew out of a philosophic movement which had no use for theology: logical positivism. Such philosophers as A. J. Ayer of Oxford and Vienna's Rudolf Carnap, now a professor emeritus at U.C.L.A., argued that the only meaningful propositions were the analytic statements of logic and mathematics, or statements that could be verified by empirical procedures—which meant that the ethereal language of theology was literally meaningless.

Language Games. Many philosophers —including Ayer himself—have now backed away from that dogmatic view, thanks in large part to the influence of an eccentric Austrian-born Cambridge don named Ludwig Wittgenstein, who died in 1951. Wittgenstein, perhaps the century's most important philosopher, believed that there was a wide variety of discourse—ranging from jokes to the "God-talk" of theologians —that could not be empirically verified, but nevertheless was useful and in some ways meaningful to man. Instead of dismissing this nonempirical discourse as nonsense, Philosophy should treat it as a "language game" and—without passing on its value—clarify the rules and make it more intelligible.

Many philosophers still regard theology as illogical nonsense; but within the past decade, a number of British theologians have increasingly found linguistic analysis to be a helpful tool in interpreting the religion "games." It has dissolved some of the old conflicts between science and theology, by making it clear, for example, that pastors speaking of God the Creator and cosmologists talking of the "continuous creation" of the universe refer to different and nonparallel propositions. It has made analytically minded theologians suspicious of the cloudy speculation that sometimes wafts out of German seminaries. More important, analysis has provided the theologians with a method of thinking that will help them make a fresh approach to such vital religious terms as soul, creation and mystery.

The Convert. In many U.S. seminaries, linguistic analysis is still treated as a foe of faith, although there is a growing band of theologians who strongly disagree. One young religious thinker converted to this new method is Paul van Buren of Texas' Episcopal Theological Seminary of the Southwest, whose recent *The Secular Meaning of the Gospel* (Macmillan; $4.95) is a radical and controversial effort to translate a major theological issue into language that would pass the scrutiny of the philosophical analysts.

BILL MALONE



PAUL VAN BUREN
Blik.

Van Buren's study focuses on the declaration of the Council of Chalcedon (A.D. 451) that Jesus was both man and the divine Son of God. Since secular-minded modern man does not understand or accept the notion of "divine," he argues, the church must find a logical but nonsupernatural equivalent of what the Chalcedonian Fathers were trying to express. Van Buren suggests that one persuasive way of referring to Jesus today is as a "remarkably free man." This description capitalizes on an adjective that is a touchstone of contemporary aspirations, but it concurs with the Gospel testimony. The Evangelists constantly refer to the personal authority of Jesus' teaching, his freedom from claims made upon him by parents and brethren, his departure from rabbinical teaching and disregard of the Jewish law.

After the Resurrection, the Apostles proclaimed Jesus the man as the Risen Lord and the Son of God. These words, says van Buren, were an attempt to describe their new understanding of Jesus in language appropriate to an age that saw God in every tree. In a technical term used by some linguistic analysts, the Apostles' expression of this faith was a *blik*—a statement that is not subject to empirical proof but has its own validity as an individual's interpretation of existence.

"Contagious" Freedom. How should the Christian church translate the Easter *blik* into contemporary language? Van Buren suggests that after the Resurrection the Disciples suddenly possessed some of the unique and "contagious" freedom that Jesus had. "In telling the story of Jesus of Nazareth, therefore, they told it as the story of the free man who had set them free. This was the story which they proclaimed as the Gospel for all men." Down through history, millions of others have been called by faith in Christ—which means, in van Buren's translation: "He who says, 'Jesus is Lord,' says that Jesus' freedom has been contagious and has become the criterion for his life, public and private."

Van Buren concludes that Christianity will have to strip itself of its supernatural elements to become believable again, just as alchemy had to abandon its mystical overtones to become the useful science of chemistry. Many Christians firmly disagree, and van Buren has been roundly charged with clarifying Christian doctrine to the point where there is hardly anything left of it. But even some theologians who disagree with van Buren's conclusions admit that Christian thinkers can no longer dismiss the linguistic approach as invalid or irrelevant. Professor Ian Ramsey of Oxford, a pioneer in relating linguistic philosophy to theology, goes so far as to argue that some analytical religious thinkers "are on the threshold of a theological revolution which might prove to be more significant than the relationship of Aristotelianism to scholasticism."

LUTHERANS

Taming the Tongues

In Minneapolis last week, the 47-member American Lutheran Church Council voted to throw the Rev. A. Herbert Mjorud off the church's evangelical staff. His offense was one that appalls, embarrasses and deeply worries church leaders: promoting glossolalia, the practice of praying in "gibberish."

Without question, glossolalia is the fastest-growing fad in U.S. Protestant churches. Once a peculiarity of Pentecostals, "speaking in tongues" has caught on with Episcopalians, Methodists, Baptists and Presbyterians, and there is now

a national association of glossolalists, the Blessed Trinity Society in Van Nuys, Calif. At least 260 of the 5,239 American Lutheran churches have glossolalia cells; many of them took up the practice after Pastor Mjorud stopped by to preach at revival meetings.

Open Doors. Born in Minnesota to Lutheran parents, Mjorud, 54, grew up in Alaska, and was converted from agnosticism back to his childhood faith in 1942. He gave up the practice of law to enter the ministry, and two years ago attended his first glossolalia service at an Episcopal church in Seattle. After several months of prayer, Mjorud began speaking in tongues himself, started trying it out on interested Lutherans during his mission trips. Mjorud, who is also a devotee of faith healing, was warned several times by the Evangelism Commission, and only the intervention of A.L.C. President Fredrik Schiotz saved him from dismissal last year. Although fired as a traveling evangelist, Mjorud is still free to accept a call by any congregation that wants him, and he intends to keep on speaking as the Spirit directs. "It's my calling," he says, "and there are many open doors."

Glossolalists argue that they are reviving a spiritual exercise of the early Christian church, and they often quote St. Paul in *I Corinthians*, who lists speaking in tongues as a gift of the Holy Spirit, along with prophecy and healing. They hoot at skeptics. "It's pretty hard for a man with an idea to go up against one with an experience," says one self-satisfied glossolalist. Sample tonguing: *"Ulla, ulla, unga, unga garah, atta alla ungaraze."*

Spiritual Need. An A.L.C. committee investigating glossolalia last year warned that it has led to "divisions and tensions" in many congregations; tongues advocates often tend to slight regular worship services, force the practice on doubters, and develop into an ecstatic spiritual elite. But Lutheran leaders have little hope that the tongues will now be silent. Admits Dr. Schiotz: "Perhaps it is a reaction against the tendency to overintellectualize the Christian faith. Speaking seems to fill a spiritual need for simplicity and emotional attachment."

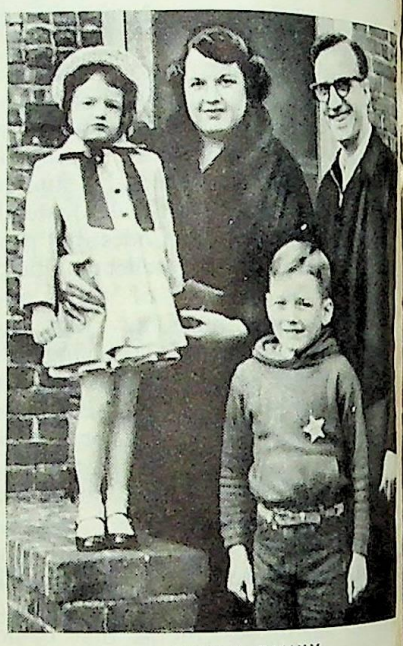
ROMAN CATHOLICS

The Married Priest

With his son serving as acolyte, a Detroit man named Ernest Adam Beck was ordained a fortnight ago in Germany as a priest of the Roman Catholic Church. A former Lutheran minister, Father Beck, 42, is married and has two children. He is the first American among a handful of Latin Rite Catholic priests who have received dispensations from the Pope to take holy orders without a vow of celibacy.

Canon law has insisted on priestly celibacy since the Middle Ages, although Eastern-Rite Catholic priests may marry before their ordination. But within the past 13 years, Popes have from time to time approved the ordination of a few convert Protestant ministers for whom leaving their families would be a heartless cruelty.

Such dispensations are not easy to get —as Father Beck's experience shows. Born and raised a Lutheran, he studied at Concordia Seminary in St. Louis, served a parish in Teaneck, N.J., for seven years. In 1954, Beck and his wife became Catholics. Convinced that he had a vocation to the priesthood, Beck went to Germany and in 1956 received permission to enter the seminary at Mainz. But before he could be ordained, Pope Pius XII told Beck in a 1957 interview, he would have to find a bishop who would promise to support him. Bishop Mark Carroll of Wichita, Kans., stepped in with an offer shortly before Pius died, but Pope John subsequently decided that there would be too much



BECK & FAMILY

First find a bishop.

danger of scandal if Beck served in the U.S., suggested that he find a bishop somewhere else.

Beck gave up his studies for three years, worked in advertising, teaching and sales to support his family while trying to find another prelate who would accept him. At one point, Boston's Richard Cardinal Cushing put in a bid—but, like Carroll, was turned down by the Vatican. Last year Bishop Hermann Volk of Mainz agreed to provide Beck, who speaks German, with an assignment, and Rome finally agreed.

Several other Protestant converts are currently studying for ordination in German seminaries, but no one foresees that there will be any drastic revision of the church's general prohibition against priests with wives. Most American bishops oppose the idea of married priests, and the Vatican has made it clear that none are likely to serve in the U.S. soon. But last week Cardinal Cushing indicated that "we should accept at least topflight men," predicted that a change in the church's attitude "will come in the future."

PERFORMANCE IN MANHATTAN

GE

Under Kansas' anti-obs
state attorney general w
cizing 1,715 such "nigh
from a paperback dealer
City. Last month, howev
Supreme Court ruled the
constitutional. Also voided
ban against an allegedly obs
movie, *The Lovers*, and Flo
against Henry Miller's scatalo
ed. *The Tropic of Cancer*. The
between the court and the states
a puzzling question: To what ext
are there any more enforceable
laws against obscenity?

Proof Needed. Answers are not easy. Although the First and 14th Amendments guarantee freedom of speech and press, the Supreme Court has cast obscenity outside these rights, just as it does incitement to violence or publication of military secrets. But one trouble is that many cities and states have tried to suppress smut even before it reaches the public. This the court calls "prior restraint," meaning that a state invades freedom of expression if it bans obscenity on such vague grounds as "objectionable" before proving its case in a legal hearing.

In last month's Kansas case, the court did not feel it even had to decide whether the seized books were actually obscene. Speaking for the court, Justice Brennan merely declared: "If seizure of books precedes an adversary determination of their obscenity, there is danger of abridgment of the right of the public in a free society to unobstructed circulation of nonobscene books."

The Roth Case. But what if a proper legal hearing does find obscenity, as did the Ohio Supreme Court with *The Lovers*? By what standard does the U.S. Supreme Court test the finding?

Precisely because the court has shorn obscenity of constitutional protection, it feels duty-bound to deal individually with all such cases that reach it. And however objective it tries to be, the court is mired in what Justice Brennan calls "a difficult, recurring and unpleasant task"—setting a national moral criterion for a people of widely diverse standards.

The court's current obscenity doctrine rests on a 1957 decision (*Roth-Alberts*) which upheld the conviction of two mail-order smut peddlers. At that time, the court explained that obscenity is not to be found merely because it offends some people. Rather, it must be "utterly without redeeming social importance." Nor can a book be judged obscene unless it is "taken as a whole" and found to violate "contemporary community standards."

Since then, the court has tried to refine the definition. In 1959 it ruled that a bookseller cannot be convicted for selling an obscene book unless he knows of its contents. In 1962 it held that a motion picture cannot be judged obscene unless it is "utterly without redeeming social importance." In 1963 it ruled that a book cannot be judged obscene unless it is "utterly without redeeming social importance."

Found. Light towers rose like periscopes out of the next truck, to be fed by generators in another truck. At either flank of the main stage, trucks pulled up and opened for business as dressing rooms. Still another truck pulled out and positioned in front of the apron. The *Roth* test is applied neatly packed flats, stairs, person, applying contemporary community standards, the dominant theme of the material taken as a whole appeals to prurient interest," and whether, in addition, the material "goes substantially beyond customary limits of candor."

Roth failed to satisfy dissenting Justice Douglas, who argued that prurience is no sure test for sending errants to jail. "The arousing of sexual thoughts and desires happens every day in normal life in dozens of ways," said Douglas, citing stimulants from music to a woman's sight of a man. The court nonetheless retained its *Roth* rule last month as it brushed aside the ban on *The Lovers*, saying that the film contained merely one "explicit love scene in the last reel." In his dissent, Chief Justice Warren argued that local obscenity standards should still prevail because "there is no provable 'national standard.'" But the majority ruled: "It is, after all, a national Constitution we are expounding."

Resistance & Surrender. Local diversities are likely to remain. Just before the court summarily reversed Florida's ban on *The Tropic of Cancer* last month, for example, the Illinois Supreme Court (disagreeing with Wisconsin, California and Massachusetts) ruled the book obscene under the *Roth* test. Chicago prosecutors next week will spend several days reading *Fanny Hill* aloud to jurors hearing the case of a book dealer arrested for selling those 18th century "memoirs."

Illinois courts generally take a straitlaced view of such literature, but the probable test of *Fanny Hill* in the U.S. Supreme Court would be whether it is "hard-core pornography," which is unquestionably illegal. But what is hard-core? Justice Potter Stewart says only, "I know it when I see it." One expert

tialist conception, standing for everything and nothing at 738 m.p.h.

All this may suggest why the film that first established him was called *Breathless*. Since then he has played [illegible] of roles—an ine[illegible] criterion.

Morin, Prê[illegible] it "a succession of increas-*Two W[illegible]*otic scenes without distracting No[illegible]otic passages." In the *Roth* case, the U.S. Solicitor General described the "worst" of hard-core pornography as movies showing "people of both sexes engaged in orgies" that include "every form of sexual activity known."

In the Kansas book case, Justices Black and Douglas nonetheless implied that all censorship of any sort is unconstitutional. So too argues Los Angeles Lawyer Stanley Fleishman, who won the case. As he sees it, all obscenity laws are doomed because the Supreme Court has now passed such books as *Tropic*. "To be obscene," says Fleishman, "a book has to go significantly beyond what has already been declared not obscene, and that is impossible. You can't talk about sex any more frankly than is being done now."

See Here, General Kennedy

When the N.A.A.C.P. urged President Johnson to consider "taking over" race-torn Mississippi, Attorney General Robert F. Kennedy replied that the federal-state relationship forbids "preventive police action." Last week General Kennedy (Virginia Law, '51) was given a failing grade on his answer by 29 law professors at Harvard, Yale, Columbia, N.Y.U., Pennsylvania and Boston College. Whatever Kennedy's political motives, said they in an open letter rebutting his "facile pronouncement," the legal facts are clear. The Federal Government has been fully empowered since Reconstruction to "take protective action in the circumstances that now prevail in Mississippi."

▶ Section 332 of Title 10 of the U.S. Code authorizes the President to use state militia and federal troops "whenever he considers that unlawful obstructions, combinations or assemblages, or rebellions against the authority of the United States, make it impracticable to

ment has ... 1879, when the Supr... firmed the Federal Governm... er to command obedience to ... "on every foot of American soil. dence may curb this power in Mississippi, noted Kennedy's critics. But it is "disappointing and ironic that the Department of Justice, which has been bold beyond precedent in successfully urging the Supreme Court that the judiciary possesses the broadest powers to enforce the constitutional assurances of equality, should now discover nonexistent barriers to executive action."

COURTS

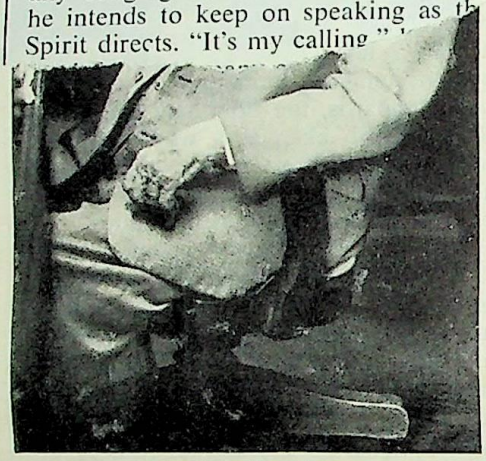
Getting the Feds to Pay

As the cost of living continues to rise, the price of a good lawyer continues to soar—so much that equal justice is still an empty platitude for the 60% of criminal defendants who cannot afford even a bad counsel. State courts are now trying the remedy of paid public defendants. But federal courts are still without the means to pay even court-appointed lawyers. Last week a U.S. district judge in Oregon blasted this anomaly with a broad-gauged decision that may not only cost Washington a great deal of money, but may be the neatest constitutional argument of the year.

A U.S. Appeals Court in San Francisco ordered Judge William G. East in Portland to hear alleged Bank Robber Edward J. Dillon's claim that he had been sentenced to 18 years without benefit of a lawyer. Enthusiastically complying, last spring Judge East ordered crack Portland Lawyer Manley D. Strayer to represent Dillon, and the lawyer, toiling in Dillon's behalf, spent 108 hours of his usually high-priced time during a rehearing at which Dillon was resentenced. Federal rules being what they are, Strayer did not expect a penny.

Judge East had other ideas. Petition a national association of glossolalists, the Blessed Trinity Society in Van Nuys, Calif. At least 260 of the 5,239 American Lutheran churches have glossolalia cells; many of them took up the practice after Pastor Mjorud stopped by to preach at revival meetings.

Open Doors. Born in Minnesota to Lutheran parents, Mjorud, 54, grew up in Alaska, and was converted from agnosticism back to his childhood faith in 1942. He gave up the practice of law to enter the ministry, and two years ago attended his first glossolalia service at an Episcopal church in Seattle. After several months of prayer, Mjorud began speaking in tongues himself, started trying it out on interested Lutherans during his mission trips. Mjorud, who is also a devotee of faith healing, was warned several times by the Evangelism Commission, and only the intervention of A.L.C. President Fredrik Schiotz saved him from dismissal last year. Although fired as a traveling evangelist, Mjorud is still free to accept a call by any congregation that wants him, and he intends to keep on speaking as the Spirit directs. "It's my calling."



ROSCOE POUND
For lichens, Lucretius and liberty.

LAWYERS

Paragon of Principle

"Law must be stable, and yet it cannot stand still," said Roscoe Pound. It was a principle that the renowned dean of Harvard Law School first began teaching the U.S. in 1906, when at 35 and still an obscure Nebraska lawyer, he stepped before the American Bar Association and blasted U.S. courts for archaic adherence to fixed rules.* Thereafter famed as "The Schoolmaster of the A.B.A.," he followed the same principle in helping to shift the focus of U.S. law to social needs. Later, in his complaints about the resulting tendency of U.S. courts to become quasilegislatures, he was faithful as ever to his point. Last week, when Pound died at 93, a paragon of principle passed from U.S. law.

Massive, mustachioed, cigar-chomp-

* Given in St. Paul, Minn., Pound's speech is considered so historic that last month the American Judicature Society, celebrating its golden anniversary, memorialized Pound's words with a bronze plaque in the Minnesota state capitol building.

Himself ... an early Roosevelt Republican, Pound later became disillusioned with executive pressure on the courts and supported the G.O.P.'s Alf Landon in 1936.

After resigning as dean that same year, Pound became Harvard's first "roving professor"—entitled to teach throughout the university—and for eleven years he expounded on everything from sociology to Lucretius. Prime founder of the pioneering American Law Institute, he wrote 44 books, ranging from *Readings In Roman Law* to *The Spirit of the Common Law*. At 76, already a master of French, German, Greek, Hebrew, Italian, Latin, Sanskrit and Spanish, he took up Chinese in order to reorganize Nationalist China's judicial system. When the Communists took over the mainland before he could finish, Pound lambasted the State Department for having abandoned Chiang Kai-shek.

Service State. Peering out from under his inevitable green eyeshade, Pound spent the rest of his years at Harvard endlessly writing and watchdogging the "service state"—welfarist Big Government that "undertakes to perform for us every service short of looking after our immortal souls." The service state's threat to law, Pound fretted, was its tendency to use the courts to back its policies rather than allowing the courts to restrain power. Government without judicial restraint, he warned, meant "a mere preachment bill of rights, a hierarchy of superman administrative officials who ex-officio know what is good for us, and ultimately a super-superman to give directions to the hierarchy."

Pound's remedy—a zealously independent judiciary—is now avidly sought by every U.S. lawyer worthy of the name. It is his monument that he saw the danger early, and alerted less prescient men.

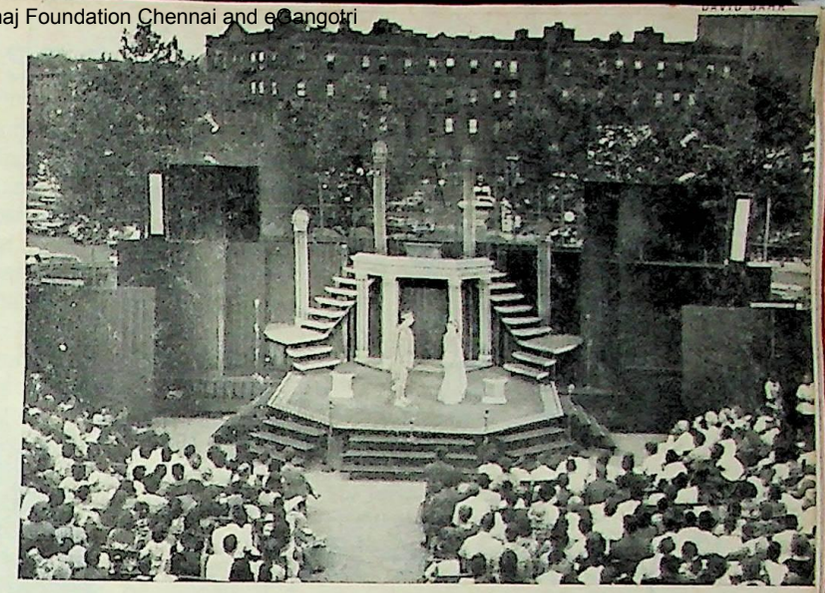
UNPACKING ON THE ROAD

Midsummer dreams with pageantry and plastic cowslips.



PERFORMANCE IN MANHATTAN

THE STAGE

Stratford-on-Firestones

In the Middle Ages, plays in England were sometimes performed from Pageant Waggons, which traveled around the ancient cities stopping at key spots —such as "ye Abbaye gates" and "ye high crosse before ye Mayor"—where the actors would strut and fret their hour upon the unsteady stages.

New York now has its pageant waggons too—set to perform everywhere from ye Bronx to ye Staten Island, and even before ye Bobby Wagner, the mayor. Belonging to Joseph Papp's New York Shakespeare Festival, they are not quaint old tumbrels. They are a caravan of six trucks, led by a big, behemoth trailer truck that disassembles like a Chinese puzzle. In four hours, they collectively become a fully lighted, handsomely equipped Elizabethan theater. In addition to the free, summerlong Shakespeare that the festival group offers in its stationary theater in Central Park, the new road company is taking *A Midsummer Night's Dream* to 34 parks and playgrounds in all five of the city's boroughs.

Lost. The show opened last week, playing six Manhattan locations in six nights, first in Mount Morris Park in Harlem, a neighborhood where the wail of police sirens is a part of the constant atmosphere. There all the big trucks staged an incongruous arrival, grunting and respirating into position on a baseball field while crowds gathered. Soon a rehearsing actor was standing in a tunic and sandals before a gaping group of Harlem youths. He tried to explain to them that in the play he is a character called Demetrius, who gets lost in the woods.

"You look like you're lost already," said a kid.

Meanwhile, a crew of 16 unpacked. Off came the top and sides of the principal truck. Its bed, with six decorative pillars and two staircases permanently mounted upon it, became the main stage. At the push of a button, an apron stage hydraulically unfolded itself into position. Still a third stage level was pulled out and positioned in front of the apron.

Found. Light towers rose like periscopes out of the next truck, to be fed by generators in another truck. At either flank of the main stage, trucks pulled up and opened for business as dressing rooms. Still another truck spewed out neatly packed flats, stairs, props, scenery and more lights. The last truck contained enough collapsible bleachers and folding chairs for something over 1,500 people.

Nicely acted and broadly directed, with colorful costumes and plastic cowslips that stood upright on their stems when tossed to the stage, the performance was full of life, and it found an audience. Almost no one walked away. One young boy who did leave had nothing against Shakespeare. "Man, it's getting dark," he said, "and you can get killed in this park."

. . .

Two Broadway set designers and one Broadway lighting designer were recently given a $75,800 Ford Foundation grant to develop a mobile theater similar to Papp's on an even more compact scale—that is, on one truck only. The foundation is trying to help the State Department find a way to present American theater from town to town anywhere in the world. Arena stage, dressing rooms, props, generators, lights —everything but the emotion—would roll in one unit.

ACTORS

Breathless Man

The Tricolor, a snifter of cognac, a flaring hem, a tilted skylight—these have been demoted to secondary symbols of France. The primary symbol is an image of a young man slouching in a café chair, his socks sagging over broken shoelaces, his shirt open to the waist, his arms dangling to the floor, where his knuckles drag. A Gauloise rests in his gibbon lips, and its smoke meanders from his attractively broken, Z-shaped nose. Out of the Left Bank by the New Wave, he is Jean-Paul Belmondo—the natural son of the Existentialist conception, standing for everything and nothing at 738 m.p.h.

All this may suggest why the film that first established him was called *Breathless*. Since then he has played all kinds of roles—an inspiring priest in *Léon Morin, Prêtre*, an introverted teacher in *Two Women*—but he has become the No. 1 box office draw in France because the indelible *Breathless* image lingers on. He feels that he does not resemble that public image of himself—or so he says over cognac and smoke, slouching in a café chair, his socks sagging over broken shoelaces, his shirt open to the waist, arms dangling to the floor, where his knuckles drag.

Never Doubled. All France calls him Bébel (pronounced Bay-*bell*), and the French press has recorded that his nose was broken in the prize ring. "I let this story go through because it has added to my legend," he confesses. His nose was actually disassembled in a fight in high school. But if such embellishments exist here and there, the private Belmondo still rides point to the legend. He does box, but only as an amateur. He is indeed a fearless, reckless fellow.

He loved making his new picture, *That Man from Rio*, a protracted comic strip in motion that rams into two hours every cliché of the classic cinema chase pictures. On location in Brazil, he never used a double. He walked along a ten-story ledge and hung from a wire 70 ft. high. Once he was warned that a stream was too dangerous to swim in, being chock full of poisonous serpents, carnivorous disease-carrying insects and razor-teethed fish. Belmondo tossed a chunk of corned beef into the water. When nothing happened to it, he dove in, saying: "What the hell, if they're not going to chew on that they're certainly not going to eat me."

His charm with scaly creatures did not confine itself to working hours. In a steamy Amazon town, Jean-Paul went out into the jungle one night and came back to the hotel with a dozen baby crocodiles, crept into rooms late at night and put a baby croc into everyone's bidet. Soon he had two baby leopards, four macaws, several adolescent

SIEMENS

If you ask us: "What's your strong point?"

An electrical system is more than the sum of its individual parts: it is a highly coordinated organism. As such it should be planned in one piece and built in one piece. Thus the optimum solution is invariably to let the same firm handle the entire project, from planning to post-installation servicing.

If you wish us to build you, say, a power station, we will not only supply the turboset and instrumentation, but are also in a position to conduct all the necessary preliminary studies, from location surveying, soil analysis to architectural planning. Or if you wish us to instrumentate a chemical plant or a steel mill, we will not only offer proposals covering any desired degree of automation but also tell you whether any of your country's industrial products can be drawn upon.

In other words, we prefer to solve a technical problem in one piece and to accept full responsibility. The more complex a task, the greater is the incentive for us tc tackle it. For over a century, this form of engineering enterprise has always been our strong point.

***The Siemens Group* — your experienced partner in all electrical engineering projects**

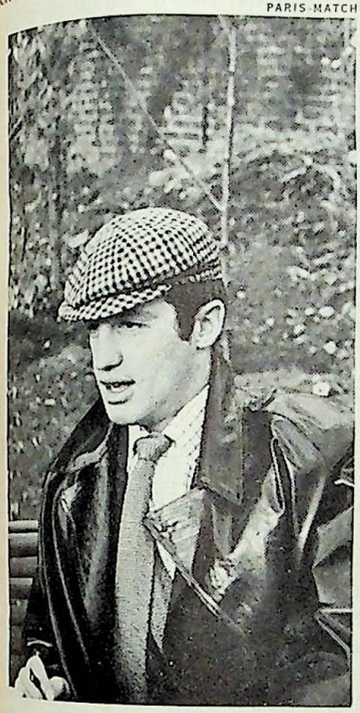
crocodiles, a parrot and three snakes in his own room. Remembers the film's producer: "The crocodiles ate the birds. The leopards ate the crocodiles. The snakes died of starvation. The room stank like the bottom of some Amazonian cesspool."

Much Experience. Bébel was born in Neuilly-sur-Seine, a fairly expensive Paris suburb, but he grew up on the Left Bank, and his colloquial language could have been swept up off the cobblestones of St.-Germain-des-Prés and Montparnasse. His father was a sculptor who taught at the Académie des Beaux-Arts.

Though Belmondo is so natural on the screen that he appears to be the sort of actor who was discovered rather

PARIS MATCH



JEAN-PAUL BELMONDO
Riding point to a legend at 738 m.p.h.

than trained, he had ten years of experience behind him by the time he made *Breathless*. Most of it he acquired at the Conservatoire, the French equivalent of Britain's Royal Academy of Dramatic Art. Bébel got experience of all kinds there. "In spite of my mug, it would be stupid to deny that I've always had a certain success with girls," he says.

Eventually he married a dancer named Renée, whose attractions were blurred only by her name, which he couldn't stand. So he renamed her Elodie. Belmondo is devoted to her and to his three children. "I love my Elodie," he rhapsodizes, "because after I come home from a hard day between the sheets with Jeanne Moreau, Sophia Loren or Claudia Cardinale, she's bound to ask an insidious question like 'Well now, how was it in bed with Claudia today, dear?' Jealousy—that's what saves the household from conjugal routine. Is there anything in the world more icy, more disagreeable than a woman who never suspects that you're betraying her?"

MILESTONES

Born. To Malcolm X, 39, former No. 2 man for the Black Muslims, who split with the "too peaceful" Muslims to start his own Organization of Afro-American Unity, and Sister Betty X: their fourth child, fourth daughter; in New York. Name: Lumumbah.

Married. Princess Margaretha, 29, granddaughter of Sweden's King Gustaf VI Adolf; and John Kenneth Ambler, 40, well-to-do British commoner; in a Lutheran ceremony witnessed by 7,000,000 Swedes on TV; on Öland Island, Sweden (*see* THE WORLD).

Married. Dorian Leigh, 44, queen of U.S. fashion models until she passed the scepter to her younger sister, Suzy Parker; and Iddo Ben-Gurion, sometime playwright, no kin to Israel's former Premier; she for the fifth time, he for the first; in Paris.

Married. Veronica ("Rocky") Balfe Cooper, 51, blonde and still beautiful socialite widow of Hollywood's Gary Cooper; and Dr. John Marquis Converse, 51, Manhattan plastic surgeon, whom she met when she moved back East after Coop's death in 1961; both for the second time; in a civil ceremony in Westport, Conn.

Married. Mahalia Jackson, 52, high priestess of Negro gospel songs; and Minters Sigmond Galloway, 47, salesman for a Gary, Ind., building contractor; both for the second time; in Chicago.

Died. Edward Glenn ("Fireball") Roberts, 33, champion U.S. stock car racer, a fierce and flashing veteran of the high-banked ovals who, in 15 years of driving everything from midgets to 410-h.p. Fords, won close to $400,000 and all the big races except the World 600 in Charlotte, N.C., which he tried for again on May 24 only to wind up in the middle of a flaming, three-car crash that left him with third-degree burns over 45% of his body; of complications resulting from his burns; at Charlotte Memorial Hospital.

Died. Pierre Monteux, 89, French-born conductor whose portly figure graced virtually all the major podiums —the Boston symphony (1919-24), Amsterdam (1924-34), San Francisco (1935-52), London (from 1961 on), guest conductor of close to 100 more—a maestro with a calm, precise technique that generally brought out the best both in the musicians and music; of a brain hemorrhage following a fall; at his home near Hancock, Me.

Died. Roscoe Pound, 93, Harvard's renowned student and teacher of law; after a long illness; in Cambridge, Mass. (*see* THE LAW).

EDUCATION ABROAD

Breaking the *Bachot*

From the moment a French baby opens his little Gallic eyes, his ruling purpose in life becomes preparing for the *bachot*, the grueling baccalaureate exam that decides who shall enter universities and the *grandes écoles*, and thus automatically become the elite that will some day rule the nation. The exam was over last week, and in Paris and Marseille milling, delirious teenage students overturned cars, pelted passers-by with flour, bombarded police with eggs, set bonfires on the sidewalks. They were celebrating the end of the pretest tension—and a lot of them were celebrating the fact that this year they knew the questions in advance.

PIERRE DOMENECH

SUCCESSFUL STUDENTS* WHOOPING IT UP IN MARSEILLE
Charles de Gaulle also wanted the answers.

Is Perception Proof? The *bachot*, or "*bac*," is drawn up by 30 eminent French professors, who submit it to the Education Ministry. Then the exam goes to the National Printing Office, where no printer sets more than a single line of type. The printed copies are kept in safes until three days before exam time, when envelopes containing the dreaded test are distributed to regional centers. At the same hour throughout the country, the seals are broken to start the trial that every French youth has worked toward for 16 to 18 years.

But in Marseille this time, someone —possibly in the city's famed underworld—had cracked the secrecy. For at least a week before the *bachot*, parents and children happily paid as much as $300 for the three tough questions on the philosophy section of the test, which turned out to be: "Does perception provide proof of the reality of an object? Is it correct to speak of the lessons of the past? Is liberty of judgment compatible with the necessity of truth?" As word spread to 80% of the local students and to Nice, Corsica, Toulon and Paris, the price dropped to $30. Many Frenchmen found the questions more interesting than the scandal, and abstruse discussions could be heard all over town.

Busy Signal. Police got proof of the fraud only on exam day, but bureaucracy made it impossible to switch to a standby *bachot*. The decision to change, explained an official of the Marseille test center, could be made only by the Minister of Education in Paris, "and all the telephone lines were busy."

Rather than require all students to take the *bac* a second time, Education Minister Christian Fouchet ordered the exam results to be compared with a student's regular work. Those scoring suspiciously well will get an oral grilling. President Charles de Gaulle was so peeved by the inglorious mess that at a Cabinet meeting he asked his Education Minister: "*Alors*, Fouchet, and about this *bac*?" Replied Fouchet, with grumpy high-score logic: "The whole thing would never have happened if Marseille weren't in France."

* That's a mask in the center.

TEACHING

Montessori in the Slums

Founding the first modern Montessori school in the U.S. turned red-haired Nancy McCormick Rambusch from a housewife into a stormy prophetess. Her success in setting up the Whitby School in Greenwich, Conn., led to so much demand for her advice that she went on to start the American Montessori Society. "I'm sort of the Mary Baker Eddy of this organization," she remarks, a little ruefully. But Nancy Rambusch is proud that beginning with Whitby in 1958, the Montessori movement in the U.S. has grown to 1,[illegible] private schools (38 of them belonging to her A.M.S.), and the method may be on the verge of filling a big new role in big-city slums.

Heresy. The Whitby School was chartered from Amsterdam, headquarters of the international Montessori movement. There, Mario Montessori, natural son of the Italian woman who worked out the method, has carried on since her death in 1952 at 81. But when Headmistress Rambusch insisted on relaxing the strict discipline of the original Montessori dogma, Mario called her a heretic and withdrew the charter. "My task has been to create a society for the maintenance of the 'pure' Montessori," he explains with a sigh.

Then Nancy Rambusch quit the Whitby School, after a disagreement with the board of directors. At the same time, an ex-actor named Tom Laughlin founded a Montessori school in Santa Monica, quickly made it the biggest in the U.S., and brought in an authentically European Montessorian couple to run a teacher-training program. Orthodox Montessorian Laughlin scorns Nancy Rambusch, confidently expects that the A.M.S. will die within three years.

Despite such bickering, the movement thrives. Thousands of well-off U.S. couples, many of them Roman Catholics, accept the Montessori principle that a child's mind, far from being a clean slate, contains a blueprint of self-civilization; the school and teachers need only provide conditions for the child to follow the blueprint. Kids who are able to follow often learn to read, write and do binomial theorems at six—which is why Montessori schools rise faster than competent teachers can be found.

Hands Unlike Hands. Yet only now is the Montessori method being tried on the gravest problem facing big-city educators in the U.S. Recalling that Maria Montessori formed her educational concepts teaching 60 slum children in Rome almost 60 years ago, some Chicago experimenters are running a Montessori school that tackles the job of preparing preschool kids from racial ghettos for the strange world of middle-class public schools.

The children live in Chicago's Cabrini slum-clearance project. They are mostly fatherless Negroes and Puerto Ricans whose mothers work or are on relief. "Some of the older ones have hands that didn't even operate like hands," says the school's director, Marcella Morrison, who taught in Chicago public schools before she went to Greenwich for a year of Montessori training at Nancy Rambusch's Whitby School. "They had never been given anything to handle." At first they were a reserved, hostile bunch, and Director Morrison

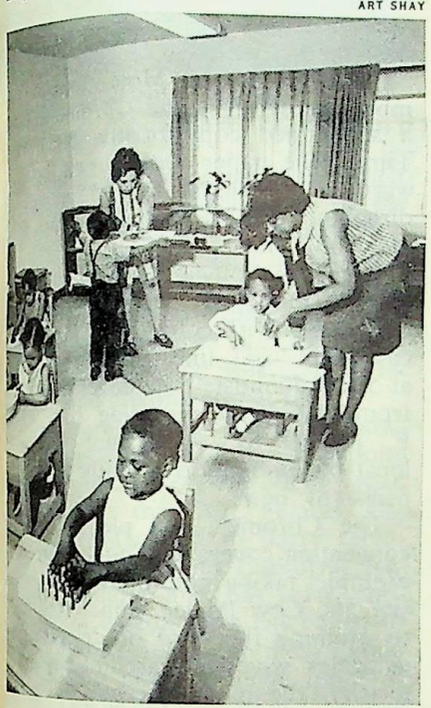
CC-0. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

found that she could barely even talk with them. Now the Cabrini kids fondly call her "the tall lady," and follow her through the grounds of the project as though she were the Pied Piper.

Learning one step at a time, at their own pace, they become more self-reliant and confident. A three-year-old lies on a rubber mat, arranging a washbasin and cups; a five-year-old, blindfolded with a blue eyeshade, feels a sphere, a cube, a cylinder, following out some blueprint in his mind. Ordinary progressive schools have similar equipment, since U.S. toy manufacturers have stolen many of Maria Montessori's original designs and ideas. But where progressive schools use the tools as one of many activities in which the teacher plays a major role, Montessori schools put the

ART SHAY



CABRINI TEACHERS & STUDENTS
Each has a blueprint for self-civilization.

teacher in the background while the didactic teaching materials do much of the work.

Profound Change? Some educators, such as Columbia Teachers College Professor Miriam Goldberg, think the Montessori boom will collapse, just as it did early in the century when John Dewey's brand of progressive education won out. On the other hand, others are just as sure that the current Montessori revival, coinciding with national concern for preschool education in general and for slum kids in particular, will profoundly change U.S. education.

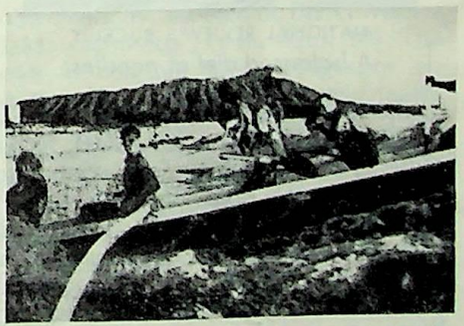
"The big push at the moment," predicts John Henry Martin, superintendent of schools in Freeport, L.I., "will eventually force the public school system into running nursery schools. And the only thing on the horizon with the theoretical base and the classroom hardware for a modern nursery is the Montessori system." Adds Nancy Rambusch: "We've come full circle. We're back with the slum kids Maria Montessori started with."

These 3 tests prove First National City Travelers Checks are "Better Than Money"®

National City Travelers Checks are the best way to carry money. Actual tests, shown below, demonstrate three specific reasons: *ready availability ...immediate acceptability...on-the-spot refundability*. In case of loss, there are thousands of refund points throughout the world...leading hotels can direct you to the nearest one.

In the United States, no Travelers Check is more spendable, more readily available than these famous checks backed by First National City Bank. And, in case of loss, there are many thousands of U.S. refund points... easily located simply by calling Western Union Operator 25.

Test No. 1—Refundability—in Washington, D. C.
In this test, vacationing Mr. and Mrs. David Jalbert, of Brooklyn Hgts., N. Y., burned $220 of National City Travelers Checks; called Western Union Operator 25. Directed to Riggs National Bank, they received an immediate on-the-spot refund.



Test No. 2—Acceptability—in Waikiki
The S. Joseph Gores of Florissant, Mo., enjoy a ride in one of Hawaii's famous outriggers. They paid for this fun, as for all travel expenses, with National City Travelers Checks.

Test No. 3—Availability—in Mexico City
Dom Algieri, of Nutley, N.J., used additional cash to purchase more National City Travelers Checks. Banks everywhere carry them.

MAGAZINES

Spokesman for Conservatism

"This magazine," said William F. Buckley Jr. in his prospectus for the first issue of the *National Review*, "will forthrightly oppose the prevailing trend of public opinion; its purpose, indeed, is to *change* the nation's intellectual and political climate." Only five years out of Yale, Buckley had already made a national name for himself with his first book, *God and Man at Yale*, which accused his Alma Mater of preaching liberalism and secularism to the exclusion of almost everything else. And in that fall of 1955, the articulate young conservative found the political weather parlous. "Clever intriguers are reshaping both parties in the image of Babbitt gone Social-Democrat," he wrote. The press, he said, was a mess of "New Deal journalism"; conformity, fabricated by "Social Engineers," loomed as "the largest cultural menace in America."

From the start, *National Review's* polemic spirit, bolstered by its editor's intellectual bravura, was a rallying point for those who subscribed to the Buckley brand of "radical conservatism." In its pages, such conservative spokesmen as Russell (*Conservative Mind*) Kirk, Cornell University's Clinton Rossiter (*Conservatism in America*) and James Jackson Kilpatrick Jr., editor of the Richmond News Leader, spelled out the philosophy of their politics. Sometimes even outsiders were permitted aboard, among them Liberal Columnist Murray Kempton and Steve Allen, whose occupation as a TV comedian allows time for the espousal of liberal causes.

If there were occasional exercises in doctrinaire pedantry, there was always a balance of nicely aimed journalistic needling. Neither liberals nor middle-of-the-roaders were spared the *Review's* witty and often savage prose. There was also a leaven of practical politics. And it was hardly surprising that, when the intellectuals of conservatism spotted a proper champion, they announced his candidacy before he got around to doing it himself. In April 1963, *National Review* began its Barry Goldwater for President campaign.

Goldwater & Eisenhower. "I have never importuned Mr. Goldwater to run," Buckley wrote then, "but I am for him, and I do believe that if he would declare himself, and go to the people, in no time at all he'd dispose them to say, 'Yes, Mr. President.'" By August 1963, *National Review* had filled out its Republican ticket: Goldwater and Eisenhower. "Before dismissing the idea as inherently preposterous," said Buckley, who thought it up, "one should consider that the strength Mr. Eisenhower could give to the ticket would almost surely be conclusive." Somewhat later, Buckley added: "It is quite irrelevant that *I don't like Ike.*"

Now that the Goldwater bandwagon has picked up a full head of steam, *National Review* is already looking beyond the election. This week it publishes a 16,000-word *A Program for a Goldwater Administration*. Sample advice: Goldwater should man the battlements of states' rights ("within the federal harem, the states today are merely eunuchs"), invade Cuba if necessary, insist that Russia dismantle its "world revolutionary apparatus" and retire to its borders of 1939.

"Venture in Triviality." "We burnish the truths of Society as we see them," says Buckley. *National Review* has held that racial segregation is "not intrinsically immoral," and it opposed the civil rights bill on the grounds that it ceded

DON CRAVENS

NATIONAL REVIEW'S BUCKLEY
A balanced diet of needles.

to the White House "the powers of a despot." When Pope John XXIII, in his *Mater et Magistra* encyclical, seemed to be saying that a little socialism was not necessarily bad, Buckley, a Roman Catholic, attacked the encyclical as "a venture in triviality." He also objected to last summer's Freedom March on Washington: "Mob-deployment in circumstances that call for thought and discussion is a dangerous resort."

The magazine is still not self-supporting (annual loss between $100,000 and $150,000 a year). But circulation, which reached 30,000 by 1960, has more than doubled since. Today Bill Buckley is convinced that *National Review* is living up to its promise to "change the political face of America." In the light of Goldwater's growing successes, that conviction seems to carry more weight than it did in 1955.

NEWSPAPERS

What to Read in the Cow Palace

As the site of a national political convention, San Francisco offers many advantages—which may be why the Republican Party has chosen it twice in eight years. Its precipitous hills produce women long and firm of limb. It abounds with good hotels, fine restaurants and postcard vistas. It also fields three dailies favorably disposed to the Republican cause: Hearst's morning Examiner, the morning Chronicle, and Hearst's evening News Call Bulletin. To this triad must be added a fourth: the Oakland Tribune, published just across the bay by former Republican U.S. Senator William Knowland. But if delegates to next week's convention depend on the four dailies for comprehensive accounts of their activities, they may be disappointed.

Hearty Cheers. Most popular and most successful is the Chronicle. Once a sobersided copy of the New York Times, the paper took a new tack toward entertainment in 1955 under the direction of Executive Editor Scott Newhall and Publisher Charles de Young Thieriot, a descendant of the paper's founders. The two men filled their pages with columnists, both syndicated and local, until the census peaked at 53. Columnists now cover everything from veterinary medicine (Dr. Frank E. Miller) to sex (Count Marco, a local beautician), frequently at the expense of news.

The Chronicle has pledged blanket convention coverage: Count Marco, for example, taking note of the convention site, the Cow Palace, announced plans to examine the herd of delegates and delegates' wives in search of cows. Editorially, the paper greeted Bill Scranton's entry with hearty cheers.

Decent & Dull. Second-ranking daily is the Examiner, which was William Randolph Hearst's pedestal paper, and which still styles itself, somewhat anachronistically, as "Monarch of the Dailies." Having surrendered its circulation lead to the Chronicle in 1961, the Examiner now lags far behind, 293,000 to 330,000, and has lost spirit. Successive waves of new editorial management, all rolling in from Hearst headquarters in New York, seem to have improved nothing but the Examiner's morals: the paper no longer prints cheesecake, and its trucks now proclaim: "Decency—A Family Newspaper." The Examiner's editorial policy is set in New York, where Editor in Chief William Randolph Hearst Jr. has displayed a preference neither for Goldwater nor for Scranton but for Henry Cabot Lodge: "Don't be surprised if many delegates turn to the handsome and experienced politician-diplomat."

Hearst's other San Francisco paper, the evening News Call Bulletin, is a blend of unprofitable competitors. Despite its monopoly of the afternoon field, the News Call Bulletin has slipped in circu-

OAKLAND BOOSTER KNOWLAND

A passion for civic issues, a pledge of blanket coverage.

lation until it is not appreciably larger than the Pacific Coast Edition of the Wall Street Journal. Nevertheless, Editor Thomas Eastham plans to deploy a convention force of 25—some 18 more than the Examiner—by drafting his TV critic, a reporter whose normal assignment is the Parks and Recreation Department, and anyone else at hand.

Little Interest. It is William Knowland's Oakland Tribune that may quite possibly be the most thoroughly read local paper in the Cow Palace. The Tribune gave its heart to Barry Goldwater months before the California Republican primary, and has since published scores of editorials calculated to make pleasant reading for the 700-odd delegates who plan to arrive more or less in Goldwater's pocket. Sample Tribune comment: "Because Senator Goldwater is the one candidate who can capture large chunks of Democratic votes without conceding to the Democrats more than a handful of GOP votes, he is the obvious choice for the minority party." Goldwater has remained the Tribune's choice through thick and thin. It classified Pennsylvania Governor William Scranton's last-minute arrival onstage as "a late and vain challenge" and "an exercise in futility." Outside of that, the Tribune should offer little of interest to political tourists; it is preoccupied with local bond issues, civic development and a current crusade to get Oakland a professional football team.

Covering St. Augustine

It is almost an axiom of the integration struggle in the South: wherever a city's newspapers have pitched in to help, wherever editors and publishers have worked to stretch the limits of local tolerance, there has been a minimum of violence. In St. Augustine, Fla., the Record is a modest little daily (circ. 7,000) with more modest ambitions. It has tried to ignore the South's biggest story, on the hopeful assumption that if nobody pays any attention, the race problem just might go away.

After a fashion, this policy worked for years. St. Augustine had no race trouble to speak of, and when it did, the Record barely spoke of it: last October, when the first lunch counters were integrated in St. Johns County, of which St. Augustine is the seat, the Record gave the incident 1½ in. on an inside page. But last April the South's biggest story also became the biggest story in St. Augustine. That was the month that the civil rights movement enveloped the city.

Leaning Backward. Demonstrations, riots and violence have been the order of the day ever since. But "for a long time we didn't even mention the situation," says Record Editor Harvey Lopez. This posture proved unworkable, especially after one of the arrested picketers turned out to be Mrs. Malcolm Peabody, mother of the Governor of Massachusetts (TIME, April 10). The news flashed out of St. Augustine on all the national wires, and reluctantly the Record played the story on Page One—but beneath a studiously uninformative headline: MORE ARRESTS MADE AS DEMONSTRATIONS CONTINUE HERE.

That headline symbolizes the Record's dilemma. As a newspaper, it has begun at last to give St. Augustine's civil rights movement the news prominence it deserves. Record accounts of local violence now appear where they belong: on the front page. But as a newspaper with segregationist sympathies, the Record bends over backward to accommodate what it considers the right side.

Negroes are generally referred to as "Negro demonstrators"; the St. Augustinians who swing clubs against them are called "white citizens." Mayor Joseph Shelley's press conferences are covered in full; the press conferences of Dr. Martin Luther King Jr., leader of the demonstrators, are not reported at all. After whites and Negroes fought bloodily with clubs and fists in a local motel pool, the Record dusted off the same headline that it had used on the arrest of Mrs. Peabody: MORE ARRESTS MADE AS DEMONSTRATIONS CONTINUE.

Keeping Silence. "Rumors are persistent," the paper reported recently, "that local Negro citizens and leaders do not approve of racial demonstrations here." After a Florida Beverage Department official had the temerity to beat up a white man who was beating up a Negro, and then got away before infuriated rednecks identified him, the Record obligingly printed his badge number. State police, fearing reprisals, hustled the man out of town.

To preserve neutrality, the paper has embargoed such coverage as action photographs ("showing pictures of violence just adds fuel to the fire") and does not run copy that is considered inflammatory. Says A. H. ("Hoop") Tebault Jr., 29, who took over the paper after his father's death last year: "We are in favor of local problems being solved locally."

Editorially, the Record has hammered on this theme: that trouble would subside if only the agitators would get out of town. "We have no intention of taking an active hand in the situation," Tebault says. "First, because there is no single solution. Second, because for a paper to become committed, it would have to take a stand that could be interpreted as favoring one side over another." Adds Editor Lopez: "The only way this thing can be settled is for Dr. King to withdraw and let us work it out among ourselves."

TENNIS

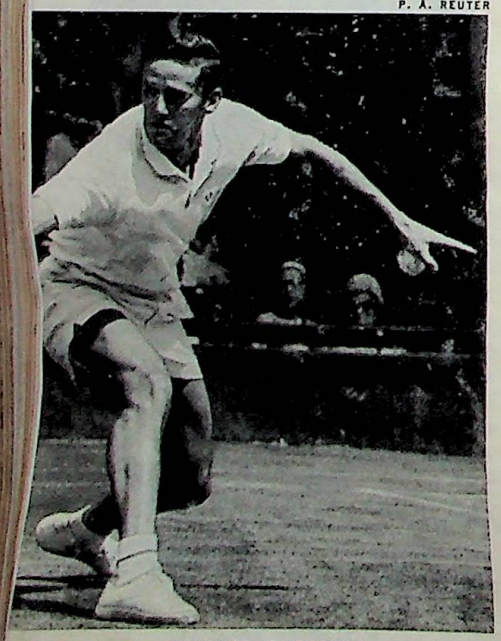
Pingpong, Anyone?

Any ballboy could tell that American tennis fortunes were certainly looking up. Why, any one of three Yanks had a good shot at Wimbledon last week. First there was the defending champion: chunky Chuck McKinley, 23, the acrobatic Texan who breezed to victory in 1963 without even losing a set. Then came Frank Froehling, 22, a finalist in last summer's U.S. championships at Forest Hills. And finally there was Dennis Ralston, 21, who teamed with McKinley just last December to beat Australia for the Davis Cup.

In 88 years storied old Wimbledon has seen a lot of bad performances, but few as shocking as last week's U.S. collapse. In the first round, Ralston lost to Tony Pickard, a 29-year-old Englishman who had virtually retired from competitive tennis; Ralston romped through the first two sets, then collapsed to lose in five. Froehling also fell in the first round—to Nicky Kalogeropoulos, a 19-year-old, Costa Rican-born Greek who had just graduated from the juniors. Froehling's problem was double faults. By the semifinals, McKinley was the only American left in the tournament. He took care of that, dropping a four-set match to Australia's Fred Stolle—the same man he whipped for the title last year. Stolle's forehand used to be his weakness. No longer.

That made it an All-Aussie final, the sixth in nine years. Stolle's opponent: Roy Emerson, 28, the world's No. 1-ranked amateur, but always before an also-ran at Wimbledon—in eight tries, he had never reached the finals. This time, Emerson went all the way. Despite intermittent showers that forced officials to stop the match three times, he polished off Stolle in four straightforward, serve-volley sets, 6-4, 12-10, 4-6, 6-3.

P. A. REUTER



WINNER EMERSON

Sudden as the showers.

For the U.S. the worst blow was yet to come. Last May both Emerson and Stolle were booted off the Australian Davis Cup squad for playing in foreign tournaments without permission. But as soon as the results from Wimbledon were in, Aussie tennis officials started talking about lifting the ban.

GOLF

Brinkmanship

It was the merest formality, the *coup de grâce*, and then everyone could adjourn to the clubhouse for the popping of the corks. There stood "Champagne Tony" Lema at last week's Cleveland Open, 15 under par, with just a one-foot putt between him and $20,000—and everybody knows that golf pros do not miss one-foot putts. But there was a slip 'twixt the cup and the lip. Ever so casually, Tony stepped up to the ball. Ever so casually, he pushed it right around the hole.

That put Tony in a sudden-death playoff with Arnold Palmer, a beer man. Sudden death is hardly the word. Suicide is a better term: out of 19 playoffs in his career, Palmer has won twelve. But Tony is a brinkman too: it makes the bubbly taste all the better. On the first hole, a 398-yard par-four, he watched Palmer smack his drive over a creek all the way to the base of the elevated green. Briefly, Lema fingered the "safe" club—a No. 4 iron. Then he reached for a driver too. "I might as well go out in style," he sighed.

He almost did: the ball was headed straight for the water when it clipped a footbridge and kicked across. A No. 9 iron put Tony on, 15 feet from the pin—and when Arnie left his wedge short of the green, Lema suddenly had another chance to win. This time he took a deep breath and stroked the ball neatly into the center of the cup. Birdie, hole and match for Lema's third victory in four weeks. His 1964 winnings now totaled $60,561, only $1,090 behind King Palmer himself.

FISHING

All Out for Banzai!

Somebody once said that the man who fishes for black marlin probably wears a size 44 coat and a size 4 hat. That is libel, of course. But the idea is that it takes brawn to catch one—and a kind of lunacy to try.

Not that the black marlin is the biggest game fish around; some sharks grow bigger. The black is just the fastest, strongest, smartest and meanest—and big enough too. The record for rod and reel is 1,560 lbs., and even the babies—meaning 200 lbs. or so—have bills like baseball bats. Golfer Sam

WINNER LEMA

Safe as suicide.

Snead, who would rather catch a marlin than lick Ben Hogan, says that going after blacks is "like hunting elephants." Another expert big game fisherman, S. Kip Farrington Jr., calls the black "the glamour boy of all fishes—and the most difficult to catch." Farrington should know: he once held the world record (a 1,135-pounder), and he has also spent 94 consecutive fishing days without boating a single marlin.

More of Everything. He should have gone to Piñas Bay. An isolated jungle inlet, 150 miles southeast of Panama City, Piñas (or Pineapple) Bay is the world's hottest marlin ground, better than Peru, better than New Zealand, Hawaii or the Bahamas. There, swarming around a bait-packed barrier reef seven miles offshore, are more different kinds of billfish, and more of each, than anybody has ever seen before: big Pacific sailfish in such profusion that fishermen consider them a nuisance, literally thousands of blue marlin, silver marlin, striped marlin and the lordly blacks.

Canal Zone fishermen have known about Piñas for years. The trip from Panama City took two days by boat, and it was camping out all the way. But that was until Ray Smith came along. A homespun Texas oil millionaire, Smith, 51, spent close to $1,000,000 carving his Club de Pesca de Panama out of the rain forest and equipping it with all the comforts of home: his own amphibian plane service, air conditioning, plenty of ice and quinine water. He bought a fleet of ten sport fishing boats, hired captains and crews from as far away as Jamaica. In the two years since Smith opened shop, hundreds of marlin have been pulled from Piñas Bay's waters, and Smith himself has one of five world records: a 186-lb. 8-oz. beauty, caught on 12-lb. test line—the equivalent, perhaps, of a 1,900-pounder on standard 130-lb. test. In one twelve-day span at Piñas last year, a marlin-mad Virginia couple ac-

CC-0. Gurukul Kangri Collection, Haridwar

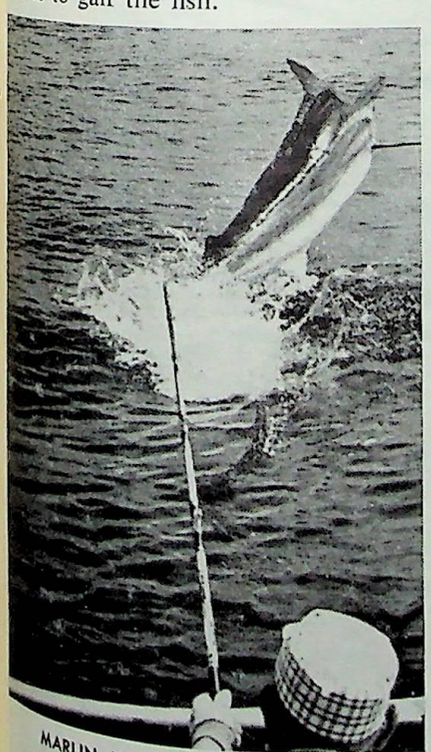
Digitized by Arya Samaj Foundation Chennai and eGangotri

usually boated 47 blacks, and Smith can prove that six out of every ten visitors land the marlin they came to catch.

Both Kneecaps. But they work for their prize. Not even a trout has a more jaundiced opinion of hooks. Blacks like live bait (a 5-lb. bonito does nicely), and they want it practically spoonfed to them. Some marlin will tail a bait for half an hour, only to decide that it isn't fishy enough; others give fishermen heart failure by enthusiastically grabbing the bait, then sourly spitting it out. But when the captain finally yells, "Sock him!", it's Katy bar the door. A few weeks ago at Piñas, an unprepared angler was yanked right over the stern of his boat, so hard that he broke both kneecaps.

Like a Polaris missile, the great fish roars out of the water, sometimes jumping 12 ft. or more, as he goes raging and tail-walking across the ocean. The hook usually pulls clear at this point, or the rod breaks, or the line pops with a crack like a .38 pistol. If the marlin does decide to stay and dance awhile, he rolls in the wire leader, smashes away at it with his bill, swims off on long curving runs to get a slack "belly" in the line. If that fails, in shallow water he will sometimes jam his bill tightly into the sand or cut himself off on a reef; in deep water he sounds, staying down until he dies—and not even a size 44 can reel a 1,000-lb. carcass up from 150 fathoms.

As a last resort, if the marlin is angry enough, he will even launch a banzai attack; virtually every boat in the Club de Pesca's fleet carries chunks of marlin bill embedded in its hull. Or the big black may simply outlast his tormentor. At Piñas Bay recently, a little lady from California battled a 900-lb. black marlin for nine solid hours, only to lose when darkness fell and crewmen were unable to gaff the fish.



MARLIN JUMPING AT PINAS BAY

BASEBALL

Matter of Psychology

The New York Yankees win pennants because they generally scare everyone to death. But if the Baltimore Orioles should win the 1964 American League pennant, it will undoubtedly be because they are scared to death themselves.

Even at 41, Baltimore Manager Hank Bauer is the sort of man who gives people pause. He stands 6 ft., weighs 190 lbs., has a face like a clenched fist and a voice that starts out tenderly—like an avalanche. He carries shrapnel scars, two Bronze Stars, and a card in the steam fitters' union, has done his share of knocking around—places like Guadalcanal, New Georgia, Guam, Okinawa. And when he played rightfield for the Yankees from 1949 to 1959, his specialty was knocking down double-play-minded second basemen.

Bauer wasted no time whipping the Orioles into line when he took over the club this spring. Baltimore had not won a major-league pennant since 1896, and the Orioles, under easygoing ex-Manager Billy Hitchcock, had a reputation for playing their best ball off the job. The first thing Bauer did was fine Outfielder Willie Kirkland $300 for being three days late getting to camp. ("Whew!" said Kirkland, and it sounded suspiciously like relief.) Then, just like Yankee Manager Yogi Berra, Hank announced that his team would observe a midnight curfew, would wear shirts and ties on the road, and would not be allowed to drink at the bar in the hotel where they were staying. "That privilege belongs to the manager," he said. Unlike Berra, he wasn't kidding.

Bauer's get-tough tactics are paying off handsomely. The Orioles started the season by taking four straight from the Yanks and the Chicago White Sox. Two weeks ago, they swept three in a row from New York. Now it is July 4—and they are coasting along in first place, four games ahead of the pack. For a team that wound up seventh in 1962 and fourth last year, the Orioles seem too good to be true. Third Baseman Brooks Robinson (a .251-hitter in 1963), is batting a lusty .314. Outfielder Boog Powell has 20 homers. Rookie Pitcher Wally Bunker, 19, won his first six straight. And Shortstop Luis Aparicio, no longer bothered by the mysterious leg pains that slowed him down last year, has already stolen 31 bases—tops in either league.

Bauer is shocked that the Orioles surprise anyone. After all, it is a simple matter of psychology. "Some guys respond only when you crack down on them," he says. "Others you might have to pat on the tail. Still others do best if you first give them some bull and then lower the boom."

SCOREBOARD

Who Won

▶ Mickey Wright, 29: the Waldemar Open, her sixth victory in eleven tournaments; at Brookville, L.I. Tied for the lead after 36 holes, Mickey fired a last-round 71, two under par, collected $1,350 (bringing her season's winnings to $13,130) and talked wistfully about joining the men's pro tour. "I could wear a hood or some disguise so they wouldn't recognize me," she said.

▶ Dan Gurney, 33: the Grand Prix de France, averaging 108.7 m.p.h. in his green, Climax-powered Brabham, to beat Britain's Graham Hill by 41 sec.; at Rouen-Les Essarts. The Californian's victory was overshadowed, however, by the magnificent performance of Scotland's Jimmy Clark, the 1963 Grand Prix champion whose Lotus blew a piston on the pre-race practice lap. Running on only seven cylinders, Clark still leaped into the lead at the start, broke the track record four times, was 16½ sec. ahead of Gurney when he had to quit after 30 of the 57 laps.

BAYER

The Hallmark of Reliability

Green-eyed with envy

Why should Puss sulk, just because Bayer Dralon(R) is as soft and caressing as her own silky fur? Science has discovered many other secrets of Nature. More and more people need more and more new materials specially suited for clothing and home. Small wonder those versatile, easy-wear and easy-care textiles made from Bayer fibres are so widely popular.

WALL STREET

1066 & All That

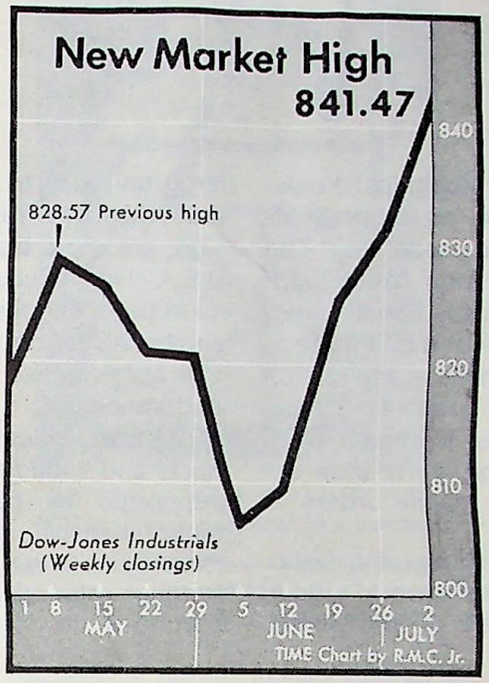
Wall Street greeted the July 4 weekend with a bang. After going nowhere for six puzzling weeks, the Dow-Jones index of industrial shares reached new records in four out of five trading sessions, climbed 10½ points for the week to close at an alltime high of 841.47. The gain was all the more impressive because the market is usually sluggish just before a warm-weather holiday. By crossing the 840 mark, which brokers had viewed as a psychological hurdle, the market appeared well poised for further advance.

Whether they called it "the Johnson Market" or "the Blue Chip Market," most Wall Streeters thought that the averages were healthy, substantial and well based. Small investors are coming back; during the past fortnight, about 7% more purchases than sales of odd lots—fewer than 100 shares—have been made. Other bright signs: four stocks rose for every three that fell, and the whole market was led up by the shares of the nation's biggest, most broadly owned companies.

The Leaders. Nine issues in particular have spurred the 30 stocks that make up the Dow-Jones average. The greatest upward momentum was provided by American Telephone & Telegraph, whose shares have moved from 69⅜ to 74⅛ since they were split a fortnight ago. Chrysler and General Motors have also been front runners, helped by last week's report that U.S. automakers built 13% more cars in June than in the same month last year. All those cars sent up demand for gas and oil, buoying the shares of Texaco, Jersey Standard and California Standard. The other significant gainers in the Dow-Jones have been Du Pont, International Harvester and Sears, Roebuck—the latter lifted by the upswing in retail sales since the tax cut.

The rise in consumer spending has also given new luster to grocery chains, department store groups and clothing producers. In addition, brokers now favor the rails, utilities and steels, whose production is expected to meet or exceed the 1955 record of 117 million tons. There is declining enthusiasm for the recently popular airlines, which are leveling out after a sharp climb, and the cement companies, which have suffered from trouble signs in the construction market.

Higher Earnings. Some brokers look for a brief slump before the next surge, but few think that the market is overpriced. Two-thirds of the Dow-Jones stocks are selling below their 1956-61 bull market high, although profits are now much higher. The Dow-Jones shares



are selling on average for only 19½ times earnings, well down from 23 times earnings in early 1962.

The market has climbed 300 points in the past two years, and most Wall Streeters expect the trend to continue. Brokers still expect the Dow-Jones to reach 880 or 900 by year's end. And Arthur Wiesenberger of Wiesenberger & Co., a bull with one of the best forecasting records, predicts that the Dow-Jones will reach a neat 1066 by 1966.

AVIATION

The High See

Sitting idly aboard an airliner one day in 1956, a Tennessee theater-chain owner named David Flexer was struck by how much the cabin resembled a screening room. Flexer's brainstorm: Why not show movies in flight? He formed a company called Inflight Motion Pictures, Inc., spent five years developing a compact, shock-resistant projector and screen with the help of Trans World Airlines.

TWA began showing movies on its overseas flights in 1961, has remained the only U.S. airline to show movies in the air, largely because of an exclusive contract it made with Inflight. The line has steadily expanded its movies to U.S. transcontinental flights, has found them a popular drawing card that has helped increase its passenger load 24% since 1961. Now TWA's days of exclusivity are nearly over, and the U.S. public is about to be served movies as commonly as meals in flight. Last week American Airlines announced that it will put on its own show for passengers, thus ensuring that other airlines will soon join the trend to movies in the air.

Tapes in the Cockpit. American plans quite a variety-show offering: closed-circuit TV pictures of takeoffs, landings and scenery below, full-length movies, local TV shows while waiting on the ground and stereophonic music for traditionalists. After convincing itself with a public opinion survey, American got Sony Corp. to make special equipment for its theater in the air. Whereas TWA's films are flashed on the screen at the front of the cabin from a projector hidden high above the aisle, Sony is equipping American's planes with a series of 9-in. TV sets—one for each two passengers in first class and one for each nine in coach—with individual headsets and controls. Movies will be transmitted from tapes in the cockpit. The first screenings will be on the Chicago-Los Angeles run, but by the end of September all 45 of American's Astrojets will be fitted for airborne entertainment.

Also on Ships & Buses. Airline schedules may soon read like movie guides. Pan American this week is running a test flight with the Sony system. California's Ampex Corp. has developed a similar system, called "Travelvision" for showing movies and television on planes, ships, buses and trains, and within two months will install the first system in a U.S. airline. Flexer's Inflight has 35 systems working aloft for TWA, another four for Pakistan International Airlines; it has also obtained a waiver of its exclusive TWA contract so that it can service non-competing routes, is presently negotiating with one international and four domestic lines. With all this competition ahead, pioneering TWA is thinking of offering half-hour movies on its shorter-distance flights. Hollywood has clearly invaded the heavens: its problem now is to tailor its products to flying times.

"let's see what ASEA can do"

in METALLURGY. Electrotechnical know-how has a big share in the rapid present-day development of metallurgical processing. The ASEA induction stirrer is a striking example. It works on the same principle as the simple electric induction motor, rotating the melt in a furnace instead of the rotor of the machine – see sketch below. The stirrer reduces the processing time, improves the product and makes for better overall furnace economy. It has won world-wide acceptance and the number of repeat orders is significant.

And ASEA serves metallurgy in many other ways. For decades now, ASEA has been a world leader in developing induction furnaces of sufficiently large unit size to give rational and economic operation; mains-frequency furnaces of ASEA's design are now being built under licence in the U.S.A. High-vacuum furnaces of impressive size have been supplied to the U.S.A. and Great Britain by ASEA, facilitating the production of special alloys called for in aircraft, nuclear reactors and spacecraft.

ASEA's activities cover every aspect of arc-furnace and induction-furnace technology and are supported by reliable practical experience in comprehensive steelworks and foundries within the ASEA Group. Whatever your problem is – melting, refining, heat treatment – you will find it worth-while to see what ASEA can do.

INDUSTRY

Top Money

What the Indianapolis 500 means to U.S. auto racing, FORTUNE's 500 means to U.S. industry. Last week the magazine's tenth annual rating of the nation's leading corporations showed that American business really went off to the races in 1963.

Profits of the 500 biggest industrial firms jumped more than 10% to $14.8 billion, accounting for 55% of the 1963 earnings of all 1,200,000 U.S. corporations. The two largest firms brought home more than one-sixth of the 500's earnings: General Motors earned $1.6 billion on sales of $16.5 billion, and Standard Oil (N.J.) became the only other U.S. manufacturer to join the billionaires' circle by earning $1.02 billion on sales of $10.3 billion.*

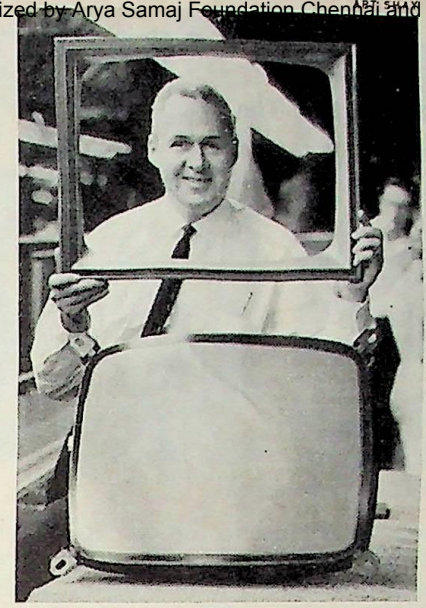
The same six companies led the sales list as in the previous two years. After G.M. and Jersey Standard came Ford with $8.7 billion, General Electric $4.9 billion, Socony Mobil $4.4 billion, U.S. Steel $3.6 billion. Chrysler, the only newcomer to the top ten, sped from twelfth place to seventh as sales increased from $2.4 billion to $3.5 billion. The laggard among the leaders was Swift, off from tenth to twelfth on a slight sales decline.

Several of the also-rans did impressively well. The fastest sales increases were made by American Petrofina, up 114.8%, and by Iowa Beef Packers, whose 114.6% gain was due largely to increased capacity. Amerada Petroleum, in 355th place, had the highest profit margin for the sixth consecutive year—30.2% of sales—thanks largely to its low overhead. When it came to return on invested capital, Avon led with 34.3%, followed closely by Gillette's 34.1%, General Dynamics 32.2%, Smith Kline & French's 30.9%. On the average, the 500 earned better than 6% on sales and 9% on invested capital, both slightly higher than in 1962.

CORPORATIONS

The Boss's Son

The youthful chairman of Motorola, Inc. acknowledges stem-winding introductions with a stock joke: "The most important reason for my rapid rise is that my dad owned the joint." At Motorola, the success of Robert W. Galvin is no joke. When he took over from his father Paul, the company's crusty, autocratic founder, Motorola had long been largely a one-man, one-product corporation. Galvin might have rested on his father's laurels, but he elected to be his own man. In the five years since his father's death, Bob, now 41, has made Motorola a decentralized giant. Its projected $400 million in sales this year covers such a broad range of products and aptitudes that Motorola last week 1) won a contract to equip an eight-mile stretch of New York's crime-beleaguered subway system with an experimental two-way radio hookup for policemen, and 2) announced a new line of electronic circuits that will sell for as much as 77% less than present manufactured units.



MOTOROLA'S GALVIN WITH TV TUBE
Making managers feel like owners.

Space & Speedometers. Motorola was founded in 1928 in a one-room Chicago loft, made mostly car radios until World War II, when it developed the walkie-talkies that became almost as universal as the Jeep. It still outsells all competitors in two-way radios for police cars, fire trucks, taxicabs and other vehicles, is also developing sophisticated models for space that will carry voices across 250,000 miles.

On top of this, Bob Galvin skillfully built the broad diversification begun by his father. The company pioneered the transistor radio, now also manufactures auto alternators and ignitions, electronic speedometers, hi-fi consoles, and exotic semi-conductors and solid state devices used to measure and control industrial operations. Last year it introduced a 23-in. rectangular color-TV tube, slimmer and more compact than previous round tubes; it expects to sell 100,000 this year, has jumped to third place in dollar volume of TV sales. "Once we identify ourselves with a field," says Galvin, "we make a determined effort to be dominant in that field."

Significant Decisions. Motorola has managed its mix of products by internal growth rather than by acquisition, financing expansion largely from corporate funds; last year it spent a lavish $48 million on research and capital investment. The company also makes a practice of promoting from within. When Galvin two months ago moved up to chairman to concentrate on long-range planning (he remains chief executive), he was succeeded as president by Elmer Wavering, 57, who, like many other Motorola executives, joined the company in the early car-radio days.

ELECTRONICS CENTER IN PHOENIX

Galvin works easily with his executives, most of whom are much older than he. At Motorola's shiny Franklin Park, Ill., headquarters, where even the chairman works in shirtsleeves, he sees division heads intermittently, allows them full rein to handle engineering, production and sales and make significant decisions. "The most important factor motivating a manager," says Galvin, "is his sense of proprietorship. The man who is given the greatest hand to determine his own destiny will try the hardest. It is fair to say that this is a rather different approach to management." It is also fair to say that Bob Galvin is a different sort of boss's son.

THE ECONOMY

Those Static Statistics

Major Government and business forecasts of the nation's year-to-year growth have been wrong by 30% to 40% since 1947. Reason: shaky projections based on shoddy statistics. This disconcerting report came last week from the privately financed National Bureau of Economic Research, and it further darkened the shadow of doubt that hovers over many of the indicators used by businessmen to reach their decisions to spend, lend or cut back.

The Government spends $100 million a year to find and refine the modern statistics that measure where U.S. business stands and is likely to move next, and industry and private economic groups spend millions more. But the U.S. economy has changed so quickly in recent years that many statistical standbys have become insensitive, inaccurate or downright misleading.

Some long-revered statistics that U.S. businessmen would do well to treat with caution:

• DEPARTMENT STORE SALES: Last week businessmen were cheered by reports of rising department stores sales for June

* The world's biggest company in terms of assets, American Telephone & Telegraph, is not in this industrial group, will be listed in next month's directory of the 50 leading utilities. Last year it earned $1.5 billion on sales of $10 billion.

BEN MARTIN

DAVID GAHR

BRITISH SECRETARIES AT WORK IN MANHATTAN

the telltale New York City area. his statistic, like many commonly used ics, ignores some recent and signifi- ant changes in the economy, since it ils to measure the growth of discount oses and other fast-expanding stores at have no index of their own. Says ove L. Lowry, executive secretary of e Federal Statistics Users' Confer- ce: "Considering that drugstores now ll pots and pans and that supermar- ts sell clothes and fertilizer, the fig- es on department store sales really n't tell very much." Much more eaningful as an indicator is the over- ll figure for retail sales, which has een showing gains that are steady— ut less spectacular than those of de- partment store sales.

• FREIGHT CARLOADINGS: Bernard Ba- uch is reputed to have said long ago hat the surest way to gauge the whole economy is to "watch freight carload- ings." That was long before trucks and planes captured such a large share of the changing cargo market, and also before freight cars were built bigger to carry more cargo. Result: freight load- ings often go down—as they have for four of the past ten weeks—at the same time that total cargo tonnage goes up. For such reasons, the Pennsylvania Railroad, the nation's largest, last week announced that it will no longer issue carloading figures to the public.

• UNEMPLOYMENT: The problem is seri- us—the unemployment rate in June rose from 5.1% to 5.3%—but it is not as bad as the figures indicate. In its overly broad definition of "unemploy- ment," the Government counts among the jobless such people as fulltime stu- dents looking for part-time work, and the job-seeking wives and children of laid-off workers. What if other coun- tries did the same? Sweden, celebrated land of low unemployment, not long ago adopted the U.S. system; to their chagrin, the Swedes soon found that their national unemployment rate was four times higher than under their old, looser standards.

• WHOLESALE PRICES: The U.S. whole- sale price index, table-flat for more than six years, is weighted heavily with food and farm goods, which have been fall- ing because of the agricultural glut. But the much broader index kept by the National Bureau of Economic Research, which measures more manufactured goods, has been showing what worried officials call "fairly dramatic rises" for the past six months. The danger of infla- tion is thus greater than the Govern- ment's price index shows.

• HOUSING: Statistics on housing starts often rise or fall 10% a month, much more sharply than the overall construc- tion market or the economy as a whole. They are the product of a tangled series of estimates, hunches and guesses. To get a housing figure, Government ana- lysts 1) count the number of building permits, 2) guess at the number of houses that might be planned in areas that require no permits, 3) hunch the number of "permit houses" and "non- permit houses" that are actually started. "Then," sighs Chase Manhattan Bank Vice President William Butler, "you take the time of the year into consid- eration, and you seasonally adjust the whole mess."

Disturbed by such unreliable statis- tics, both the National Bureau and the U.S. Census Bureau are combing through 150 of the most widely used statistics, will recommend by year's end which of them should be revised or dropped entirely. Meanwhile, Washing- ton's wisest economists ignore such sta- tistics in favor of about five reliable indicators used to assess the here and now economy, and another five to pre- dict what is likely to happen next. For current performance, they look to the Federal Reserve Board's industrial pro- duction index, the number of Ameri- cans at work, personal income, total retail sales and new consumer credit. To get a feel for the future, they study the average number of hours in the working week, the prices of industrial materials, businessmen's plans for capi- tal spending, inventory movements and new orders for durable goods. Fortu- nately for the U.S. economy, nine of these ten reliable indicators—all except industrial materials prices—are now moving in the right direction.

LABOR

Reverse English

One of the most prized fixtures in many a U.S. executive suite is a British secretary. In Manhattan, her impec- cable manners, cool good looks, clipped telephone accent and considerable sec- retarial skills are greeted with more than ordinary hands-across-the-sea en- thusiasm. Through friends or enterpris- ing employment agencies, some 700 young English girls enter the U.S. each year to work for a while as secretaries. New York used to get most of them— but not any longer, by Gregg. The U.S. Labor Department, looking out for American girls who might be deprived of jobs, has specifically barred the entry of any more foreign secretaries to New York City.

U.S. "LEPER LAW" BANS OUR GIRLS, headlined London's Daily Mirror, in wry reference to the fact that the re-

ASSOCIATED NEWSPAPERS

INTERVIEWED IN LONDON
Some lepers.

striction on visas was ordered under a section of the U.S. immigration law that prohibits entry of aliens who are "afflicted with leprosy, who advocate polygamy, and whose employment will adversely affect wages and working con- ditions" of Americans. Despite the pres- ence of an estimated 3,500 English sec- retaries in New York, the city actually has a shortage of typists and steno- graphers. But the U.S. Government, sus- pecting sharp practices by some em- ployment agencies, grew worried as visa applications began piling up at the Lon- don embassy.

Nonetheless, there'll always be an English secretary. In London and New York, employment agencies are still processing the eager young things by the score, placing them at typewriters in Boston, Chicago and San Francisco— from where they may eventually move to New York if they wish. They do not work for coolie wages either; they may start for less than Americans when they are new to the country, but soon make $80 to $110 a week. Last week the government heard pleas to reconsider its New York ban, conceded that there may have been a misunderstanding, and promised to restudy the matter within two weeks. Meanwhile, by some reverse English, a number of American girls are getting a fine welcome in Lon- don executive suites. British bosses think they make jolly good secretaries —breezy, informal and that sort of thing.

MIDDLE-INCOME HOUSING IN BREMEN

WESTERN EUROPE

Room Shortage

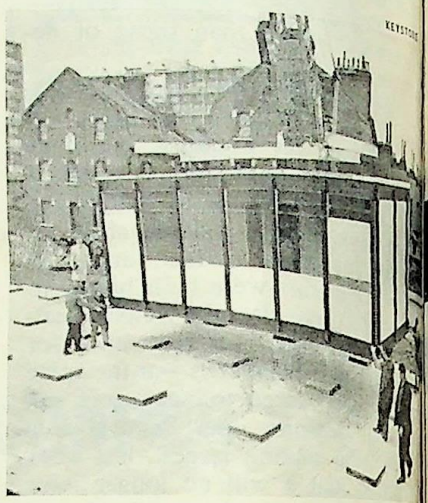
A space race is on in Western Europe, but the goal is not some distant planet: it is a down-to-earth place to live. Europeans are suffering from the tightest housing squeeze since the immediate postwar days. Rentals have soared, and the price of private houses has shot out of reach for millions of people. Last week, as government officials everywhere stewed over what to do, France's overbuilt bureaucracy took a few steps to ease its *Crise du Logement*. It freed some state lands for housing development, announced a major slum-razing and rebuilding program, and sliced back the paperwork that now stymies building permits for up to two years.

Halfhearted Efforts. A recent Common Market survey shows that the monthly rent for a three-room apartment in a lower-middle-class district averages $65 in Düsseldorf, $70 in Brussels and a skyscraping $180 in Paris, Europe's toughest town for housing. In Italy's cities, unskilled workers have a hard time finding one-room flats for $50, which represents one-half of their monthly income. The co-op apartment is also a high-level proposition; a two-bedroom flat in a middle-class district markets for $12,000 in Amsterdam, $14,000 in Hamburg, and $30,000 to $40,000 in Paris—not counting monthly maintenance payments. Costs for private houses commonly run much higher than in the U.S. A typical two-bedroom bungalow in Germany sells for $15,000, exclusive of extra charges for the land it is built on and for such simple amenities as built-in closets. Trying to deflate prices, municipal authorities in Britain and other European countries are helping to promote the sale of prefab houses that can be erected in an hour or less.

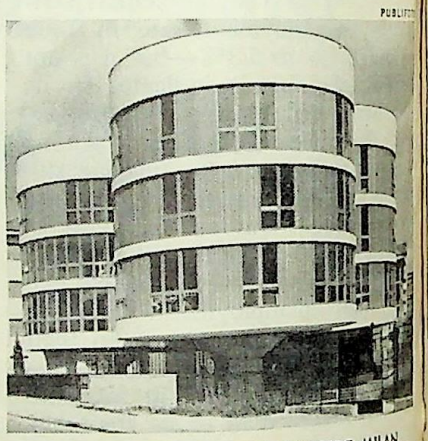
There are plenty of reasons for the overall scarcity. Wartime bombers destroyed much of Europe's housing, and most of what was left was not much good. At least 12% of the houses in France, Germany and Britain were built more than a century ago, and are without indoor plumbing. The shortage has been worsened by massive movements of people to the cities: Eastern refugees into West Germany, dispossessed Algerians into France, and job-seeking Southern Italians into the industrial hubs up north. Instead of constructing moderately priced housing, builders have catered to the lucrative luxury markets, putting up Miami-style apartments that now command as much as $125,000 in Rome. National governments have made halfhearted efforts to create space for the middle class, but have been snarled by endless red tape, inadequate budgets, and a shortage of private capital that has lifted the common mortgage interest rate to 10% to 15% a year.

Upper Levitt. The incredible demand for space has permitted fly-by-night entrepreneurs to debase Europe's reputation for quality craftsmanship. Many new houses and apartments have cracker-thin walls, minimum soundproofing, unpainted interiors. On a recent tour of Europe, 20 top U.S. construction experts were shocked by the high prices and lack of standards. Said Tacoma's Daniel Brown, research director of the Douglas Fir Plywood Association: "There's no comparing quality here with the U.S."

Some U.S. builders are beginning to take advantage of this remarkable seller's market. The most famous U.S. builder, William Levitt, has won preliminary approval from the French government to construct a Levittown of 500 houses near Versailles. For a three-bedroom house, he will charge $20,000 to $25,000—which is 25% to 50% more than the price of the same Levitt house in the U.S.



ONE-HOUR HOUSE IN LONDON



LUXURY APARTMENTS OUTSIDE MILAN

Out of reach for millions.

CANADA

One Way to Run a Railroad

Toronto's usually crusty Royal York hotel has hired leotard-clad waitresses to serve customers in a new "Black Knight" room, and Quebec's courtly Château Frontenac has replaced some Victorian parlors with a smart new cocktail lounge. Is that any way to run a railroad? It seems to be, because these two changes are symbolic of a great transformation that is sweeping the owner of the hotels: the Canadian Pacific Railway.

A vital force in opening up the Canadian West, the investor-owned C.P.R. was long the slumbering giant of Canadian business. It took pride in being the "world's most complete transportation system," with $2.9 billion in assets, including its own 17,000-mile railroad network, a steamship company, an airline and even a chain of hotels to serve them. But until recently, it got a very small profit return on these vast assets; it allowed its operations to become antiquated, competing air and highway traffic to steal away earnings and its ships, hotels and airline to slip into the red. Even worse, it sold off or leased much of its 25 million acres of valuable oil, gas and mineral and timber land, largely because it was reluctant to compete directly with some of its own freight customers.

The Awakening. Such was the direction of the road when a veteran Canadian Pacific railman named Norris Ro

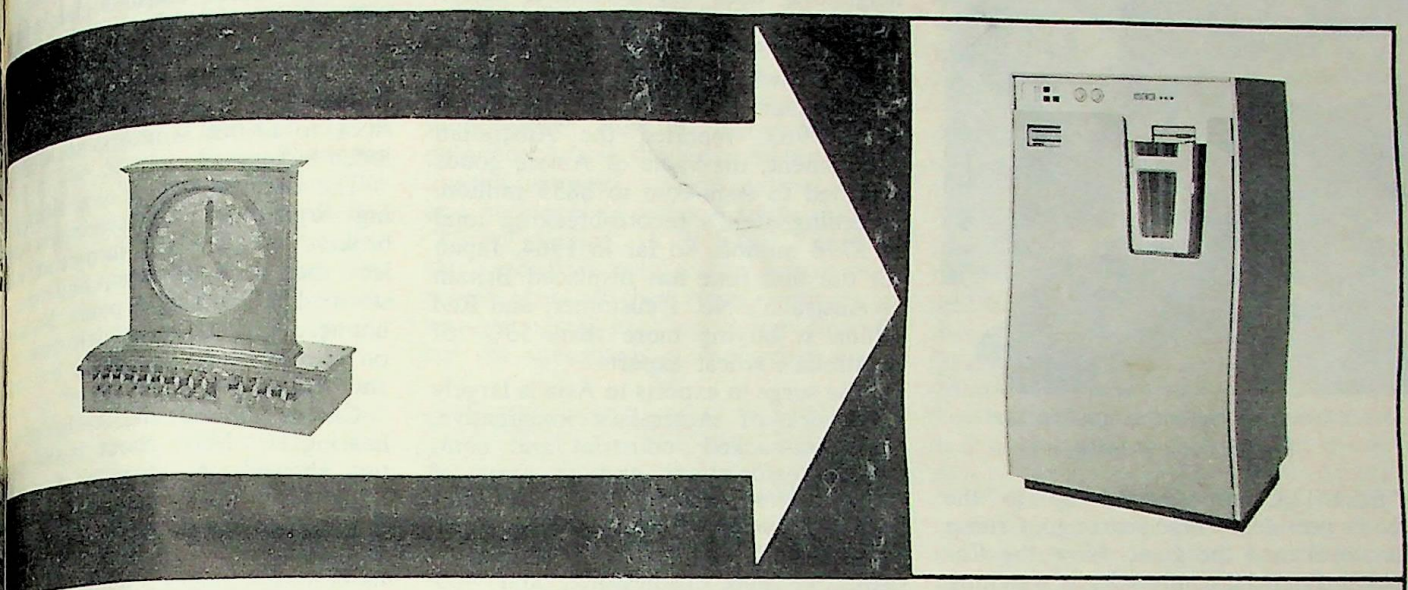
NCR . . . 80 years of progress in Automation



NCR's job for the past 80 years has been to make things easier and more profitable for businesses of all kinds and sizes. How? By producing the most complete and efficient line of record keeping and data processing equipment obtainable. We began 80 years ago by marketing the first cash register—the first automated system for handling sales and cash! Today NCR continues to make things easier for government, industry, business and banking with a full line of 43 types of equipment to handle every kind of input and data processing. NCR provides completely automated record keeping and processing from original entry to final report.

Equally as important as the development of the total system concept of record keeping are the many research and development programs which NCR has in progress. Important advances in encapsulation, photochromism, thin-film and laser technology have contributed greatly to progress. NCR welcomes your inquiries about its systems and research and development programs. For complete information on any of these subjects, write today to your nearest office of The National Cash Register Company or to NCR, Dayton, Ohio, U.S.A. 45409.

CANADIAN PACIFIC'S "CANADIAN"
Profits from striplings.

("Buck") Crump moved up to the road's presidency nine years ago. Crump has awakened the giant. Now the Canadian financial community is watching its performance—and its potential—with deep interest.

The new president moved slowly at first, was accused of copycat management because he adopted many innovations of the government-owned Canadian National. But Crump steadily picked up momentum, has become a hard man to brake. He has entirely dieselized the road, shorn off many of its unprofitable branch lines and short-haul passenger trains, aggressively adopted piggybacking and bought the world's largest railroad-owned computer to direct freight and handle accounting. Result: in 1963's expanding economy, after a monotonous downgrade run, C.P.R.'s earnings rose 24% to $40.1 million, the highest since 1957. Canadian Pacific Airlines also broke through the profit barrier to earn $350,000 in 1963 largely because of a wise investment in five *DC-8 jets; even Canadian Pacific's hotels earned $1,100,000.*

Spinning Markets. Under Crump, C.P.R. also rounded out its transportation empire by absorbing Smith Transport, Canada's biggest trucking firm. This fall it will begin construction of a new hotel in Montreal, has faced up to the motor age by taking on the management of motels. But its greatest growth could come from its considerable remaining land holdings, whose rich resources the road has now begun to exploit. The newly formed Canadian Pacific Oil and Gas, Ltd., earned $5,600,000 for C.P.R. in 1963, and another stripling subsidiary, Pacific Logging, contributed $253,000. A 51% interest in Consolidated Mining and Smelting, the road's biggest subsidiary, last year brought in $11 million in profits. With the Canadian stock markets spinning as a result of mining finds at Timmins and the search for new finds, the railroad that opened up the West now hopes to find new sources of wealth under some of its land.

AUSTRALIA

The Hustlers

Australia's policy of excluding Asians, which has long irritated its up over neighbors, does not extend to Asian currency. With Australian exports to Asia up by 300% since 1959, money is flowing down under where immigration cannot. During the first ten months of fiscal 1963, reported the Australian government, the value of Aussie goods exported to Asia rose to $855 million, exceeding 1962's record-breaking total of $778 million. So far in 1964, Japan for the first time has displaced Britain as Australia's No. 1 customer, and Red China is buying more than 53% of Australia's wheat exports.

The surge in exports to Asia is largely the work of Australia's imaginative, Canberra-backed industrial and commercial associations and an army of tropical-suited Australian salesmen, who tout their goods in every Asian bazaar. This spring a "floating trade fair," consisting of 100 businessmen and 400 trade exhibits aboard the merchant ship *Centaur,* dropped anchor in Hong Kong, Manila, Bangkok, Osaka, Tokyo and Singapore, piped 90,000 visitors aboard and transacted $1,125,000 worth of business right on deck. Australia's enterprising businessmen miss few opportunities to mold their exports to their customers' specific habits and needs: in a wily and woolly coup in Thailand, they recently landed a large order for plastic sneakers by producing them in a shade of orange that matched the robes worn by the country's innumerable Buddhist monks.

ARGENTINA

Bankruptcy by Ballot

One grey morning in Buenos Aires last week a milling throng of 3,000 massed in front of the River Plate Club. Shuffling and shivering in the cold of the South American winter, they waited neither for soccer nor for revolution, but for a court of law to convene. No ordinary courtroom could have held all the clamoring creditors of Alberto Abraham Natín, 55, a dapper, moon-faced real-estate wheeler-dealer who was charged with fraud and faced with bankruptcy. Before the crowd, seated at a stand draped in dark red felt, was a stern-faced federal judge. After months of delays and postponements, the time of decision had finally come in one of Argentina's most notorious financial scandals.

Flamboyant Stock Hawking. In Argentina's inflation-plagued economy, businessmen know bankruptcy almost as well as success. The commerce courts are clogged with tangled litigation; 1,780 bankruptcies were declared in 1962. But no other financial empire has fallen with as resounding a crash as Natín's. Only four years ago, Natín was the owner of a small company with the long name of Organization for Trade, Administration, Property and Real Estate Representation—or simply ONAPRI.

Then in a flamboyant, stock-hawking promotion, Natín held out promises of fantastic future profits in construction and real estate, enlisted glamorous TV and movie celebrities as initial backers. ONAPRI became the hottest piece of paper in the country, and Natín had little trouble selling $16 million worth of stock to 13,000 workers, socialites and laden ladies.

The disenchantment was swift. During Argentina's 1962 recession, stock brokers hauled Natín into court to collect their commissions, and investors stormed the courts in panic. Natín was bounced in and out of jail three times on various charges of fraud, bad checks and "economic delinquency."

Cheers & Handcuffs. At the first major hearing last May, about 10,000 creditors showed up, as much to see the pudgy operator as to hear a report on ONAPRI's financial plight. When he appeared, handcuffed to two policemen, his creditors cheered loudly. Natín, the court determined, had liabilities of $17 million, and only $4,900,000 in assets. But the court agreed to call another meeting to let the stockholders decide by a vote whether he should be given a chance to settle his debts or be declared bankrupt.

Natín figured he had a chance. At the meeting last week, he made one last plea for a *concordato*—an agreement to withhold bankruptcy proceedings. He asked for two years: "ONAPRI can recover its position if it is permitted to continue operating." In secret balloting, some 7,600 creditors favored giving Natín his time, but the margin was short of the required two-thirds. Natín's empire was declared bankrupt, and Natín went back to jail.

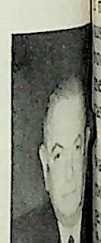
lers of the Sûreté

A Shot in the Dark. Four shots, in A police car roars up to the e-cochere of a château and out s—*sacrebleu!*—it is the terror of tmartre, the Napoleon of criminol- It is Inspector Clouseau (Peter ers) of the Sûreté. Fresh from his ing exploits in *The Pink Panther*, the ector is a model of sangfroid. Be- h the vigorous mustache, the lips ironical; beneath the snap-brim felt, darting eyes see everything—well, ything except the goldfish pond.

Sopping but unstoppable, Clouseau iciously sniffs at a jar of cold am, moves away with a big white b on the end of his nose. He re- tively sucks on a ballpoint pen, re- mes the interrogation with a bright e tongue. He nervously lights the garette of a seductive suspect (Elke mmer), forgets to extinguish the ter before he puts it back in his cket. "Eeeeeeeeek," Elke squeals a ment later. "You're on fire!"

Flaming but unflappable, Clouseau s off his trench coat, strides to the dow and—wham! The chief inspec- r (Herbert Lom) bursts through the droom door, the bedroom door clouts ouseau in the suffix, Clouseau takes f as though there were lead as well as pper in his alloy. When next seen he digging himself out of a gravel drive- ay two stories below and cringing as e chief inspector scornfully adds in- lt to injury. "Clouseau!" the old brute llows. "You're off the case."

Obviously, Inspector Clouseau never es solve his case, but he manages, in manner of speaking, to dissolve it: the spects are all blown to bits by a mb. Long before that hilarious mo- ent—even though the inspector oc- sionally palls, and the one-joke script much less amusing than the Broad- ay farce it is broadly adapted from—ost customers will have reinforced a neral conviction and a popular hope: at Peter Sellers is one of the funniest en alive and that the dear fellow will ease get well quick.

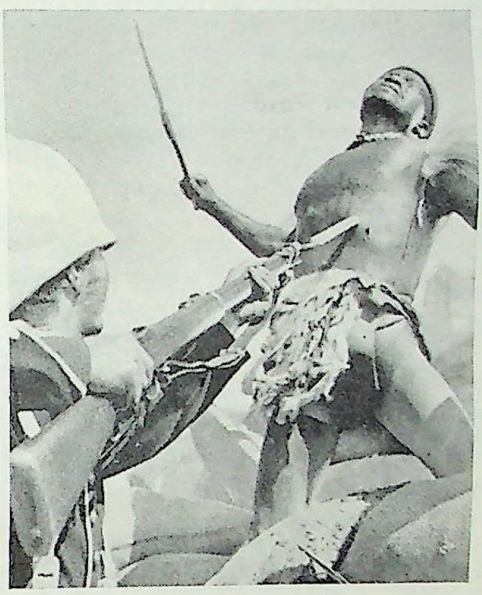


rand & Gory

Zulu vividly re-creates an episode om the British conquest of Zululand n 1879. Its heroes were some 130 red- ats who made a blood-and-guts stand against 4,000 proud Zulu warriors be- ging the mission outpost at Rorke's ift, Natal. Eleven of the survivors ere later awarded Britain's coveted ictoria Cross, the most ever given aft- r a single military action.

Improving on history, Director Cy ndfield has made a battle film in the grand carry-on-lads tradition of *Four Feathers* and *Gunga Din*. His characters re swiftly etched stereotypes, a draw- ack easily overlooked once the action begins to surge against the eye-filling sweep of Natal's brooding, beautifully photographed Drakensberg Mountains.

Soon an insidious clacking sound echoes through the surrounding hills. It is the primitive, awful din of short-stabbing spears hammered against rawhide shields. Now the threat becomes palpable. Across the horizon stretches a line of warriors clad in animal skins and necklaces of baboon teeth, wailing *"Usuto! Usuto!"* (Kill! Kill!) The first wave sacrifices itself to test British firepower; then on they come, wave after wave, lunging, hacking, dying. For all but the squeamish, it is a grisly good



BATTLE IN "ZULU"
For blood and guts, a warrior's salute.

show, and the film's climax is visually and dramatically stunning—when the fierce Zulus, some 18 hours later, roar acknowledgment of their enemy's die-hard courage and withdraw, shields raised in tribute.

That moment alone explains, perhaps, why *Zulu* is currently raking in more pounds sterling than any other film in the history of British cinema. After a spate of "kitchen dramas" filled with whining social protest, *Zulu's* bloodbath refreshes the spirit with its straightforward celebration of valor, tenacity and honor among men.

Reynolds to the Rescue

The Unsinkable Molly Brown is a massive song-and-dancer derived from Meredith Willson's also-ran Broadway musical of 1960. Defying the laws of levity, it follows an ebullient, money-grubbing Irish lass who marries a miner and gets rich so she can sashay in Denver's high society. When the bluebloods snub her, she flounces off to Yurrup to bring home some dukes and duchesses, finally earns her place among the snobs and saves her marriage—for reasons clear only to musical comedy authors—by surviving the *Titanic* disaster.

Plot, though vaguely based on reality, is only one of *Molly's* handicaps. The sound track seems to amplify every commonplace tune into a fugue for trip hammers. The red plush trappings of old Colorado, as Hollywood sees them, produce instant antipathy. And Broadway Leading Man Harve Presnell repeats his stage role with little more than stiff, strong-lunged precision.

But despite this freight of handicaps, *Molly* does not go under—mainly because of Debbie Reynolds. Having browbeaten M-G-M's executives into letting her play the part—a plum better suited, they thought, to Shirley MacLaine—Debbie *Molly*fies the audience with all the raucous charm and irrepressible high spirits of a girl who is out to win the Derby astride a dead horse. As a comedienne, she spurns subtlety but makes the shortcoming seem a solid gold asset in a character who boasts: "I'm a vulgar, extravagant *nouveau riche* American!" She even works slick, if slightly unnerving, pathos into a moment of pining over her wedding ring, a jewel-encrusted cigar band bearing the fond inscription: "Always Remember Two Things—That I Love You, and the Name of the Bank."

Sawdust Spectacular

Circus World. Still doggedly reproducing the collected epics of Cecil B. DeMille, Producer Samuel Bronston has launched a three-ring *Circus*. Though likable enough, this least pretentious of Bronston spectaculars cannot compare with *The Greatest Show on Earth*. It is just a minor romantic tearjerker, a *Stella Dallas* with sawdust.

When Big Top Impresario Matt Masters (John Wayne) takes his show to Spain, he has never told his ward (Claudia Cardinale) that her mother (Rita Hayworth) was the woman he once loved. No need to, really, because Rita has been missing for 14 years—guilt-ridden since the suicide of her aerialist husband after he discovered that her heart had been doing triple somersaults with the wrong man. Of course Rita reappears in Europe, and poignant revelations spring up faster than acrobatic midgets. Claudia ultimately overcomes her bitterness toward the older folk, which leaves her free to concentrate on a Wild West rider (John Smith).

While both love affairs develop innocuously, the gaps in the story line are filled by some delightful European circus acts and other diversions. A 4,000-ton ship keels over at the pier in Barcelona, and one exciting scene has Hayworth, Cardinale and Wayne all dangling from the rigging of a burning tent. The only serious mishap to befall *Circus World* is Cinerama, which magnifies a meager tale beyond all reasonable proportions. To sit through the film is something like holding an elephant on your lap for two hours and 15 minutes. You can hardly measure what you have there, but it leaves a definite impression: it's big, it's warmhearted, and tons of fun for the kids.

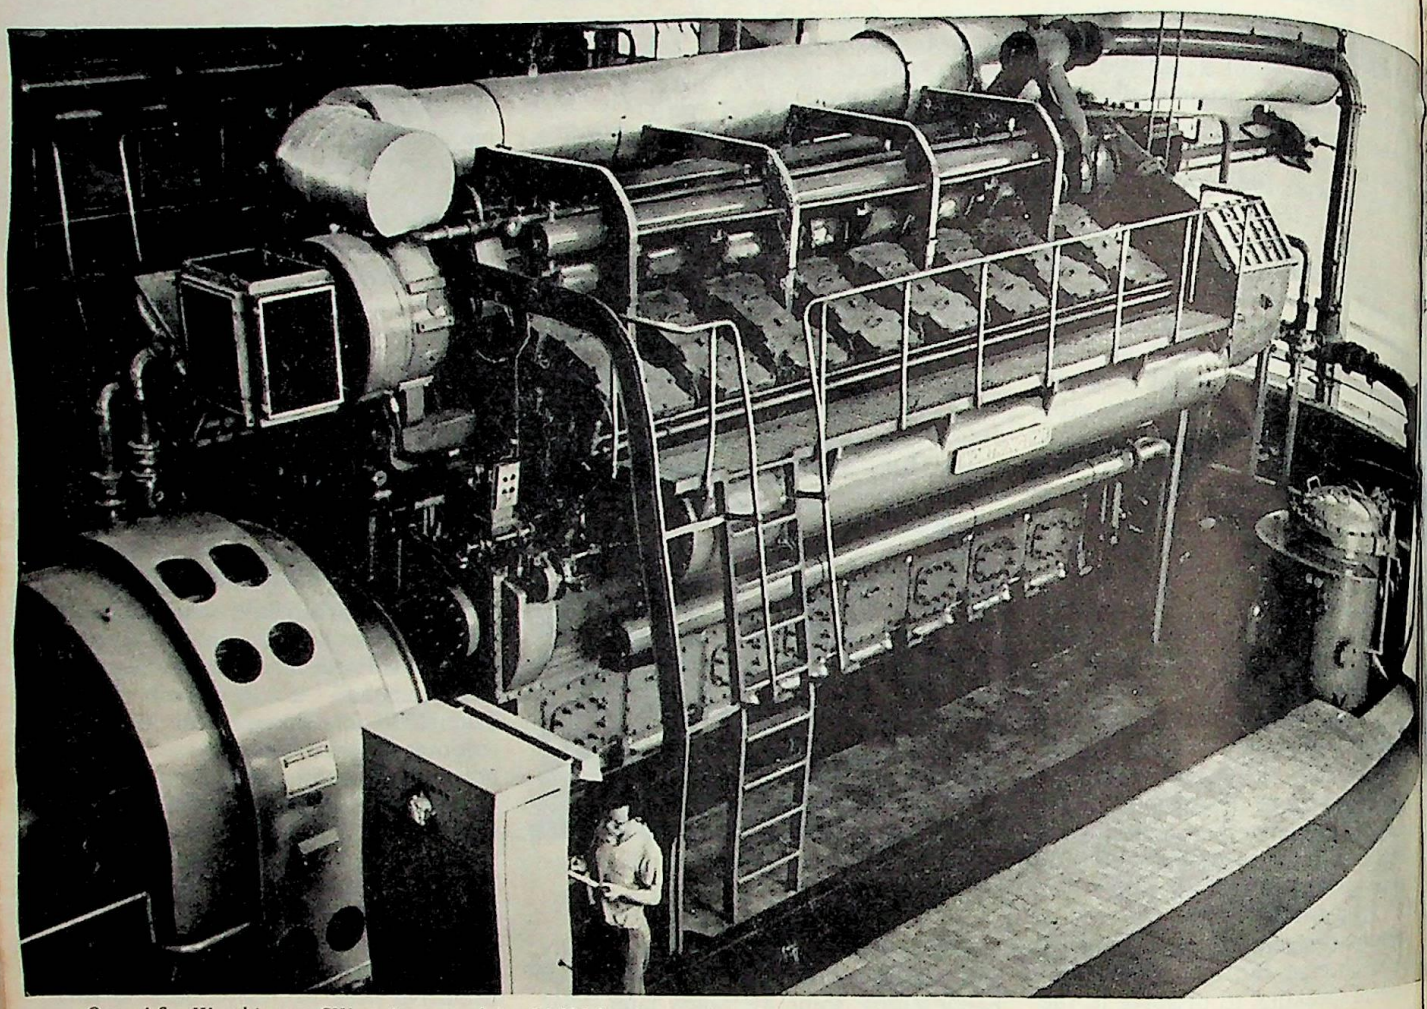
When you need continuous reliable power...
When peak power loads are increasing...
When additional power is required quickly...



One of five Worthington SW engines supplying 14,325 kw for municipal power in a major Far Eastern city.

...our diesel engines supply that power most economically

We are talking about Worthington diesel engines. They provide low cost power in units of 1,000 to 3,500 kw. You can use them as individual power plants or fit them into your present generating system. Simply add units as the power load increases, keeping plant expansion costs to a minimum.

The SW diesel is specifically designed for continuous duty power generation. It is *not* adapted from some other engine application, an important factor to consider when choosing diesel power equipment. Another factor is the SW's moderate running speed—450 rpm. At this speed parts wear is at a minimum. In fact, one Worthington power engine ran for 13 years on its original pistons and liners. Maintenance is also low—generally 25,000 hours or more between scheduled overhauls.

Fuel consumption is the lowest possible. Why? Because the SW is the only diesel originally designed for high pressure turbocharging above 200 bmep. With turbocharging normally wasted exhaust gas energy is recaptured and used. This makes a typical Worthington turbocharged unit 15%-20% more efficient than the best naturally aspirated unit.

Over-all thermal efficiency is much higher too. With special engine jacketing you can use both jacket heat and lube oil heat and boost thermal efficiency to 58%. If you also use recoverable exhaust heat you can raise this efficiency to 76%. This is nearly double what the efficiency would be if measured by crankshaft alone... thus nearly double the fuel economy.

Worthington SW engines are proving themselves in power installations throughout the world. For more information on how they can boost your power output economically, write for Bulletin 4314-B1 to Worthington Corporation, Dept. 108-87E, Harrison, New Jersey, U.S.A.

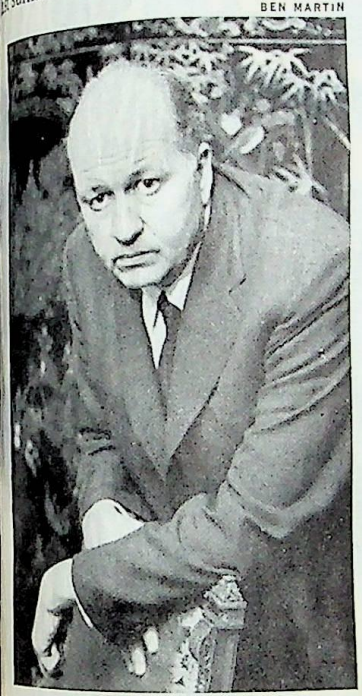
...st Poems

THE FAR FIELD by Theodore Roethke. 95 pages. Doubleday. $3.50.

"What I love is near at hand, / Always, in earth and air," Theodore ...ethke wrote in the title poem of this ...collection. What he loved was growing things (no important U.S. poet since ...reau has been less citified) and their ...tures. What he celebrated was his ...e for his young wife (now 38, she ...d been his student at Bennington Col...ge, where he taught English). And ...at he feared was death.

And as death approached (he died ...t summer, aged 55, of a heart attack),

BEN MARTIN



THEODORE ROETHKE
In love with finite things.

...s poems seem to have taken on a new ...arity of line and image, a new depth ...f tone. In these poems, written in the ...st seven years of his life, he loving...y and lingeringly catalogues objects: ...ef and "the falling of small waters," ...elds and abandoned farms, vireos, ...arblers and "the heron's hieratic fish...g," the greenhouses and roses of his ...rist father remembered from his ...Michigan boyhood. Musical in themselves, these flashing descriptions are ...presented almost brusquely, so that they ...ay seem at first to be curiously opaque ...nd lacking in resonance.

But the resonances somehow develop ...with rereading. Then Roethke's driest ...nes can blossom as unexpectedly as the ...desert cactus. One of his repeated, even ...self-conscious influences in such pas...sages is Walt Whitman ("Be with me, ...Whitman, maker of catalogues / . . . the ...terrible hunger for objects quails me"). ...But for Roethke, "all finite things reveal ...infinitude," and

. . . if we wait, unafraid, beyond the fearful instant,
The burning lake turns into a forest pool,
The fire subsides into rings of water,
A sunlit silence.

Beyond Whitman, the poems poignantly betray Roethke's consciousness, like Andrew Marvell's, of "Time's winged chariot hurrying near," and Roethke cannot even playfully think of love without remembering death. The *Wish for a Young Wife* is characteristic:

My lizard, my lively writher,
May your limbs never wither,
May the eyes in your face
Survive the green ice
Of envy's mean gaze;
May you live out your life
Without hate, without grief,
And your hair ever blaze,
In the sun, in the sun,
When I am undone,
When I am no one.

In a concluding sequence, which he frankly labeled "sometimes metaphysical," Roethke was on fire with God. "What shakes the eye but the invisible/ Running from God's the longest race of all," he wrote. And in a voice of anguish and protesting confrontation rarely heard in poetry since Donne called on his deity to "batter my heart, three person'd God," Roethke cries:

Godhead above my God, are you there still? . . .
From me to Thee's a long and terrible way.
I was flung back from suffering and love
When light divided on a storm-tossed tree.
Yea, I have slain my will, and still I live;
I would be near; I shut my eyes to see;
I bleed my bones, their marrow to bestow
Upon that God who knows what I would know.

The Conscientious Objectors

BUT WILL IT SELL? by Marya Mannes. 240 pages. Lippincott. $4.50.

WHAT CAN A MAN DO? by Milton Mayer. 310 pages. Chicago. $5.

Gadflying is an honorable calling, but it has its pitfalls. The truly conscientious gadfly is apt to run out of material at around age 33 and find himself in the embarrassing position of gadding at the same old targets. The less conscientious gadfly may even invent new subjects to gad about.

Marya Mannes, 59, and Milton Mayer, 55, are two of the more durable gadflies of U.S. letters—lifelong, card-carrying conscientious objectors. Between them, they provide a sort of check list of the more hoary clichés of Instant Social Criticism.

Public Slugging. Of the two, Mayer is both the more messianic and the more corrosive. A wisecracking, easy-going chap, he was a protégé of the University of Chicago's Robert Maynard Hutchins, taught in Mortimer Adler's Great Books program before launching a career as a freelance writer and fulltime polemicist. He has been flailing away at his chosen targets—war, racial prejudice, big government—for something close to a quarter of a century. The secret of the art, he understands, is to avoid the complicating thought and the qualifying phrase; indeed, few writers have his knack for reducing problems of considerable complexity to aboriginal simplicity.

U.S. society, he declares in this collection of magazine articles, has "a record of private and public shooting, slugging, mayhem, assault, battery, contusions, abrasions, lynching and vigilantism unmatched by any people who come readily to mind, except, perhaps, the ancient Cossacks." With that vision of the violent society in mind, he

ROLEX
A landmark in the history of
Time measurement

goes on to argue that the U.S. gives away a little bit more of its "liberty" every time it yields to its fatal impulse to "horn into every war within reach." In fact, says Mayer, after two world wars, both of which he regards as U.S. defeats, "freedom is less well preserved than it was before those two wars began." He has no doubt that "Hitler indeed imposed Prussianism on us, but he was dead when he did it." Americans, says Mayer, "love war so much that we are willing to lie to our young men in order to persuade them to be killers."

Conformity is the U.S.'s worst social evil. In "The Case Against the Jew," Mayer argues not that the Jew has failed to become assimilated but that he has assimilated too much, placing his faith in "the grand fallacy of adjustment." The most insidious ally of conformity is the "Giant Economy-Size" government, which, "as it fends every evil from us, will end by fending every virtue from us, too."

The Old & Rich. Marya Mannes is a stately, handsome, sharp-tongued woman who enjoys nothing more than rising at a banquet table and flailing the bejesus out of her hosts. She once told the Women's National Press Club that, in most cities in America, the public "buys your papers to hold up at breakfast or to line the trash can or to light a fire, but not to learn."

The villains in U.S. life are "the old and the rich, who have come to think of our way of life as the only way." The advertisers, particularly television advertisers, play so insidiously on the emotions of America "that they must bear a large part of the responsibility for the deep feelings of inadequacy that drive women to psychiatrists, pills or the bottle." They have foisted on women a vision of themselves as homemakers that has crippled large numbers of them intellectually as well as emotionally.

Concludes Feminist Mannes: "We are neither accessories, instruments, nor objects, although in the wide range from housekeeper to whore we have for a very long time been used as such."

Fold, Spindle & Mutilate

THE 480 *by Eugene Burdick.* 313 pages. *McGraw-Hill.* $5.

Science fiction has all but expired, trampled to death by onrushing reality. Its successor is what might be called political-science fiction. Its practitioners aspire to write tomes that seem just like historical novels, but in the future tense. *Seven Days in May, Fail-Safe, On the Beach*—they have gone from *Ugly* to worse and from *ad hoc* to pure hokum. Right along with them has gone Eugene Burdick, co-author (with different partners) of both *The Ugly American* and *Fail-Safe*, and he now tries it solo.

Burdick's new gimmick—true to their science-fiction ancestry, these novels usually require a gimmick—is the ominous threat to democracy posed by computers, which, he maintains, can tell politicians exactly how to manipulate the inertness of voters to win national elections for sure.

With the Republicans currently most in need of such help, Burdick imagines the real control of that party falling under the influence of two young behavioral scientists, the male named Madison Curver and the beautiful female known only as Dr. Devlin. These two are so brilliant that they talk only in footnotes:

She: A study by Thorndike and Muscatine indicates that professionals are very limited in their span of knowledge.

He: You mean the *other* Thorndike.

Updating computer techniques that were tried out on a small scale by the Kennedy forces in 1960, Mad and Dev set out to win the G.O.P. nomination

Lenin Landslide

THE LIFE OF LENIN *by Louis Fischer.* 703 pages. *Harper & Row.* $10.

THE LIFE AND DEATH OF LENIN *by Robert Payne.* 672 pages. *Simon & Schuster.* $8.50.

LENIN: THE COMPULSIVE REVOLUTIONARY *by Stefan Possony.* 418 pages. *Regnery.* $7.95.

IMPRESSIONS OF LENIN *by Angelica Balabanoff.* 152 pages. *University of Michigan.* $5.

Since there has never been a really good biography of Lenin in English, the idea of doing something about it came more or less simultaneously to three authors. As soon as each heard the others were at work, the race to get published was on. Stefan Possony won it, but Authors Payne and Fischer were close behind.

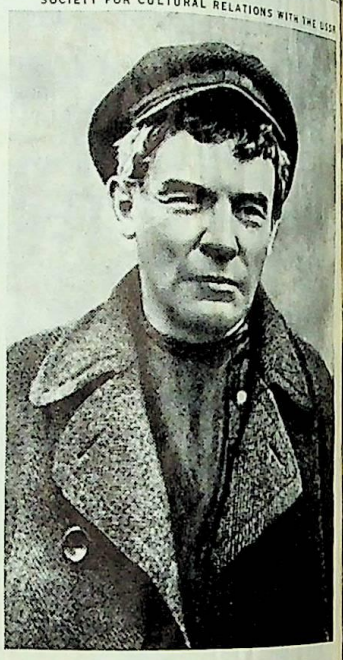
Each biography seems tailored to a specific audience. Robert (*The Terrorists, Forever China*) Payne, a prolific as well as a catholic writer, has produced a Book-of-the-Month selection aimed at romantics. Stefan Possony, political studies director at Stanford's Hoover Institution, will appeal most obviously to believers in the conspiratorial view of history, since his research comes largely from police and foreign office files, ranging from Japan to France, and covering mostly Lenin's life as a fugitive conspirator.

Fed Suspicion. On balance, Louis Fischer's is the best of the three biographies. Fischer has devoted much of his long lifetime to the study of Russia (*The Soviets in World Affairs; Russia, America, and the World*), and he soberly weighs those episodes that the other two biographers sometimes accept as fact, offering the pros and cons of each argument. There is, for example, a genuine riddle about Lenin's racial background. Author Payne insists "there was not a drop of Russian blood" in Lenin, and claims his ancestry was German, Swedish and Chuvash (a Tatar tribe living along the Volga), and that it shaped his personality. Without citing any evidence, Author Possony argues that the "evidence indicates" Lenin's grandfather "was born a Jew." Fischer places the responsibility where it belongs, on the Soviet government. "The records were undoubtedly available in Russia's bulging archives," he writes, "but the Bolsheviks saw fit to suppress them. This feeds the suspicion that there is something to conceal."

What emerges most strikingly from all three biographies is the awesome power of a single and single-minded man to change the course of history. If the Kaiser had flatly refused to let Lenin cross wartime Germany and enter Russia, if the Kerensky government had succeeded in arresting and executing Lenin (as he fully expected it to try to do), would the Bolsheviks now be merely a footnote to history? One of the least of the paradoxes is the fact that Communism, which teaches the inevitability of historical forces and the impotence of the individual in shaping them, owes its conquest of Russia to the energy and confident thrust of Lenin alone.

Refused Axiom. But it is in the memoir of Angelica Balabanoff that the most human—and in some ways the most terrifying—portrait of Lenin emerges. Memoirist Balabanoff is now

SOCIETY FOR CULTURAL RELATIONS WITH THE USSR



BEARDLESS LENIN IN DISGUISE
The awesome power to change.

86 and lives in Rome. The daughter of a wealthy Russian family, she eagerly and early espoused Lenin and his cause. But she always preferred to be "a victim of power rather than a holder of it," and has spent half a century defending the downtrodden in a variety of furnished rooms from Moscow and Paris to New York and Vienna. Both naive and deeply ethical, Angelica Balabanoff had obviously no place in the Soviet power setup, but Lenin wanted her there, and she tried her best to please him.

Refusing the axiom Lenin lived by, "everything that is done in the interest of the proletarian cause is honest," Angelica repeatedly carried her complaints to Lenin until he finally said in despair, "Comrade Balabanoff, what use can I find for you?"

Her incorruptibility of spirit seems to have touched even his amoral heart. At their last interview, Angelica said sadly to Lenin, "Perhaps Russia does not need people like me." Prophetically, Lenin replied, "She needs them but does not have them."

After you've seen Europe, fly 'Round the World with Pan Am!

Europe every day of the week—on Pan Am!

Only Pan Am flies direct to major European cities, and on 'Round the World, with jets every day of the week. How could your trip planning be made easier?

But there's even more than convenience to Pan Am's schedule to Europe. On Pan Am you can choose from an array of magical cities to visit along the way—at no extra fare. Hong Kong. Bangkok. New Delhi. Karachi. Beirut. To name just a few.

So the choice is up to you:

Any day, fly fast and direct jets to Frankfurt or London (or, with a single, fast connection, to Rome or Paris). Frequent direct flights to Istanbul, Belgrade, Vienna and Munich, too.

Or—go to Europe the leisurely way. Enjoy all those fascinating Orient and Middle East holiday stopovers.

Any way you do it, you'll like being a Pan Am Traveler. Generous, relaxing service by expert, bilingual cabin attendants. Cuisine by world-famed *Maxim's of Paris*. Best of all: the *sure* feeling you have, flying with Pan Am's *Priceless Extra of Experience*.

FIRST ON THE PACIFIC . . .
FIRST ON THE ATLANTIC . . .
FIRST IN LATIN AMERICA . . .
FIRST 'ROUND THE WORLD

THREE FIRSTS

Everyone knows Mt. Fuji, the highest peak in Japan. The new railway bridge spanning the Fuji River nearby is Japan's longest, and will carry the super-expresses of the new Tokaido Line, the world's fastest.

Fuji Steel supplied all the steel for this modern, 1,374-meter bridge. Fuji products are in high demand for similar projects attesting to Asian progress. Look to Fuji for the best in steel.

FUJI IRON & STEEL CO., LTD.

Sporty!

What is it that gives the new BELLETT such exceptional roadability? Independent four-wheel suspension! Because each wheel is sprung independently your Bellett steps lightly over bumpy roads, gives you reassuring stability at high speeds, and reduces sway and roll when turning. It is competition-bred ideas like independent suspension that set this lively performer apart from the rest of the compact crowd.

BELLETT strikes a satisfying balance between sporty performance and family car practicality. Its four-door body provides ample room for the whole family. The 1500cc powerplant delivers its maximum torque at low rpm for consistent economy and low upkeep. Yes, here's more than "just another compact." We call it a **family sports sedan.** Why not see it soon at your Isuzu dealer. Test-drive it. Be a sport!

TIME LISTINGS

TELEVISION

The networks plan to cover the nominating proceedings at San Francisco's Cow Palace until the last ballot is counted. CBS is using four times as much manpower and equipment as in 1960, features 22 on-the-scene correspondents, including Anchorman Walter Cronkite, Reporters Harry Reasoner and Eric Sevareid. NBC has brought 60 tons of equipment, is building four complete studios, and Chet Huntley and David Brinkley will be bolstered by Floor Reporters John Chancellor and Frank McGee. In addition to Pundits Howard K. Smith and Edward P. Morgan, ABC viewers can benefit at least twice a day from the insights of Special Commentators Dwight Eisenhower, Ike's former Press Secretary James Hagerty, and ABC Editor William Lawrence.

Wednesday, July 15

REPUBLICAN NATIONAL CONVENTION (ABC, NBC, and CBS, 4:30 p.m.-conclusion).*

Thursday, July 16

REPUBLICAN NATIONAL CONVENTION (ABC, 7 p.m.-conclusion; NBC, 7-11 p.m.; and CBS, 7:30 p.m.-conclusion).

Friday, July 17

REPUBLICAN NATIONAL CONVENTION (ABC, 7 p.m.-conclusion; NBC, 7-11 p.m.; and CBS, 7:30 p.m.-conclusion).

Saturday, July 18

46th P.G.A. CHAMPIONSHIP (CBS, 5-6 p.m.). The nation's leading professional golfers compete from the Columbus Country Club, in Columbus, Ohio.

SATURDAY NIGHT AT THE MOVIES (NBC, 9-11 p.m.). Dana Wynter and Richard Egan star in *The View from Pompey's Head*. Color.

Sunday, July 19

P.G.A. CHAMPIONSHIP (CBS, 4:30-6 p.m.). Final holes of the championship.

EISENHOWER REVIEWS THE G.O.P. CONVENTION (ABC, 5-6 p.m.).

THEATER

Straw Hat

There has always been some question as to whether American actors can successfully get themselves up in tights and doublets, flick the old rapiers around, and spew forth Shakespeare. Some have shown they can indeed, and in ever growing numbers others are getting the chance to try, most importantly in the Shakespeare festivals and rep companies that have sprung up from coast to coast, indoors and out, even in reproductions of Elizabethan theaters. Several cities have free performances in parks. And one outdoor theater has imported an entire British rep company.

Notable offerings include:

OREGON SHAKESPEARE FESTIVAL (Ashland): *Merchant of Venice, Lear, Twelfth Night* and *Henry VI, Part 1*.

OLD GLOBE THEATER (San Diego): *Macbeth, Much Ado About Nothing* and *Measure for Measure*.

PILGRIMAGE THEATER (Hollywood Hills): John Houseman's U.C.L.A. production of *Lear*, starring Morris Carnovsky.

RAVINIA FESTIVAL (Highland Park, Ill.): *Henry V, Twelfth Night* and *Hamlet*, put on by a British company under the direction of Peter Dews (who put together TV's "Age of Kings" series).

TYRONE GUTHRIE THEATER (Minneapolis): *Henry V*, starring George Grizzard.

GREAT LAKES SHAKESPEARE FESTIVAL (Lakewood, Ohio): *The Taming of the Shrew, Hamlet, Much Ado, Henry VI, Richard III* and *Antony and Cleopatra*.

SHAKESPEARE IN CENTRAL PARK (Louisville, Ky.): *Shrew, Macbeth* and *As You Like It* (all free).

IRISH HILLS PLAYHOUSE (Onsted, Mich.): *Richard III, Shrew, Twelfth Night, Macbeth* and *Comedy of Errors*.

SHAKESPEARE SUMMER FESTIVAL (Washington, D.C.): *Midsummer Night's Dream* at the foot of the Washington Monument (free).

ACADEMY THEATER (Atlanta): *Midsummer Night's Dream, Hamlet* and *Henry IV, Part 2*.

AMERICAN SHAKESPEARE FESTIVAL (Stratford, Conn.): *Much Ado, Richard III* and *Hamlet*.

NEW YORK SHAKESPEARE FESTIVAL (New York City): *Othello* at Central Park's Delacorte Theater and *Midsummer Night's Dream* touring the boroughs (both free).

STRATFORD FESTIVAL (Stratford, Ont.): *Richard II* and *Lear*.

CINEMA

A SHOT IN THE DARK. As Inspector Clouseau of the Sûreté, Peter Sellers pratfalls his way through a multiple murder case and proves beyond reasonable doubt that he is one of the funniest men alive.

ZULU. Brisk, bloody, eye-filling adventure inspired by the heroism of 130 British soldiers who fought off 4,000 Zulu warriors at Rorke's Drift, Natal, in 1879.

THE UNSINKABLE MOLLY BROWN. This massive song-and-dancer based on Meredith Willson's also-ran Broadway musical owes nearly all its buoyancy to a raucous, winning, free-style performance by Debbie Reynolds as the rich mountain gal who yearns to make a splash in Denver society.

THAT MAN FROM RIO. Poisoned darts and snappish Brazilian crocodiles are among the dangers faced by Jean-Paul Belmondo in hilarious spoof of all the next-earthquake-please action pictures.

NOTHING BUT THE BEST. A mordantly funny variation on *Room at the Top*, this British comedy studies a climber (Alan Bates) who hires an upper-crust crumb to teach him the niceties of snobbery.

THE ORGANIZER. In this vivid, beautiful account of a 19th century strike in Turin, Marcello Mastroianni fascinatingly portrays the early labor leader as a kind of holy hoodlum.

YESTERDAY, TODAY AND TOMORROW. The ubiquitous Mastroianni, evenly matched against one of Italy's great natural wonders, Sophia Loren, in three racy modern fables directed by Vittorio De Sica.

BECKET. A stunningly filmed dramatization of the church-state conflict that becomes a death struggle between 12th century Archbishop of Canterbury (Richard Burton) and King Henry II (Peter O'Toole).

BOOKS

Best Reading

THE FAR FIELD, by Theodore Roethke. These poems, written in the last two years before Roethke died of a heart attack, are beautiful in themselves and provide for him an astonishingly true memorial. All the themes of which he was a master re- appear: the greenhouse, the root, the flower and a troubled reaching toward God.

TO AN EARLY GRAVE, by Wallace Markfield. On a kind of comic Volkswagen odyssey through Brooklyn, four Greenwich Village intellectuals search for the funeral of a compatriot and discover themselves: pathetic, rather pretentious fellows who at heart prefer the cult of Humphrey Bogart to the cult of the Port-*san Review*.

TWO NOVELS, by Brigid Brophy. These short novels contain glittering prose, a variety of verbal tricks, and almost too many *tours de force* to digest at one reading. Already known as the most tongued of British critics, Author Brophy has now hit a fictional stride that should place her well up in the ranks of Britain's formidable array of lady novelists.

THE SCARPERER, by Brendan Behan. To "scarper" in Gaelic is to escape, and Behan runs off with some Dublin weirdos glorifying their past and dreaming their future. This short novel is vintage Behan (1953).

A MOVEABLE FEAST, by Ernest Hemingway. This memoir of Paris, which the author suggested should be read as fiction, has a ghostly quality: it reads as if the author had written in the '20s what in fact he wrote in the '50s. All the famous writers are there: James Joyce, Ezra Pound, Gertrude Stein, the Fitzgeralds, characterized memorably, if sometimes nastily.

THE INCONGRUOUS SPY, by John le Carré. A reissue of the author's first two books in one volume. One is a slightly fey mystery set in C. Day Lewis' social set at Oxford; the other is a dress rehearsal for *The Spy Who Came In from the Cold*—with all the props, some of the characters and bleak tone. Both plots are exciting.

JULIAN, by Gore Vidal. Into his fleeting reign as Emperor of Rome (A.D. 361-363) Julian crammed enough wars and grandiose plans to make Alexander the Great seem inert. With elegance and flourish, Vidal's novel records every last adventure, including Julian's attempt to abolish Christianity, but it does not quite capture its elusive subject.

Best Sellers

FICTION

THE NEW YORK FAIR

The fair is fun, in hundreds of pavilions, ...sements and restaurants sprawled over ...area almost as large as Central Park. ...see it with pleasure calls for some ...ming. Herewith some highlights.

PAVILIONS

SPAIN'S pavilion is a gentle interlacing ...courtyards and corridors filled with ...less surprises of light and shadow. Its ...ractions include priceless paintings of ...d modern masters, an impressive ...wing of its young avant-garde artists, ...k dancers who perform in a garden ...ded with red geraniums and, in the ...arket Plaza, hot *churros* and cold *hor-...ta*. It alone is easily worth a day at the ...r.

JAPAN juxtaposes its ancient arts with ...s modern technological achievements: ...e delicacy of flower arranging and a ...odel of the world's fastest train, wood-...ock printing and powerful microscopes. ...ominating the three-building complex is ...e of the finest works of art created for ...e fair—Masayuki Nagare's thunderous ...one wall, carved out of lava rock.

JOHNSON'S WAX has a fine film totally ...nocent of commercial or waxy intent. ...little boy stares at the city through a ...ism that changes boredom to beauty. ...r the viewer the film does much the ...me thing. *To Be Alive!* is one of the ...w events worth a wait.

GENERAL ELECTRIC. Part of the outside ...ll revolves, taking six auditoriums full ...f people around Walt Disney's puppet ...ma of domestic electricity. In the ...ilding's core, there is a show about the ...iverse on the dome and a display of ...om fusion in the basement.

IBM. A huge hydraulic mechanism ...grinds away and whisks you 53 ft. up into ...IBM's huge egg nesting in steel trees. ...There you can peek 90 ft. down to the ...ground or settle back and be assaulted by ...a plethora of images flipping onto nine ...screens faster than you can blink.

COCA-COLA. In this delightful walk-...through exhibit, Coke turns up in the ...damedest places: hidden in a Hong Kong ...fish market, along the Taj Mahal's jas-...mine-scented promenade, tucked in a Ba-...varian snowbank, cooling in a Cambodian ...rain forest, or gracing the captain's table ...on a cruise ship to Rio.

PROTESTANT AND ORTHODOX CENTER. For ...an eloquent little film called *Parable*, ...writer-Director Rolf Forsberg chose a ...setting much like the fair itself. A sad-...faced clown in whiteface trails behind a ...circus troupe, collects a host of friends ...and a slew of enemies. Finally, when he ...frees some human puppets from their cruel ...manipulator, he is symbolically crucified.

FINE ARTS. The former Argentine pavil-...ion makes a splendid, spacious showcase ...for "American Art Today"—250 paint-...ings, prints and sculptures from as many ...contemporary artists. Most modern mas-...ters are represented, but a certain homo-...geneity makes the exhibition less exciting ...than it could have been.

ILLINOIS. Honest Abe sits somber and ...silent in a high-back chair, rises, bows, ...and delivers a 10-min. oration. Disney's ...Lincoln is a little stolid, but then he is ...stuffed with things like steel, air tubes and ...hydraulic valves.

FLORIDA has pink flamingos nuzzling in a garden, porpoises prancing in a pool, and a little gem of an art show. The 13 paintings and three sculptures, all master-works, include a Rubens, a Veronese, one of Monet's wavery *Water Lilies*, a smooth Brancusi bronze, a stark Soulages and Gaston Lachaise's *Elevation*.

VATICAN. Some 78,000 people daily have been viewing the *Pietà*. That its monumental tenderness manages to penetrate the frigid atmosphere is a tribute to Michelangelo's genius. In the chapel upstairs is *The Good Shepherd*, a magnificent early Roman sculpture, also from the Vatican's vast collection.

GENERAL MOTORS' Futurama ride glides past floating space stations and aquacopters touring the ocean's depths. What excites the imagination most is what seems most possible (and needed): three dream cars designed to run on automatic highways where the driver would push a route-programmed punch card into a slot, turn over all controls for the trip to an electronic system.

FORD. New cars carry fairgoers into a Disney version of the prehistoric past; the rest of the place seems filled with Fords —new, old, antique, and even parked in ponds around the pavilion like, well, like water lilies.

ENTERTAINMENT

OREGON. A logger jubilee on the banks of the Flushing River. Husky lumberjacks like "Big Bad John" Miller saw and chop through giant timber in jig time, logrollers joust each other into the amber waters, and a death-defying treetopper climbs a towering Douglas fir to do the Charleston 110 ft. up—without a net.

CARIBBEAN. At night torches blaze in the breeze, couples congregate at thatched-roof tables, while brown-skinned babes in tighter-than-skin pants gyrate to the hot blasts and calypso beat of bongo drums and steel bands. There is no place to dance, but the itchy-footed shake or shuffle outside on the sidewalk. It is, perhaps, better not to mention the food, but there is a $3 minimum after 6 p.m.

HELICOPTER TOUR. From the air, the riotous array of bubble-tops, fluted roofs and rainbow-colored domes make the fair look like a toyland tucked along Flushing Bay. Choppers lift off every eight minutes from the Port Authority heliport, make a figure 8 before plumping back down.

THE AFRICAN PAVILION is the swingingest —and the noisiest—place at the fair. For $1 you can walk past monkeys, giraffes, and native *objets d'art* into a gravel clearing surrounded by African hus flying the flags of 24 small nations, there watch red-robed Royal Burundi drummers, Olatunji and his passion drums, and gaily garbed Watusi warrior dancers.

CHILDREN & TEENAGERS

U.S. RUBBER. A giant rubber tire, six stories tall, frames a newfangled Ferris wheel popular with youngsters. After loading up, the swinging bucket seats go for a two-trip spin over the top.

HALL OF SCIENCE. Atomsville, U.S.A., is strictly for small fry. So that parents will take the hint, the entrance is only 5-ft. high. The little visitors can pospect for uranium on a world map, produce electricity by riding bicycles, shoot ' at "uranium atoms" on a *pinball* and measure their weight in atom seem to have plenty of fun, whet not they learn very much about ato

TIVOLI GARDENS PLAYGROUND. The Da are adept at entertaining children, a they take it seriously. Created by 13 of Denmark's top artists and architects, the playground is modeled after Copenhagen's. Kids can sail paper boats in shallow canals or swoop down a slippery slide into a sandbox, sit at tiny-tot tables and watch fireflies flit in the trees or play hide-and-seek in a maze with magic mirrors.

MINNESOTA brings a bit of the Big Woods to Flushing Meadow. Through winding waters and twisting tunnels, you can paddle your own canoe or, from a wooden bridge, fish for well-fed trout that will outfox the most dexterous angler.

RESTAURANTS

FESTIVAL OF GAS. Its blue and green color scheme is one of the coolest sights in the industrial area. From the glass-walled room, the diner can look out over a flower-sprinkled moat while enjoying such entrées as compote of squab, tenderloin flared in bourbon or baked country ham. $6-$12.*

TOLEDO, in the Spanish pavilion. "French cuisine is the best in the world," says Spanish Chef Francisco Gonzalez, "that is, the way I do it." The way he does it is just fine, and so is the service by a small armada of trim, bolero-jacketed waiters. $5-$25. The pavilion's No. 2 restaurant, the Granada, serves an all-Spanish menu that features *gazpacho* and *paella* at slightly lower prices.

THE MILLSTONE. From the colonial atmosphere of the New England pavilion's restaurant, you can look out onto a millpond while enjoying down East specialties like johnnycakes with hot maple syrup, clam chowder, giant breaded lobster, blueberry slump and apple grunt. $5-$9.

MOULTRAY'S POLYNESIAN. The Polynesian punch, served in an earthen vessel that looks like a tiny totem pole, is garnished with fruits and flowers and little lantern. Egg rolls are stuffed with tangy tidbits, and steak and shrimp are served on small bamboo spears. $3-$12.

FOCOLARE, in the Mexican pavilion, is one of the handsomest dining rooms at the fair. It serves good Mexican food (chicken, tacos and enchiladas) while *mariachis* serenade the cocktail crowd in the Café Alameda below. $4-$15.

MARYLAND'S restaurant overlooks a fisherman's wharf with eel pots dangling in the water, is a favorite for those who like down-home cooking. On the menu: terrapin, shad roe and, of course, Southern-style fried chicken. $3-$10.

DENMARK. The modern Danish restaurant has a sumptuous cold table that includes herring, lobster, salmon and eight different meats. The akvavit comes packed in ice, and packs a wallop of its own. $6.

SWEDEN, too, has a smorgasbord, but here you help yourself. $6.

INDONESIA. The royal-looking pavilion shaped like a crown houses a favorite feeding spot for potentates and VIPs. An Indonesian feast is served, while on a center stage Sumatran and Balinese beauties oscillate to the contrapuntal gongs of the gamelan. $7.

* Dinner prices per person.

LETTERS

Party in San Francisco

Sir: How can anyone blame Ike for refusing to endorse a G.O.P. nominee for President? After all, it was he who recommended our present Chief Justice. Such a horrible blunder should keep him silent for the rest of his life.

V. C. SILER

Ramona, Calif.

Sir: President Johnson is selling this country short by his refusal to tell the American people the truth about the dangers we face with Red China and Russia. Senator Goldwater is a true American who wants to defend the rights of every American. When Goldwater becomes President, the White House will become a place of truth and sincerity.

NICHOLAS KLIROS

Lowell, Mass.

Sir: I am disturbed by the large number of letters in your column that imply that if one is not for Goldwater, one's patriotism is somehow suspect. I hope that such a basically undemocratic way of thinking represents only a small number of the Goldwater supporters.

HOWARD C. WOLFE

New York City

Sir: If Goldwater wins the nomination, Lyndon Johnson gets my vote, and the Democratic Party gets my registration. My Republican Party will be defunct, and I cannot support a party remade and rewritten to conform with a man who is not a Republican. My duty is to my country first and party second.

C. G. CAMPBELL

Annapolis

Sir: Barry Goldwater represents the first major breakthrough in "political conservatism" since the days of Teddy Roosevelt. Let's rid ourselves of this clique of liberals, Commie lovers, "intellectuals" and spendnuts; let's extinguish the eternal flame of mediocrity and move up to greatness.

C. RAND

Boston

Sir: It is a downright pity to see great Americans like Romney, Ike and Dirksen refuse to speak against Barry. Instead of doing what they know is morally right, they jump on Barry's bandwagon for personal rewards. As a Democrat, I congratulate Scranton and Lodge for giving Goldwater a fight.

RICHARD CONSOLA

Boston

Sir: Goldwater's views do not disturb me so much as the fact that his views apparently do not represent the majority of Republicans in this country. I hope that the system by which we nominate a candidate for the presidency has not degenerated to the point where the candidate is chosen irrespective of the wishes of the people who make up the party whose label he wears.

RICHARD SELDEN EATON

Washington, D.C.

Sir: Senator Dirksen's nimble leap aboard the Goldwater bandwagon [July 10] is a sad exercise in a politician's descent from statesmanship. We are fortunate that he cannot take back the civil rights bill and the test ban treaty even as he forfeits our confidence and trust.

DAVID L. PASSMAN

Chicago

Sir: It is difficult for me, or any other Republican, to believe that Senator Dirksen "fully intends to be on what he feels is the winning side." It is more factual to say that Senator Dirksen is on the side that he feels is the right side—win, lose, or draw.

KURT BAYMILLER

Watertown, S. Dak.

Missing in Mississippi

Sir: I am outraged and disgusted that members of our U.S. Navy are used for the purpose of trying to locate three no-good rabblerousers in the South. Schwerner, Chaney and Goodman went to Mississippi looking for trouble, and if they got it, they deserved it.

MRS. ROBERT W. LISTER

Lawton, Okla.

Sir: Would not the people in the North react violently to an equal number of Southern students entering Harlem with a similar purpose? Human nature being what it is, I believe they would. It is time for the Northern press and civil rights groups to take care of their own problems before interfering in those of the South. When will the hypocrisy end?

J. DAVID KELLEY

Wayne, N.J.

Sir: Your statement that "despite its high purpose, the Negro revolution breeds violence and death" [July 3] must have been welcomed in the South. If the three young men had chosen to spend a less dedicated, more relaxed summer, if Postman William Moore had stayed off the highways, if the Negro girls had slept late and not attended their Birmingham church, and if Medgar Evers had never joined the N.A.A.C.P., there would still be violence and death in the South. There always has been.

ANITA ZELMO

Los Angeles

Relentless Ice

Sir: Your fine, factual account of the dramatic rescue from Antarctica was well done [July 3]. Only those of us who have wintered over on the ice and can "see" the lights of Scott Base can appreciate the awesomeness of Lieut. Mason's task. I feel sure that he was watched over not only by "the Man upstairs" but by the spirits of Scott, Wilson and Bowers, whose bodies still lie encased in the relentless ice only a few miles from where the aircraft set down.

JOHN WALTER KELSEY, Jr.
Commander, U.S. Navy

Fort Amador, Canal Zone

Key to Defeat?

Sir: The warm and enthusiastic reception that Attorney General Robert Kennedy received from the people of "Communist" Poland [July 10] clearly shows that the key to the defeat of Communism lies in Eastern Europe. If handled correctly, the affection that the satellite countries have for Western democracy will spread into the Soviet Union itself.

JOHN J. NEUBERT

Yonkers, N.Y.

Scanning Scandinavia

Sir: Your writers managed to bring the whole world of Scandinavia concisely and fully into the pages of TIME [July 3]. You have pinpointed the reasons why the number of North American visitors to Denmark, Finland, Norway and Sweden have increased more than three times over in the last ten years: they go, not only for pleasure, but also to observe and study the exciting and, on the whole, remarkably successful Scandinavian solutions to so many of the problems that face our societies.

TORE H. NILERT
President

Scandinavian Airlines System, Inc.
New York City

Sir: I would guess that your picture of the "craggy Scandinavian coast" must be from the wild west of Norway, but precisely where?

REIDAR F. SOGNNAES, D.M.D.

Los Angeles

▶ *Wrong guess. It's the western coast of Suderø, one of the Færøerne Islands belonging to Denmark.*—ED.

Sir: I am here on holiday visiting American relatives, and read your Scandinavia article. Why do you deceive your readers into thinking we Swedes are capitalists? We have been Socialist for many years. As for having a living standard higher than yours, I never see at home the poverty, filth and lack of hope I see here in the U.S.

BERIT ENGSTROM

St. Louis

Sir: Although I have always been sharply critical of TIME, I must admit you have made an honest and objective presentation of the subject of Scandinavia. You did not spice the story with distortions on Scandinavian welfare schemes, suicide rates, divorce rates, etc. I was amazed at

Harlow the Actress

Sir: So Jean Harlow [July 3] "could not act," eh? I wonder if your book reviewer ever saw *Bombshell* or *Redheaded Woman* or *Dinner at Eight* or *The Girl from Missouri* or *Red Dust* or *Beast of the City* or *China Seas* or *The Public Enemy* or even *Hell's Angels*? I wonder, in fact, if your reviewer has ever seen any Hollywood films made in the '20s and early '30s; if he had, he would not have singled out Jean Harlow for "refusal to wear a brassière." That was standard practice. Nor is he up on his clinical psychology. Nymphomania is not something girls have "bouts" of. You either got it, or you ain't. The details of Jean Harlow's short, unhappy life may not be savory, but that is no cause to sully her image as it remains to us on the screen: that of a vibrant and beautiful woman with more temperament and talent than a carload of today's pneumatic wonders.

Maids in America

Sir: As an English secretary, I cannot agree that we are overpaid or that we take jobs away from American girls [July 10]. I have found that here in New York you can only earn what you are worth and not a penny more, that you must be prepared to cater to your boss's every whim, make the coffee, order the lunch, wipe the catchup off his tie, sew the buttons on his jacket, and generally be the head cook and bottle-washer and be "personable" at all times. My dear editor, in England they do not call this a "secretary"—this is a "maid." American girls don't want these jobs, and I don't blame them.

DORIS HURST

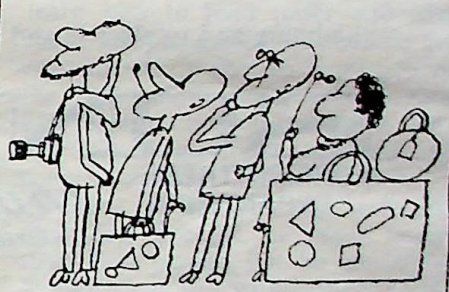
How to avoid the rush at exchange counters



Literally thousands of visitors are expected for the Olympic Games in Tokyo this year.

The best way to avoid the rush at exchange counters is to convert your money before leaving your country. Bank of Tokyo has outlets all over the world where you can purchase Yen Travellers Cheques. As the saying goes, one shouldn't go anywhere in Japan without Bank of Tokyo Yen Travellers Cheques.

WE'RE ONLY 9 YEARS OLD

(and already we have a reputation) Not many companies brag about how *young* they are. We do for a reason. In only nine years Sunwave products have found their way into 28 countries in North, Central and South America, Europe and throughout the Far East. This kind of world-wide attention is a tribute to the quality you'll find in any Sunwave product. It's an example of what can be accomplished when you try hard to make the best.

We try hard in six huge factories, 101 domestic offices and branches overseas in Paris and New York. You can test the quality of our efforts in a wide range of appliances for the home and in electric and electronic components for industry.

A letter from the PUBLISHER

Bernhard M. Auer

THE civil rights issue was close to the top of the news almost every place one looked in the U.S. last week—in Washington, throughout the South, and amid the political sound and maneuver in San Francisco. How the U.S. reacted in the first week of the new law is reported and analyzed in THE U.S. and THE LAW. To complete the perspective on this historic turning point in the relations between the races in the U.S., the editors of TIME decided they should present a deeper analysis of the traditions, emotions and psychological factors that lie at the roots of the problem and the progress. As the subject for that study, they chose the late great novelist William Faulkner, whose perceptive view from within the U.S. South illumined the crisis of conscience in race relations long before it worked its way out of the shadows.

This is Faulkner's second appearance on TIME's cover. The first (Jan. 23, 1939) preceded his Nobel Prize by eleven years and was based on TIME's judgment that he was the "central figure" in Southern literary life. Reaching back to that point and beyond, the raw material for this week's Faulkner story was considerably different from that for most cover stories. Although Senior Editor A. T. Baker, Writer Horace Judson and Researcher Martha McDowell had at hand some 70 pages of current reporting from TIME correspondents covering the civil rights front and a wealth of other background from TIME's library, the bulk of their material came from Faulkner's writings. In ten days of preparing for the story, Judson read or reread from cover to cover some 13 volumes of Faulkner's works.

Judson is especially equipped for an assignment that calls for such concentrated reading. A native New Yorker who graduated from the University of Chicago (A.B.) at 17, Judson at 21 wrote *The Techniques of Reading*, a widely used textbook for college freshmen who want to learn how to read faster and with more comprehension. A onetime bureaucrat (as a civilian employee of the U.S. military in Berlin), reading teacher, book manuscript editor, advertising copywriter and account executive, Judson is now a mainstay of TIME's BOOKS staff. As might be expected, he reads faster than most people, but he considers himself slow as a writer, spent some 70 hours at the typewriter on the Faulkner story.

For the cover portrait, Artist Robert Vickrey did his pen-and-ink drawing from photographs taken not long before Faulkner's death.

THE U.S.

REPUBLICANS

The Cinched Nomination

In its main order of business, the 1964 Republican National Convention was all but over before it began. Barry Goldwater's presidential nomination was as close to a cinch as anything in politics can be.

But that conclusion did very little concluding. Still stretching ahead was the steep, stone-stubbled campaign road to November. And in their anger and anguish at Goldwater's imminent nomination, Barry's Republican critics seized on battle cries that will echo hither and yon—and be picked up by the Democrats—throughout the coming campaign.

When Forthrightness Is Wrong. Candidate William Scranton put it one way. He told the sparse airport audience that greeted his arrival in San Francisco that he would continue his anti-Goldwater fight to keep the G.O.P. from becoming "another name for some ultra-rightist society."

Nelson Rockefeller avowed to the convention Platform Committee that the party cannot expect to win if it seeks to serve "the narrow interests of a minority within a minority"—that is, the Goldwater interests. Henry Cabot Lodge said: "We must never countenance such a thing as a trigger-happy foreign policy which would negate everything we stand for and destroy everything we hope for—including life itself. Many times in foreign relations the thing to do is not to be forthright." Michigan's Governor George Romney asked that the G.O.P. "unequivocally repudiate extremism of the right and the left and reject their efforts to infiltrate or attach themselves to our party or its candidates."

Suicide in Full View? What all this strong talk added up to was the proposition that Goldwater's nomination would cause an irreparable party split, that by nominating Barry, the G.O.P., in effect, would be committing suicide in full public view.

But would it? Though many Democrats might desire it, the answer was no. If Goldwater, by some miracle of political chemistry, were to be denied the nomination, there would indeed be a split, even the possibility of a third party formed by his followers. But with Barry on the very brink of victory, there was no evidence whatever that his Republican critics had enough cohesiveness to make 1964 a Bull Moose year.

Goldwater's nomination may cause some professional Republicans, for their own particular and perhaps understandable reasons, to stray from the national party fold. Among these is New York's Senator Kenneth Keating, up for re-election this year in a northeastern industrial state where Barry has little appeal. Keating has decided to wage his Senate campaign as an "independent" Republican if Goldwater is nominated, and last week he hinted that he might even vote for Lyndon Johnson in November. "I'm a good Republican," said Keating, "but not a hidebound Republican."

Next Step. As for all the talk that Goldwater represents only a small segment of the Republican spectrum, that he would be the nominee of "a minority within a minority," Barry had his own facts and figures to point at. After all, the overwhelming delegate strength that he brought to San Francisco came from all sections of the U.S., and could by no means be narrowly categorized as a mere handful of "extremists."

None of this means that Goldwater is going to have anything but a desperately difficult time trying to beat President Johnson. His party, if not split, is deeply divided. Having surged to the nomination as the G.O.P.'s Mr. Conservative, he must next conciliate and corral his party's more liberal members if he is to have a chance of election. In other words, his theme from now on must be party unity.

He made a good start in San Francisco. Warnings went out to his workers, who were thronging into the city, not to be too obstreperous in their enthusiasm. When the anti-Goldwater forces tried to pick a fight over the party platform, Barry was all sweet reason. He could and would, he said, heartily endorse almost any document the Platform Committee chose to write, and in the unlikely event that the committee were to produce a platform upon which he could not stand, he would "do

the only honest thing; I would withdraw from the race."

All for One & One for All. More than anything else, Barry preached party unity in his appearance before the Platform Committee, which furnished some of the few dramatic moments of the pre-convention week. At times his harsh, hoarse voice took on a quality that seemed to electrify his audience, which interrupted him 35 times with cheers and hand clapping.

In that statement, Goldwater spoke less of the arguments that divide Republicans than of "the great base of principle" that unites them. "It is urgent," he said, "that we revitalize our constitutional principles in all branches of government, that we reverse the accelerating drift into arbitrary and distant power by reclaiming our legacy of checks and balances."

Goldwater said he was startled by the few times that previous speakers had mentioned Communism. But he was quite willing to make it an issue. "The standard we raise at home is one to which men can repair around the world," he said. "In our reluctance to impose our own ways upon others, we must not be blind to the fact that the world, whether we like it or not, is in a time of choosing . . . When we speak of peace today, and the threats to it, we must, whether we like it or not, speak of Communism.

"We cannot condone the foreign policy of this Administration. This Administration pretends that Communism has so changed that we can now accommodate it. Our party cannot go the final and fatal step and pretend that it doesn't even exist. Your party and mine can responsibly remind all free men that Communism is the enemy—not a friend, and certainly not a fiction."

As a party, Goldwater concluded, the Republicans should identify the central issues of the times and declare the fundamental principles upon which they claim the right of leadership. It is principle, he said, principle and purpose that mark the path of Republican philosophy.

And it is principle and purpose, convincingly displayed during the campaign, that could reunite the Republican Party and give their nominee a chance to beat Johnson.

Back with the Old Barry

Now the Goldwater bandwagon came rolling into the convention city. And behind the wheel, breezy and relaxed as a one-arm driver who is supremely confident of conquest in his courtship, sat Barry Goldwater.

During many of the months of his campaign for the G.O.P. nomination, Goldwater had seemed irritable, withdrawn, genuinely reluctant to fare forth to meet we-the-people, a reckless popoff in his informal pronouncements, and a wooden soldier while reading his formal speeches.

All this dismayed friends and followers who had come to know him as a charming companion, a bluff, gruff-spoken man whose candor was a virtue rather than a vice, a candidate with deep convictions, if not the learnedness or the lingo of a political scientist, about a particular philosophy of government.

AP

GOLDWATER AT HOME IN PHOENIX
For the house in the Elks Club bar.

"Win We Will!" For a while, something had happened to that old Barry. But last week, in the full expectation of victory, he was back. He started out in his own Arizona, riding a palomino in a Prescott parade and looking as though he had been born to the saddle, bellying up to an Elks club bar and buying drinks for the house, hosing the vegetation (which consists in considerable part of cactus) on his Phoenix spread. Then, after a brief trip to Washington, it was on to San Francisco in that same relaxed mood.

Arriving at International Airport, Barry threw off the cloak of professional pessimism about his prospects. "The chances are excellent," he cried, "that we will win on the first ballot!" His audience shouted its approval as Barry continued: "But first ballot or not—win we will!"

Just in case there was any remaining doubt about Goldwater's nomination, it was dispelled a scant five hours after his arrival when word came that Ohio's Governor James Rhodes had given up his favorite-son candidacy, thereby freeing about two-thirds of his state's 58-member delegation to vote for Goldwater on the first ballot.

That Interview. By then, about the only cloud—and it was little more than a speck—left on Goldwater's horizon was the publication of a June 30 interview with a reporter from *Der Spiegel*, a West German weekly newsmagazine. In that interview, Goldwater was asked if he thought that he could defeat Lyndon Johnson. He replied: "If you ask that question as of now—and I also like to answer political questions as of now—no. I don't think any Republican can, as of now . . . I don't think I'd be rash enough to say I could beat Johnson in the South as of now. But come Election Day, there's going to be another horse race, I believe."

Defending his vote against the civil rights bill, Barry stuck by his guns, insisting: "If they could have locked the doors to the Senate and turned the lights off, you wouldn't have gotten 25 votes." And on the question of what he would do about Southeast Asia, Goldwater said: "I would make it abundantly clear—and I think President Johnson is moving in that direction—that we aren't going to pull out of Southeast Asia. I think that we are going to win, in fact. Now the next decision becomes based on military decisions. I don't think that's up to a presidential candidate, or even a President. I would turn to my Joint Chiefs of Staff and say, 'Fellows, we made the decision to win, now it's your problem.' "

As Goldwater himself later pointed out, there was nothing in his [illegible] interview that he had not said [illegible]. But as he did not point out, such statements had landed him in political trouble before, and the timing of his latest remarks seemed singularly unpropitious. At any rate, Bill Scranton and other anti-Goldwater Republican leaders grasped at the interview as though at a life belt tossed into a raging sea. "Barry Goldwater has now decided to defoliate the Republican Party," cried Scranton. "How could delegates nominate someone who says he can't win?" Of Goldwater's civil rights views and his Senate vote against the civil rights bill, Scranton said: "We must ask ourselves what events the Senator is looking forward to before November to improve his chances in the South. Tragically, there can be but one explanation. He or those close to him hope to gain by racial unrest in this nation." As for Goldwater's proposed Southeast Asia policy, Scranton snapped: "This is another example of his failure to comprehend that being President of the United States is not the same as being a benevolent chairman of the board—letting others decide when nuclear destruction should be unleashed."

The Needles. Even though Goldwater may again have been indiscreet in his *Spiegel* statements, Scranton's assault did not add up to the Pennsylvanian's finest hour, and Barry largely negated its effect during his appearance before the Platform Committee next day.

After his strong, sometimes stirring plea for party unity, Goldwater [illegible]

CC-0. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

...e the committee to answer ques-
...—which came mostly in the form
...ndling from Scrantonites.
...hat was Goldwater's thinking as to
...er control of the use of nuclear
...ons should be in hands other than
...President's? Patiently, Barry said
...e had been misquoted, that U.S.
...llows no one but the President to
...horize the use of nuclear weapons,
..."I can't change that law." Anyhow,
...continued, he would favor giving
...the Supreme Allied Commander,
...e—presently General Lyman
...mpitzer—a degree of authority about
...lear weapons. He carefully ex-
...ned that he was not talking about
...-range, strategic missiles, but rath-
...bout the low-yield, tactical weapons
...und which Western Europe's de-
...se is now built—"ones small enough
...e carried on the shoulder, small
...gh to be launched from aircraft.
...fearful of the day if it ever comes
...nd I hope it doesn't—when Russia
...ght attack our bases with these tac-
...al nuclear weapons and we would
...e to reply with conventional weap-
... I would hope that something could
...worked out in the case of NATO,
...NATO alone."

...Barry's vote against the civil rights
...—and his argument that some of its
...visions were unconstitutional—also
...e under attack. Would he, as Presi-
...t, work to have the law repealed?
..."That's not in my opinion the duty
...a President," said Goldwater. "I
...ink the legislative branch has now
...en for the majority of the party—
...e majority of the American people—
...d while I didn't agree and I repre-
...nted the minority, I stand with the
...jority, and just as Harry Truman
...d when he vetoed the Taft-Hartley
...t he later used it six times even
...gh he didn't like it."

The only Negro member of the Plat-
...m Committee, George A. Parker
...m the District of Columbia, was
...t satisfied. He doubted that Gold-
...er could "consistently, conscien-
...sly and in good faith use the powers
..."prestige" of the presidency to carry
...the civil rights law. Goldwater
rushed, but held his temper. "When you use that argument," he said, "you are questioning my honesty, and I should resent it but I won't." Parker insisted that he was doing no such thing. Said Goldwater: "Well, you are, sir. I will uphold that law because it is the voice of the majority. And if I'm your President, I will do something about this in more ways than the law."

Thus, during his Platform Committee appearance, and indeed throughout his entire performance in San Francisco last week, Goldwater was the old Barry, the one who behaves best when he is relaxed and confident. No one can say how he would act if he were to lose the Republican nomination. But he was surely showing himself to be a good winner.

The Last Calls

By the time he got to San Francisco, Bill Scranton's machine was in full gear. In 48 rooms on three floors of the Mark Hopkins Hotel, scores of eager workers performed their appointed tasks—from drafting speeches to ordering cookie and fruit between-meals snacks for the candidate. A complex communications network had been installed—including a 15-circuit phone switchboard, and a special "hot line" system linking hotel headquarters to the Cow Palace convention floor and to two communications trailers parked outside. Code words were used in telephone conversations to confuse possible eavesdroppers, and the whole headquarters area had been combed for electronic bugs that Goldwater gumshoes might have concealed.

Guards stood outside the locked door of Room 1202—"The Delegate Control Center"—where trusted Scranton aides worked diligently by phone to shake out new delegate strength. At their disposal were three separate and expertly cross-referenced filing systems, including boxes of index cards, fat black notebooks and large manila envelopes, all packed with vital information on each of 1,308 delegates, 1,308 alternates, and dozens of key politicians. Inherited from Nelson Rockefeller, the files contained names, ages, financial background, marital status, business contacts, clubs, fraternities, presidential preference, and the names of friends or associates who might put pro-Scranton pressure on the delegates. So precious were these files that Scranton's men had divided them into six sections for the trip from Harrisburg to San Francisco, packed a guard along with each segment on a different train or plane so no single railroad wreck or air crash could destroy the whole package.

All told, Scranton's San Francisco operation would cost some $200,000. But all the money and effort somehow seemed wasted. In the brief four weeks of his campaign, Scranton had covered some 20,000 miles, visited 25 states—including a second trip last week to Illinois, where he boarded a five-car Illinois Central Railroad train for an old-fashioned whistle-stop tour through cornfield country. But he made no notable impact, and in Springfield, Mayor Nelson Howarth sadly summed up the situation when he said to the Governor: "Why didn't you come here in April, when the prevailing wind was out of the East, instead of July when a hot wind is blowing from the Southwest?"

And so, despite all his elaborate machinery, at week's end Bill Scranton was reduced to performing the most disheartening chore that can come to any candidate: making personal phone calls to delegates and pleading for help that he must have known would not be forthcoming.

Shuffling the Planks

Most of the Platform Committee hoopla came over the appearances of the presidential candidates and their top supporters. But during its pre-convention week the committee, chaired by Wisconsin's Representative Melvin Laird, also took testimony from spokesmen for some 170 organizations, ranging from Americans for Democratic Action to the Izaak Walton League and the American Committee for the Independence of Armenia.

There was, for example, a full after-

noon devoted to hearing the representatives of civil rights organizations. The N.A.A.C.P.'s Roy Wilkins, a Democrat, praised Republicans in Congress for their part in passage of the Civil Rights Act, but, in a plain dig at Goldwater, deplored the doubts about the measure's constitutionality as expressed "by aspirants to public office."

"A Cruel Jest." Martin Luther King Jr. pleaded for a "G.I. Bill" for Negroes, explaining: "Negroes must not only have the right to go into any establishment open to the public, but they must also be absorbed into our economic system so they can afford to exercise that right. Giving a pair of shoes to a man who has not learned to walk is a cruel jest." King also urged that the Federal Government take stronger steps toward stopping civil rights violence in the South before it happens. Said he: "If our Government is capable of gathering intelligence information in a matter of hours from all parts of the world and has been able to maintain a constant surveillance of the U.S. Communist Party, is it not also capable of maintaining a surveillance of terroristic groups and persons subverting the Constitution of the United States by arson, bombings and murder of civil rights workers?"

A.F.L.-C.I.O. President George Meany sharply attacked U.S. trade with Communist countries. "A generation ago we were bitterly opposed to doing business as usual with Hitler," he said. "Half a generation ago we were bitterly opposed to doing business as usual with Stalin. Today we are equally opposed to doing business as usual with Stalin's de-Stalinized successors." W. P. Gullander, president of the National Association of Manufacturers, urged another tax cut. Said he: "A further tax reduction during the 1960s is not only feasible, but it is also well within the bounds of responsible fiscal policy."

"White-Sneakered Amateurs." But even as the torrent of testimony continued to flow in public, the real shaping and shuffling of the platform planks took place in the nighttime privacy of hotel rooms, where drafting subcommittees worked till dawn. Frustrated by the Goldwater forces' kill-'em-with-kindness strategy, anti-Goldwater leaders fell to squabbling among themselves. Scranton-supporting committee members, led by Pennsylvania's Senator Hugh Scott, wrote 31 different drafts of a proposed civil rights plank before they could agree on one.

After one such session in a ninth-floor suite of the St. Francis Hotel, Massachusetts' fiery Congressman Silvio Conte fumed at the ineffectiveness of his fellow Scrantonites. They were, he cried, a bunch of "white-sneakered amateurs," and he added: "I'm ready to pack up and go home."

With the Scranton platform advisers so disorganized, the Platform Committee heavily pro-Goldwater and a majority of the key Drafting Committee also for Barry, the final product obviously would be a platform upon which Goldwater could run. So, for that matter, could most any other Republican.

The Working List

Veep guessing is perhaps the least profitable of political pastimes. But the guessers keep guessing and, more important, prospective presidential nominees encourage the game for all it's worth.

John F. Kennedy, during his 1960 pre-convention campaign, turned playing from an inexact art into a science; he had everyone from Hen Loveless (Iowa) to George Do (Kansas) to Edmund ("Pat") B (California) to Henry M. ("Sc Jackson (Washington) thinking might be his running mate. And promoting the possibilities, he w fair number of delegate votes their states.

Last week it appeared that Goldwater might have taken a pa two from Kennedy's book. At a his San Francisco forces were around a "working list" of five to presidential prospects—even wi sisting that it was highly tentativ that the candidate himself had n made up his mind and was "com to nobody."

The list:

▶ Pennsylvania's Scranton, whose ence on the ticket would pro G.O.P. unity and help Barry in th dustrial Northeast. Scranton ha peatedly said he does not want the presidential nomination, and last Goldwater said: "I don't think e of us would be comfortable run with the other." Still, there are str arguments that a Goldwater-Scra ticket would make the best of pol sense, and the possibility should n ruled out.*

▶ G.O.P. National Committee C man William Miller, a New York C gressman who could also give the a Northeastern tinge, a Catholic orator with a gift for tough-talking

* In 1960, Senate Majority Leader L Johnson scorned the suggestion that he accept the Democratic vice-presidential nation, saying it would be "trading a vo a gavel." Before the reconciliation, he refer to Kennedy as "young Jack," said nedy had rolled up primary victories "Jack was out kissing babies while I was ing bills." In the heat of battle, Johnson above rattling the long-closeted skeleto Old Joe Kennedy's days as U.S. Ambass to England: "I wasn't any Chamberlain brella policy man. I never thought Hitle right."

ADVISER KITCHEL
The friend who counsels.

date Goldwater's backers were aghast at the appointment of a political amateur whose sole experience had been as counsel to the Arizona state Republican committee. Says Kitchel of such criticism: "I'm inclined to think that the term 'professional' in politics has been a little misunderstood, or misused. As I see it, this is mostly a matter of common sense and judgment."

Ready to Resign. In his exercise of common sense and judgment, Kitchel's sensitivities are sometimes staggered by the folkways of American politics. During Barry's New Hampshire primary campaign, Kitchel watched disgustedly as an eager mother pushed her baby into the candidate's arms. He murmured: "If he kisses that baby, I resign." (Barry didn't kiss and Kitchel didn't resign.) He has also developed a simple expedient for avoiding political arguments that offend him; he simply tunes down his hearing aid.

When Goldwater's campaign seemed to be going badly, Kitchel received much of the blame. He readily admits that he is not much of a political administrator, that much of Goldwater's grass-roots organization sprang up and operated with little help or coordination from his office. But it was Kitchel who made the decisive campaign decision that Goldwater should stop sloshing around like a candidate for alderman, devote his major energies and funds to major appearances, thereby lessen the opportunity for the off-the-cuff remarks that were landing Barry in trouble.

Kitchel is also one of the few men who exercise sufficient intellectual sway over Goldwater to shape his opinions or persuade him to change his mind. It was Kitchel who convinced Goldwater of the crucial value of the North Atlantic Treaty Organization (now one of Barry's main pitches) and who argued Goldwater into reversing his stand against the use of federal troops to enforce the Supreme Court's 1954 school-desegregation decision. In his own quiet way, Kitchel downgrades his importance in the Goldwater line-up. "My position," he says, "has been that of a friend who counsels." This week's convention results should show that he has counseled well.

Among the other leading Goldwater lieutenants:

▶ Richard G. Kleindienst, 40, director of campaign field operations. As extraverted as Kitchel is introverted, Kleindienst rose through the G.O.P. ranks in Arizona to become state party chairman and, as one friend puts it, "a full-fledged political animal." As Goldwater's advance man, Kleindienst has displayed a tendency to whirl off handshaking and backslapping in all directions. When he first barnstormed into Chicago, complains one Goldwater man, he rushed about making deals only to find he had missed the real party leaders, later had to do some fancy backpedaling. Kleindienst also finds time to promote his own political fortunes, has announced as a candidate for Governor of Arizona in November, hoping to succeed Paul Fannin, who plans to run for Goldwater's Senate seat should Barry win the nomination. At a state G.O.P. rally in Arizona recently, the band of Kleindienst's straw hat carried a slogan for his own campaign, not Barry's.

▶ F. Clifton White, 45, co-director of field operations, who has shared with Kleindienst the job of beating the bush

If nothing else, time to go on a diet.

for delegates. A New Yorker who enlisted in the Air Force as a private and emerged in 1945 as a captain with the Distinguished Flying Cross, White is the tenacious kind of fighter who draws the natural respect of Barry Goldwater. Co-founder of a Manhattan firm called Public Affairs Counselors, Inc., which offers corporation employees advice about how to make their muscle felt in the political world, White was also a founder of the "Draft Goldwater" movement. Since then he has put his special talents for cajolery—and political arm twisting—to work at G.O.P. state conventions. Persistent rumors have it that White's reward if Goldwater is nominated will be the chairmanship of the G.O.P. National Committee, succeeding fellow New Yorker William Miller.

▶ Dean Burch, 36, deputy campaign director. A Goldwater booster since undergraduate days at the University of Arizona, Burch joined the Senator's Washington staff in 1955, became a close personal friend, and even got his flying license after lessons from Old Pilot Goldwater. The youngest of Goldwater's top aides, Burch plunged into the thankless job of scheduling campaign appearances, aided Kitchel in a notable job of offending the fewest possible Republicans despite the candidate's disturbing penchant for last-minute cancellations.

THE PRESIDENCY

Just Storing Up Energy?

Lyndon Johnson a retiring sort? Lyndon Johnson dodging publicity? Perish the thought. But there he was—ducking reporters, scurrying to secret hideaways and acting for all the world like some latter-day Greta Garbo.

Off to Texas for a long July 4 weekend, the President all but said, "I *vant to be* alone." The L.B.J. ranch was declared off limits to reporters, who played pinochle and poker in Austin, 65 miles away. Persistent prodding of Presidential Press Secretary George Reedy got them nowhere. At one point, Reedy snapped: "As to what he did today, I do not go into matters of social or personal activities. The President regards going to church or various types of ranch activities, or boating—which I know is going to be raised somewhere along the line—as a purely personal affair."

Cruise in the Sun. At that, Lyndon spent little time at the L.B.J. ranch, slipping off to a smaller, more secluded spread called Haywood Ranch, which he owns along with A. W. Moursund, a Johnson City lawyer and a trustee of the L.B.J. business interests. Built on a knoll between the Llano River and a 1,620-ft. hill called Packsaddle Mountain, some 25 miles from the L.B.J. ranch, Haywood is a working spread. The one-story white house is neatly fenced to keep out grazing cattle.

But these days some changes have been made. A new boathouse rises from the Llano River's edge just as it begins broadening to become Granite Shoals Lake. There, a recently acquired 28-ft. cabin cruiser and a snappy black runabout are moored. With a handful of family, close friends and White House staff, the President cruised the choppy water sunning himself. At least once, the President took the controls of the runabout to give Lynda Bird some water-skiing practice. After several spills, Lynda gave up.

Back in Washington, it was much the same story as the President spent another curiously quiet week with no more than a handful of ceremonial greetings for White House visitors and a routine ceremony to sign the $375 million mass-transit bill into law.

Perfect but Paunchy. This was far from the whirlwind Lyndon that Washington had come to know so well. And the rumor swiftly spread through the capital and its environs that Johnson, who suffered a massive heart attack in 1955, was ailing again. His aides vehemently denied such stories, insisted that the President is in perfect health. Still, the merest glance at photographs of him in swim trunks while bo in Texas would indicate that, if ing else, he ought to go on a diet.

At week's end, perhaps now fe that he had overcompensated and back too far, the President called first press conference since June He opened with glowing projection the economy, then ranged from tential running mate (he will make lic no choice until the August co tion) to civil rights (50 new FBI will be assigned permanently to office in Mississippi). The con lasted a dreary 30 minutes. It ly added up to the old Lyndon but maybe he is just storing up for the campaign to come.

DEFENSE

Down to the Dog Tags

When John F. Kennedy ap his Defense Secretary in 1960, he him a paradox: 1) meet U.S. requirements without worrying arbitrary budget ceilings, and 2) at the lowest possible cost. Since in Robert McNamara's 3½ years o job, military spending has soare nearly $10 billion, now hovers the $50 billion mark.

But McNamara still sees no con tion between greater expenditures more economy. Thus, it was with pride that he last week announced results of the cost-reduction pro that he has pushed relentlessly. In 1964, which just ended, the Pen had saved $2.5 billion. "We even begun to scratch the surf McNamara claimed, estimated of $4.6 billion by fiscal 1968.

Homely Principles. Lest anyone such penny pinching had jeopar the nation's military strength, Mc mara ticked off some impressive of his stewardship:

▶ Nuclear warheads in the alert forces—up 150%.

▶ Combat-ready Army divisions 45%.

▶ Airlift capability—up 75%.

And the Walls Came Tumbling Down

Throughout the South, from Charleston to Dallas, from Memphis to Tallahassee, segregation walls that had stood for several generations began to tumble in the first full week under the new civil rights law.

In Birmingham, Negro Chauffeur J. L. Meadows, 70, strolled into the Dinkler-Tutwiler Hotel's Town and Country Restaurant, sat down amid a roomful of staring white diners, ordered, and was served without incident. Said he later: "I've been driving white folks down here for 21 years, and now I'm going to eat where I've been taking these white folks." At least nine other Birmingham restaurants and four movie houses also accepted Negroes for the first time. In Montgomery, Ala., the state capital, most restaurants and lunch counters, along with two theaters, were peacefully desegregated.

Even in Mississippi. Similarly, Negroes were admitted to previously all-white hotels and eating places in Savannah, Thomasville and Warner Robins, Ga. In Texas, Dallas' Piccadilly Cafeteria, a motel and lunch counter in Longview, restaurants in Palestine, and Austin, and a Beaumont drive-in were integrated. Thirty-three Memphis restaurants, including one of the city's largest downtown cafeterias, opened their doors to Negroes. Kemmons Wilson, chairman of the Memphis-based Holiday Inns motel chain, noting that he had instructed his motels to obey the new law, said: "The alternative is eventually anarchy, chaos and destruction." And in Charleston, Columbia, Florence and Greenville, S.C., integration proceeded without major trouble. In Greenville, a young Negro was sipping tea in the Jack Tar Poinsett Hotel dining room when South Carolina's Democratic Senator Strom Thurmond, one of the rights bill's bitterest foes, walked in. Apparently unaware of the Negro's presence, Thurmond sat down in another part of the room and quietly ate breakfast.

Even in Mississippi, land of violence, there was quiet compliance. Negroes played golf on Jackson's municipal course, ate at a Vicksburg whites-only lunch counter, and, drawing scarcely a disapproving glance, checked into and ate at Jackson's two leading hotels and a motel. In Jackson, the way had been paved by a Chamber of Commerce policy statement urging local businessmen to "comply with the law, pending tests of its constitutionality in court."

The Holdouts. Choosing not to comply was Stewart Gammill Jr., proprietor of the city's third largest hotel, the Robert E. Lee, who ordered the hotel's Confederate flag struck and put up a sign: CLOSED IN DESPAIR. CIVIL RIGHTS BILL UNCONSTITUTIONAL. Two days later, Gammill announced that henceforth the Robert E. Lee was a private club open to members only. A Richmond, Va., steakhouse also turned private, and restaurants in Charlottesville, Va., and Durham, N.C., and a Williamston, N.C., theater closed their doors for good rather than comply.

Inevitably, there were some trouble spots, such as Laurel, Miss., and Americus and Albany, Ga. In Baton Rouge, La., a white state employee punched a Negro minister in the jaw as he and two Negro women left the state capitol cafeteria after eating. Fifteen Negroes were arrested in Slidell, La., when they sought service at a restaurant. At a variety-store lunch counter in Bessemer, Ala., a steel town near Birmingham, six Negro youths were beaten by whites wielding 24-in. baseball bats. Near Texarkana, Texas, a white man and three Negroes were wounded when another white man opened fire with a shotgun during a Negro wade-in at Lake Texarkana.

In Atlanta, perhaps the most moderate of the South's big cities, some of the worst flare-ups took place. One occurred when three Negro ministerial students sought to test a fried-chicken joint owned by Lester Maddox, an un-

successful Georgia office seeker and a loud racist. Maddox was waiting for them in the parking lot of his place, waving a snub-nosed pistol. "You ain't never gonna eat here!" he shouted, shoving against the car door as the Negroes started to get out. When the students persisted, Maddox and another white man grabbed ax handles from a stockpile Maddox had laid in for just such an occasion. "Git, git," Maddox ordered. The Negroes did, with a crowd of angry Maddox patrons at their heels. Among them was a small boy dragging a 3-ft. ax handle and squealing: "I'm gonna kill me a nigger!"

Next day, at a Fourth of July segregationist rally at Atlanta's fairgrounds, three Negro youths were beaten with metal chairs in a melee that began when the Negroes and a white girl civil rights worker entered the grandstand. Forty whites chased the Negroes into a fenced corner, pommeled them until cops broke it up.

The Ugliness. In Tuscaloosa, Ala., one of the most bizarre incidents took place—indicating, if nothing else, how civil rights tensions may lead to ugly misunderstandings. Actor Jack Palance, his wife Virginia, and their three children, in Tuscaloosa to visit relatives, had a narrow escape from a mob when they went to a movie. Earlier in the day, Palance had signed autographs for both whites and blacks. When he and his family entered the newly desegregated Druid Theater, a rumor spread that a Negro woman had accompanied them. As it turned out, there were no Negroes in the theater at the time, but a crowd of nearly 1,000 whites gathered, pelted the cashier's cage and the marquee with rocks and bottles, shattered the windows and slashed the tires on Palance's rented car. Local cops took the Palances to the police station for protection.

Finally, in a mysterious incident on a north Georgia highway, Lemuel A. Penn, 49, director of vocational high schools in Washington, D.C., was killed when two shotgun blasts, fired from a passing car, ripped into the car he was driving while returning to Washington from Army Reserve duty at Fort Benning, Ga.

Despite such incidents, the South's initial compliance with the new civil rights law was by any standard encouraging. Perhaps Mrs. Constance Baker Motley, a Negro lawyer for the N.A.A.C.P. who has spent 18 years fighting for Negro rights, summed it up best. Said she: "Voluntary compliance has been unexpectedly good. I would have lost every penny I've got if I had made a bet."

How Silly Can You Get?

Among other things, the civil rights bill created some new Government jobs —among them the directorship of the Federal Community Relations Service, which will offer Southern communities help in ironing out their integration problems.

Who should the director be? Ideally, he ought to be someone acceptable to the South with a good record on integration. Such men are hard to find, and President Johnson was perplexed. Then Commerce Secretary Luther Hodges, an ex-Governor of North Carolina, suggested LeRoy Collins, 55, an ex-Governor of Florida. During six years in office (1955-60) in Tallahassee, his native city, Collins had talked a fair-to-middlin' civil rights game while doing little to implement it.

Some Soothers. Lyndon liked Luther's idea, and so did LeRoy—up to a point. Trouble was, the director of the Community Relations Service will receive only $22,500 a year, while Collins, as president of the National Association of Broadcasters since 1961, has been getting $75,000 in annual salary plus a $12,500-a-year living allowance. Loath to give up such a job, Collins suggested

HISTORICAL NOTES

...ers from "Constant"

...t was 1920. Woodrow Wilson was ...his way out, and the Republicans ...ed certain to take over the White ...se. Their triumph would be ...ved through the candidacy of Sen... Warren Gamaliel Harding, the ...some Babbitt from Marion, Ohio. ...Republicans all over the nation were ...ing for him, and in his own home ...n on the day that Harding, 54, ...ed his campaign, every storefront ...the community was ablaze with ...ing.

...Every storefront but one, that is. It ...the Uhler-Phillips department store, ...as William Allen White wrote ...r later, "when the reporters asked ...t it, they heard one of those stories ...t a primrose detour from Main ...et." According to the gossip, Nom... Harding, long since married to a ...neering, unattractive woman, had been treading the primrose path with Mrs. Carrie Phillips, wife of one of the owners of the store. She was a tall, willowy redhead, the best-looking woman in town, and about a dozen years Harding's junior—but the less said about it the better.

And so nothing was said. Harding, of course, was elected, and presided for three years over the most scandal-scarred Administration in U.S. history. After his death in 1923, another woman, Nan Britton, wrote a book describing a long love affair with Harding, one that began in 1917. She had borne his daughter, Nan claimed, and had continued her clandestine affair with Harding through the years of his presidency.

"Darling Sweetheart Adorable." Carrie Phillips was forgotten—until last week, when Historical Writer Francis Russell announced that he had seen and read more than 250 love letters that Harding had written to her between 1909 and 1920. Carrie kept the letters. After she died a recluse in 1960, the letters were found by Marion Attorney Don Williamson, who had been Carrie's guardian.

The letters, says Russell, who plans to detail them in an *American Heritage* magazine article, portray Harding as a devout lover and Mrs. Phillips as something of a moneygrubber. Many of the missives were written on Senate stationery, some on postcards bearing Harding's photograph. Some of them ran to 35 or 40 pages. Some of the letters he signed "Warren," some with his full name, and others with a code name, "Constant."

One letter, dated only "Easter Morning," bore the salutation, "Carrie Darling Sweetheart Adorable." Many more were strewn with homemade poetry. Inspired by a musical play, *The Wedding Trip*, which he saw in New York City in 1912, he penned an epic of 20 stanzas, including one memorable line, "I love you garb'd but naked, *more!*" At Christmastime 1914 he dashed off another poem:

I love you more than all the world,
Possession wholly imploring
Mid passion I am oftimes whirled
Oftimes admire—adoring.
Oh, God! If fate would only give
Us privilege to love and live!

Slow Boat. The love affair was a stormy one, so it was no surprise that it began to fade in 1920. When Harding was summoned to the historic smoke-filled room at Chicago's Blackstone Hotel during the 1920 G.O.P. presidential convention, he was asked pointedly if he knew of any embarrassing family skeletons that might hurt the party's chances. Harding asked for time to think, ten minutes later announced that he was as clean as a hound's tooth.

Harding apparently tried to extricate himself from his love affair, and there is some evidence to show that Carrie put a price tag on it. In one of his last letters, he wrote that he could not "secure you the larger competence you have so frequently mentioned. I can pay with life or reputation, but I can't command such a sum. To avoid disgrace, I will, if you demand it as the price, return to Marion to reside . . . If you think I can be more helpful by having a public position and influence, I will pay you $5,000 per year in March each year, so long as I am in that public service."

As it turned out, the problem was resolved when, following Harding's nomination, a party official visited Mrs. Phillips, gave her a reported $25,000-$50,000 and suggested that she take a little vacation—say for six months. Soon afterwards, Carrie and her husband James took a slow boat to the Far East to look into conditions in the raw-silk market.

Carrie Phillips, however, was not always so cooperative. Time and time again, Warren Harding had admonished her: "Destroy these letters!"

QUEEN ELIZABETH AT BUCKINGHAM PALACE DINNER WITH COMMONWEALTH LEADERS*

Around the table and around the globe, they have yet to find global goals.

THE COMMONWEALTH

Who Needs Mother?

Leaders of 18 nations on five continents gathered last week in the red-walled, blue-carpeted conference room of London's Marlborough House. More than ever before, the faces around the oval table at this year's Commonwealth Prime Ministers' meeting reflected the divergent interests and cultures represented in the network of free nations that has evolved from the British Empire: only five were white, and the other 13 represented every shade of skin from ivory-yellow through burnt umber to the blue-black of Africa's heartland.

There were those who wondered whether Britain could much longer dominate an association with such widely differing political and economic systems. London's respected *Economist* had a remedy: "It is high time that Britain and the Commonwealth shed the 'mother country' fixation and made their relationship one of real as well as constitutional equality."

Whatever the merits of this argument, the Commonwealth nations last week showed that they are still preoccupied less with global goals than with regional and racial issues close to home. All seven African leaders at the conference were insistent that Britain use force, if necessary, to ensure that Southern Rhodesia's white-supremacist government grants full constitutional equality to the African population before achieving its independence. But militant white Southern Rhodesians have many sympathizers in England. And in an election year, the government of Sir Alec Douglas-Home is deeply reluctant to make any move that might encourage the self-governing "colony" to seize independence this year as it has threatened to do. Nonetheless, the African statesmen who were to wind up the speeches this week left no doubt that, in their eyes, Britain's resolution of Southern Rhodesia's impasse will be the crucial test of the Commonwealth's need and ability to survive.

THE CONGO

Premier No. 4

The new ministers filed awkwardly into the palatial reception room overlooking the rapids of the Congo River, then raised their right arms stiffly as they took the oath of office. Some of them got the phrase backward, but that didn't seem to matter. Premier Moise Tshombe grinned, clapped his new government on the back, and capered with flailing fists in a mad jig down the bright green lawn as his admirers screamed their approval: "Down with Adoula and *vive* Tshombe." Thus the Congo's fourth Premier in as many years began his rule.

"Public Salvation." It had been a masterful performance so far. When Katanga's bulky ex-President returned to the Congo last month, it seemed incredible that he could hope to form a government. Cursed as a tool of Belgium's copper-producing Union Minière, accused by some of the murder of Patrice Lumumba, and driven out of the country by the force of United Nations arms, Tshombe appeared to have nothing in his favor.

But he still had Katanga, and without the political support of that ore-packed province the Congo is just another bleak, hopeless stretch of African bush. It was clear that Cyrille Adoula's government could not repress the Communist-backed revolts flaming in three provinces when Tshombe finally returned. Why not let him take a crack at forming a "government of national reconciliation"?

But the government he produced week was hardly reconciled. Ts himself described it as one of "public salvation," and the few recognizable within it were more torious than noteworthy: as Ag ture Minister he chose Kasai's M (god-emperor) Albert Kalonji, cessionist right-winger who is ti mally charged by Adoula's gover with torturing political prisoners new Health Minister is none other André Lubaya, a key official in Communist-backed National Libera Committee, which runs the Congo demic provincial rebellions. Reco ing the dangers of giving more folios to potential enemies, Ts took the ministries of Foreign T Planning, Information and Foreig fairs for himself, named his old Ka henchman Godefroid Munongo to t the Interior and Civil Service minist

Woman Trouble. The remaining en Cabinet posts—with the excep of Defense, which President Joseph savubu wisely retained—were tu over to nonentities. In fact, w Tshombe introduced his Cabinet to public, he stared blankly for a ing moments at Youth and Sports M ister Joseph Ndanu, unable to re his name.

* Left to right: Trinidad-Tobago's Eric liams, Cyprus' Spyros Kyprianou, Malay H. Kamuzu Banda, Sierra Leone's Sir Margai, Nigeria's Sir Abubakar Tafa Balewa, Malaysia's Tunku Abdul Rah Kenya's Jomo Kenyatta, Canada's Le Pearson, Uganda's Dr. Milton Obote ganyika-Zanzibar's Julius Nyerere, Ja Donald Sangster, Australia's Sir Robert zies, Ghana's Kwame Nkrumah, India's Krishnamachari (representing ailing Minister Lal Bahadur Shastri), Ceylon's Sirimaro Bandaranaike, Britain's Sir Douglas-Home, New Zealand's Keith oake, Pakistan's Ayub Khan.

Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Tshombe's eagerly awaited announcement of a government had been delayed by a full 24 hours when Adoula tried to force a woman into his Cabinet. She was Catherine Tshibamba, attractive young wife of the Congo's first vice premier. Though women do not have the vote in the Congo under the new constitution, they may well get it before the next elections nine months from now. Adoula wanted to win a few votes, embarrass Tshombe, and prove that Catherine was at least as qualified to sit in the Cabinet as God-Emperor Kalonji. Only a nighttime call from Tshombe himself convinced Premier Adoula to drop Catherine.

At his first Cabinet meeting, Tshombe served champagne and Simba beer, and took three steps toward appeasing the N.L.C. and other dissident leftwingers. He ordered all political prisoners—including Leftist Antoine Gizenga —released immediately; he lifted the highly unpopular 5 p.m. curfew in Leopoldville; he abolished the post of Resident Minister in Stanleyville, thus ending the state of emergency in that Lumumbist stronghold. All of this was intended to change Tshombe's image from that of a white-hearted "sellout" to a true black African leader. But just in case it didn't work, the Congo's new Premier took out a little insurance. Tshombe ordered his 2,000 tough Katangese gendarmes and their white mercenary officers back from their sanctuary in Angola. For a while at least, they should tide him over the rough spots that certainly lie ahead.

BURMA

Asians v. Asians

In the 17 years since the end of the British Raj, the Indian subcontinent has repeatedly echoed to the thunder of populations on the move. More than 7 million Hindus and Moslems fled across the borders of India and Pakistan in the wake of partition and religious strife in 1947. Since last January, 900,000 more have poured over the frontiers to escape a new wave of religious persecution. Last week still another mass migration was underway as thousands of India's newest dispossessed flocked home from neighboring Burma.

Road to Socialism. There are more than 500,000 Indians in Burma, and a staggering 200,000 of them are expected to leave before the current flood ends. Next week the first of 60 shiploads of Indians will begin docking at the southern ports of Madras and Visakhapatnam. Half a dozen refugee flights from Rangoon are already arriving at Calcutta's Dum Dum airport each day, and the waiting rooms are piled high with the pitiful possessions of the uprooted—lumpy bundles of bedding, cheap suitcases, bright plastic pails stuffed with children's toys and kitchen utensils.

Behind the exodus is the fact that strongman Premier Ne Win, driving pell-mell along his "Burmese road to Socialism," has nationalized all small businesses, banks and warehouses, denied trading licenses to aliens, and prohibited non-Burmese from taking government jobs. Ne Win's edicts struck particularly hard at the Indians, who have become the nation's sharpest shopkeepers, but have been reluctant to take out Burmese citizenship.

As a result, many Indian merchants are now serving as $1-a-day clerks in the shops they once owned, and find themselves constantly being reprimanded by Burmese overseers. Their former employees are even worse off. Some 100,000 poorer Indians, who had worked for Indian storekeepers before nationalization, not only found themselves out of jobs but also out on the street as well, for most of them had lived above the shops in which they worked.

Nothing of Value. Having made it clear that Indians were less than welcome, Ne Win next made it impossible for them to take anything of value when they left. Large-denomination banknotes were abruptly declared invalid, and even after that, adults were allowed to take only 75 rupees ($15.75) out of the country with them. Though Indian women traditionally convert their cash into gold jewelry and even decorate their children with bangles and bracelets, the Burmese stripped departing Indians of all their jewelry. Many Hindu women were forced to give up the gold and black *mangal sutra* necklaces that they wear as a symbol of marriage.

A few departing refugees were able to slip some money out of Burma before Ne Win plugged all the loopholes. But Indian officials are bitter, nonetheless, privately describe Ne Win's nationalization measures as a shabby trick to strip the Indian community of its property with no compensation at all. Nor is Burma's treatment of its Indian minority an isolated case. In Ceylon, where nearly 700,000 Indian plantation workers and tradesmen live as "stateless persons," the regime has launched a "Ceylonization of trade" campaign. And what that might very well mean is yet another mass exodus of Indians.

JAPAN

Narrow Shave

After a couple of two-year terms of competent but colorless rule, Japan's Prime Minister Hayato Ikeda, 64, was supposed by custom to make way for a successor. But when the ruling Liberal-Democratic Party met in Tokyo last week to choose a new president—and hence a new Prime Minister—Ikeda upset tradition by bidding for a third term.*

Square-jawed and obstinate, Ikeda decided that a third term was precisely what he needed to carry out some "unfinished business," although he never said exactly what that business might be. Two formidable rivals challenged him: 1) Eisaku Sato, 63, Minister of State under Ikeda and the obvious heir apparent, who attacked Ikeda's policy of "patience and tolerance," promised a dynamic regime that

* Tough old Shigeru Yoshida, now 85, is the only man to have served three consecutive terms as Prime Minister in postwar Japan. That was largely because his premiership from 1948 to 1954 spanned the transition from Allied occupation to Japanese independence.

STATESMAN

REFUGEES DISEMBARKING AT CALCUTTA AIRPORT

would fight for the return of the Kuril Islands from Russia and the Ryukyus (which include Okinawa) from the U.S.; and 2) Aiichiro Fujiyama, a silver-haired sugar baron who had served as former Prime Minister Nobusuke Kishi's Foreign Minister and as party coordinator under Ikeda.

But the two fell short of victory in the closest party leadership election in Japan's postwar history. Ikeda emerged with 242 votes for the party presidency to 160 for Sato, 72 for Fujiyama. In a pithy acceptance speech of 55 seconds, Ikeda pledged to seek "greater cooperation for the purpose of solidifying our great party."

THAILAND

The Marshal's Minor Wives & Major Tickel

On his deathbed in a Bangkok hospital, Thailand's Premier Sarit Thanarat held his comely wife in his arms and sang to her the old Thai ballad that begins: "The love of 100 mistresses could not be compared to the love one has for his own wife." Sarit may have been altogether too modest. After his death last December (of cirrhosis and other ailments of hard living), Bangkok papers carried the names of more than a hundred women who claimed publicly to have enjoyed his favors and hoped to get a piece of his estate. Among an inner circle of 51 mistresses, whom the old-school Thais delicately call "minor wives," Marshal Sarit had generously scattered villas, autos and other largesse, and fathered at least nine children. Many minor wives actually filed court claims for a share of Sarit's tickels, or baht, as Thais call their money.

Indeed, thanks to the energetic strongman's flair for financial wheeling-dealing, his fortune turned out to be even more spectacular than his dalliance balance. Contesting Widow Thanpuying Vichitra's claim to the marshal's estate, Sarit's two sons by a previous wife estimated that their father was worth at least 2.8 billion tickels, or $143 million. That seemed a lot of baht for a career soldier. So, before allowing his estate to be distributed, Sarit's successor, Thanom Kittikachorn, appointed a five-man committee to see if any government funds had lodged in Sarit's pocket.

JOHN LAUNOIS—BLACK STAR

PREMIER SARIT & VICHITRA

A dalliance balance of a hundred, plus baht by the billion.

Last week the investigating committee published an interim report disclosing that it had unearthed 400 million tickels ($20 million) in various bank accounts maintained by the late strongman. Even that was peanuts compared with the total value of his nationwide commercial empire, which included a controlling interest—mostly in the names of Sarit's relatives—in at least 15 specially privileged companies. Among them: the only merchant bank allowed to import gold; the only sales agency for the government plywood monopoly; a brewery with a heady share of the government beer monopoly; two companies with concessions to print and sell tickets for the national lottery; a construction firm with major government contracts. Sarit also owned a commercial fishing boat, some 50 autos, 30 Bangkok villas and a 3,000-acre farm.

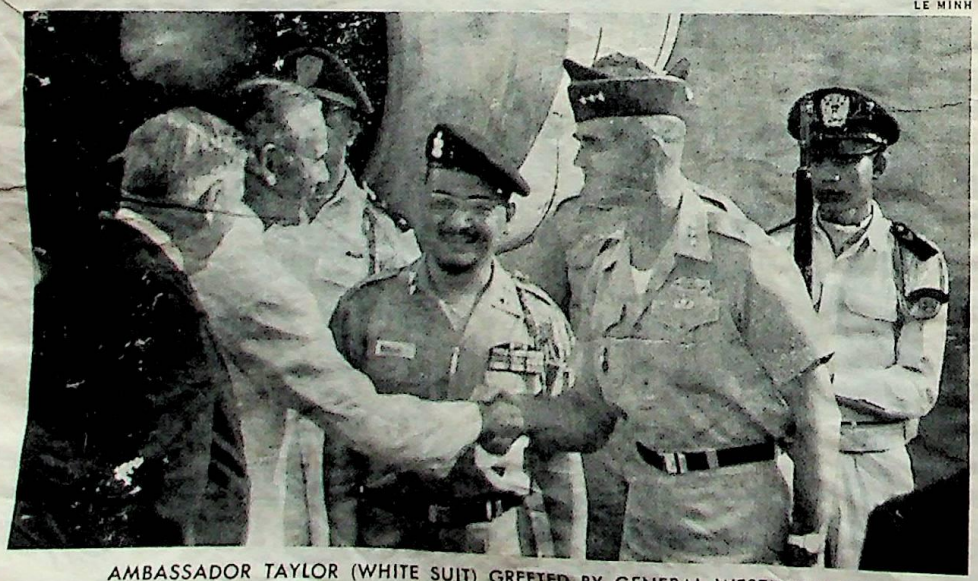
As to whether Sarit had actually dipped into the till, the committee said that to date it had traced $17.8 million of government money to Sarit's estate. Committee Chairman Phra Manu Vimolmath said that part of a secret fund of 12 million tickels ($600,000) had gone exclusively to Sarit's minor wives. The money, he said, came from a special government account known as the Funds for Secret Work.

SOUTH VIET NAM

No Time Limit

Hundreds of nervous cops jam Saigon's Tan Son Nhut airport as a U.S. Air Force jetliner swept in under flight escort. As the plane swung sharply to a halt, out stepped the new U.S. ambassador, General Maxwell D. Taylor, fresh in shining sharkskin and a brisk resolve. The Viet Cong had sworn to kill him, and indeed a terrorist carrying a homemade grenade in a loaf of bread had been captured just yards from the U.S. embassy the day before. But Max Taylor figured to stick around a while —at least until after the U.S. election. "I'm here to assure you of our unstinting support," he told the Vietnamese officials who greeted him. "There is no time limit in that commitment."

LE MINH



AMBASSADOR TAYLOR (WHITE SUIT) GREETED BY GENERAL WESTMORELAND

A tight schedule, and an eye for the 1,002nd solution.

Dawn Rise. To South Viet Nam's leaders, this must have come as a pleasant surprise. Only eight months ago General Taylor and Defense Secretary Robert McNamara had been talking of withdrawing all U.S. troops by 1965. This served only to inspire the Viet Cong, hardly helped morale in Saigon.

From the very start, Taylor set a no-nonsense pace. He huddled immediately with U.S. Forces Commander Lieut. General William Westmoreland. Wasted on the new arrival were the talents of former Ambassador Henry Cabot Lodge's superb cook "Can." Taylor eats quickly and sparingly for scheduled "working lunches" for weeks ahead. Accompanied by Deputy Ambassador U. Alexis Johnson, also new

rived, Taylor embarked on a series of
eetings, briefing and protocol sessions
his first day. He was up with the
n next morning to pay a call on
reeted Premier Nguyen Khanh.
Then he flew off to the seaside town
Da Nang to celebrate South Viet
's Air Force Day. Trim F-100s lined
e runway as several score of Viet-
nese pilots plus three U.S. aviators
re decorated with the Medal of Gal-
ry with Gold Wings. At the nearby
e hospital, Taylor passed out Purple
arts to two wounded Americans and
opped to chat with a sergeant who
d jumped with him over Normandy
D-day 20 years ago.

Phosphorus Barrage. From the 16,-
0 U.S. military men stationed in
outh Viet Nam, Taylor demanded an
creased effort. "We're already aiding
e Vietnamese in a thousand and one
ays," he told them. "But let's not be
tisfied when it might prove that the
housand and second way is the decisive
ne." Just how seriously that exhorta-
on was taken was proved during one
f three Viet Cong raids last week on
S. Special Forces camps. When two
iet Cong battalions hit the camp near
am Dong with a predawn barrage of
hite phosphorus mortar shells, U.S.
ister Sergeant Gabriel Alamo and an
ustralian warrant officer fought their
y to a weapons pit, fired parachute
res that illuminated the whole battle
ea—themselves included. They kept
eflares burning even as the Viet Cong
owed in on them. When the shooting
opped, Alamo, the Australian and 48
efenders were dead. But so were 107
Viet Cong raiders.

FRANCE

The Killer of Little Luc

Leaping from four police cars in a
ersailles square last week, a wedge of
ops hustled their handcuffed prisoner
ward the doors of St. Pierre jail. Be-
re they could make it, a screaming
b burst through police lines and
eted the prisoner with blows. "Give
m to us!" they cried. "Kill the mon-
r!" Their target was the confessed
er of little Jean-Luc Taron (TIME,
ne 19), and he seemed elated at the
mmotion. Turning to the *flics*, he
ted above the uproar: "They're right!
m a monster!"

In truth, Lucien Léger, 27, looked
ppointingly unlike most Parisians'
ne-tingling image of *l'étrangleur*, the
yll-and-Hyde strangler who had
ged the headlines and taunted the
ce for 40 days. "The Machiavelli of
me," as France-Soir had dubbed him,
rned out to be a colorless, bespecta-
ed little (5 ft. 4 in., 130 lbs.) male
dent nurse from the shabby suburb
f Villejuif. His hobby was writing ba-
verse, which he set to borrowed mu-
corded and issued in a jacket flatter-
gly decorated with his face and name.
Trapped by the last bizarre stunt in

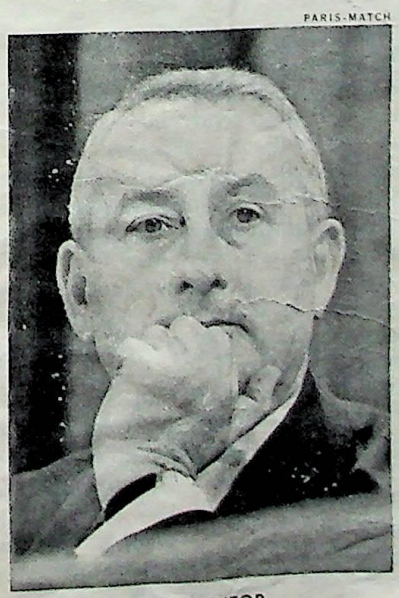
THE RECORD
Songs to strangle by.

his succession of bragging phone calls and letters to the police and press, Léger sat chatting with detectives at police headquarters as a squad from the Sûreté's First Mobile Brigade searched his apartment; in it they found the lined rose-tinted pad on which all 58 of the strangler's messages had been written. After 24 hours of grilling, Léger burst into tears and admitted: "*Oui, je suis bien l'assassin du petit Luc.*" He was drawn to the little boy, he explained, because "he seemed as unhappy as I was when I was his age."

An Undercover Talleyrand

The road to espionage is rarely paved with good intentions. Most of the "agents" working the dark corners of the cold war were lured there by simple greed or forced there by blackmail. But in the case of French Spy Georges Pâques, the motive was sheer do-goodism, complicated by a dash of intellectual vanity.

Since the Sûreté blew his cover last year (TIME, Oct. 4), the chubby, urbane French press attaché to NATO had been busy preparing his rationale. Last week, at his trial before a state security court in Paris, he unveiled it. Posed imperiously in the box, with one hand resting lightly on a thick dossier and a thin smile playing across his face, Pâques took six hours to tell his tale of misguided intelligence. His 19-year career as an agent in the pay of the Soviet Union, Pâques argued, had been nothing more than a clandestine political seminar, an effort to explain the intricacies of French policy. By filling the Russians in on Western military strength, he also felt he could countervail the "excess of weight" of the Anglo-Saxons—particularly the U.S.—in Europe and Africa, and perhaps prevent war based on miscalculation.



THE TRAITOR
Seminar of spying.

A Bit Choosy. Pâques believed he was ideally suited for this role. After all, he was a *normalien*—a graduate, like French Premier Georges Pompidou and Philosopher Jean-Paul Sartre, of the prestigious Ecole Normale Supérieure, and thus a "certified intellectual." So, first in Algiers in 1944, later in Paris, where he served in a succession of government departments, Pâques began a series of "political conversations" with a changing list of Soviet embassy personnel.

The Russians were eager to learn, gladly put up with Pâques' innocuous profiles of government ministers and long-winded explanations of French diplomatic thinking until their instructor could provide them with more valuable information. For his part, Pâques insisted that his pupils at least be apt. When an embassy official named Lysenko became his contact in 1959, Pâques complained crabbily about the Russian's "lesser intellectual capacity" and Lysenko's banal insistence on teaching him how to use a microcamera.

A Message from Garcia. In 1962 the Russians found an ideal student for their French teacher. Vasily Vlasov, first secretary in the Soviet embassy, clucked sympathetically at Pâques' revelations of "the aggressive intentions of the United States," urged Pâques to turn down a job in French counterespionage in favor of one on NATO's information staff. "He thought I had neither the character nor the temperament for counterespionage work," Pâques told the court. "He was interested in my fate."

Now Russian patience paid off. Using the code name Garcia, Pâques set up meetings with Vlasov in Métro stations, cafés, the Bois de Meudon and a suburban church. During the ten months he served as NATO information officer, he handed over the Allied military contingency plans for the defense of Berlin, a document of NATO's military-force needs from 1958 to 1963, a top-secret military plan named Fallex, many NATO studies on the political situation in Soviet satellites, psychological warfare plans, and regularly briefed Vlasov on the NATO ministerial conferences he attended. It was all good, hard intelligence, for Pâques had a "cosmic" clearance—the classification in NATO sec-

CC-0. In Public Domain.

Digitized by Arya Samaj Foundation Chennai and eGangotri

ond only to "cabale," the top status.

Pâques would have gone undetected except for a Russian defector who early last summer told the U.S. Central Intelligence Agency that Moscow had obtained the Allied contingency plans for Berlin from sources in Paris. The Sûreté immediately began tailing Pâques and 15 other suspects, rapidly narrowed the field to him. The charge against him was treason, which under the French penal code carries the death penalty. But as the court listened openmouthed to Pâques' naive self-justification last week, a spark of sympathy was struck. As his defense counsel put it: "He was a *normalien*, a man who thought he was capable of maintaining his own permanent summit conference with the Russians, a sort of undercover Talleyrand." For that reason they sentenced Georges Pâques to life imprisonment.

WEST GERMANY

Adenaullism

When Konrad Adenauer stepped down as West Germany's Chancellor last October, the Christian Democrats who took over hoped that he would fade into political oblivion. Not a prayer. *Der Alte* has not hesitated to snipe at the policies of his successor. Last week he bounced right back into center stage. In the first open challenge to Ludwig Erhard's leadership, Adenauer berated his successor for rejecting the "complete union" of France and West Germany that Charles de Gaulle had proffered in Bonn earlier in the month.

Backed by other powerful "Gaullists" in the ruling Christian Democratic Union, Adenauer urged support for a loose association of sovereign states, the European Third Force that De Gaulle envisions, rather than the Atlantic-oriented federal union advocated by Erhard and most other European leaders. Echoing this line, former Defense Minister Franz Josef Strauss challenged the Chancellor's constitutional right to determine foreign policy.

Word of the new Adenaullism reached Erhard while he was paying a visit to Denmark. On his return to Bonn, Erhard growled: "In Denmark I did more for the consolidation and cohesion of Europe than was achieved by some of the talk back here."

Then, with a forcefulness that has often been lacking in his chancellorship, Ludwig Erhard angrily told a Cabinet meeting that De Gaulle had specifically "tried to place before us the alternative of choosing between Paris and Washington." As a top government official summarized Erhard's position: "A Europe that consists of two states is not the Europe that the federal government has in mind. Close cooperation between France and West Germany is a precondition for the creation of Europe. But it is not an end in itself."

ULLSTEIN—BILDERDIENST

ACROSS THE FIELD & INTO THE WIRE

The crop was high, but so was the Grepo's eye.

BERLIN

They Keep Coming

Two East German brothers, aged 19 and 21, crept silently into a grain field at the East-West border one recent summer afternoon and flattened themselves amidst the billowing green stalks. Looming above them were two 30-ft.-high wooden guard towers manned by grim East German Grepos toting machine pistols, and between the towers stretched three rows of ugly barbed wire.

For six hours the brothers lay still. Then, just before 7 p.m., West Berliners strolling on the other side of the field stopped in their tracks, aghast, as they saw the two young men rise to make their break. Wearing heavy gloves to protect their hands, the brothers vaulted one row of wire, then another, *finally the third. Luckily, the guards' backs were turned. Only one shot was fired—and that by a young West Berlin woman who excitedly snapped her camera (see cut) just as the two successfully hurdled the final barrier to freedom in the West.*

GREECE

Slap for the Center

Prime Minister George Papandreou's lure for leftist support in last Feb... ary's national elections was a pledge to repeal anti-Communist legislation enacted between 1946 and 1949 when Communist guerrillas tried to seize power. Sure enough, Papandreou's Center Union, having garnered 173 seats in Greece's 300-member Parliament, rammed through a bill to free most Communist prisoners convicted of sedition and murder, abolish political deportations, and deprive the police of power to withhold work permits on political grounds.

In municipal elections last week, Papandreou's more liberal policies toward the left were put to the test, and the ruling Center Union emerged the principal loser. Leftist and pro-Communist candidates running under the banner of the United Democratic Left Party or as independents won more than half of the 230 mayoralty races. And it was most at the expense of Papandreou's followers. Most embarrassing to the government was the balloting in Athens, where 1,850,000 of Greece's 9,000,000 people live. There Pausanias Katsotas, a minister in Papandreou's Cabinet who resigned to run for mayor, polled only 25% of the vote, trailing both leftists and rightists.

ALGERIA

Still in the Saddle

Treachery last week ended the short-lived revolt of Colonel Mohammed Chaabani, 32. Guided by informers to an oasis where Chaabani and 87 followers were resting, government troops surrounded the overconfident rebels and forced them to surrender without firing a shot. It was one up for Ahmed ben Bella, Algeria's harassed Premier and President, who clings uneasily to control of his ragtag nation.

Arrests, dismissals and resignations were becoming a habit; hardly a day went by without some new police swoop. One victim was Abderrahman Farès, a foe of the regime, who was interim President when Ben Bella first came to power in 1962. Disaffection reached into the Cabinet and was ruthlessly dealt with by Ben Bella. One went the Minister of Interior, who resigned in protest against a decree creating regional governors to bypass the ministry and report directly to the President. In Switzerland, Ben Bella moved swiftly against Mohammed Khider, a former revolutionary comrade who had fled into exile with a reported $1,200,000 in party funds. At Algeria's request, Swiss officials blocked Khider's bank accounts.

All this demonstrated that, though he is increasingly isolated, Ben Bella is in the saddle and means to stay there. As long as the army remains loyal to the regime, he probably will.

Rambler Classic 770 4-door sedan

RAMBLER: ALWAYS SEEN IN THE COMPANY OF IMPORTANT PEOPLE

Important people everywhere are discovering the true automobile value that Rambler offers. They appreciate Rambler's unique combination of luxury . . . spacious, rich luxury . . . with America's most advanced engineering features: the rattle-free solidity of one-piece body construction . . . outstanding fuel economy . . . the sensible dimensions that make Rambler easy to handle and to park. Plus the Rambler Double-Safety brake system that employs tandem master cylinders (one for front brakes, the other for rear. If one set is damaged, the other still works). Rambler is an important car, well worth the modest investment it may cost. See your Rambler dealer today.

A better way to run a railroad

Higher speeds and lower maintenance costs are made possible by the improved lubrication provided by oil-soaked, foam rubber lubricators for railroad journal boxes. The improved lubrication is a direct result of the better oil-holding properties of oil resistant foam rubber made from POLYSAR Latex 761. This is just one of the many practical benefits of continuing Polymer research. By concentrating on the improvement of existing products and the development of new ones, Polymer research has helped to find a better way of running a railroad and to suggest better methods of processing in many different fields. Polymer research and the products it creates are near you, no matter where in the world you do business. For more specific information, let us put you in touch with the Polysar technical service representative or distributor nearest you. Write: Polysar International, S.A. Fribourg, Switzerland.

CUBA

Friendly Fidel

Fidel Castro generally is inclined to thumb his nose at the U.S. and at any other country that disagrees with him. Last week he changed his style and seemed to be waving and grinning all around. In a flurry of interviews with old invitations to U.S. newsmen, he sought to convince everybody that Cuba wanted nothing but peace and good fellowship with its neighbors—particularly the U.S.

Sugar, Anyone? For an opener Castro sought out the New York Times, which shares with the Associated Press the distinction of operating the only U.S. news bureaus in Havana. In 18 hours of talk, Castro laid it on thick for Times Correspondent Richard Eder—and the Times, in its characteristic fashion, gave Castro its front page for a forum. The bearded Cuban talked about reconciliation with the U.S., smoothly suggested that now was the time to normalize trade relations—meaning his vast sugar sales—and mused about the possibility of resuming diplomatic relations. He even admitted that he had supplied aid to guerrillas in other parts of Latin America, and airily offered to cease and desist if the U.S. would end its own subversive activity inside Cuba. "We do not hate you," said Castro magnanimously. "If the U.S. is ready to live with us, then we would feel the same obligation."

No sooner was the Times interview in print than Castro wired 25 U.S. newspapers and magazines, "cordially" inviting them to send representatives to Cuba to witness the country's July 26th anniversary celebration in Santiago in eastern Oriente province. Most of the big-city papers were included, from the San Francisco Chronicle to Boston's Christian Science Monitor. TIME and *Newsweek* were invited. But no Miami or Scripps-Howard papers were on the guest list, nor were any of the television networks.

Trouble. What was behind Castro's sudden image-polishing? Washington's Castrologists put it in a word: trouble. Though Castro remains in ironfisted control of his island, the economy is just barely bumping along, cut off from any real trade with the West and without enough help from Moscow to make a go of it. Abroad, Castro's image has been severely tarnished by the spectacular defection of his sister Juanita (TIME, July 10). And next week the 20 foreign ministers of the Organization of American States will meet in Washington to vote on sanctions against Cuba for shipping arms to Communist terrorists in Venezuela. The prospect is for a clear two-thirds majority branding Castro an "aggressor." The OAS is expected to ask all hemisphere nations to break their remaining economic ties with Cuba.

Aside from the New York Times, which thought that Fidel's friendly new look "deserves serious scrutiny and thorough exploration," the reaction was generally cool. The State Department regarded the Cuban overture as an attempt to buy time and take some of the steam out of the OAS, advised Castro to back his words with evidence. Said a spokesman: "We have consistently maintained that there are two elements that are not negotiable—Castro's ties of dependency with the Soviet Union, which are tantamount to Soviet domination, and the continuance of Castro's promotion of subversion elsewhere in the hemisphere."

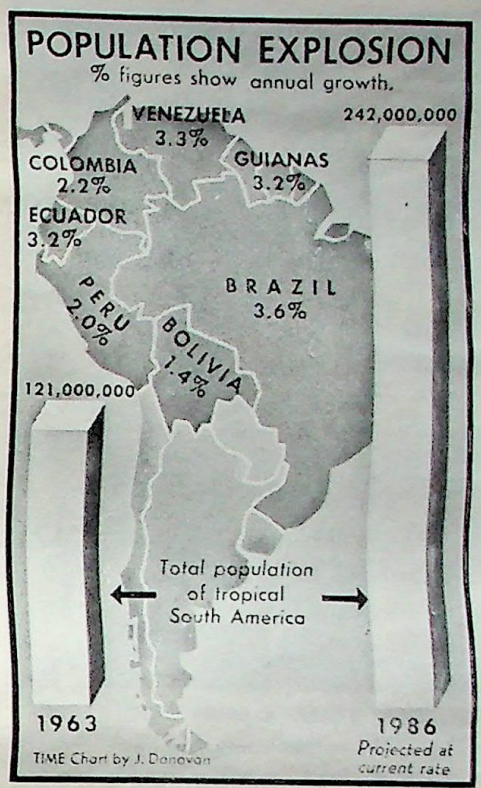
EDER & CASTRO
Buying some time.

POPULATION

Double by 1986

What part of the world has the fastest growing population? Not India and not Communist China. The population explosion is strongest in tropical South America—a 5,300,000-sq.-mi. area encompassing Bolivia, Brazil, Colombia, Ecuador, Peru, Venezuela, and the three Guianas, British, Dutch and French (*see map*). According to the Population Reference Bureau, an independent, nonprofit organization based in Washington, D.C., these nine countries are growing at an average rate of 3.2% each year, compared with about 2% for India and Red China. At current rates, their 121 million population will double by 1986; in 100 years something like 3.8 billion people will be fighting for survival in the area's inhospitable mountain ranges, jungles and deserts.



High birth rates of 40 to 50 per 1,000 annually have long been a fact of Latin American life. Since World War II, modern medicine has reduced the death rate to less than 20 per 1,000 in most countries. Brazil, whose 78 million people are increasing by 3.6% each year, is growing the fastest; next comes Venezuela, with 8,100,000 and a growth rate of 3.3%. Tiny Ecuador, whose 4,700,000 people stand 43 to the square mile, already has the highest population density of any South American country, and is compounding the matter with a 3.2% growth rate. Only in mountainous Bolivia, where 2,400,000 Indians struggle to exist in the thin Andean air, do the deaths start approaching the births.

The human explosion poses staggering problems for the nine nations—and for the U.S. as their Alianza partner. Almost half of the region's population are under 15 years of age, children who must be educated and trained for jobs, which must then be found for them. In Brazil, despite all efforts to build more schools, only half the children are getting a grade school education, only 6% high school training. Concludes the Population Reference Bureau: "Until a new 'vital balance' is achieved—a low birth rate balancing a low death rate—economic progress and better living conditions for each citizen will be very difficult to attain, if not impossible."

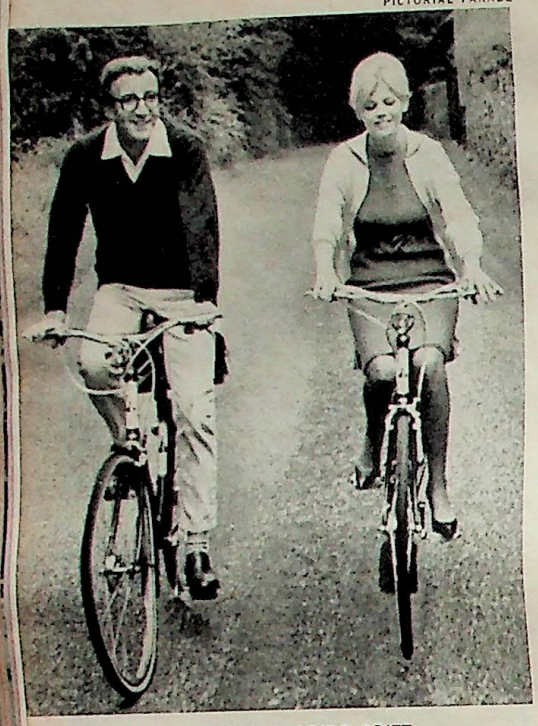
PICTORIAL PARADE



SELLERS & BRIDE BRITT
The wheel came full cycle.

"I suffer from a prolonged mechanical adolescence," says **Peter Sellers**, 38, who loves nothing better than a spin in his 83rd car, a $19,600 Ferrari, which makes a nice change of pace from his 82nd, a $14,000 Lincoln Continental. But 100 m.p.h. can be hard on the heart, and an April cardiac seizure made Peter feel like a very old man, so the wheel has come full cycle, and it's back to puberty down an English country lane for the convalescent comedian and his bride Britt Eklund.

. . .

Mary Ann, 10 mos., **Mary Magdalene**, 10 mos., **Mary Catherine**, 10 mos., **Mary Margaret**, 10 mos., **James Andrew Fischer**, 10 mos., and their five older siblings take the giant economy-size carton. What's more, says Mother Mary Ann, they have a new brother and/or sister due in September. One company that that's strictly milk and honey to is Borden's, which has just lined up the quints and their family to boost everything it sells from gum to beans, but mainly guess what. Elsie, move over.

. . .

The memories were still strong, and gawking sightseers made N Street all but impassable, so **Jacqueline Kennedy**, 34, decided that next fall she, Caroline and John Jr. will move to impersonal Manhattan and put their twelve-room Georgetown house up for sale.

. . .

It was too early for Bastille Day, too late for the Fourth of July, but **Frank Sinatra**, 46, is so big for independence that he started his own revolution in Paris. During a wild night on the barricades, tossing firecrackers and four-letter sizzlers, Frank and his Hollywood citizens led French photographers to hot spots from the Left Bank to the Champs Elysées. As a cherry bomb burst in the air outside one *boîte*, a French newspoule asked, "Is that a game for middle-aged men?", to which Frankie glared redly, "Say that again and I'll smash your face in." She didn't, but the pack routed the rabble anyway with drawn knives, a gin bottle and a couple of clubs, leaving some Frenchmen thinking wistfully: *Quel dommage* the Bastille was ever torn down.

. . .

In Washington, D.C., the estate of Builder **Morris Cafritz**, who died last month at 77, was tidily appraised at $24 million, of which the feds will get $3,000,000, his widow, sometime Party Giver Gwen, $6,000,000, his three sons and charity the rest.

. . .

Bounding triumphantly from the grueling examinations that won him his *lycée's* coveted *bachot*, **Charles de Gaulle**, 15, *mon général's* oldest and favorite grandchild, reported that as his examination code name he had used *"L'état, c'est moi."* Despite dark suspicions that "certain professors are intimidated by my name," he nevertheless flunked Latin, pulled through on the strength of his French and history, which surprised few of his fellow students, among whom he is already famous for his imitations of Grandpa. "I am a Gaullist," he explains, grandly. "But if I were in Grandfather's place, I would be much more intransigent."

. . .

Oregon's Senator **Maurine Neuberger**, 57, who succeeded her husband Richard after his death in 1960, will be married "some time this year" to Dr. Philip Solomon, 50, a divorced Boston psychiatrist.

. . .

As it must to practically anyone who parks in Rio de Janeiro nowadays, *pffft* came to **Lincoln Gordon**, 50, U.S. Ambassador to Brazil. The official Cadillac (license: CD3) was parked in a forbidden zone across from the embassy, whereupon a Rio cop breezily whiffled the air from its front tires, preparatory to having it hauled away as part of the city's enthusiastic traffic improvement campaign. A hard-pumping attaché soon got things rolling again, however, and there was one consolation. Gordon got dozens of sympathetic phone calls from fellow flatties. Said he: "This is the first time in three years I've had such unanimous support."

. . .

Well, the candidate was a Dodger, a well-known Dodger, and he was dodging the accusations made by Vermont Bricklayer Rene Morin, 51, that he, **Leo Durocher**, 57, had stolen the heart of Morin's wife Anna, 51. The original Lip was curled up on the witness stand in Middlebury, Vt., during Morin's $150,000 alienation-of-affections suit. "I respect and admire Mrs. Morin," grated Leo, giving the ump his side of the story. But the girl "I am very, very much in love with" is Morin's daughter Carolyn, 26, a leggy actress-model [illegible] the coach's onetime secretary, whom [illegible] has dated since his marriage to Actress Laraine Day was rained out in 19[illegible]. He gave mother and daughter gifts, [illegible] agreed, but to persuade Carolyn to [illegible] come Mrs. D. Said she: "If the offer [illegible] still open, I might reconsider."

. . .

Foreign devils do it. Even Moscow revisionists do it. But for **Mao Tse-tung**, 70, leader of the glorious Chinese People's Republic, to indulge in such bourgeois barbarian ostentation as a limousine was hardly thinkable. Nonetheless, Mao has apparently decided to make the great leap forward in style. Peking has placed an order with Britain's decadent Rolls-Royce Ltd., for a $12,726 Silver Cloud III Mark III and a $20,454 Phantom V. They should do a lot for his image. At the Gate of Heavenly Peace, since with a little friendly assistance even the cleric in a Rolls can be persuaded not to [illegible]

. . .

Kelly's Law states that if you bring your umbrella to work, it won't rain. CAMPUSES

Advice from a Wise Old Computer

The typical junior college for 4,500 students requires 142 classrooms, but the junior college soon to be built in St. Louis will do the same job with 80. The savings will be $3,000,000, and all the credit goes to a wise old computer. Using techniques followed by aerospace engineers to simulate the performance of the Gemini space capsule, technicians at St. Louis' McDonnell Automation Center fed an IBM 7094 computer a fact of data that included the college's projected curriculum, the expected line-up of courses for the students, the size of classrooms, labs, lecture halls and shops, the size of the faculty, and time patterns for classes. In less than 30 minutes, the computer produced a schedule that would keep the instructional areas in use for 80% of the college's 45-hour week—as compared with an average utilization rate of from 30% to 50%.

Following the computer's advice, 100,000 sq. ft. were lopped off the building plans for the new campus. Two additional colleges are planned, and by 1970 a student body of 16,000 is expected for the three superefficient campuses. Said a grateful taxpayer: "How do you give an honorary degree to a computer?"

TEACHERS

Nuns for the 21st Century

From Columbia University last year, a Roman Catholic nun working for her M.A. in Russian flew off to the Soviet Union to do interviews on the 1917 Revolution. At the University of California in Berkeley, one of the nation's best centers for Hispanic studies, another nun, expert in Spanish, has just been offered a job as a teaching fellow. In New York, sisters attending Manhattanville College of the Sacred Heart quietly study the sometimes shocking works of Samuel Beckett, and other nuns press curiously into a Second Avenue loft to take in the blasphemous black mass of Jean Genet's *The Blacks*.

Many such horizon-widening studies for U.S. nuns are planned and sponsored by the Sister Formation Conference, an organization successfully dedicated to raising the educational standards of the nation's 104,000 teaching nuns. Says Sister Bertrande Meyers of Missouri's Marillac College, which runs a year-round training program for the conference: "We prepare nuns for the 21st century."

How Many Hail Marys? Until recently, most U.S. sisters were barely prepared for the 19th. In 1952, one survey showed that only 13 out of the 255 religious communities had training programs to provide their nuns with bachelor's degrees, while 118 had no educational facilities of their own. So heavy was pressure from bishops to get nuns, even if badly trained, into expanding parochial-school systems that thousands of sisters were sent out to teach after two years of a spiritual novitiate. By secular standards, few were qualified to do much more than keep order in class and provide a "one Hail Mary and two Hail Marys make three Hail Marys" level of instruction.

Sister Formation has helped change that. Founded in 1954 by the National Catholic Education Association and superiors of the principal U.S. sisterhoods, the conference has set up four fulltime accredited centers for nuns at Catholic women's colleges, organized dozens of summer courses for sisters already committed to parochial-school teaching. It has persuaded well-fixed orders to open their facilities to less affluent sisterhoods, and to Episcopal nuns as well. About nine-tenths of the nation's sisterhoods have added in whole or part a standard five-year curriculum for nuns —heavy on liberal arts, light on professional education courses. Sister Formation's summer courses, and its monthly bulletin edited by Sister Ritamary of Washington, sometimes offer more avant-garde theology than most seminaries for priests allow.

A Wider Mission. The aims of Sister Formation are not narrowly professional or narrowly Catholic. According to Sister Annette Walters, the Minnesota psychologist who has been its executive director since 1960, the conference seeks to integrate a nun's spiritual and educational training. One current debate within the conference involves this spiritual training; some religious superiors, like Mother Regina of the Sisters of Mercy, believe that the conference should take its norms from the zealous Better World Movement, founded by Italian Jesuit Riccardo Lombardi.

Sister Formation believes that nuns should take a wider and more active mission role in the world. Thus nuns majoring in sociology at Marillac spend long hours in St. Louis courts learning how the law operates, and those at Mundelein study civil rights and the psychology of poverty. In pursuit of higher education, nuns sometimes exchange their habits for dresses (as did the Columbia student who toured Russia) or get ecclesiastical permission to study writers, such as Sartre and Gide, whose works are on Rome's Index of Forbidden Books. And when nuns go on to graduate school, says Sister Mary Ann Ida of Mundelein, "the best type of university is often a state or large private university, and not necessarily a Catholic one."

"We must be dedicated to being the best-prepared teachers possible," says Sister Mary Emil of Detroit's Marygrove College, who believes that "we are within ten to 15 years of establishing the sisterhoods as the best-trained teachers on the American scene." Since one-tenth of the nation's children attend Catholic parochial schools, Sister Formation represents a national asset that will pay off not just in better-educated sister-teachers but also in better-educated Americans.

The Curse & The Hope

(See Cover)

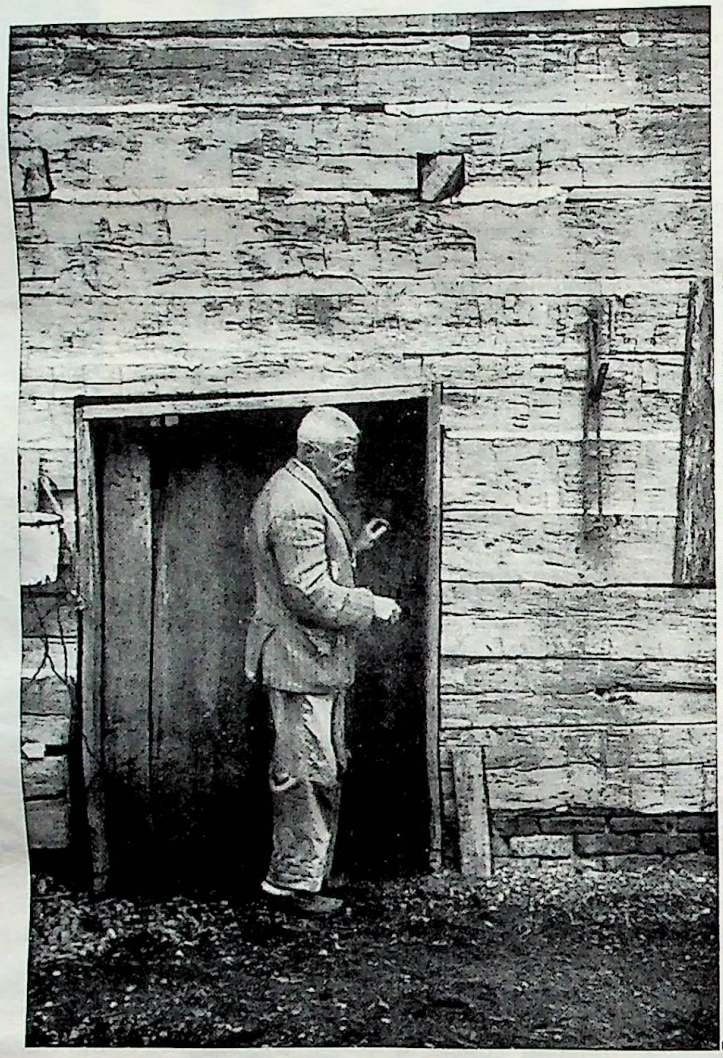
Tell about the South. What's it like there. What do they do there. Why do they live there. Why do they live at all?

You can't understand it. You would have to be born there.

—Absalom, Absalom!

The myths, mysteries, and hard realities of the South are the preoccupation of Presidents, the puzzlement of foreigners, the daily grist of newsmen, and the astonishment of the entire nation. Is the South a war camp of church bombings and station-wagon burnings, or is it a region earnestly attempting peaceful compliance with a hated civil rights law? Does it ask for "understanding" merely to delay the inevitable? Or is there a wound so deep that it will not heal for generations to come? Is poverty too prevalent? Is sex too obsessive? What sets Southerners apart —what lies at the root of their beliefs and behavior?

One man who knew was William Faulkner. He was born there, in Mississippi, heir to and prisoner of the crinoline-and-lace tradition; he died there in 1962. In writing 19 novels and 80 short stories, almost all about the South, he won through to an understanding that in its richness, scope and completeness, tragic vision and comic invention, will not soon be equaled. At his best he penetrated the magnolia curtain of Southern illusions to the secret springs of motive and action. He said, in effect, "This is the way it feels to be Southern"—something the North needs to know and the South may even need to be reminded of.



© 1963 MARTIN J. DAIN "FAULKNER'S COUNTY: YOKNAPATAWPHA" TO BE PUBLISHED BY RANDOM HOUSE

FAULKNER INSPECTING HAND-HEWN LOG BARN

Back to native roots.

Faulkner's vision has little to do with sit-ins and registration drives. His is a vision of history and the heart. It begins with the land in its original wildness and its taming and spoliation by the first settlers and their slaves. For him the crime of the South was chattel slavery, and the white man's denial of the Negro's equal humanity was an ineradicable curse on the land and its people. Ever since, Faulkner argues, the white Southerner has been burdened by a crippling, unacknowledged guilt, as intimate and inescapable as if taken in with the milk of his mother—or of his Negro wet nurse.

Slavery brought the disaster of the Civil War, which united the South, gave it legends, but impoverished it. Reconstruction, by attempting to impose revolutionary change, created the South's implacable resistance to change, and thus put off for a century any real hope of racial equality and the working-out of the Southerners' guilt on their own initiative—which is the only way guilt can be worked out.

The defeated whites clung to the past when Mississippi had been one of the richest states in the Union and Jefferson Davis the rebel President. They were scared because they felt that they were few and the Negroes myriad; they were stubborn because only by convincing themselves that the Negro was somehow inferior, like a pet or a horse, could they justify their long crime of refusing to recognize him as an equal human being; they were violent, partly from the strain of sustaining this myth, partly from fear that if the myth was once cracked, at any point or in any context, the whole perilously maintained social structure would collapse.

Gropings & Costs. Thus Faulkner's stories know the moment when a Southern child first hates, and what happens to men who use other men as tools. Faulkner brings alive the Southern preoccupation with the past and the sickness of living in memories. He teaches again and again the fear and the reality of miscegenation, and he makes comprehensive the sexual hysteria behind the myth of Southern white womanhood. He can extort reluctant understanding for a code of grim and instant violence.

Faulkner also knew the gropings and costs of conciliation, and the difficulty and urgency of arousing men of good will to action. He spoke of the future not as a social scientist with a blueprint and a program, but as a novelist of "the human heart in conflict with itself"—as he said when he received the Nobel Prize. Thus his hopes are implicit in the psychology of the characters he created and in the moral judgments he requires the reader to make. And what he seemed to hope was that out of the heart in conflict, out of the crisis of conscience, could come a new reverence for the land and for its people, and a voluntary recognition by the individual white Southerner of the humanity of the individual Negro. He put his faith in the generation now coming to maturity to go much farther than its fathers.

For those who had ears to hear, Faulkner was offering these things more than a quarter-century ago, back when the public that was embracing *Gone With the Wind* could dismiss the South's sporadic violence (119 lynchings in the '30s) and constant racial repression as merely a peculiar regional problem. Faulkner himself was often treated as a strictly regional writer. In 1945, just five years before he won the Nobel Prize, nearly all his novels were out of print. Many white Southerners still turn away from him as difficult, gothic and horror-ridden, loaded down with guilt they claim they do not feel. Yet today William Faulkner is the one writer—sociologist, historian or novelist, Southerner or Northerner, white or Negro—who is inescapably relevant to a compassionate understanding of the Southern crisis.

Born & Bred. Halfway through the writing of his third novel, *Sartoris*, he had a vision: "I discovered that my own little postage stamp of native soil was worth writing about and that I would never live long enough to exhaust it. I created a cosmos of my own." He called it Yoknapatawpha County and set it down in the rolling pine hills and cotton-rich valley bottoms of northeastern Mississippi, 80 miles from Memphis, Tenn., named its county seat Jef-

Gurukul Kangri Collection, Haridwar

...erson, and peopled its 2,400 sq. mi. ...with 15,611 residents—"Whites, 6,298; ...Negroes, 9,313. William Faulkner, sole ...wner and proprietor."

Faulkner set 15 of his 19 novels in ...Yoknapatawpha County. He drew its ...maps, crisscrossed its landscape in his ...stories, plotted the intricate genealogies ...of some of its families for four and five ...generations, told and retold its legends, ...and searched out its history back to its ...original Indian inhabitants.

So real was the world of Yoknapatawpha to Faulkner that he sometimes ...gave the impression of living the life of ...the county almost day by day.

...during a bibulous all-afternoon lunch in New York with ...the last Random House editor, Albert Erskine, Faulkner ...might ask: "By the way, did ...you hear what happened to ...Barry Snopes?" and then ...launch into anecdotes (some ...of them never published) just ...as if Erskine had lived in the ...same town but had not been ...back for a spell. Faulkner ...once remarked to a friend that ...Yoknapatawpha Lawyer Gavin Stevens " was a good man, ...but he didn't succeed in living ...up to his ideal. But his nephew, the boy [Chick Mallison, ...the young hero of *Intruder in the Dust*], I think he may ...grow up to be a better man ...than his uncle; I think he may ...succeed as a human being."

Looking Glass. Yoknapatawpha County and the town of Jefferson resemble closely the Oxford, Miss., area where Faulkner was born in 1897. (Yoknapatawpha was the original Indian name of the river that runs past Oxford.) Many of its inhabitants, including most of the principal characters of his novels, are closely drawn from his family, his acquaintances, his ancestors. His great-grandfather (the novelist added the *'u'*) was a Confederate colonel and a fiery leader of irregular cavalry; he later turned railroad builder and politician, killed two men in gun fights, was himself finally shot dead in the street by a former business partner. In each larger-than-life detail he has long been recognized as the model for Faulkner's Colonel John Sartoris, progenitor of the Sartoris family, whose family legends, falling fortunes and declining vigor the novelist traced through four generations in eleven novels (principally *Sartoris* and *The Unvanquished*). Oxford friends of Faulkner can tentatively identify the real-life sources of several dozen other characters and incidents, including some of the most decadent and grotesque.

But Yoknapatawpha County is far more than antiquarianism and an exercise in skirting the law of libel: it is a looking glass of magical power to enable the patient viewer to see the South whole.

Faulkner was first of all a social historian of matchless accuracy and sweep in capturing the detail of the way life in the Deep South was, and often still is, for whites and Negroes, rednecks and aristocrats, farmers and townspeople. He was also a raconteur of hallucinatory splendor and sudden mirth. But primarily, Faulkner chronicled and explicated the mind and conscience—and something deeper than conscience or even consciousness—of the white Southerner. In effect, his exploration was an exploration of himself. This is one of the most difficult things to do honestly, and one of the most significant if done well.

Black Shadow. For no man could have been more wholly in the South and of the South. William Faulkner was deeply, almost mystically, attached to the land. He was the great-grandson of a man who had owned slaves; his father ran only a livery stable. But Faulkner's concern was spiritual, not economic. His obsession was the region's deepest secret, what he called the curse on the land.

He put it most passionately in *Light in August*, as the tormented Joanna Burden remembers the time when her abolitionist father took her to the family graves and told her: "Your grandfather and brother are lying there, murdered not by one white man but by the curse which God put on a whole race before your grandfather or your brother or me or you were even thought of. A race doomed and cursed to be forever and ever a part of the white race's doom and curse for its sins. Remember that. His doom and his curse. Forever and ever. Mine. Your mother's. Yours, even though you are a child. The curse of every white child that ever was born and that ever will be born. None can escape it."

And Joanna remembers: "I had seen and known Negroes since I could remember. I just looked at them as I did at rain, or furniture, or food or sleep. But after that I seemed to see them for the first time not as people, but as a thing, a shadow in which I lived, we lived, all white people, all other people. I thought of all the children coming forever and ever into the world, white, with black shadow already falling upon them before they drew breath."

LIBRARY OF CONGRESS

GENERAL ROBERT E. LEE LEAVING APPOMATTOX (BY WAUD)
Out of the memory of defeat.

On the Floor. Faulkner has explored this thesis in myriad ways, but none is more touching, or echoes the experiences of more Southerners, than the story of seven-year-old Roth Edmonds in *Go Down, Moses*. In all Roth's young life, his constant companion has been a Negro boy named Henry, son of a nearby Negro farmer. They have played and fished together, eaten the same meals and often slept in the same bed. "Then one day the old curse of his fathers, the old haughty ancestral pride based not on any value but on an accident of geography stemmed not from courage and honor but from wrong and shame, descended to him." Roth decrees that Henry must sleep on a pallet on the floor. This primal wrong and first denial of equality leaves Roth in "a rigid fury of the grief he could not explain, the shame he would not admit."

Just how far Mississippi's troubles extend back into history is examined in *Absalom, Absalom!* That history is inexorably racial. The novel mercilessly strips away the romantic Southern mythology to reveal the brutal repression of slavery, the arrogance of plantation owners who could summon Negro girls to their beds as if they were ordering the carriage brought around to the door, the guilt behind the Southern obsession with "purity of blood," and the consequences down through the generations of the white man's refusal ever to recognize his Negro offspring, his in-

ability ever to say "my son, my son," to his dark-born child.

In a panting, difficult prose, the several 20th century narrators of *Absalom, Absalom!* pursue the story of Thomas Sutpen, who came to Mississippi with wagonloads of savage blacks in 1832 determined to change a 100-sq.-mi. piece of virgin forest into a plantation. Sutpen is a creature of high-flown words and naked will—and perhaps the closest to a tragic hero in the classical Greek sense that U.S. literature has produced.

His fierce dream of Sutpen's Hundred at first succeeds. But disaster overtakes him and his dream of a dynasty. His grown son Henry brings home a friend, Charles Bon, who courts Sutpen's grown daughter Judith—but who turns out to be Sutpen's never-acknowledged child by his first wife, whom he put aside when he discovered that the aristocratic Creole girl had a trace of Negro blood. The Civil War interrupts, and the men go off to fight. But when the weary combatants return and meet at the gate of the ruined plantation, young Henry Sutpen shoots down his half-brother Charles Bon. Why? Was it because of a fear that Judith would commit incest? Or miscegenation?

Thus the plot of *Absalom, Absalom!* sums up the fundamental Southern anxiety: to the racist's question, "would you want your sister to marry one," Faulkner adds "when he may be your brother?" This, Faulkner seems to say, lies at the heart of the almost paranoiac fear of the "mixing of bloods," which would call in question the belief in a difference between the races on which white dominance was founded, and which, as the owner of one of Mississippi's largest plantations said last week, is still "very real for many whites today."

Crisis of Identity. In *Light in August*, Faulkner demonstrated how the preoccupation with race can make it tragically impossible for a man to know who he really is, and dramatized the mindless virulence of white reaction to miscegenation. Joe Christmas, the book's hell-ridden hero, is a remarkably modern figure: in the psychological cant phrase of 1964, he suffers an "identity crisis" because he thinks he is part Negro successfully passing for white. Compounding his agonizing psychological fracture, Joe Christmas takes for his mistress a woman who embodies the Southerner's hated notion of the "outside agitator." Joanna Burden is a spinster, a Northerner, dedicated to helping Negroes. Her failure is that she is not able to know Negroes as individuals, but only as an abstract mass or a brooding presence. One day Joanna is found brutally murdered in her bedroom. Obviously Joe has killed her. But this would not have excited the town until an acquaintance of Joe Christmas says that he has always thought Joe was a nigger. That sets off the mob. In his description of Joe's lynching, Faulkner makes clear that vengeance does not expunge guilt, and expiation is nigh to impossible.

"When they saw what Grimm was doing one of the men gave a choked cry and stumbled back into the wall and began to vomit. Then Grimm too sprang back, flinging behind him the bloody butcher knife. 'Now you'll let white women alone, even in hell,' he said. But the man on the floor had not moved . . . From out the slashed garments about his hips and loins the pent black blood seemed to rush like a released breath . . . upon that black blast the man seemed to rise soaring into their memories forever and ever. They are not to lose it, in whatever peaceful valleys, beside whatever placid and reassuring streams of old age, in the mirroring faces of whatever children they will contemplate old disasters and newer hopes."

Renunciation. In the series of novellas and short stories brought together in *Go Down, Moses*, Faulkner expressed most explicitly his hope that some day reconciliation may be found in an end to exploitation of one race by another. More than any other Faulkner character, Ike McCaslin grapples with and points the way to the moral and emotional resolution of the white man's guilt. Faulkner begins again at the beginning, where Ike McCaslin's ancestors with their slaves took the land from the Indians and tamed it to cotton. He then tells how Ike himself as a boy grows up in the town of Jefferson, learns to hunt deer and bear, and is initiated into a manly love for the wilderness and all the creatures in it.

Ostensibly, Ike McCaslin's life is a series of hunting stories. As that, they are fine entertainment, often anthologized. But beyond that the stories make up a mystical, and for Faulkner truly religious, statement of man's holy relation to the wild land. What Ike McCaslin learns is that he can have peace only at the price of renouncing his claim to his father's slave-won, sharecropper-run plantation, "founded upon injustice and erected by ruthless rapacity and carried on even yet with at times downright savagery not only to the human beings but the valuable animals too." But after this his wife rejects him, and Ike thereby loses the right to found a family of his own. The price of reconciliation is terribly high, Faulkner says—and even then it may not be enough.

Told by an Idiot. In *The Sound and the Fury*, which many critics call his greatest book, Faulkner examined the aimlessness, moral impotence and sense of doom that he saw afflicting many of the old established Southern families in the first third of this century. The events are simple enough, though the stream-of-consciousness telling makes them often difficult to follow. Of the four children in the aristocratic Compson family, the boy Benjy is an idiot, the girl Caddy gets pregnant, marries the wrong man, and goes away, the boy Quentin commits suicide in an infirmary, rejection of his sister's dishonor, and the boy Jason grows into a man constantly lashing himself with hate, frustration and repressed violence.

Only the old Negro servant of the family, Dilsey Gibson, can be seen as whole and fully human. Some critics found Dilsey heroically simple to the point of sentimental caricature of the "black mammy." Faulkner clearly

Through the three decades ...mined by the novel, Dilsey Gibson, ...h her strength, patience and honesty, ... the only one who keeps the family ...ether at all.

Crisis in the Flesh. Faulkner's devel... alarm over the grim daily realities ...ace in the present-day South was ...r demonstrated in three notable char... portraits (one Negro, two white) ... painted in *Intruder in the Dust*, ...ch was his first novel in seven years ...en it was published in 1948. Lucas ...champ (rhymes with reach 'em) is ...a "damned high-nosed impudent Ne... " As the book opens, he is about ...e lynched for murdering a white ...n. He proves himself a model of ...perturbable courage that any civil ...hts leader should envy.

Lawyer Gavin Stevens, whom Beau... ...mp calls on to defend him, is the ...y picture of the well-meaning but ...ffectual white moderate who is re... ...ant to act on his convictions. Faulk... ...r's belief that the coming generation ...ries the burden and opportunity of ...nciliation is personified in Chick ...llison, the white lad who digs up the ...ence that clears Beauchamp. Chick ...rn between the tradition that ex... ...cts him to hate Beauchamp for his ...rideful independence, and his own ...rudging, slowly growing respect for ...ucas as a man. More explicitly than ...y other of Faulkner's books, *Intruder ...the Dust* is the South's racial crisis ...en flesh.

Walked Off the Page. But Faulkner ...finally relevant not narrowly to the ...egro problem in the South but to the ...an problem—the ills of the entire ...ciety and way of life he writes about. ...this Snopes trilogy, starting with *The ...mlet*, he turned to another aspect ...f that society, telling of the grimly ...dependent small white farmers and ...e rise of that perfectly unprincipled ...an Flem Snopes.

Flem Snopes and his rootless clan are ...Faulkner creation that rose up and ...alked off the page. Throughout the ...outh today, "Snopes" is a derisive epi... ...et for men ranging from leading dem... ...agogic politicians down to the Klans... ...an next door. Snopeses pop up early ...Yoknapatawpha County, but unlike ...st other Faulkner characters they ...em to have no ancestors—at least not ...om Mississippi. Flem's father, the vi... ...ous Ab Snopes, wore neither blue uni... ...orm nor grey, but was a carrion crow ...m Civil War battlefields.

Flem rises because he has no humani... ...y to blur the cold, hyper-rational clarity ...th which he uses other people's weak... ...sses. When he outgrows the back country and moves to Jefferson (in *The Town* and *The Mansion*), his tribe begins to infiltrate and increase. There is Montgomery Ward Snopes the pornographer, Wat Snopes the carpenter, Virgil Snopes the barber and brothel athlete, and a score of others. When Flem takes over the Sartoris Bank, his success is proof of the loosened grip of the older, principled families.

Agonized Search. All of these novels have a jolting brilliance and precision of characterization. Jason Compson, bitter, narrow and enraged by personal failings, is a merciless rendering of the type of Southerner who constantly vents his frustration with lines such as "What this country needs is white labor. Let these damn trifling niggers starve for a couple of years, then they'd see what a soft thing they have." Negro Novelist Ralph Ellison says that the enduring Dilsey Gibson reminds him of the real-life Rosa Parks, who touched off the Birmingham, Ala., bus boycott one day in 1955 when she refused to stand up for a white passenger because her feet hurt. Lucas Beauchamp catches to perfection the abrasive, unbending independence of a man like James Meredith, who integrated the University of Mississippi three months after Faulkner's death.

The novels also share another trait that seizes and deeply involves the reader: each is an extended and agonized search for truth. Faulkner at his best thus belongs with novelists like Proust or Dostoevsky. This trait in part explains Faulkner's enormous popularity abroad, particularly in such places as Japan and France, where the state of the soul is considered far more absorbing than sociology—least of all the sociology of a remote region such as the U.S. South. There they have viewed Faulkner's work as a series of morality tales, and long before the U.S. did, they understood his novels as dramatizations of a U.S. crisis of conscience that most Americans irritably denied existed.

Visible Conflict. Faulkner's overt, publicly voiced views on the Southern crisis are relatively rare and ambiguous. He was a writer above all, and perhaps he did not know what he thought until he had written it. His novels are a kind of diary of his own tormented inner struggle, an inadvertent self-portrait of a man making visible his own conflict of loyalties and good will.

Faulkner also kept himself one of the least public of writers. He rarely gave interviews, and when he did he was frequently gruff and uncooperative. He secluded himself in a classical South-

MISSISSIPPI SHARECROPPER, MULES & CABIN

The price of reconciliation is terribly high, and yet may not be enough.

ern house that was an almost defiant backward clutch toward a lost way of life. He often refused to answer the phone. When the movie made from *Intruder in the Dust* was given its world première in Oxford, he announced, to the producers' horror, that he would not attend. He finally did appear at the theater only because someone had reached an aunt of his in Memphis, who thereupon told Faulkner that she was going to the première and expected him to escort her. With the negligent indifference of an aristocrat, he did not bother to wear a tie or shave off a three-day stubble.

Shooting in the Streets. After receiving the Nobel Prize in 1950, Faulkner reluctantly began to develop a sense of responsibility to his audience, and also as a spokesman for the South, though he could still be unpredictable and self-contradictory. His most notorious statement on the racial crisis came in the course of a rambling, angry Oxford interview in February 1956 with British Newsman Russell Warren Howe, who reported Faulkner as saying: "If it came to fighting I'd fight for Mississippi against the United States even if it meant going out into the street and shooting Negroes."

PHIL MULLEN

FAULKNER & DEER-HUNTING CRONIES (1952)
One of them, but not all the stores were open.

In that same interview, Faulkner insisted repeatedly that "the Negroes are right—make sure you've got that—they're right," and that Southern white racists "are wrong and their position untenable." But ripped from context, shooting in the streets made headlines. Negro Author James Baldwin condemned Faulkner, in large part for that statement, as "guilty of great emotional and intellectual dishonesty."

Faulkner himself followed up the headlines with letters to many newspapers insisting that he had been misquoted by Howe. What the letters naturally did not mention was the fact that at the time of the interview Faulkner had spent several days working his way through a demijohn of bourbon, a bout set off by a running quarrel about the racial question with his brother John Faulkner, who was a die-hard segregationist.

Stop a While. Not a call to arms for the South, but a plea to the North to "stop for a moment," to hold off forcible desegregation until the South had "a little time" to come to its senses and voluntarily grant the Negro's inevitable equality—this was Faulkner's concern in articles he wrote for LIFE and *Ebony* that same year. As early as 1948, Faulkner had put a similar plea in the mouth of Lawyer Stevens in *Intruder in the Dust*. And in a letter to a white student at the University of Alabama at the time of the riots over Autherine Lucy's admission, he wrote: "I vote that we ourselves choose to abolish [segregation], if for no other reason than, by voluntarily giving the Negro the chance for whatever equality he is capable of, we will stay on top; he will owe us gratitude; where, if his equality is forced on us by law, compulsion from the outside, he will be on top from being the victor, the winner against opposition. And no tyrant is more ruthless than he who was only yesterday the oppressed, the slave."

Such views hardly make a man a radical from the Northern point of view. But in Mississippi, Hodding Carter recalls, people who had always vaguely thought that "Bill Faulkner is one of us" by the mid-'50s were calling him "small-minded Willie, the nigger lover." He was the target of abusive mail and crank phone calls. Around Oxford there were stores and filling stations that refused to serve him.

They were wrong. No man was more fiercely loyal to his land and his people. But he wanted and demanded that the South cure itself. In the words of the rebellious Chick Mallison, looking at his relatives with sudden pride: "That was part of it too, that fierce desire that they should be perfect because they were his and he was theirs, that furious intolerance of any one single jot or tittle less than absolute perfection —that furious almost instinctive [illegible] and spring to defend them from anyone anywhere so that he might excoriate them himself without mercy since they were his own and he wanted no more save to stand with them unalterable and impregnable: one shame if shame must be, one expiation must surely be but above all one unalterable durable impregnable one: one people one heart one land."

For Every American. Faulkner did not know everything about the South, at least about the new South. He knew few Negroes well, and no civil rights leaders at all, except in briefest acquaintance. He never understood (or anyway portrayed) the urban and educated Negroes that have been the spearhead of the civil rights fight. He saw federal action on civil rights through a haze of fact and legend about the Reconstruction imposed from the North. He never appreciated the imperative need for legal sanction of a Negro's right to sit at a bar, get a haircut, swim in a pool. He only vaguely realized that civil rights legislation provides many a Southerner of good will the excuse to accept—quietly, if not graciously—what cannot be avoided.

Faulkner understood not the legal but the human facts. He understood that the crisis between white and black was not only a crisis for the South but for every American, however many miles may separate him from Mississippi. He understood that legal sanction was one thing, but emotional acceptance was another.

And in the long range of two races' memories or one nation's vision, Faulkner's difficult proposal is the only one that works. He desperately urged on his fellow Southerners—and himself—a change of heart. He never, on the evidence, quite managed that change himself. But if he left a message and a legacy, it was to urge upon his fellow Southerners and the nation the imperative necessity for that change.

ST. LOUIS RIVERFRONT CIRCA 1935

ED MEYER—ST. LOUIS GLOBE-DEMOCRAT

JEFFERSON MEMORIAL PARK TODAY

Out of the skids and on to a renaissance.

CITIES

To the Brink & Back

Sprawled along the banks of the Mississippi, St. Louis funneled the emigration of half a nation toward the Western reaches of the U.S. Paragon of productive diversity, the city turns out candy and caskets, chemicals and containers, animal feed and jet aircraft. Its International Shoe Co. is the nation's biggest shoemaker, Budweiser the biggest brewer. It is the nation's second largest rail center. It served the first hot dog and the first ice-cream cone, was the site of the first balloon race. The corncob pipe was invented there. The first operation to remove a man's lung was performed there.

But more important for modern St. Louis are still two other facts of its past and present: seldom has a U.S. city come closer to the brink of civic disaster, and seldom has a city worked harder or more successfully to recover.

"Such a Dump." "After World War I," wrote Ernest Kirschten in his book *Catfish and Crystal*, "St. Louis dozed off. Maybe it was tired. Maybe Prohibition was not only a shock but also a sedative to this beer city. Depression was no stimulant. More than ever, St. Louis turned in on itself, contemplated its communal navel."

A wave of immigrants swept into the city while disgruntled middle- and high-income burghers fled into the surrounding county suburbs. Gracious mansions became tenements. By 1952, the city was one-quarter slum, another quarter near slum. No new office buildings had been put up in 25 years. Industry pulled out in wholesale lots. Property values and business activity plunged. "You might ask," wrote English Author Geoffrey Grigson in 1951, "why anyone would be proud of such a dump."

In 1952, business leaders, alarmed at the city's skid, formed a nonprofit organization called Civic Progress, Inc. It backed Engineer Raymond Roche Tucker, for mayor. Back in the late 1930s, Tucker had come up with a plan to eliminate the city's then notorious smog cover by cutting down the amount of volatile fuel used by industry. He later was named chairman of the department of mechanical engineering at St. Louis' Washington University. Democrat Tucker gave up his $20,000-a-year job for the $10,000-a-year mayor's post.

Recruits for Resurgence. Tucker recruited the city's business leaders to help work on problems ranging from slum clearance to the downtown traffic tangle. To fight blight while bringing the city budget back from the red, Tucker pushed through a $110 million public-improvements bond issue, lured in federal and private capital to help.

On the Fourth of July, nearly half a million people flocked to the St. Louis riverfront and, amid bursts of fireworks and patriotic oratory, celebrated the 200th anniversary of the year a group of French fur traders came ashore to found the city. But as much as anything, it really was a celebration of a "notable civic renaissance," as the St. Louis Post-Dispatch has called it.

In all, some $2 billion worth of major construction is under way or planned in the metropolitan area. A 454-acre midtown tract of slums called Mill Creek Valley, filled with slum housing that cried out for rebuilding in 1954, is now one of the largest urban-renewal areas in the U.S. A substantial section of it will be set aside for an expressway to link downtown with the major expressways leading out of the city. The long neglected riverfront has been cleared for the Jefferson National Expansion Memorial Park; scheduled for completion there next year is a soar stainless-steel arch 630 ft. high, signed by the late Eero Saarinen monument to St. Louis as Gatew the West. A seven-block pedestria shaded by trees and flanked by is abuilding. Ground has been for a 1,100-car parking garag step in construction of a dow sports stadium, designed by E Stone, that will seat 50,000, cos million.

The program has its critics. The Creek slums were bulldozed in but redevelopment has been so that the area is locally dubbed shima Flats." The New York T Ada Louise Huxtable charged that rebuilders had razed "the heart history" of the city by clearing riverfront. Defenders point out that storied waterfront had long deter rated into a grimy morass of dilapi warehouses, buildings and resid Developers have been scrupulous in serving the architectural monument the area—the old courthouse and cathedral—and have stored the best amples of cast-iron storefronts to be on display in the new Museum of W ward Expansion.

Beyond a doubt, St. Louis is from the brink. In many ways, its ple have changed little. They still their suds at the rate of 28 gal year per person, root for the Car nals, thrive on sauerbraten, like t member that their town produced Eliot as well as Stan Musial, and pronounce Gravois Street as "Grav Men like Mayor Ray Tucker brought a new awakening. Says "This is a warm, stable community people here are conservative and tious. But I have yet to see them respond to a program for civic ment when it is explained to them."

Nevertheless, a ...ad in the Daily News was just what ...e other News competition got. TV ...S MISSISSIPPI, read the Daily ...s's headline, above a report that ...C was programing on-the-spot re-...s from Philadelphia, Miss.

Fan-Club Fidelity. These were not ...ted examples of a U.S. newspaper ...ency to treat television news cov-...ge as if the coverage itself were ...s. Jack Gould, the New York ...s's TV critic, systematically lumps ...ewscasts in with Dr. Kildare, and ...s both the same sort of critical ...-over. After last month's confer-...of state governors in Cleveland, ...Dealer TV Columnist Bert J. ...ng praised the city's radio and TV ...ons for "an exemplary piece of ...k." But the Plain Dealer had noth-...to say, one way or another, about ...performance of its own reporters—...for that matter, of those on Cleve-...'s other daily, the Press.

...e appearances and disappearances ...TV newscasters are logged by the ...s with a fan-club fidelity usually re-served for grease paint performers—which perhaps they are. Thus when NBC, eying San Francisco, decided to backstop its top news team of Chet Huntley and Dave Brinkley with another duo, the New York Times duly recorded their names: Ray Scherer and Nancy Dickerson. And when Westinghouse Broadcasting Co. signed Novelist-Playwright Gore Vidal to report both the Republican and Democratic national conventions, the Times gave Vidal's assignment headline prominence—meanwhile leaving unmentioned the names of several dozen experienced Timesmen who are likely to do a better job at San Francisco.

Generous Attention. It was not as if the country's press needed any reminder that television is a fiercely competitive news medium. "I like the nationwide audience and all that," said Allan Rusten, press chief for the G.O.P.'s Platform Committee, "but I feel like I'm being strangled in TV cables." TV sound trucks ringed San Francisco's St. Francis Hotel like enemy tanks, and such was the TV-induced congestion that one city cop had to borrow a TV crane to regulate traffic (*see cut*). But the moral was apparently lost on the country's newspapers, where page after gift-page reflected TV's ambition to hog the San Francisco show.

The Chicago News devoted twelve column inches to NBC's plan to use ultraviolet-light transmitters in the Cow Palace. THE BATTLE OF COMPUTERS: A TV THRILLER, headlined the Detroit Free Press. In New York, under a no-surprise headline—NETWORK CARAVANS CARRY TV GADGETS AND MEN TO COAST G.O.P. RALLY—the Times totted up the logistics of the move: 1,500 TV hands, nearly 50 miles of cable for NBC alone.

Newspapers justify such generous attention to TV's news function on rather curious grounds. "A news event on TV is just another TV program," says Detroit News TV Columnist Frank Judge, who thinks more televiewers should watch the news and encourages News readers to do just that. Los Angeles Times Publisher Otis Chandler is even more unselfish. "I'm the first to admit that TV news is very good here," says Chandler. "But just because television is a good competitor is no reason for reducing your coverage."

Being Catty to Columnists

Pamela Mason, the all-but-divorced wife of Actor James Mason, is an English-born, middle-aged chatterbox whose very conversation is constructed like a Hollywood gossip column. Mostly, she has confined her monologues to parties and daily appearances on radio and TV, but neither medium was just the right setting for a woman with Pamela's natural dagger-turn of phrase. Last week she announced that she was about to be put in her proper place at last. Soon, she said, she will begin writing a Hollywood column just like Hedda and Lolly. Columnist Mason's paper: The Chicago Sun-Times.

"If they ever have another filibuster in Washington, Pamela should lead it," says Groucho Marx. "She's the steadiest-talking woman I ever encountered. It's invariably about sex—but that's an interesting subject to me."

"I don't want to do gossip," Pamela says defensively. "I do opinion. Movie-

JULIAN WASSER

PAMELA MASON
No grouches from Groucho.

star gossip isn't interesting unless you're having an affair with Richard Burton."

Her opinions are as trim and sharp as she is. Her two-word review of Irving Shulman's biography of Jean Harlow was: "Shocking puce." Her general code is: "You should be vicious only if you have something to be vicious about." And—regardless of whether it is called gossip or opinion—she sees no reason not to be vicious about actors if she wants to be. "I don't think actors have any right to private lives," she says. "If they want to have privacy, they shouldn't be actors. I don't like cowards who stick their necks out and then scream and run. You can't have it both ways."

As for Hedda and Louella, she says: "I challenge them, because they're passé. Louella has a gushing attitude toward the whole industry and neither she nor Hedda writes her own column. Hedda's not a *writer*. I am. I've written books and novels." She has, at that. One work in progress: *Woman of the Worldmanship*, originally titled *Hollywood Be Thy Name*.

DIAGNOSIS

Scanning the Lungs For Blood Clots

Whenever a large blood clot blocks the artery leading from the heart to the lungs, the result is so dramatic and catastrophic—in many cases, fatal—that doctors find the difficulty relatively easy to diagnose. But small clots that block some of the smaller arterial branches are far more common than

SHEEDY & LONG

RADIOLOGIST TAPLIN
Light up the roadblocks.

such massive pulmonary embolisms. The trouble is, they are so hard to detect that the true nature of the illness is often missed. Patients complain of shortness of breath, they faint frequently, and they may collapse after exertion, leaving their doctors baffled. Now, atomic medicine is coming to the aid of chest physicians and embolism patients with an ingenious and relatively simple diagnostic procedure.

The clots do not show clearly on X rays, and neither do the dead areas of lung surface beyond them. But Dr. George V. Taplin of U.C.L.A. figured that he could spot them with a radioactive substance, which after injection into the veins would pile up at the arterial roadblocks while flowing freely through normal blood vessels. The next problem was to find a radioactive chemical that would do the job, and then disappear harmlessly—preferably a substance that occurs naturally in the human body.

24-Hour Flush. Working with the radiopharmaceutical division of E. R. Squibb & Sons, Dr. Taplin found what he wanted: human albumin, but in a special form made up of large molecules too big to pass through the lungs' blood filters, and laced with radioactive iodine. Dr. Taplin proved in dogs that these macro-molecules would jam up in the clot-closed arteries, stay there long enough to take their own picture on an X-ray plate, then break up into the normal, small-molecule form of albumin and pass into the bloodstream.

Dr. Henry N. Wagner Jr. of Johns Hopkins Hospital became the first man guinea pig to try the "Albutope" injection on himself. He has used it, with iodine 131, to get revealing scintillation-scan pictures of 225 patients, with no ill effects. Dr. Taplin himself has now used the technique on more than 150 patients. He employs iodine 125. The safety of the method is attested by the fact that the radiation dose each patient receives is much less than he would get from specific chest X rays for this purpose. And the minute amount of radioactive iodine is flushed out of his body within 24 hours.

What to Do. Once they have an accurate diagnosis, doctors can decide what the patient needs. In the severest cases, surgery with the heart-lung machine is called for; in others, oxygen to tide patients over a crisis. But for most victims drugs are enough: heparin to guard against the formation of new clots, repinephrine to keep up the blood pressure. Dr. Wagner has high hopes for a new enzyme to dissolve old clots.

TRANSPLANTS

Questions of the Heart

History's first transplant of a heart from a chimpanzee to a dying man (TIME, Jan. 31), was a significant surgical achievement. But the difficulties that surrounded the operation, say University of Mississippi Surgeon James Hardy and his colleagues, were more than problems of cutting and suturing. What bothered the doctors as much as anything else, they report in the A.M.A. *Journal*, were matters of timing and questions of ethics.

The doctors knew well in advance that they wanted a human heart for the transplant. They figured that one would be taken from a relatively young patient dying of brain damage, and that it could be placed in a man dying of incurable heart-muscle failure. But what were they to find the proper brain patient dying just when the proper heart patient was waiting?

Kill a Patient? The doctors thought that in their small hospital they were likely to have many more suitable recipients than donors. But they were wrong. Three men were admitted to the medical center in Jackson with irreparable brain injuries—one from a tumor, one from a suicidal gunshot wound. Each of the doomed men was kept alive for a while by artificial breathing apparatus, and any one of them might have been a suitable donor if there had been an equally suitable recipient handy, even if they had had a dying heart.

ECUMENISM

Toward Easier Mixed Marriage

"Those whom God hath joined together let no man put asunder," intoned the Rev. Claudius Miller, an Episcopal minister, at the wedding last month of Susan Ekberg, an Episcopalian, and Patrick C. Barker, a Roman Catholic. The words were from the Episcopal Book of Common Prayer, and the wedding took place at St. Genevieve du Bois Catholic Church near St. Louis. A Catholic priest officiated jointly with Father Miller, and Susan promised that she would bring her children up as Catholics.

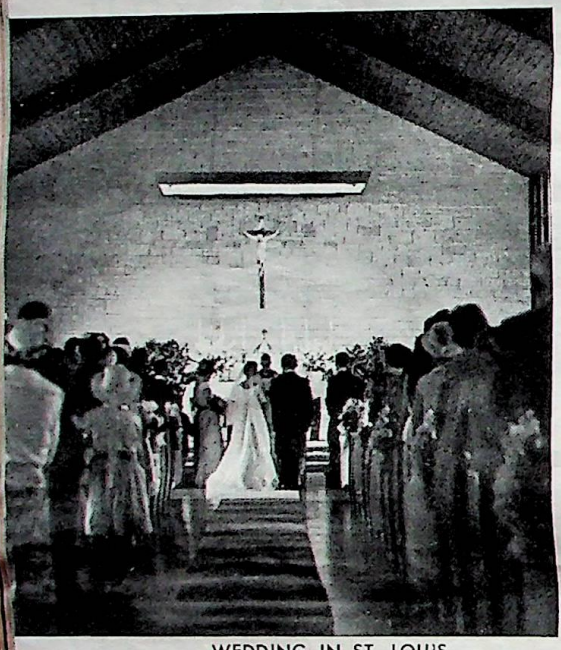
This unique marriage took place with the blessing and approval of St. Louis' Joseph Cardinal Ritter and his good friend, Missouri's Episcopal Bishop George Cadigan. Bishop Cadigan, who is close to the Ekberg family, interceded with the cardinal when Susan insisted on having a priest of her faith at the ceremony, and Father Miller helped work out a ceremony that used prayers from both the Catholic and Episcopal rites. At the wedding the Catholic priest, the Rev. Dom T. Leonard Jackson of St. Louis' Benedictine Priory, read the exhortation from the Roman ritual, blessed the ring, and officiated during the exchange of vows according to the Episcopal rite. Father Miller delivered an invocation, pronounced the couple man and wife, and recited over them the Prayer Book blessing.

Sarum Ceremony. All this was legal in Catholic eyes because Father Jackson was the official witness of the sacrament. And there was no problem about using the Prayer Book form of marriage: it in fact derives from the Sarum rite used in the pre-Reformation English church.

The Ekberg-Barker wedding was the first of its kind in the U.S., although similar experiments in ecumenical marriage ceremonies have taken place in the methodically unity-seeking Netherlands. Last April in Amsterdam, for example, a Dutch Jesuit and a Lutheran minister presided over the wedding of the minister's daughter to a Catholic boy in a Lutheran church. Dutch Catholic Bishop Willem Bekkers of 's-Hertogenbosch has twice allowed Reformed pastors to assist Catholic priests at mixed marriages; the couples promised only to bring up their children as "Christians."

Protestant Warnings. Such ecumenical experiments may well prove one way to end a continuing source of Catholic-Protestant conflict. Catholic canon law requires that the children of all mixed marriages be brought up as Catholics and that the Catholic partner work "prudently" for the conversion of his spouse. It does not even recognize the validity of any mixed marriage that is not celebrated before a priest. Despite such off-putting rules, roughly one-fourth of all Catholic marriages in the U.S. and Germany involve a non-Catholic partner—and there are thousands of other Catholics who, breaking canon law, marry Protestants before ministers. Many Protestant leaders, including the Church of Scotland Assembly and Germany's Evangelical Church hierarchy have warned against mixed marriages so long as the strict Catholic rules prevail.

A number of progressive Catholic bishops have asked Rome to change the rules on mixed marriages, and the fourth session of the Vatican Council will probably outline the norms to be allowed a pontifical commission of cardinals that is now revising canon law, last codified in 1918. The progressives argue that the marriage rules involve ecclesiastical rather than divine law, and that the sacrament is actually administered by the couple rather than the priest, who is merely an official witness. Thus there is no Catholic doctrinal bar against Catholics' marrying Protestants before non-Catholic clergy.



WEDDING IN ST. LOUIS

SUSAN & PATRICK BARKER

Officiating: an Episcopal minister and a Catholic priest.

LUTHERANS

A Glass, Not a Chalice

A major trend among Protestants a denomination-crossing liturgical newal that has restored much cer ny to Sunday services, and is ele the sacrament toward equality wi preaching word. But to many ch goers, the idea of candles, vest and more frequent Communion smacks of Romanism, and last we Pittsburgh the nation's largest Lu church resolutely voted in favor o low road in liturgy.

One key issue facing the 670 gates to the biennial convention o Lutheran Church in America (1 000 members) was a proposed uniform order of worship drawn eight of the nation's top Lutheran gists. They favored Holy Comm services at least every Sunday a use of the chalice rather than p individual Communion glasses. also recommended that every c should have facilities for private fessions, and that Lutherans sho "increasingly urged to avail them of this spiritual habit."

All this was just too high chur the delegates, who resolved to stic hygienically superior individual munion glasses, changed all refe to the minister as "celebrant" o Communion to "officiant," and to encourage private confession taught that confession is to G Florida Layman Edgar Armstr isn't necessary to confess to any to receive forgiveness if I am penitent."

In other actions of the week-lo vention, the Lutherans:

▶ Elected the first Negro, New Lawyer William Ellis, ever to ser the church's executive council, ha civil rights statement defending c obedience "if and when the mea legal recourse have been exhaus are demonstrably inadequate."

▶ Grimly accepted the Supreme C decisions banning school prayer an ble reading, but warned that "the an era in which Christianity is kept arate from the state in a way that have been repugnant to the min our ancestors at the time the Con tion was written."

PROTESTANTS

The Third Man

"Ah God! If only Adam had eat pear!" So wrote the young Swiss R Ulrich Zwingli in the margin of a c of St. Augustine's *City of God*. li tried to legislate Zurich into a facsimile of God's kingdom on earth. The town council passed stern laws against adultery and fornication and made attendance at Sunday services compulsory. But Zurich was an ideal community only for those who saw things Zwingli's way. Catholics were fined and were forbidden to run for elective offices, and Zwingli approved exile and execution for Anabaptist heretics who wanted a more radical reformation than he allowed.

Zwingli's followers spread his Reformation doctrines through northern Switzerland and into Germany, where they came into contact and conflict with Lutheranism. With Luther, Zwingli believed in justification by faith, the supremacy of Scripture, and predestination of the elect, but the two quarreled bitterly over the meaning of the Eucharist. Luther believed in the real presence of Christ in the bread and wine of Communion; Zwingli argued that the Lord's Supper was only a memorial to the Saviour's redeeming sacrifice. In 1529, friends brought the two men together for a confrontation at Marburg. It did little good. "Your arguments are weak," thundered Luther. "Abandon them and give glory to God." Answered Zwingli: "We too ask you to give glory to God and abandon your begging of the question." Later, Luther declared that Zwingli was in league with the devil.

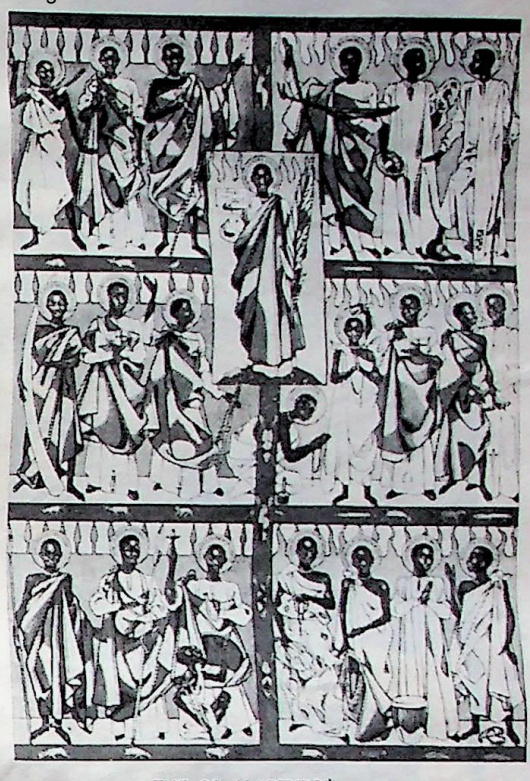
Fighting Prophet. As Zurich's spiritual dictator, Zwingli matured into a shrewd, power-conscious diplomat who tried to forge an international alliance against the Catholic Swiss cantons. When their armies attacked the Zurich forces in 1531, he buckled on sword and armor to serve as a fighting chaplain at the battle of Kappel. There, mortally wounded, he was captured and killed by the Catholics. His body was quartered by a hangman, smeared with dung and burned.

More a polemicist than a systematic theologian, Zwingli wrote an earthy, lucid prose that is rarely read today except by scholars. But his influence is nonetheless wide. He helped create the Reformed Church doctrine ultimately perfected by John Calvin, who imitated Zwingli in attempting to set up a theocratic city of God at Geneva. "Zwingli was no stained-glass-window saint," writes Pastor Rilliet, but he made "the unremitted search for God the ruling motive of his life."

ROMAN CATHOLICS

Uganda's Black Saints

Saints may live and die for the love of God, but the Roman Catholic Church sometimes canonizes them to reward the Christian loyalty of a country's faithful or to make some moral point. Last week the Vatican expressed its interest in the African church and its opposition to racism by announcing that in October, Pope Paul VI would proclaim as saints



THE 22 MARTYRS*
Speared, beheaded and burned.

22 Bantu converts from Uganda who were martyred between 1885 and 1887.

The Uganda martyrs are the largest group of lay saints ever canonized by the Catholic Church at one time and the first Bantu Africans publicly honored by the church.† About half of the martyrs —some known only by their first names —were youthful pages in the court of Buganda's pagan King Mwanga, and were speared to death after they refused his homosexual advances. The other saints include Bugandan nobles, a potter and a shipbuilder, who were burned or beheaded when they refused to revert from Christianity to spirit-worship. In all, about 200 Catholic and Protestant converts died for Christianity during Mwanga's persecution; the missionary order of White Fathers, who converted the Ugandans to Catholicism, promoted the cause of only those whose martyrdom was unquestionably due to religion.

The Uganda martyrs were beatified by Pope Benedict XV in 1920, achieved elevation to sainthood when the Sacred Congregation of Rites accepted as miraculous two cures from pulmonary plague attributed to their intercession. A shrine has been erected at Namugongo, near the site of their martyrdom, and Uganda today has become one of the strongest outposts in Africa. About 2,000,000 Ugandans are Roman Catholic, and three of the country's eight dioceses are governed by black bishops, one a descendant of an Uganda martyr.

* Painted in Uganda in 1962 by Swiss Artist Albert Wilder.

† Among other black saints: a 4th century Ethiopian bishop named Moses; Benedict the Moor, a 16th century Franciscan whose parents were African slaves; and the Dominican lay brother Martin de Porres (1569-1639), a Peruvian mulatto canonized in 1962.

ECOLOGY

Death Scent for Gypsies

The sight of a horde of gypsy-moth larvae defoliating a forest is one of the most urgent arguments for the use of modern pesticides. The ugly, hairy, 2-in. caterpillars eat every leaf in their path; the rustle of their ill-smelling droppings sounds like falling rain. But public apprehension about the possible dangers of chemical insect killers is now shielding the hungry worms from DDT and other long-lasting poisons. State and federal authorities are turning with some misgivings to less controversial means of protecting the forests.

This summer's anti-gypsy-moth campaign in New Jersey has sprayed 41,000 acres of infested forest with carbaryl, an insecticide that takes only hours to turn into inert residue. Carbaryl is therefore less effective than DDT, which stays on the foliage and kills caterpillars for weeks or months. Lest the cautious chemical fail to save the forests, New Jersey's moth fighters also plan to drop by airplane 100,000 cardboard traps baited with a synthetic sex scent to attract male gypsy moths. New Jersey conservationists hope that when caterpillars that survive spraying turn into mature moths the males will be seduced by the scented traps and taken out of circulation. The females will then go unfertilized, and there will be no new generation of Jersey gypsy moths.

ZOOLOGY

How the Camel Conquers Thirst

Myths about the camel and its thirst-resistance are older than the Sphinx—and almost as durable. Well into the modern age of science, men accepted the notion that the evil-tempered animal could store a two-week supply of water in its hump or in a great, cistern-like stomach. The hump theory was the first to be discarded as so much humph. What the camel carries on its back is a reserve of fatty tissue to be consumed when the rest of the camel runs out of fuel. The story about the parched Bedouin who slaughtered his favorite camel to drink the water in its stomach was far more tenacious. Not until the 1950s did zoologists puncture it as a romantic mirage.

Albumin in the Plasma. But for all the debunking dissections, the camel's thirst-quenching secret remained hidden. Then, a young Israeli veterinarian went to work on the ship of the desert. The answer, says Dr. Kalman Perk, 34, of Rehovot's Hebrew University, is in the camel's bloodstream. The plasma has an extraordinary high content of a kind of albumin, which enables the blood to retain its water and maintain its volume and fluidity even when the water in the camel's tissues has been markedly depleted.

Focus as close as 5 feet.

stop taking amateur movies
[*and start filming professionally*]

If you are really serious about your home movies, you want every scene with perfect light values, colors that come alive whether you shoot indoors or outdoors — movies that are exciting to look at *more* than once. Here is how the new Minolta Zoom 8 makes a technician out of you:

A powerful CdS light meter is built in. It's highly sensitive, measures candlelight to bright outdoors, and is every bit as accurate as the hand-held meters the professionals use. The meter automatically calculates the available light and sets correct exposure for you. You sight and shoot. That's all.

Zoom from wide angle to tight telephoto, pan from dark shadows to bright light. Use slow motion, fast motion or conventional speeds. Focus as close as 5 feet. Zoom 8 acts like a computer automatically adjusting to any situation.

Here is a perfectly balanced 8mm movie camera — light, compact and truly automatic in every respect — equipped with the world-famous F1.8/10-30mm Rokkor lens.

Compare Zoom 8 with any other 8mm movie camera made. Then compare the price.

THE MARKET

Goodbye Paris, Hello New York

For a fortnight, French newspapers and art journals have been sputtering with rage. The ostensible rub, as summed up in the Paris newspaper Libération, is that "a clique of dealers from overseas has, with the delicacy of a bulldozer and the discretion of an atomic bomb, given the Venice Biennale's most authoritative prize to the 'made-in-U.S.A.' stuff one calls 'pop art.' France won not a single prize of any importance. So much the better. French art has nothing in common with this trash." Hotheadlined *Les Lettres Françaises:* AMERICAN OFFENSIVE AGAINST THE SCHOOL OF PARIS—

MUSEES DES BEAUX-ARTS DE ROUEN

SOCIETY AT ART SHOW, 1911 (BY GRÜN)
From heyday to holiday resort.

THE FAKE DADAIST ROBERT RAUSCHENBERG CROWNED IN TITIAN'S HOMELAND. *Le Figaro* held its nose at THE GREAT POP ART MANEUVER; AN ATMOSPHERE OF THE APOCALYPSE.

So much heat, obviously, had to come from more than a mere biennale. And although it may have been indiscreet of him, the U.S.'s commissioner to the Venice festival, Alan Solomon, diagnosed the real embarrassment: "The fact that the world art center has shifted from Paris to New York is acknowledged on every hand."

A Place of Entertainment. To have an American say that was infuriating to the French—and to have a Paris art dealer agree raised the chilling probability that it is true. As he closed down his Paris gallery permanently on July 1, Daniel Cordier circulated a letter that scathingly measured Paris' decline. "The dimensions of this city," he wrote, "are not compatible with the scale of modern civilization; it has become a holiday resort, a place of entertainment, and is becoming less and less a center of creative activity. In order to interpret our period, an artist has to be familiar with its realities, its sensibility. These can be felt better and more intensely in New York."

The gradual shift of world art centers from Paris to New York is not new; only the angry French cultural double take is. The shift began in 1956, when Manhattan's Museum of Modern Art sent abroad a show that introduced Pollock, De Kooning, Kline and abstract expressionism to England and the Continent. European critics at once recognized that the postwar New York school had the innovative strength, technical skill and independent-minded vision to go its own way without regard for the school of Paris—which, since the cubism, surrealism and dadaism of the first quarter of the 20th century, has contributed nothing conspicuously new.

Anxiety & Affluence. Not only has Paris slipped creatively, but it has also declined as a market. Play-safe French collectors never bought modern art, even French impressionists, on a big scale; and Paris art dealers always counted on Americans to buy moderns. Now that first-rate moderns are created in New York, Americans—and many Europeans—buy them in New York.* Moreover, as Cordier says, "the art market is particularly sensitive to fluctuations in the stock market," and the Paris Bourse failed to recover from the 1962 slump as strongly as the New York stock market.

"Although the French congratulate themselves on carrying the torch of civilization, there is a lack of interest in art," says Lawrence Alloway, curator of the Guggenheim Museum. "The attendance for the entire run of the recent Dubuffet show in Paris—granted that it was not at the height of the season—was 8,000 to 9,000. Here at the Guggenheim, we have that many people on a single Sunday." Alloway believes that "schools of painting flourish under anxiety and affluence," and New York has both. But Manhattan Critic Harold Rosenberg argues that on balance, "the concept of a world art capital is obsolete. Art flourishes in New York because New York is a kind of global city, a kind of momentary focus of global art which exists everywhere. There are historical analogies to show that there have been places where everything was working and suddenly all the life went out of it. 'The wind bloweth where it listeth.' We can't make predictions about inner qualities."

* But London tenaciously holds first place as the big-money auction market. Sotheby's of London, long intent on extending to New York its primacy in art sales, is this week trying to acquire Manhattan's top-ranking Parke-Bernet Galleries. Christie's, London's other major house, plans to stage what will probably be the biggest auction ever (estimated proceeds: up to $5,600,000) when it sells off the late Captain George Spencer-Churchill's fabulous Northwick art collection of 500 old masters next December.

EXHIBITIONS

7 Millenniums Under One Roof

"The last 6,000 years of human history are *most* interesting," Alfred North Whitehead once remarked to a companion. If the philosopher could have attended the current exhibition at the National Gallery of Art in Washington, D.C., he would have had to increase his span by a millennium. The Archaeological Museum of Tehran has lent a major private Iranian collection that has been spilled open to provide the show with a show of 735 objects, many of them only recently discovered, from 7,000 years of Persian art.

The thriving cities where the art was fashioned—Marlik, Shapur, Ray, Nishapur, Tepe Hissar—have crumbled into oblivion. The fabled rulers and scourges of Persia—Cyrus the Great, Darius the Great, Alexander the Great, Genghis Khan—are dust. But a Persian's bronze bracelet, a golden cup, a statue of an ibex with circlet of horns remain to testify to the enduring power that art wins over time.

Totemic Alliances. The earliest millenniums are dominated by goldsmiths, silversmiths, pottery makers and bronze-casters, the later by weavers and glass. Many of the objects glow with elegance and beauty, partly because they were intended for royal use, but partly because the Iranian artists knew the value of refracting light from curved and slanted surfaces. They could make a gold drinking cup glint and dazzle from every angle.

One motif of the show is the interplay between man and beast in myth and daily life. The winged bulls and lions on vases and breastplates often represent totemic alliances by which early man sought to acquire the power of the strongest beasts to fend off the dark forces around him. But in their glittering regality, these beasts bear themselves like demigods, not mere animals.

Also a Rug. Sometimes the artists aimed at subtler, more evocative effects. A pitcher will have a graceful elongated spout that suggests the head and neck of a crane. Undulating lines represent water, the perennial need in hot, parched lands. While the Persian artists frequently represented animals naturalistically, they occasionally moved to a kind of symbolic shorthand that foreshadows the geometric forms of modern art, using circles for eyes, U-shaped mouths and heart-shaped ears. The millennial parade culminates fittingly if inevitably, with a stunning 16th century Persian rug, the art form that has been one of the world's glories and holds words in all recent centuries.

The show at the National Gallery runs to July 19, but Washington is sharing the Iranian treasures with seven other cities. First stop will be Denver, starting August 8; then the show will go to Kansas City, Houston, Cleveland, Chicago, San Francisco and Los Angeles, spending six weeks in each city.

Good and some better.

RECORDS

Cut-Rate Classics

In the modern supermarket, the hapless shopper is besieged at every turn by labels of BARGAIN BONANZA! slapped on everything from brussels sprouts to lawnmowers—and, of late, records. In the past, the quality-cautious shopper could rightfully assume that those cut-rate LPs racked next to the vegetable bins were, from a musical standpoint, about as choice a bargain as last week's Bibb lettuce. Recently, however, several giants of the recording industry have launched new lines of low-cost (from $1.98 to $3) classical records that are honest-to-goodness bargains. Designed for distribution in supermarkets and drugstores as well as record shops, many of these cut-rate classics are as good as and in some cases better than albums being peddled at two and three times the price.

Freshly Pressed. Although the catalogues and record jackets discreetly avoid mentioning the fact, these new records "for budget-conscious connoisseurs" are mostly freshly pressed reissues of classical standards cut before 1960. In a fiercely competitive market where the consumer is conditioned to demanding the newest rather than the best Beethoven *Fifth*, say, the life expectancy of many a first-rate classical LP has been growing shorter every year. Fifteen years ago, Schwann's LP catalogue listed 489 classical titles offered by eleven recording companies. Today there are some 14,000 classical titles available from 118 companies, which are spinning out 300 or more new releases each month. In the avalanche, touched off in part by the boom of stereo, close to 6,000 classical LPs have been discontinued and swept into oblivion in the past four years.

London Records was the first to exhume a number of its buried treasures, reissuing under the Richmond label such gems as George Szell conducting the Concertgebouw Orchestra in Brahms's *Third Symphony* and the Mozart *Requiem* conducted by Josef Krips at the bargain-basement price of just $1.98 per record (formerly $4.98). Sales were brisk, so London reissued ten operas, including Renata Tebaldi in *La Bohème* and *Madama Butterfly*. Mercury followed London's lead, establishing its Wing label, featuring such surefire favorites as suites from Tchaikovsky's *Sleeping Beauty*, *Nutcracker* and *Swan Lake* ($1.98 for mono, $2.98 for stereo), ably rendered by Antal Dorati and the Minneapolis Symphony.

Since then, Capitol, Victor and Vanguard have charged into the market. Capitol dubbed its revivals Paperback Classics ($1.98 for mono, $2.98 for stereo). Among the highlights are a rousing Brahms *First Symphony* with William Steinberg conducting the Pittsburgh Symphony, and a brace of Beethoven piano sonatas, the "*Appassionata*" and "*Waldstein*," masterfully played by Pianists John Browning and Rudolf Firkusny respectively.

Just the Answer. Victor, which hauled out its venerable old Victrola label to kick off its new line, offers a rich lode of glittering bargains ($2.50 for each mono LP, $3 for stereo). Among them: Puccini's *Tosca* with Soprano Zinka Milanov; Tchaikovsky's "*Pathétique*" with Pierre Monteux and the Boston Symphony; and Brahms's *Concerto No. 2* with Russian Pianist Emil Gilels backed by Fritz Reiner and the Chicago Symphony. Vanguard Records' new line, Everyman, includes a fine performance of Haydn's *Creation*, conducted by Mogens Wöldike.

While a few audio purists might quibble over the fidelity of some of the vintage vinyls, the quality is more than satisfactory for the average listener. For the man with a new hi-fi rig who is looking to build the nucleus of a good standard record library without having to hock his children, the 200-plus selections available in cut-rate classics are just the answer.

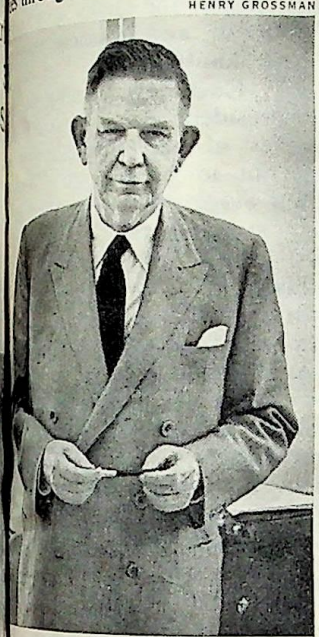
BROADWAY

Icemen Melteth

On the night that *My Fair Lady* opened, Lyricist Alan Jay Lerner waited nervously in the 21 Club for news of the critics' reactions. The telephone rang at last. Lerner listened silently for a few minutes, then turned to Composer Fritz Loewe and said softly: "The show cometh."

Few theatergoing children are now sophisticated enough to understand Lerner's remark, which, in his case, was made only in jest. For non-theatre children, ice can be defined as Broadway's term for the great sums of money made by various theater employees through the scalping of tickets.

HENRY GROSSMAN



LAWYER WHARTON
For long tongs, a new code.

The past winter and spring, follow-up investigations by New York State Attorney General Louis J. Lefkowitz, whose has been all over the theatrical page of newspapers, and the corruption growing out of Broadway abuses have fully been illuminated.

Under the Pot. Ice exists, of course, because when fat cats want theater tickets the price does not matter. So $20, $50, sometimes $100 is paid for a single ticket. The annual take in ice has been estimated at more than $10 million. Among major icemen, box office employees have always had the edge. Tongs, which goes a long way toward explaining why they have always behaved with such freezing contempt toward the wretched public that has to buy ice-free tickets at the box office. Brokers testified that they regularly delivered envelopes to box offices containing checks covering the list price of tickets plus agreed amounts of extra money, usually about $5 to $7 for an orchestra seat.

Beyond the scalping stories, rats were seen on one another all over Lefkowitz' hearing room. Tales were told, for example, of one producer who cleared $52,000 from a play whose investors lost $32,000, and of another producer who sadly watched a sick production fail, costing its investors $180,000 but somehow netting him $11,000. Producers also own theaters and rent them to themselves. They hire themselves as "pressagent" or "stage director" at fat salaries out of the basic investment. They sometimes make speculative investments of their own with investors' money. One producer even used part of the nut to buy himself a lobster boat.

Thou Shalt Not. The New York state legislature last April passed two bills making it a misdemeanor to take ice and requiring standard accounting procedures for all productions. Then last week the League of New York Theaters —which includes theater owners and producers—announced its own new codes of ethics covering ticket sales and production practices. In many instances the rules were more rigid than the state legislation.

The League has asked Lawyer John F. Wharton to serve as its commissioner, enforcing the new codes. The production code is a long list of thou-shalt-nots that inferentially describes all the sleazy habits of producers at the moment: it forbids them to commingle investors' money with their own personal funds; it requires them to keep books; it forbids them to take kickbacks; it says they have to notify investors if they rent their own property to the production.

The code on ice is simpler. In sum it says: no ice. Beyond the printed price of the ticket, $1.50 is the legal maximum broker's fee. The code requires all brokers to make available to the league all records of sales, and brokers caught taking ice will lose their future ticket allocations. Of course, if all those fat-cat buyers from the plains insist on waving $50 bills at ticket sellers, no one is likely to tattle on them, and some violations of the code can be expected. But if a cold-eyed broker tries to shake down a customer by demanding sums like that, the victim now has a commissioner to complain to.

Comediva

Off-Broadway's 41st Street Theater is about 25 ft. underground and is closer to Broadway than many so-called Broadway theaters. Hold on there, Ripley, don't go away. You should see the show that is currently playing there.

One woman—middle-aged, with a look that suggests the principal of a girls' day school—performs by herself for two hours. Her name is Anna Russell. Her show is called *All by Myself*, and the box office is selling tickets into August. She is a musical parodist and jokeratura who mocks every conceiv-

LAWYERS

Cram, Cram, Cram

The law's last vestige of ordeal by fire is a legal torture called the bar exam. In New York, for example, it is a 14-hour grind that requires coping with 40,000 facts in order to solve 192 legal conundrums of which the simplest might be: Is a promise made by A to B and C, to induce them not to rescind their contract, enforceable by B and C against A?*

Mastering the particular rules of a particular state has habitually been the key of admission to the bar of that state. Yet most U.S. law schools shun rote rule learning in favor of broad theory and legal reasoning. The great schools are the most detached. Bright Harvardmen, steeped though they are in constitutional law, do not necessarily do any better on bar exams than graduates of less prestigious schools that teach more local law. Last summer 73% of Harvard's candidates (and 65% of all candidates) passed the New York exam, as did 73% from Fordham.

JULIAN WASSER

CALIFORNIA BAR REVIEW CLASS IN LOS ANGELES
To aid the confused, a Pacific cat.

50 Lbs. of Law. This is the situation that sparks the law graduate's summer mania: weeks of rule-stuffing at cram schools in preparation for the twice-yearly bar exams typically given in late summer and winter. Run by lawyers, judges and professors, cram schools are often big business. Before becoming a federal judge, New York Lawyer Harold Medina crammed 800 students for $28,000 a year. Medina's heir, New York's nonprofit Practising Law Institute, is now the biggest cram school, with three yearly sessions enrolling 1,800. At $75 tuition, it is also one of the cheapest. By contrast, the California Bar Review Course charges $175 and grosses more than $400,000 a year.

Started ten years ago in Los Angeles by U.S.C. Law Professor G. Richard Wicks, the California Bar Review (or "Wicks Course") is now attended by 1,200 of the 1,600 law graduates cramming for next month's California bar exam—a three-day inquisition spanning 16 subjects, some of them not taught in top law schools. The ten-man Wicks faculty claims to cover the equivalent of an entire law-school year in eleven taut weeks, during which students plod through 50 lbs. of course outlines. In addition to these labors, worried crammers often spend Sunday supplementing Wicks with a $125 exam-writing course run by a Los Angeles lawyer named Beverly Rubens, who soothes her charges by chirping that after they pass the exam, "you'll have your new briefcase and dark blue suit, and who will I be to you? Just another woman lawyer."

IRAC & Preachers. Unlike law schools, which minimize memorizing in order to stir thought, cram schools are devoted to organizing the student's knowledge with forced-draft methods. Chicago's ebullient crammer, Thomas J. Harty, spends seven hours a day firing off questions, listening to the class consensus, then firing back the correct answers. The method works so well that one year 92% of his students passed the Illinois bar exam. Denver's Gerald Kopel, a former newsman-turned-lawyer, crams his students by simulating actual exams and blasting bad spellers for such barbarisms as *adultary, devorse, drunkedness*. Austin Lawyer Arthur ("The Garrulous Greek") Mitchell, who claims to have crammed half the lawyers in Texas, dramatizes the "life" in the law. "I tell them the law is comical, the law is tragic, the law is real," says Mitchell. "The things that happen in law are things that happen to people."

Acronyms are favorite cramming tools. Wicks students use IRAC (*I*ssue, *R*ule, *A*pplication, Conclusion) to [illegible] almost any exam question. A [illegible] year's law-school course in contr[illegible] reduced to PACIFIC CAT DID, e[illegible] ter standing for a critical legal f[illegible] P for parties, A for assent, C f[illegible] sideration, and so forth. At New [illegible] Practising Law Institute, cases in [illegible] a published and mailed notice [illegible] to get service in a civil suit, are [illegible] up in MINISTER—*M*atrimonial [illegible] *I*n rem property actions, *N*onre[illegible] *I*ncompetents and infants, Stock[illegible] *T*raveling residents, *E*xtended st[illegible] limitations and *R*esident fraud.

Necessary Evil. None of this [illegible] ration prevents some exam taker[illegible] ludicrous answers. But in most [illegible] schools serve the bar examiners' [illegible] ing demand—what one Tenness[illegible] dean calls "a Pavlov dog re[illegible] Says he: "It would be horrible [illegible] versities taught people how to p[illegible] exams. We should teach peopl[illegible] to think and act like lawyers, n[illegible] to memorize cases." Many bar exa[illegible] are now steering toward that st[illegible] But most law schools and bar exa[illegible] are still so far apart that the o[illegible] for law students to travel from [illegible] the other is via the "necessary [illegible] cram schools.

PUBLIC SAFETY

Are Hatpins Enough?

Worried about muggers a[illegible] molesters, a pretty Manhattan [illegible] named Arlene Del Fava arme[illegible] with a switchblade knife. She [illegible] in time. CONSTITUTIONAL LAW

How to Change Laws You Don't Like

"It is the law," said Louisiana's Democratic Senator Allen J. Ellender of the Civil Rights Act of 1964 that he had opposed so stubbornly. Any Southern resistance, Ellender warned, "must be within the framework of the orderly processes established by law." Any other course "is foolhardy and indefensible," including the doctrine of civil disobedience, which has "no more credence now than it did before."

From a longtime segregationist, that was a statement of stunning reasonableness. Every thoughtful lawyer, whatever his stand on the race problem, is disquieted by civil disobedience, even in the name of what Martin Luther King calls "the moral law or the law of God." To lawyers, divine code is too vague for the earthly task of preserving peace and good order here and now. Were all men free to act out their individual "consciences"—as diehard segregationists still insist—victory would simply go to those with the most power, the most guns. By contrast, the rule of law provides enforceable standards—and machinery to change them.

Guerrilla Warfare. Those lawyers who condone civil disobedience do so on very narrow grounds. Civil disobedience is "just" only when all legal redress has been closed—a position taken last week by the Lutheran Church in America at its biennial convention in Pittsburgh. "If and when the means of legal recourse have been exhausted or have been demonstrably inadequate," resolved the church, "Christians may then choose to serve the cause of racial justice by disobeying a law that clearly involves the violation of their obligations as Christians."

Even so, the burden of moral proof is heavily on the disobedient to show good faith by nonviolence, meaningful protest and willingness to accept the penalty for their actions. And the basic aim is always the same as regular litigation—to get the challenged law tested by the orderly processes of law.

It is one thing to hold such meaningful protests as restaurant sit-ins, challenging laws that may never be tested in court until they are violated. It is quite another thing to hold indiscriminate demonstrations, such as highway stall-ins, that merely protest grievances in general. Such actions are simply guerrilla warfare. Alabama's Governor Wallace, when he "stood in the schoolhouse door" at Tuscaloosa, was acting not only in defiance of a court order, but after the validity of desegregation orders had already been thoroughly established in the courts.

Standing & Ripeness. Getting unjust laws repealed in the legislature is infinitely more desirable than "just" civil disobedience. But if political persuasion fails, how to change a law in the courts? Article III of the Constitution empowers the federal judiciary to hear "cases" and "controversies," and though the courts can reject many kinds of cases, they are unlikely to turn down any genuine conflicts involving practical consequences that demand constitutional interpretation.

Those who challenge a law must have "standing" or personal involvement in the conflict. If a man disputes public school prayers, for example, he has standing only if his own children are affected. If his children are not yet involved in the prayers, or have already left the school, his standing is insufficient to build a case. Further, his case must have "ripeness," meaning that he must be able to show real injury at the time he sues. If the school board is only thinking about starting prayers, the case is not yet ripe.

$11 Million Loss. In the first major test of the new Civil Rights Act, the lily-white Heart of Atlanta Motel has just sued the U.S. and Attorney General Robert F. Kennedy with a claim that probably has sufficient conflict, standing and ripeness. Along with seeking a declaratory judgment (court opinion on the law's validity), the motel's lawyer-president, Moreton Rolleston Jr., asked for an injunction to prevent Kennedy from enforcing the act on the ground that it violates the Fifth Amendment's guarantees of due process and just compensation for private property taken for public use. Claimed damages: $1,000,000 for deprivation of property rights (lost business if Negroes register) and $10 million for Rolleston's alleged loss of "liberty" to refuse service.

Rolleston's prospects of winning seem slight. For one thing, he is fighting a law that got the most painstaking constitutional examination by a lawyer-dominated Congress sworn to uphold the Constitution just as fervently as the Supreme Court. What is nonetheless admirable is Rolleston's decision to test the law in court rather than to break it simply because he dislikes it. If his action sets a new tone for Southern resistance, it is good news for U.S. law.

CREW

One for the Alumni

The first thing most athletes do when they get out of college is to order a heavy meal, wash it down with a cold beer, take a deep drag on a cigarette—and gleefully go to pot. But not if they live in Philadelphia and know how to pull an oar. Philadelphia's 99-year-old Vesper Boat Club awards no letters or athletic scholarships; its members work out six days a week, row as much as six miles each practice session. Why? "Because we like it," says Secretary-Treasurer John B. Kelly Jr., onetime Olympic sculler and brother of Monaco's Princess Grace. "We even like it enough to go out and be good at it." Very good, even.

Last week at New York's Orchard Beach Lagoon, the smooth-stroking Vesper eight trounced 15 of the country's finest crews—and thereby became the first club crew to represent the U.S. at the Olympics since another Vesper crew did it in 1904.

Vesper almost did not get into the trials at all, thanks to a mix-up in the mails. Their registration arrived after the deadline; only a last-minute decision by the U.S. Olympic Committee allowed them to compete. Seeded fourth, behind California, Harvard and Washington, Vesper did not figure to offer much competition to the younger college crews. Their average age was 26, and only the presence of two undergraduate ringers from La Salle College kept it that low. The part-time coach, Allan Rosenberg, is a Philadelphia lawyer. The coxswain, Robert Zimonyi, is a 46-year-old Hungarian refugee. The captain, Bill Knecht, is 34, a plumbing contractor, the father of six. But in the semifinals, Vesper shocked the experts by beating Harvard, the undefeated Eastern champion, by two lengths and 7.5 sec.

That was nothing compared to the surprise Vesper pulled in the finals. California was now the heavy favorite; the high-stroking Bears had rattled off seven straight victories. At the starting gun, Cal spurted into the lead, stroking at a phenomenal 44. Harvard was second, Yale third—and Vesper was left at the line. But then Harvard sliced out in front of Cal, and Vesper began to move up. At the 800-meter mark, with 1,200 meters to go, the Philadelphians drew even with Harvard, edged ahead—and never looked back. Eight tulip-shaped oars swinging as one, they took the stroke up to 40 at the end, swept to a one-length victory in 6 min. 1.3 sec.—fastest time of the entire Olympic trials.

VESPER'S OLYMPIC CREW

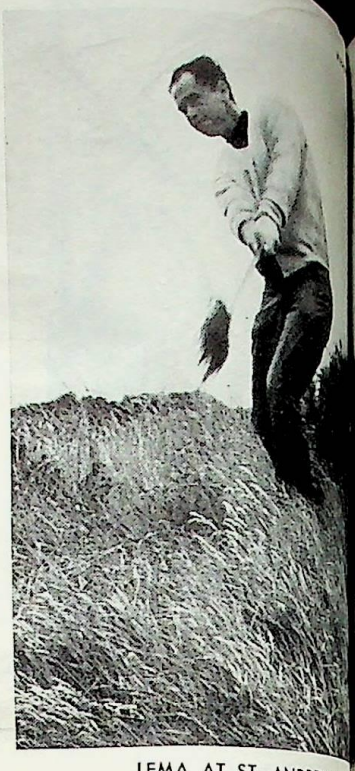
A lawyer, a refugee, and a father of six.

GOLF

"A Humbling Game"

Short of sending him out blindfolded on a moonless night with a black-painted ball, there doesn't seem to be much that anybody can do to stop Tony Lema from winning golf tournaments. Last week they tried the next best thing: they sicked St. Andrews onto him—and all Tony did was to win the British Open, for his fourth victory in the last six weeks.

St. Andrews purports to be the "birthplace of modern golf," but that is open to debate. (Some historians claim that the Dutch invented the game, not the Scotch.) It also purports to be the toughest championship course in the world—and about that, there is no debate at all. The fishhook-shaped Old Course at the Royal and Ancient Golf Club is only 6,926 yds. long—practically puny by American standards. But



LEMA AT ST. ANDREWS

Gorse, heather, sand, and polo

it is an un-American course. The stone walls to play over, tiered the size of polo fields, and acre acre of prickly gorse, heather Nicknames are enough for the "The Twin Fangs of the Lady "The Valley of Sin," "Hell For a topper, there is the weat word "links," after all, origi Scotland. It means "golf cours sea," and in the case of St. that means the North Sea.

Slick as Ice. If Tony Lema served on convoy duty in W II, he might have known wha pect. At 30, he was far too yo what's more, he had never even Old Course before. Neither Nicklaus, 24, whose $24,000 the week before in the Wh Open put him back on top of money-winning list (with $ demonstrated that he was one at the peak of his game—and suaded British bookies to install the favorite, at 7 to 2. The o Lema: 7 to 1.

On the first day, a cruel wind across the open fairways at 6 "I couldn't keep my footing plained Nicklaus, who at 20 one of golf's best-anchored p three-putted six greens, settled Lema, who weighs in at 180 lbs one-over-par 73, two strokes pace set by Ireland's Christy O and France's Jean Garaialde. nounced himself satisfied. nothing comparable to putting wind," he said. "Let me tell you thing about golf—it's a humbling about the second day was that was only 45 m.p.h. But along the way, Lema lost his Normally one of the best wedge

This airplane lands on pastures as well as on paved runways

Whether it's a pasture — or a hacked-out jungle landing strip — or a section of hot desert sand — or ice or snow Hercules works close to the action. In fact, the big turbojet transport can get in and out of places that seem better suited to a little bush plane.

Throughout the free world, C-130 Hercules airlifters are becoming as famous for their increasing number of peace-time functions as for their vital military airlift missions.

True airlifter design continues to stand Hercules in good stead wherever it flies. Straight-in rear-loading on a truckbed-height floor — plus rear-door, in-flight, outsize paradrops — and overall ruggedness, reliability, and rough-field landing and takeoff capability — continue to make it possible for Hercules to perform more and more different kinds of airlift work.

Today, nearly 700 Hercules airlifters — twenty-one different versions — are in service.

And more are on the way.

Lockheed Hercules

LOCKHEED-GEORGIA COMPANY: Marietta, Georgia, U.S.A. — A Division of Lockheed Aircraft Corporation

in the game, he changed his tactics, switched to a No. 7 iron, and ran the ball up to the pin. At the turn, Lema was one under par, and he picked up another two strokes on the 312-yd. twelfth hole—driving the green from the tee, sinking a 30-ft. putt for an eagle 2. "They've got to come and catch me now," said Tony, whose 68 gave him a two-stroke lead.

Safe from Sin. Only Nicklaus came close. Nine strokes back of Lema on the third day's start, he birdied four out of the first nine holes, went on to tie the St. Andrews course record with a sizzling six-under-par 66—and finished out his day with a final-round 68. But it was too late. Lema shot a morning-round 68, finally stepped up on the last tee needing only a triple-bogey seven to win. Playing it safe, he dumped his drive short of "The Valley of Sin," a gully just in front of the 18th green. Trying to line up his approach, Lema was surrounded by 10,000 swarming Scottish fans. Bobbies struggled to force the crowd back, and Lema waited patiently. Then he picked up his trusty No. 7 iron, swung gently and dropped the ball perfectly on the green, 18 in. from the pin. A tap, a plunk, and Tony had his birdie for a 72-hole total of 279 —just three strokes off the British Open record—and a five-stroke victory.

The $4,200 paycheck was nothing to write home about, but just thinking about all those side benefits made Tony's throat dry. "I may be the third leading money winner," he sighed, ordering champagne for everybody in the press tent, "but I'm the first leading money spender."

SCOREBOARD

Who Won

▶ Brazil's Maria Bueno, 24: the women's All-England tennis championship, beating Australia's defending champion, Margaret Smith, in three sets, 6-4, 7-9, 6-3; at Wimbledon. Recovered at last from the hepatitis that kept her out of action for six months, Schoolteacher Bueno relied mostly on flat, efficient ground strokes to score her second major victory over the 21-year-old Aussie in less than a year (the other: the U.S. nationals at Forest Hills last summer). Said the weary winner: "Everybody said it would be difficult to come back—and they were right."

▶ Houston's A. J. Foyt, 29: the Firecracker 400 stock-car race, averaging 151.4 m.p.h. in a 1964 Dodge to edge North Carolina's Bobby Isaac by less than the length of a car hood; at Daytona Beach, Fla. The U.S. Auto Club racing champion, winner of the 1964 Indianapolis 500, Foyt once again demonstrated his amazing versatility: alternating between sports cars, stock cars, sprint cars and big Offenhauser-powered Indy roadsters, Foyt has failed to win only two of the races he has entered this year.

MILESTONES

Born. To María del Carmen Franco y Polo, 37, only child of Spain's Generalissimo Franco; and Cristóbal Martínez Bordiu Ortega y Bascarán, 41, Marqués de Villaverde: their seventh child, fifth daughter; in Madrid.

Married. Romaine Dahlgren Pierce, 40, Manhattan model, ex-wife of the Marquess of Milford Haven; and James Busch Orthwein, 40, St. Louis adman, great-grandson of the original Gussie (Budweiser) Busch; she for the third time, he for the second; in Manhattan.

Married. Marshall Field Jr., 48, publisher of Chicago's morning Sun-Times and evening Daily News; and Julia Lynne Templeton, 23, onetime Sun-Times public relations girl; he for the third time; in Manhattan.

Died. Jon Corbino, 59, U.S. painter, a Sicilian-born romantic realist who specialized in turbulent canvases of full-blown nudes and writhing horses caught in shipwrecks and floods, scoffing at abstract artists for their attempt "to achieve a literature with a language none but they understand"; of cancer; in Sarasota, Fla.

Died. Roy Davidson, 63, head of the 65,000-man Brotherhood of Locomotive Engineers and spokesman for all five railroad unions during the lengthy deadlock over featherbedding, who helped talk his more militant fellow union leaders into compromise, shared bows with President Johnson over TV when the dispute was finally settled this spring; of leukemia; in Cleveland.

Died. Maurice Thorez, 64, longtime French Communist chieftain, a coal miner turned professional revolutionary, who took control of the party as secretary general in 1934, ran it as a mirror of the Kremlin, slavishly devoted first to Stalin, then to Khrushchev, seeing it grow to nearly 1,000,000 members after World War II only to decline rapidly (current membership: 240,000) in the face of European prosperity, until, suffering from chronic ill health, he "elevated" himself to president last May, leaving everyday tactics to another man; of an apparent heart attack aboard a Russian ship traveling to Yalta for a vacation.

Died. Dr. Rufus ("Rex") von Kleinsmid, 89, president of the University of Southern California from 1921 to '46, a crusty, controversial administrator who expanded U.S.C.'s plant from three to 22 buildings, increased enrollment from 5,000 to 12,000 and concentrated hard on a championship football team, but paid his professors minuscule salaries (some got as little as $2,600 a year); of heart disease; in Los Angeles.

Thailand's prospects

11 With the new six-year plan, prospects are promising. Roads, irrigation, cheap power, and education are the government's main concerns.

12 The plan foresees 9,000 new trained teachers a year (more than twice the present number). For the industries of Bangkok and the central plains, the Yanhee hydro-electric project promises more economical and abundant power. It will also irrigate thousands of acres of farmland.

13 Meanwhile, if you pass through the bustling Bangkok of today, you will be impressed at the number of banks, by the distinction of the women, and by the heaviness of the traffic. The capital (with its twin city Thonburi) has busy roads packed with cars and 3,000 more taxis than a huge Western metropolis like London.

SHELL AND WORLD OIL

Short of local mineral fuel, and with her forests dwindling, Thailand will need more and more oil to power her new industries. So will the rest of the world. Oil is one of the fastest growing sources of energy, and demand is expected to double within 15 years.

Meeting this demand has to be an international operation because no other commodity is moved in such tremendous volumes, across so many frontiers, broken into so many products, planned so far ahead. It needs a complex, world-wide organisation — the kind Shell has built up over the years.

FACTS AND FIGURES

For Shell, getting oil to the markets means operating over 11½ million tons of tanker shipping, and 32,000 miles of pipelines over the great land routes. Establishing marketing companies in over 100 countries. Doing business in nearly every major language. And encouraging 6,000 research men to find new and useful products — new fuels, plastics, resins, fertilisers and insecticides.

YOU CAN BE SURE OF SHELL

Shell is dependable because it is in the whole oil cycle. It looks for oil, finds it, raises it, transports it, breaks it down into products, and gets them to market as regularly as a metronome. In doing so, it averages about 1¼ US cents profit per gallon on its sales.

Shell is useful. It gets the right product to the right place at the right time. **It serves consuming countries by finding dependable energy, producing countries by finding dependable markets. Year after year.**

U.S. BUSINESS

BANKING

Money Makes Money

Banks are usually good mirrors of prosperity, but the $312 billion U.S. banking industry is sharing in the current economic advance to a degree that surprises even it. Bankers, in fact, are making more money than ever before. Last week alltime high first-half earnings were reported by several banks, including the two largest ones, San Francisco's Bank of America and New York's Chase Manhattan. Despite their rising operating costs and the higher interest payments they are forced to pay to remain competitive, the nation's major banks earned 9% more in 1964's first half than in the first half of 1963.

Many Happy Returns. The prime reason for the rise is that U.S. businessmen and consumers are clamoring to borrow more. Outstanding loans of U.S. commercial banks jumped from $150 billion to $157 billion in this year's first five months, and they are still climbing sharply. Much of the gain came in the kind of loans that bankers like most of all—consumer installment loans, which give them interest yields of 12% or more. The banks' consumer installment credit has increased by 13% in the past year, to $22 billion. At the same time, the amount of real estate loans, which yield more than 5%, has risen from $34 billion to $39 billion.

The bankers have also been earning more from the $59 billion that they have tied up in Government securities. Thanks to Washington's policies of firming up interest rates to prevent investment capital from flowing to foreign countries, the yields on U.S. securities have risen about ½ of 1% in the past year—to 3½% for short-term Treasury bills, and to 4% or more for longer-term issues. To further increase their income, the bankers have been switching increasingly from Government securities to municipal bonds, which are tax-exempt. In the past year, they have boosted such investments by 23%, to nearly $23 billion.

More Powers. Prudence is a way of life for the bankers, and they would be the last to claim that their fortunes can continue to rise indefinitely.* Some bankers complain that interest payments on deposits are too generous and inflexible, while others, including Federal Reserve Chairman William McChesney Martin, worry that the bankers have taken on too many chancy construction loans. On the other hand, the fact that the bankers have lent out so much reduces the prospect of economic excess. Because the banks have only a small supply of liquid funds, the Federal Reserve now has greater power to tighten up on credit should strong signs of inflation appear.

STOCK MARKETS

Career Cop

The Securities and Exchange Commission, top cop of the U.S. stock markets, was led into its most active role in many years by its current chairman, William L. Cary. Ever since Cary made known his desire to return to his Columbia law professorship by this fall,

* A few overextended banks have failed lately. Last week the Federal Deposit Insurance Corp. announced the collapse of the First State Bank of Dell City, Texas. Reason: an excess of bad loans. It was the third small bank failure for that reason this year.

SEC'S COHEN
Watching out for soft stuff

Washington and Wall Street have dered whether Lyndon Johnson brake the SEC by picking a gressive chairman. Last week clear that the SEC will continue energetic course, the President a chairman who is at least as as Cary: SEC Careerist Manuel erick Cohen, 51. "There is no any soft stuff taking place," said Cohen. "The program we have will be continued."

The program, shaped in part by Cohen, calls for closer ulation of the securities mark haps leading to lower broker missions among other changes largely from the SEC's massive stock market study (which, co tally, was led by Chicago Law ton Cohen, no kin to the new man). Cary made a strong pitch don Johnson to pick Cohen, already a member of the five-m mission, as the new chairman Cohen was not hurt by his close ship with White House Special sel Myer Feldman. Johnson under pressure to pick a caree soften criticism of his recent ment of conservative Republic mer Budge, a former Cong from Idaho with little experi the securities markets, as an SE missioner. To fill the vacancy by Cohen's promotion, Johnson week chose a Los Angeles lawyer cis M. Wheat, 43, a Democrat.

Brooklyn-born Cohen is a immigrant's son who worked his a degree at Brooklyn Law Schoo and joined the commission in 1 ing to head its division of corpo nance, he became known as a s ministrator whose devotion to did not stop him from being by the people he was regulating week New York Stock Exchange ident Keith Funston called Cohen icated and realistic."

in is only part of his problem. The real trouble comes in persuading a brace of sponsors to accept an idea, and figuring out how much each should pay for sharing in it. In the Remington-Stetson marriage, for example, two-thirds of the $12,000 campaign was billed to Stetson, which is getting twice as much touting in the tie.

COMMODITIES

The Last Boll

The U.S. Government's cotton policy is a crazy quilt that would put even Rumpelstiltskin in stitches—and it costs the U.S. taxpayer $500 million a year. Congress has piled subsidy on top of subsidy, seems to think up a new price prop every year.

First the Government fixed the price of domestic cotton at 32½¢ a lb., which is 8½¢ above the present world market price. Then it has been paying an 8½¢ subsidy to exporters so that they can sell U.S. cotton competitively at the world price. But U.S. textile manufacturers have been complaining that foreign textile makers can thus buy U.S. cotton cheaper than they can—and the Government has now devised still another subsidy to meet their complaints. Beginning Aug. 1, it will drop the farmers' support price 2½¢ to 30¢, automatically lowering the subsidy to exporters by 2½¢. At the same time it will grant U.S. manufacturers a new subsidy of 6½¢ a lb. so that they will be able to buy U.S. cotton at the cheaper world price. The effect will be to create three different payouts so that sellers of cotton will get 30¢ a lb. but buyers will only have to pay the prevailing world rate, which currently fluctuates between 23½ and 24½¢.

The new system last week proved to be the last boll for the 93-year-old New Orleans Cotton Exchange, which closed its doors to trading. Because the price of cotton has been so firmly fixed, big dealers no longer have to go to the exchange to buy futures contracts to hedge against possible fluctuations. Futures trading on the New Orleans exchange dropped from 12 million bales a decade ago to only 18,000 last year. The exchange did not take its closing easily, planted full-page ads in many newspapers to attack the situation. After suggesting that Secretary of Agriculture Orville Freeman is either "unknowledgeable" or "a demagogue," the ad charged that his subsidies were creating a "unique substitute for the free enterprise system."

That left only one remaining cotton futures exchange—the New York exchange, whose business has dwindled from 33 million bales in 1953 to 928,000 in 1963. Its leaders are negotiating with the Agriculture Department in hopes of finding a way to survive, but prospects are dim. The subsidy system has achieved stability for the nation's No. 1 fiber, but the cost in money and market freedom is high.

will discard at least some of their old furniture, buy pieces better suited to their new surroundings.

Homes are becoming bigger, too—nowadays, not many new houses have fewer than three bedrooms—and more rooms naturally require more furniture. The trend toward homes with patios and apartments with terraces has expanded the demand for outdoor furniture, and overall business has been helped even by the popularity of television. Says Chicago Retailer Milton Fish: "TV is keeping people at home more, and making them much more conscious of their furniture."

Scrubbing the Borax. In the area of style changes, the furniture manufacturers are taking a lesson from the automakers: the American family spends an average of $100 a year on furniture *v.* $800 on cars and accessories. Now the furniture men have begun to shift styles more rapidly than usual to appeal to a nation of rising tastes. "Today's American furniture buyer is interested in three things," says Hampton Powell, president of Lane Co., a major manufacturer. "He puts style above all else, with quality second and price third."

Current styles are generally more elegant—and more expensive. The bulky, tacky styles—which [illegible] dub "Borax" and jokingly [illegible] by the pound—do not sell very [illegible] more. Also declining in popularity the starkly modern styles, known [illegible] trade as "sterile" or "baby-[illegible]" important market gains have been [illegible] by French-Italian Provincial, [illegible] the Spanish or Mediterranean [illegible] which is characterized by dark [illegible] wrought irons, gentle carving and [illegible] open spaces. Furniture men [illegible] that tomorrow's hot style will [illegible] be vaguely oriental, "a hint of [illegible] East."

While middle-aged households [illegible] replacing their furniture with [illegible] pieces, there is a continuing [illegible] the number of younger, first-[illegible] ers, who do not want their new [illegible] see hand-me-downs and are [illegible] customers for whole housefuls [illegible] ture. Manufacturers look with [illegible] upon market researchers' [illegible] that the number of marriages [illegible] crease from 1,600,000 last [illegible] 1,900,000 next year. All those [illegible] ilies will benefit the industry [illegible] and one segment of it in par[illegible] manufacturers of baby furni[illegible]

HOW THE '64 AUTOS FARED

THE 1964 auto year went so fast and furiously that it is hard to believe it is nearly over. Last week General Motors Cadillac Division became the first auto-industry name plate to stop production of the '64s and begin preparations for the 1965 models. In the next few weeks Detroit's other automakers will also close out 1964 production, ending much earlier than usual to prepare for the most complete retooling in many years. As the switchover for the restyled '65s began, the auto industry's report of a record-breaking [illegible] auto sales through June, 6% [illegible] in 1963, indicates that Det[illegible] surely will have the first $[illegible] year in its history. Henry [illegible] good about the industry's [illegible] he announced last week that [illegible] spend more than $90 million [illegible] new auto plant, its largest [illegible] south of Detroit. What automa[illegible] fared best in the 1964 auto [illegible] what name plates have increa[illegible] share of the market? The [illegible]

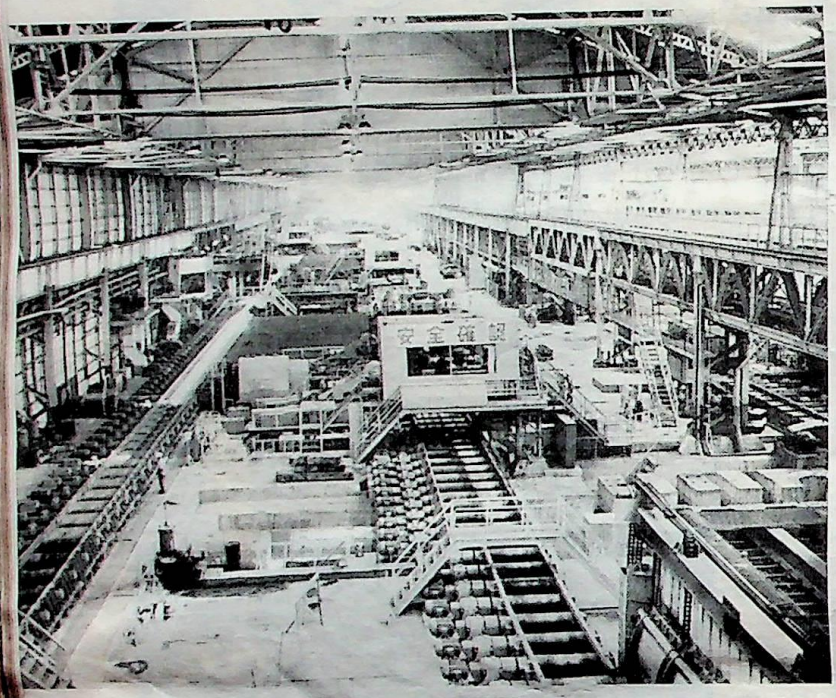
JAPAN

The New No. 3 in Steel

Even in the age of the atom, steel is still the vital measure of industrial might. The Soviet Union has made it national policy to catch up with U.S. steel production, the world's largest, and the other large steel producing nations never cease jockeying for advantage. Since World War II, no nation has reached for big steel status with more success than Japan, whose industry is among the world's most advanced and whose exports have raised the ire of competitors in both the U.S. and Europe. Now Japan has taken over from West Germany as the world's third largest producer, having turned out 34 million tons of high quality steel in the fiscal year that ended in March *v.* 33 million tons for the Germans.



FUJI'S SHAPING MILL AT HIROHATA
Dwarfing the most optimistic projections.

S. IMAI

NAGANO

From southern Kyushu to northern Honshu, the classic brush-painting coastline of Japan has been transformed into dynamic montages of modern wealth. Fire and smoke belch forth from towering blast furnaces that gobble up a steady stream of coal, iron ore and limestone from huge supertankers. The Japanese take second place to no one as owners of the most modern steelmaking equipment, have 14 ore-to-ingot plants operating at nearly 95% of capacity and another four being built. Japan ranks second to the U.S. in up-to-date strip-mill capacity and produces 38% of its steel by the speedy, economical oxygen process, while only 10% of U.S. steel is made that way.

Unexpected Boom. The American occupation triggered the modernization of Japan's steelmaking. Occupation planners declared the steel industry essential, thus enabling it to progress from a complete halt in production on V-J day to an output of 6,000,000 tons by 1951, when the peace treaty was signed. At the same time, the old government monopoly, Japan Steel & Iron Co., was broken up into Yawata Iron & Steel Co. and Fuji Iron & Steel Co., currently Japan's two largest producers. Encouraged by the authorities, competition flourished; today Japan has 62 steelmakers. But 55% of production is still accounted for by the nation's big four, who are rounded out by Nihon Kokan and Kawasaki Steel.

The man who took the lead in advocating modernization is now the acknowledged leader of the Japanese steel industry: Shigeo Nagano, 64, Fuji's president. The son of a Buddhist priest and himself a Judo expert with a reputation for forcefulness, Nagano pressed for renovation and expansion of the industry despite official reluctance and occasional opposition from financial circles, who could not see so clearly as he the role steel would play in reconstruction. Following his lead, the industry inaugurated a $358 million, five-year capital expansion program in 1951. Japan's accelerated recovery, and the shipbuilding and railroad booms it brought, dwarfed even the most optimistic projections. Steelmen put $1.9 billion into a second five-year plan that doubled production, and in 1961 launched a third plan that will cost $3 billion, bring production to 42 million tons by the end of 1966.

Japan's biggest advantage has always been cheap labor, and productivity has risen so much faster than wages that the advantage has actually been increased. Since Japan had to import most of her raw materials, she built her [illegible] plants right on the water's [illegible] nearly all major steelmaking [illegible] have to import substantial raw [illegible] also, and Japan's seaside plants [illegible] sent big savings in transport [illegible] charges, enabling steelmen to [illegible] raw materials from giant-volume [illegible] tankers. The Japanese have [illegible] fected their research and develop [illegible] have improved efficiency and [illegible] so much that the amount of coal [illegible] used to produce one ton of pig [illegible] been cut 39% in ten years.

Long-Range Goal. Finished [illegible] products are Japan's biggest [illegible] ($759 million in 1963) and [illegible] ance the outlay the Japanese [illegible] make to import raw materials [illegible] ports of steel goods thus contribute [illegible] rectly to Japan's trade balance. [illegible] nese steelmakers have been [illegible] dumping in the U.S. and of [illegible] cartel with Europe's steelmen. [illegible] is no doubt that they are aggressive [illegible] wily exporters. But they insist [illegible] long-range goal is not more exports [illegible] increased domestic consumption. [illegible] Fuji's Nagano: "The primary [illegible] this industry is to provide [illegible] needed for Japan's growing [illegible] Japan's per capita steel production [illegible] only 550 lbs. annually, about [illegible] European and U.S. consumption. [illegible] gano reasons that Japan can [illegible] fortably produce nearly twice [illegible] steel for domestic consumption.

WESTERN EUROPE

A Better Solace

Western Europe's economy [illegible] shows few signs of letting up, [illegible] has not prevented many [illegible] economists from worrying about [illegible] it all will end. The economists [illegible] work for the prestigious Twentieth [illegible] tury Fund do not seem to share [illegible] worries. In a report issued [illegible] they predicted that European [illegible] dented prosperity will continue [illegible] crease at least until 1975.

Population in the 18 West [illegible] ropean countries, says the study, [illegible] crease from 313 million in 1962 [illegible] than 340 million in 1975, outnumbering [illegible] the U.S. or Russia. Total West [illegible] ropean output is expected to rise [illegible] to $600 billion, and productivity [illegible] worker in the projected 15% [illegible] man work force will jump [illegible] employment, which was a [illegible] 000 in 1962 and is even less now, [illegible] pected to drop to 2,000,000 by [illegible]

The fund also forecasts that [illegible] Europeans will own 60 million [illegible] million cars by 1975, triple the [illegible] in 1960. Spending for household [illegible] ances and furniture will more [illegible] ble, and outlays for clothing [illegible] will rise by nearly 70%. As a [illegible] footnote, the fund also predicts [illegible]

DAVID MOORE

MELBOURNE SHOPPERS IN THE MYER EMPORIUM
Aiming at the middle.

that this year will total $500 million—but that is not enough. Egypt is still forced to import so many necessities that it runs a perennial trade deficit. To help wipe it out, the Egyptians are selling hard to nations as distant as Norway and the Philippines, shipping tires to Czechoslovakia and China, and working successfully to overcome earlier complaints of inferior quality. The Egyptians look with great expectations to the emerging African market, which they hope will be a major outlet for Egyptian goods. It is no coincidence that the industrial fair coincides with a Cairo summit meeting this week of 34 African heads of state and their cabinet ministers. Any one of them who manages to get out of Cairo without visiting that trade fair will have to be a slippery fellow indeed.

AUSTRALIA

Down-Under Macy's

The Macy's of Australia is a seven-story sandstone department store that sprawls over two blocks in the heart of Melbourne. The Myer Emporium is Australia's top store, the world's sixth largest, and the major link in the biggest retailing chain below the equator. More than 1,250,000 customers a week pour through its doors and onto its 54 elevators and 32 escalators, and thousands more shop at its 27 branches, which are placed in every state except Western Australia. Myer's has no equivalent of Gimbels to keep it on its toes, but it does not seem to have suffered from that vacuum. Last week Myer's, whose 1963 sales were nearly $300 million, announced plans to build a $20 million, 51-acre American-style shopping center in the Melbourne suburbs.

Outraged Competitors. Myer's has 50-odd subsidiaries, including car parks, garages, furniture and woolen mills and shopping centers, but it has grown and prospered because of its over-the-counter rapport with the Australian shopper. Most of its 19,500 employees attend training school, learn to address customers by name when possible instead of by the formal "sir" or "madam." Myer's departments compete with each other to bring the customers bargains, and its basement frequently carries the same merchandise as upstairs at lower prices. When merchandise does not move on a strict timetable, Myer's either knocks the price down or clears the goods from its counters.

Australian retailing was still in the Middle Ages when such practices were first introduced to Aussie shoppers by Sidney Myer, a penniless Russian Jew who emigrated to Australia in 1905 and began to hawk merchandise from his back, not far from Melbourne. He moved up to a pushcart, then to a rented store, and by 1911 had amassed enough money to buy a small general store in Melbourne—right on the present site of Myer's. He quickly became the city's most successful businessman, outraging competitors by such novel practices as introducing "price leaders" to attract customers, ordering his salesgirls to don hats and crowd around neglected bargain counters. Before he died in 1934, he had begun establishing branch stores in other Australian cities and had foresightedly picked his successor: Myer's current boss, Arnot ("Harry") Tolley, 68.

Steady Steering. A quiet, gentle executive, Tolley sees himself as "a man with an oil can whose job is to keep all parts of the machine running smoothly." He has done just that, shrewdly acquiring other companies, setting up buying companies in four foreign countries and agents in four others, and steadily expanding Myer's network. He has ignored chances to open specialty stores, steadily steered Myer's toward the volume market. "There's no future in catering to a so-called elite," Tolley says. "Aim at the broad middle section of the population and you automatically get both the top and bottom sections." Myer's not only has been good for the Australian shopper but for Australian industry as well: Tolley sees to it that of the thousands and thousands of items carried in Myer's stores, fully 90% are made in Australia.

keeps *Iguana* scuttling along at a right smart rate, and as always he shrewdly challenges his actors with delegated creativity. They all respond. Kerr lends charm and finesse to a meaching masochist. As for Burton, he makes more sense in this movie than he has in his last half-dozen efforts. He has a light in his eye, a line to his mouth, and the carriage of a man who believes in what he is doing.

It isn't hard to. Williams, though he often seems obsessed with other vital centers, is fundamentally concerned with the heart, and in *Iguana* he sometimes writes about it beautifully. His characters are contraptions and their lives are theatrical tropes, but when they say what they feel, what hurts them and what they long for, they come suddenly alive and bleeding. Strange and disturbing to see contraptions bleed.

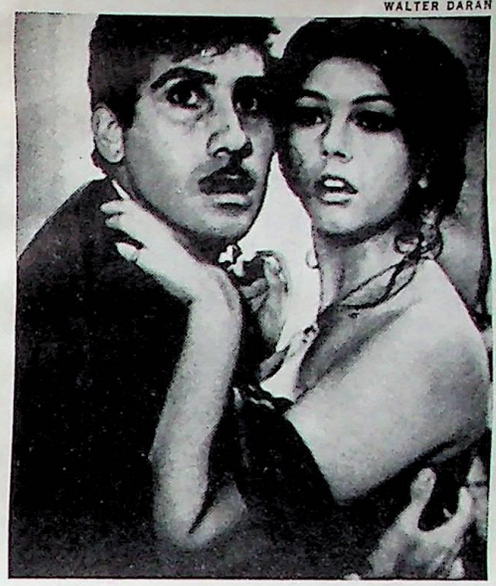
Young Love—Sicilian Style

Seduced and Abandoned. The girl's name is Agnese, a raven-haired sylph with the face of a Botticelli angel. Head high, eyes cast demurely downward, she moves with easy grace through the cobblestone streets of the small Sicilian village while the camera follows, falling slowly in love with her. So does the audience. Thus Director Pietro Germi eases smoothly into a black and bitter tragicomedy that shows his wildly wicked *Divorce—Italian Style* to be an exercise in restraint. In *Seduced and Abandoned,* Germi's underlying despair keeps burning to the surface. "This time," he explains, "I would like the public to hate me a little."

Having established the innocence of his angel (Stefania Sandrelli), Germi first thrusts her into an earthy peasant farce. One midday siesta she is seduced and becomes pregnant. Her father, played with inexhaustible bravura by Saro Urzi, consults a lawyer cousin, explaining that the doctor has brought up a little problem about Agnese. "Tumor?" asks the cousin. "Honor," growls Don Vincenzo. He sends his only son Antonio to murder the seducer, assured that the boy's punishment will be no more than three to seven years in prison, provided he kills "in a blind rage."

To this point, the comedy brims with drolly catalogued details of village and family life. The laughter fades as Germi shows, in scene after scene, how ignorance, hypocrisy and habit can transmogrify normal human problems into sunny Sicilian nightmares. Trying every tactic from simple perjury to a trumped-up kidnaping, Don Vincenzo struggles to marry off Agnese and salvage his honor, for his worst fear is that he might become an object of ridicule in the piazza. "We are an old family," says Don Vincenzo. "I admit we've had some violent deaths—but outside the law, in dignity." Agnese no longer matters. She is beaten, jeered at, and finally

WALTER DARAN



SEDUCER & SANDRELLI IN "ABANDONED"
Back to the nightmare isle.

led to the altar as if she were a schoolgirl dragged to stage center of a savage burlesque. In a grim postscript, the camera cuts from the stricken Agnese to mock the words "Honor and Family" on a nobleman's tomb.

Abandoned emerges as an erratic but deeply affecting work by an artist able to project a commonplace theme with blinding *brio*. Germi leavens his anger with compassion, lightens compassion with humor. And one pointed vignette embodies all three: a hard-pressed chief of the *carabinieri,* studying a wall map of Italy, impulsively flattens his palm over the entire island of Sicily and utters a long, long sigh.

A Kitten for King Leer

Good Neighbor Sam. "We're good clean family men here at Nurdlinger Farms," declares Milk Merchant Edward G. Robinson. "I don't want my account handled by bawds and lechers and libertines." Enter Jack Lemmon, a neat, courteous, helpful young adman who resides in suburban San Francisco with two children, one dreadfully adorable duck, and his leggy All-American wife (Dorothy Provine). Everyone who has ever seen a Jack Lemmon movie will instantly surmise that the model ac-

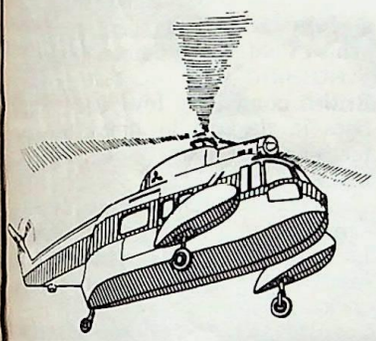
The sky's the limit



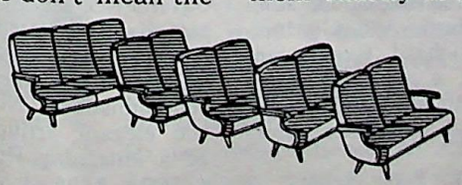
Helicopters are versatile. They go up, down, sideways, stand in mid-air, and make pinpoint landings.

The helicopter we build does all of these, of course. And quite a bit more besides.

Things other helicopters *can't* do.

The Mitsubishi S-62 is amphibious. That sets it apart immediately. (Ours was the first turbine powered helicopter to be certified by the FAA for commercial use on water.)

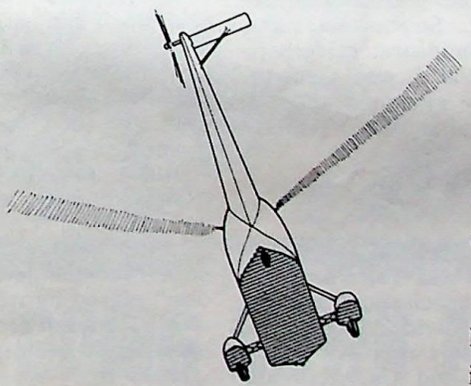
By amphibious we don't mean the ability to land on Walden Pond. The S-62 is perfectly at home on sand, mud, snow, ice and choppy seas. Wherever there's room to set down.



Another certified first is the CT-58 turbine engine. Most helicopters are rather noisy. They tend to shake. Not the S-62. The turbine is very quiet and creates little or no vibration.

For eleven or twelve passengers taking their first ride, this fact alone is bound to sell them on helicopter travel. If it doesn't, the interior comfort that borders on downright luxury will.

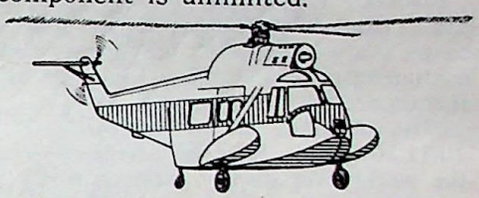
The cabin itself is multi-purposed. Remove the seats and you have 440 cubic feet of cargo space. A 2,000 pound load was once taken to a base camp 14,000 feet up in the Himalayas.



Install litters and the S-62 becomes a flying ambulance. Last year, in the dead of winter, one rescued 13 college students trapped atop Mt. Yakushi (9,597 feet).

And have you ever heard of a flying crane? The S-62 converts to just that. It can deliver work pieces to remote construction sites and position them exactly in one fell swoop.

The S-62 has a relatively short history, but no other helicopter has proven its worth more. None so easy to maintain, either. Overhaul intervals are longer and the life of at least one dynamic component is unlimited.



Produced at our Nagoya Aircraft Works under an agreement with Sikorsky Aircraft of the U.S., the S-62 is the latest in a series of helicopters we've been building since 1958. But aviation and Mitsubishi date back much further.

In 1939, one of our passenger planes made headlines by successfully completing a flight around the world.

The sky was the limit then, just as it is today. In as many different industries as you would care to name.

TIME LISTINGS

TELEVISION

Wednesday, July 29

ON BROADWAY TONIGHT (CBS, 10-11 p.m.).* Robert Goulet is the pro among tonight's new talent.

Thursday, July 30

CHOOSING A CANDIDATE (NBC, 7:30-8:30 p.m.). How the Republicans selected their presidential and vice-presidential candidates, and an advance look at what the Democrats may do.

A WORLD'S FAIR DIARY (NBC, 10-11 p.m.). NBC Correspondent Edwin Newman's personal view of the fair. Color.

Friday, July 31

THE BOB HOPE THEATER (NBC, 8:30-9:30 p.m.). Dana Wynter, Mel Ferrer and Leo Genn star in an espionage tale of a Soviet agent's theft of British defense secrets and attempted defection to Russia. Color. Repeat.

ON PARADE (NBC, 9:30-10 p.m.). Composer Henry Mancini and his music.

Saturday, August 1

SUMMER PLAYHOUSE (CBS, 9:30-10 p.m.). Comedy about a newly married couple's attempts to set up house while continuing college. Patricia Blair and Jim Hutton are the newlyweds.

MISS UNIVERSE BEAUTY PAGEANT (CBS, 10-11:30 p.m.). Shapely delegates from the world over display their charms and talents. Arlene Francis, John Daly and Jack Linkletter host the competition, broadcast live from Miami Beach.

Sunday, August 2

THE TWENTIETH CENTURY (CBS, 6-6:30 p.m.). The story of how the U.S. helped rehabilitate both its enemies and allies after each world war and fed the Russians during the 1921 famine. Participants include Admiral Lewis L. Strauss, secretary to then U.S. Food Administrator Herbert Hoover after World War I, and General Lucius Clay, military governor of the U.S. zone in Germany after World War II.

RECORDS

Virtuosos

STRAVINSKY: VIOLIN CONCERTO IN D MAJOR (Philips). A rare and rewarding encounter between the neoclassicist Stravinsky and the romantic David Oistrakh. Oistrakh gaily sets off short rhythmic explosions in the *Toccata* and *Capriccio* and then lets the melodies pour out in the two calm stretches called arias. Conductor Bernard Haitink and the Lamoureux Orchestra are also attuned to every instantaneous change in the musical weather.

BACH: THE WELL-TEMPERED CLAVIER, PART 1 (2 LPs; Archiv). "Clavier" means keyboard, and no one knows whether these preludes and fugues were written for harpsichord, organ or clavichord. Ralph Kirkpatrick is recording them on the clavichord, preferring its subtlety. Infinitely varied within their small compass, like snowflakes, the pieces have a severe fascination when played on the soft, monochromatic instrument. The late Wanda Landowska chose the harpsichord as her clavier, and her performances (RCA Victor) will be preferred by listeners who demand greater contrast and majesty.

ERNEST BLOCH: CONCERTO FOR VIOLIN AND ORCHESTRA (Angel). Bloch was noted for his Jewish music, but in this work he denied having any Hebraic inspiration or intention and referred to the main theme as the "American Indian." The overtones are oriental nevertheless, and the coloring exotic. Yehudi Menuhin, who first played for Bloch when he was six, lends to the work of his late friend a special intensity, as though he were celebrating a mystery.

MOZART: CONCERTO NO. 17 (RCA Victor). Artur Rubinstein has made long series of Beethoven, Brahms and Chopin recordings, but only in his mid-70s is he turning to Mozart, who did not live long enough to grow old. The best modern Mozart interpretation demands more crispness, but Rubinstein's performance has its own serene and sunny logic. He is accompanied by Alfred Wallenstein and the RCA Victor Symphony Orchestra.

THE GOLDEN AGE OF THE ORGAN (2 LPs; Columbia). E. Power Biggs goes on a busman's holiday in Germany and Holland, playing with artistry the twelve surviving baroque organs of Master Builder Arp Schnitger (1648-1719). The tones of Schnitger's organs are exceptionally bright and buoyant, wrong for the romantics but wonderful for the music Biggs plays: Bach (including the *Dorian Toccata* and *Fugue in D Minor*) and chorale preludes by the modern Berlin composer Ernst Pepping.

DOMENICO SCARLATTI: SONATAS FOR HARPSICHORD, VOL. VIII (Westminster). Musicians call Scarlatti's music "naked" because the performer is so exposed. Fernando Valenti need fear no such exposure, and has recorded more than 400 of Scarlatti's short sonatas. Scarlatti started to write them when he was 53; all but one of these twelve were written in his late 60s, when his earlier keyboard virtuosity made way for more provocative harmonies and modulations. Valenti's interpretation is vigorous, with a flamenco flair now and then, well-suited to Scarlatti's Spanish side.

MUSIC FOR GLASS HARMONICA (Vox). "Glass music" was long in vogue: Gluck performed a "concerto upon 26 drinking glasses, tuned with spring water"; Benjamin Franklin devised a popular "armonica," played by rubbing the edges of glass bowls. Bruno Hoffman has created his own 20th century instrument of tuned glasses to revive the literature and plays here works by Mozart and his contemporaries, setting the distant ethereal sounds adrift above flutes and violins.

CINEMA

ISLAND OF THE BLUE DOLPHINS. An Indian girl (Celia Kaye) and her dog cheerfully share an island exile in a children's adventure film rich with charm, intelligence and taste.

THE NIGHT OF THE IGUANA. Under John Huston's shrewd direction, Ava Gardner, Deborah Kerr and Richard Burton unpack their troubles at a seedy Mexican hotel in a drama that stirs the senses, persuades the mind, and sometimes touches the heart.

A SHOT IN THE DARK. Peter Sellers, as Inspector Clouseau of the Sûreté, rarely gets his man but continually gets laughs while pursuing a seductive murder s... (Elke Sommer) from corpse to co...

SEDUCED AND ABANDONED. A you... stumbles from the path of virtue ... nightmare of brutal Sicilian social c... in Director Pietro Germi's savage ... comedy, which makes his wildly w... *Divorce—Italian Style* seem an exe... in restraint.

ZULU. A band of British redcoats f... 4,000 proud Zulu warriors in a bl... battle film in the grand carry-on-lads ... dition of *Four Feathers* and *Gunga Din*.

THE UNSINKABLE MOLLY BROWN. T... massive song-and-dancer based on ... Broadway musical owes nearly all ... buoyancy to a raucous, free-style ... formance by Debbie Reynolds as the ... mountain girl who yearns to mak... splash in Denver society.

MAFIOSO. Sicily again, with Alberto ... di caught in the insidious toils of ... Mafia while Director Alberto Latt... serves up some small but gloriously ... licky slices of provincial life.

THAT MAN FROM RIO. French Dire... Philippe de Broca's wacky parody of ... lywood adventure movies propels ... Paul Belmondo through a series of w... derfully absurd dangers, smack into ... arms of a drugged damsel in distress.

NOTHING BUT THE BEST. In this sty... British comedy, a lowly clerk, Alan B... rises in the Establishment by coolly ... fecting a program of lies, theft, cour... and homicide.

THE ORGANIZER. Marcello Mastroian... superb as a scraggly revolutionary ... Director Mario Monicelli's vivid, war... human drama about a 19th century te... strike in Turin.

YESTERDAY, TODAY AND TOMORROW. ... ubiquitous Mastroianni, evenly matc... against one of Italy's great natural wo... ders, Sophia Loren, in three racy mod... fables directed by Vittorio De Sica.

THE SERVANT. Promoting country ... ters in a smart London town house, ... Bogarde gives a highly polished perfo... ance as a vicious "gentleman's gentle... who corrupts his master.

PICTURE OF TWO MEN GOING DOWN FOR AIR

Two crew compressors powered the Atlas Copco drilling equipment which is deepening Genoa's oil harbour to the point of the new Central European pipeline.

Making the most of equipment to hand can produce startling results. Kenya, where improvisation is no forgotten art, is a case in point. Speedy action was needed to deepen Mombasa's harbour entrance to allow giant tankers to enter the port. What, then, more natural than to take drilling equipment already working ashore . . . and try using it *under water*.

So, two miles offshore, an Atlas Copco wagon drill was sunk some four fathoms to the seabed where a frogmen crew successfully put it to work. The portable compressor that became seaborne to power the unit was further used to fill the frogmen's own air bottles.

Normally, of course, this watery solution is not one to recommend. In contrast, Atlas Copco has introduced special equipment that does the entire job from the surface – without divers. And in deepening Italy's Genoa harbour, this new equipment saved the contractor 40 per cent in labour costs alone.

The reliability of the equipment at Mombasa and the advanced compressed air technology applied in Genoa, stem from Atlas Copco experience on construction sites, and in industry and mines the world over. And the benefits of this experience are an integral part of our service.

Atlas Copco

puts **compressed air** to work for the world

Heidelberg

Only Lufthansa's 'Europa Jet' cruises at 600 mph without putting its nose outside Europe

Touching 600 mph is just cruising to the 'Europa Jet', Lufthansa's name for the Boeing 727. Yet Lufthansa will use this new, fast medium-range aircraft on short-hop flights – from Germany to Madrid, Barcelona, London, Copenhagen, Stockholm, Milan, Rome and the Near East. Why? Because you get all the speed, power and importance of a big intercontinental flight, even when you're going only a short distance.

In just 12 minutes 'Europa Jet' can set down and pick up its passengers or cargo. Built-in passenger steps emerge immediately after the arrival. Electric starters speed the jet into flight. The three jet engines have a reserve power unique among passenger-carrying aircraft. Thanks to Lufthansa's 'Europa Jet', intercontinental standards will now apply to air travel from one European city to another. You'll sink back into the cushioned luxury of spacious cabins, and measure in minutes the flying time to Madrid, Milan, Stockholm or London.

A9 - A New Semi-Automatic Welder

Already an established favourite in the semi-automatic welding field in Europe the A9 offers low-cost welding on many thin plate jobs. Employing the short-circuiting arc principle it welds with high speed and maximum economy thin plates of steel, stainless steel, copper, bronze or aluminium in any position. A unique and easily handled lightweight welding gun which is compressed air driven and a special rectifier, the LBA 200, maintain a constant wire feed speed and arc voltage. Gas used is CO_2, argon or mixtures. For further details write:

The equipment is compact and manoeuverable and ideal for production line work in automobile and similar industries.

"HERE COMES OUR FAILURE"

These words were once spoken of France's Jean Anouilh by a director of acknowledged ability—and doubtful foresight. TIME quoted him in a searching article on the playwright. Just such commentary gives TIME's features on famous people authenticity and bite. It's in evidence throughout the wide ranging Show Business section, which gleans theatrical news from every corner of the world. Small wonder millions of families around the world read TIME. It keeps them up-to-date on the very business there's no business like.

IF YOU DEMAND BETTER BANKING SERVICE

Our 66 years of banking service have contributed to the industrial development and economic growth of Japan. And we too have expanded and kept up with the trend of the times during this period. Today our worldwide network of 130 domestic branches, 3 overseas offices and 1200 overseas correspondents is ready to give you the benefits of our vast experience and complete facilities by providing you with the kind of efficient personalized better banking service you have been looking for.

Pennies can prevent this from happening to you

Working hot metal can be highly profitable—and extremely dangerous.

Metal-working machines, drop forges, die-casting machines and others may carry small streams of potential destruction in their hydraulic lines—flammable petroleum hydraulic fluids.

A minor mishap—a broken line or seal—and flaming liquid and explosive spray can jet through your plant.

That's why the slight additional cost for Monsanto Pydraul* hydraulic fluids can be such a wise investment.

Pydraul will not support combustion.

Pydraul in your hydraulic lines can mean lower insurance costs.

And Pydraul gives you other benefits. It won't sludge or thicken, it's not corrosive, yet Pydraul provides all the lubricating qualities of premium grade, but flammable, petroleum oils.

Pydraul is a performance-proved co bination of safety and utility. Try You'll like the feeling of security Pydr can give you.

And if other fluids in your plant are ing you trouble, talk to your local M santo representative. Chances are got something to help you.

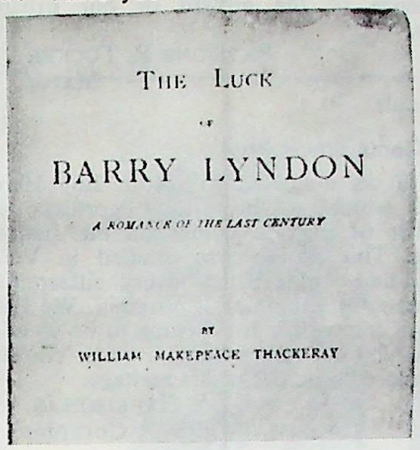
Sir: Have you seen this?



(MRS.) MILENA SNAJBERK

Berkeley, Calif.

▶ *Thackeray's anti-hero, christened Redmond Barry, was a soldier, Member of Parliament, traitor, spy, gambler, spendthrift and all-round cad. He hounded the rich Lady Honoria Lyndon into marriage, taking her name as well as her fortune. The luck of Barry Lyndon finally ran out in a London prison, where he died of delirium tremens.*—ED.

Sir: The radioactive fallout of fear, intolerance and ignorance at San Francisco has produced a political mutation that, like the proverbial mule, has neither pride of ancestry nor hope of posterity.

JACK ELLIOTT

Bound Brook, N.J.

Sir: We Germans have learned, very much to our regret, what the outcome of leaders with big sticks has to be. Are Americans prepared to pay the same tuition?

PAUL HANS BAMBERG, M.D.

Berlin

Sir: I see that my junior Senator has called President Johnson "the biggest faker in the U.S." How can Goldwater draw such a superlative evaluation without, for example, knowing me?

RUDY BARCHAS

Tucson, Ariz.

Faulkner & the South

Sir: My compliments on your thorough, incisive cover story on William Faulkner [July 17] and his works. As co-editor of a recent book on Faulkner (*Bear, Man, and God: Seven Approaches to William Faulkner's "The Bear"*), I am familiar with most of the extant Faulkner commentary, and have found yours among the most penetrating.

(MRS.) LYNN Z. BLOOM

Western Reserve University
Cleveland

Sir: As a Southerner I have never even once heard anyone reflect a "feeling of guilt" about slavery. Southerners feel no more guilty about having owned slaves than New Englanders who corralled the slaves in Africa and sold them in America.

MRS. J. F. MESSICK

Atlanta

Sir: Racial guilt phobia is the silliest concept since original sin. Southerners abuse Negroes because we all have to have someone to look down on, and for a redneck with no hound-dog, that ain't easy.

P. S. BARROWS

Del Mar, Calif.

Riots in Harlem

Sir: Every freedom-loving Negro, just as myself, must have some feeling of shame and indignation about the actions of roving gangs and mobs of Harlem's Negroes who, in the name of civil rights, loot and terrorize New York City and its law-enforcement officers [July 24]. It is hardly believable that some of the city's civil rights leaders are trying to pin the blame on the city's police department. What is one supposed to do when confronted by mobs of bloodthirsty hoodlums?

(A/2C) JAMES HUTCHINSON

U.S.A.F.
March A.F.B., Calif.

Sir: I have lived in Mississippi all my life, and, naturally, I possess likes and dislikes concerning my controversial state. But I have recently added one more "like" to my list: I am glad that there are no subways in Mississippi (disregarding the fact that the state cannot afford them).

MARCUS ASHLEY

McComb, Miss.

Sir: I wonder if the folks in Harlem can refrain from looting, from throwing bricks, Molotov cocktails, empty pop bottles and rocks long enough to denounce Barry Goldwater again because of his stand on "extremism" and civil rights.

ROBERT BRUSCATO

Chicago

St. Louis' Revival

Sir: The article on St. Louis [July 17] was well done in that it presented evidence that our older cities can make a

comeback despite the problems to which they are prone. As president of the U.S. Conference of Mayors, I am especially appreciative of the continued efforts of TIME to point out the need to meet the challenge of the growth of our urban areas.

RAYMOND R. TUCKER
Mayor

St. Louis

The Commonwealth

Sir: I am delighted with your July 10th issue, which so beautifully portrays a number of historic homes on the James River. This nation was cradled in Virginia, and we feel that every citizen of this country should visit Virginia. We believe it impossible for anyone to be so exposed and not return home a better citizen and more conscious of his heritage.

A. S. HARRISON JR.
Governor

Richmond

Pamela Takes Exception

Sir: I should not have been in the Press section [July 17], since by so doing, you missed some of the most interesting things about me. I was the first person in the world to wear a topless suit on radio. Groucho's quote that I talk mostly about sex is untrue. In *that* department, I strictly believe actions speak louder than words.

PAMELA MASON

Beverly Hills

Wisdom v. Ability

Sir: The Indian public has been kept singularly uninformed about the true nature of Shastri's illness. It is from TIME that I learned that Shastri has been suffering from a mild heart attack [July 10]. It is unfortunate that we Indians associate age with wisdom and ability, so that all our leaders are old men with one foot in the grave.

B. N. THADANI

Bombay

Corruption in Thailand

Sir: It is a very sad and disgusting story of the late Premier Sarit Thanarat of Thailand, who siphoned a mountainous amount of money from government funds into his pocket [July 17]. Unfortunately, there has been corruption in our government for decades, and the great robbers have been the Premiers themselves. I want to thank TIME for making such escapades available to public judgment.

KAMTHORN SUKUMARABANDHU

Stockton, Calif.

Presidential Poesy

Sir:

"Destroy these letters!" Harding wrote.
The lady smiled, and saved each note.
Each precious bloom! O Love divine,
To spare these garlands for mankind!

Those scholars who in history roam
Between Taft's term and Teapot Dome,
May peer at every bud that blows
In beds of presidential prose.

WILLIAM J. TAYLOR

Rudyard, Mich.

Jet Set Sit-In

Sir: In reference to "The High See" [July 10], there was a record-breaking transcontinental flight of a few months ago in which the passengers refused to disembark because the movie was not over.

ROY S. PORTUGAL

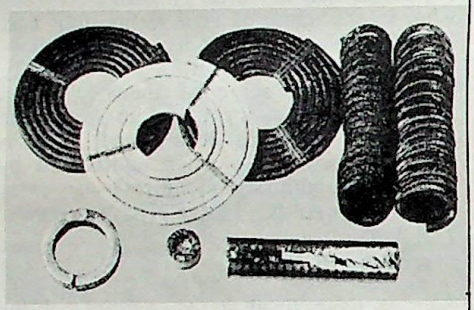
San Francisco

PROGRESS WITH EXPERIENCE

68 YEARS OF THE VERY BEST IN ASBESTOS PRODUCTS AND INDUSTRIAL THERMAL INSULATION

Nippon Asbestos Co., Ltd., a pioneer in the asbestos industry since 1896, is the largest and most experienced manufacturer of asbestos products in Asia. In addition to being a major supplier of materials for thermal insulation, it also contracts to do the installation itself, thereby assuring customers the maximum in efficiency and performance of the insulation.

The products and services of Nippon Asbestos Co., Ltd. have brought satisfaction not only to the major industries in Japan but also to customers in the Philippines, Formosa, and various countries throughout Southeast Asia and the Near East.



MAIN PRODUCTS:
■ Asbestos textiles (yarn, rope, cloth, etc.) ■ Asbestos paper, sheet, millboard ■ Asbestos joint sheet ■ Packings and gaskets of all description ■ Industrial Brake-lining & clutch facing ■ PTFE (Teflon) products (Tape, sheet, rod, pipe, molding) ■ Refractory materials ■ Thermal insulating materials ■ Incombustible bulkhead panel (Marine Board) ■ Incombustible paneling board (Asbestolux) ■ Sprayed asbestos (Tomlex) ■ Mechanical seals

THIMMESCH

TERRY

WALTER DARAN

KRISS

A BIG white turkey like you will be easy to spot," a policeman warned New York Correspondent Nick Thimmesch as he started down Harlem's notorious 111th Street. "So if anybody bothers you, tell them you are a welfare worker delivering a check."

In three weeks of making his way through Harlem—talking to businessmen, politicians, police, civil rights leaders and people, as well as witnessing the riots—Reporter Thimmesch felt that no one bothered him very much, except to hurl a few jeers of "whitey" at him. Ironically, it was Washington Correspondent Wallace H. Terry II, come home to Harlem to spend four weeks working on the story, who during one riot was knocked down and out by a brick hurled from a rooftop.

Wally Terry lived in Harlem as a child, grew up in Indianapolis, was the first Negro ever to edit the student newspaper at Brown University (where he graduated in 1959 with an A.B. in religion and the classics), and was a reporter on the Washington Post before he joined TIME's staff. While he now spends most of his time on stories of government and politics that do not turn on the question of race, his particular insight has made him an invaluable observer at many of the crisis points in the civil rights revolution. "I was with Medgar Evers the night before he was killed," Terry recalls. "My room at a motel in Birmingham was bombed hours after I checked out of it. I was locked up with reporters and photographers in the Danville, Va., city hall when police flushed demonstrators down off the steps. But at no time did I ever feel that there was an absolute breakdown of community leadership such as I saw in Harlem, where mobs of people ran pell-mell in an open battle with the police."

Work on the cover story began long before the riots blasted Harlem to the top of the news. Artist Russell Hoban walked and drove through the streets for hours to renew his impressions of Harlem before he made the first sketches for his cover painting. It is a composite of many sights he saw and of the plain people of Harlem as he thought of them, "worried and watchful." Researcher Virginia Adams pored over most of what has been written about Harlem to compile a pointed summary that supplemented the correspondents' reports. In addition to all this material, Writer Ronald Kriss read widely in James Baldwin's works and social-agency documents, and late the night before the story went to press was in Harlem to confirm some impressions.

Combining all these elements, TIME's aim was not to just report the racial trouble—which at its hottest moments is often overplayed—but to explain the ghetto called Harlem.

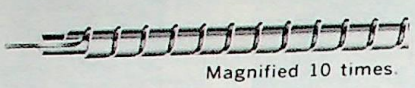
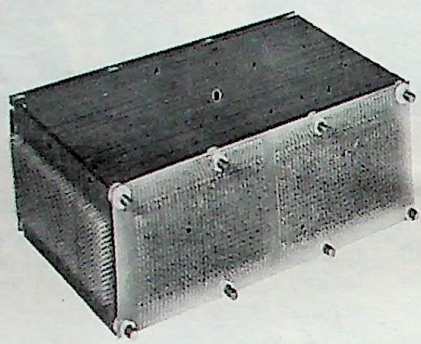
NCR is proud to announce . . .

the new 315 RMC (rod memory computer)

The first commercial computer with all thin-film main memory



Magnified 10 times.



A MAJOR ADVANCE

The new 315 RMC is a major advance in computer technology. Its entire memory of up to 240,000 digits is composed of thin cylindrical wire rods plated with a magnetic thin film. The 315 RMC has an incredible cycle speed of 800 nanoseconds (800 billionths of a second).

COMPATIBLE WITH ALL 315 HARDWARE

The 315 RMC is uniquely versatile. Though cycle speed is 8 times faster than the 315, it is designed to be completely compatible with all existing 315s and all 315 peripheral equipment. NCR users, both present and future, can easily move up to a Rod Memory Computer when additional capabilities are required.

COMPATIBLE WITH ALL 315 SOFTWARE

The command and logic structure of the 315 RMC is identical with all 315s. No re-programming is required. All 315 programs and software, including NEAT and COBOL, may be used "as is." For new applications, BEST, NCR's recently announced program generator, reduces programming time by as much as 50%.

ALSO NEW! FASTER PERIPHERAL EQUIPMENT

Now available for the new 315 RMC – **and all 315s,** a new line of faster, more efficient peripherals:

- New, faster tape drives; 66KC conversion of data from other computers; 120KC for direct processing
- New 1,000 line-per-minute printer
- New 250 CPM Card Punch
- New 321 Data Communications Controller for expanded on-line and remote inquiry capability
- New built-in floating point arithmetic for scientific applications
- New High Capacity CRAM III (Card Random Access Memory) provides up to 16,000,000 characters of random access storage in each CRAM cartridge.

COMPATIBLE WITH OUR USERS' SYSTEMS

All NCR current and future users benefit from this remarkable new development. The 315 RMC is an important scientific breakthrough– a significant addition to NCR's 315 family. It dramatically extends the life and capabilities of all 315 installations. With a 315, your system can grow as you grow – and you can move up to a high-speed, Rod Memory Computer without paying the penalty in time and money that progress in automation usually costs.

For more complete information, please call your local NCR representative or write The National Cash Register Company, Dayton, Ohio U. S. A. 45409.

MEL FINKELSTEIN—NEW YORK JOURNAL-AMERICAN

RIOTING HARLEM YOUTHS FLEE CLUB-WIELDING COP
So explosive an issue could hardly be suppressed.

THE CAMPAIGN

e Proper Stance

"This may sound crazy," said Washon Post Reporter Edward Folliard arry Goldwater at Chicago's O'Hare ernational Airport, "but do you think ould be feasible for you, as the Reican nominee for President, to get ether with the Democratic nominee d try to work out some agreement t would avert the inflaming of racial sion—some appeal for a peaceful merica?"

Goldwater did not hesitate in his ply. "I think that's a very good idea," said. "That's gone through my mind."

Absurd Idea. Barry had been saying days that he hoped the passions the presidential campaign would not acerbate the civil rights struggle, and Americans could argue with that ch. Now Harlem was aflame with r, and a degree of political statesanship seemed mandatory.

Having more or less publicly committ- himself to seeking a civil rights eting with President Johnson, Barry ent about other business, waited a e before instructing an assistant to l the White House for an appointent. Meanwhile, news stories proclaimed that Goldwater was going to ge upon Johnson a pact that "civil ghts be kept out of the campaign."

This, of course, was absurd. Whether ghtly or wrongly, civil rights is, and is ely to remain the most emotionally plosive domestic issue of election year 64. Both Goldwater and Johnson ow this, and each quite understandably suspects the other of intending to use the issue for his own ends.

The Phrases. Lyndon would love to trademark the phrase "civil rights"—it has a fine, pious ring, and anyone who says he is against "civil rights" is obviously an extremist. Goldwater, of course, hopes to win in the Democratic South not because he is against "civil rights" but because he is for "states' rights." Moreover, he figures to get votes outside the South because of the so-called "white backlash"—an unfortunate phrase that implies that anyone who does not go all the way with the Negro revolution, including its excesses and extremism, is some sort of Simon Legree with a whip in his hand.

On the afternoon that Johnson and Goldwater were finally scheduled to meet, the President held a press conference and threw it open to TV. As the Washington Post's Folliard entered the auditorium, one of the President's Secret Service men pulled him aside and requested that he ask Johnson very much the same question he had asked Goldwater at O'Hare.

Folliard dutifully did so, and Johnson was waiting in his best pulpit manner. "Well," he said, "I do not believe that any issue which is before the people can be eliminated from the campaign in a free society in an election year . . . I believe that all men and women are entitled to equal opportunities so that they may be judged according to their merits and not according to some artificial barriers. Now, to the extent that Senator Goldwater differs from these views, or the Republican Party differs, there will, of course, be discussion. And I intend to carry on some of it if I am a candidate."

No Pix. When the actual Johnson-Goldwater meeting took place, it was icily formal. No photographs were taken, and when the session ended a scant 16 minutes after it started, White House Press Secretary George Reedy's communiqué was exquisitely balanced. "The President met with Senator Goldwater," it said, "and reviewed the steps he has taken to avoid the incitement of racial tensions. Senator Goldwater expressed his position, which was that racial tension should be avoided. Both agreed on this position."

Score one for whom? For neither—except that both displayed the proper stance.

That night, rioting spread from Harlem and other New York City ghettos to Rochester, N.Y. There, half a dozen Negroes jumped two policemen who had handcuffed a drunk for arrest. From that scuffle the rioting spread over 50 blocks, burst into a full-scale pitched battle between several thousand Negroes and 500 cops. Rioters overturned squad cars, assaulted white motorists with bottles, rocks and bare fists, and looted shops while burglar alarms clanged unnoticed. Police at first tried to hold back the mob with night sticks, soon switched to tear gas, police dogs and fire hoses. Finally, officials pleaded for state troopers to help, and after hours of unchecked violence the crowds were dispersed, at least for the moment, leaving the city under tight, state-of-emergency law.

NEW YORK

When Night Falls

Like so many affairs of their kind, the New York riots followed an isolated incident that in other, quieter times would have passed almost unnoticed in history's larger march. It took place on Thursday morning a fortnight ago, on a sidewalk in Manhattan's predominantly white East 70s. For reasons now lost in a tangle of differing tales, a white apartment-house superintendent turned a hose on a group of Negro teen-agers. The kids threw bottles and ashcan lids at the man, and three of them, including a 15-year-old named James Powell, chased him into the building.

A police lieutenant, off duty and in civilian clothes, heard the ruckus, flashed his badge, ordered the youngsters to quiet down. He was Thomas Gilligan, 36, a 6-ft., 200-lb. veteran of 16 years on the force and the holder of 19 citations, including several awards for disarming dangerous suspects. According to the police report, the Powell boy went after Gilligan with a knife. Gilligan ordered him to stop, but Powell kept coming. Then, "in defense of himself," Gilligan fired his revolver three times. The third shot went wild—but the first two killed the boy.

It would remain for a grand jury to get at all the facts. Some Negro witnesses claimed that Gilligan gave no warning, others that the youth had had no knife—even though one was found in the street not far from Powell's dead, outstretched hand.

To many people it seemed incredible that a man of Gilligan's experience could not have dealt with the boy without resorting to gunfire.* For two days after that, this notion seeped through the Negro districts of New York City like liquid dynamite. Negroes, long lacerated by the thousand painful shards of ghetto life, by emotions stirred in the civil rights movement, by their hatred for police, whom they regard as both oppressive and corrupt, were only too ready to believe that the Powell death was a case of deliberate murder. And "police brutality" became their battle cry.

"Let's Go!" Hate-preaching demagogues took to the street corners, and raunchy radicals issued inflammatory broadsides. From a pro-Red China outfit called the Progressive Labor Movement came a handout that screeched insurrection: "Once again the cops have murdered one of our children. They have been killing about one black person a day in New York City. Lieut. Thomas Gilligan (remember that name) shot James once and James fell to the ground. This fascist cop stood over him and fired two more bullets into him. He then kicked the dead body. THIS IS THE WAY THE FASCIST AND RACIST COPS OPERATE HERE IN 'LIBERAL' NEW YORK. These murderers follow the orders of Commissioner Murphy, Mayor Wagner and Rockefeller. We don't have to go to Mississippi because MISSISSIPPI IS HERE IN NEW YORK."

By Saturday night, the most restless elements of Harlem, the broken- or no-home kids and the seething out-of-job adults. were bristling for a fight. It was hot and humid. Scores of people gathered for an outdoor protest rally called by three local chapters of Congress of Racial Equality. After harangues by CORE leaders, the Rev. Nelson C. Dukes, pastor of Harlem's Fountain Spring Baptist Church, and a veteran agitator, launched into a 20-minute call for action, exhorting everyone to march on the local police precinct station to present their "demands." "Let's go! Let's do it now!" cried his listeners, and the mob, swollen by now into a howling tide, headed for the station house.

GORDON RYNDERS—N.Y. DAILY NEWS

POLICE LIEUT. GILLIGAN
Was it self-defense . . .

Police squads tried to hold them back, but the screaming mob swarmed through the streets. From tenement rooftops came a hail of bricks, bottles and garbage-can covers. The police, firing their guns into the air, moved the rioters back. Reinforcements poured into the neighborhood, and still came the storm of bricks and bottles. Whaling away with their night sticks, the helmeted cops waded into the mob. Pastor Dukes, watching it all with growing horror, muttered, "If I knew this was going to happen, I wouldn't have said anything." Then he walked away.

"Kill 'Em!" The senseless nightmare stretched, night after night throughout the week, through the main streets of Harlem, and, like an echo, through the Bedford-Stuyvesant slum district of Brooklyn. Roving bands of rioters—most of them kids—surged through the districts, aimlessly, desperately pursuing their urge for violence. They attacked a passing car driven by a white man and roughed up a woman passenger. They broke doors and windows in shops owned mostly by Jewish merchants, tearing down protective iron gates and screens. They ran off with TV sets, appliances, canned goods, clothing.

One man was arrested while wearing a new coat, the price tag still dangling from his sleeve. A Negro woman sat down on the sidewalk and muttered through her drunken stupor: "They walk all over me in Greenville, S. Carolina, and they might as well walk over me here." An onlooker cried: "Did you see that? They shot that woman down in cold blood!"

Some hoodlums lobbed Molotov cocktails into the battalions of pursuing police. An organization called "Harlem Freedom Fighters" had helpfully issued a crude flier: "How to Make a Molotov Cocktail. Instructions: Any Empty Bottle, Fill With Gasoline, Use Rag as Wick, Light Rag, TOSS & SEE THEM RUN!"

The nights shook with gunfire. Police exhausted their ammunition, and had to send out emergency calls for more. False fire alarms rang throughout the area. Mounted police heaved bricks against the mobs with their horses. Again and again came the cries: "Police brutality!" "Kill 'em!" "Murderers!" A white newsman, telephoning from a bar, heard a Negro yell: "We gotta kill all the whiteys!" He dropped his phone and scooted out. A bartender shook his head sadly: "Where are the parents? If the parents would take charge of them, they couldn't get mixed up in this."

The Leaders. In the lulls between the riots, Bayard Rustin, the Negro who organized last year's Washington civil rights march, roamed through the streets, urging residents to remain at home, but he had little success. A N.A.A.C.P. official issued a plea in leaflet: "Cool it, baby, the message has been delivered!" But to the rioters, the only one who urged restraint was an "Uncle Tom."

They much preferred to hear leaders like CORE's National Director James Farmer, who ambled through Harlem insisting all the while that he was not trying to soothe the people. "I saw the cops united against the black man," he told a church meeting. "I saw New York's night of Birmingham horror." He claimed that he saw a cop draw his service revolver and deliberately shoot a woman in the groin (the woman was actually nicked in the thigh by a ricocheting bullet). "I saw the blood pouring off heads of men and women," Farmer cried. "It was my son and every black mother's son and every black mother's son who died before that policeman's bullets!"

"Kill 'em!" the crowd answered.

Another Harlem "leader" made no pretense at all about his aims. He

* *Then again, maybe not: less than a week later, a man who was being arrested by another officer suddenly lashed out with a knife—and the cop ended up on the hospital critical list with a slit throat.*

. . . or deliberate murder?

...n and promised that he would do ...utmost to redress legitimate griev-...es, but he warned that the city ...uld not tolerate lawlessness. "Law ...d order," said the mayor, "are the ...egro's best friend—make no mistake ...out that. The opposite of law and ...der is mob rule, and that is the way ...the Ku Klux Klan, the night riders ...d the lynch mobs."

The mayor seemed most concerned ...the city's reputation, during a ...rld's Fair year, as a tourist attrac-...t. Hotels had reported more than ...reservations canceled, and Wagner, ...ting a patently preposterous claim, ...d that "no single visitor to our city ...been physically attacked or brutal-...d in any way." That was news to ...an Colwell, 61, manager of the famed ...adena Tournament of Roses, who, ...y five hours before, had been beaten ...d robbed of nearly $1,000 while visit-...New York.

Whose Handiwork? Bad as the riots ...re, they were overplayed not only by ...st of New York's papers, but by the U.S. press as a whole. They did not hold a candle to recent insurgencies at Oxford, Miss., or Birmingham, or even to a 1943 riot in Harlem. Perhaps no more than 1% of the Negro population of New York was directly involved. One Negro was killed by a police bullet as he pelted officers with bricks from a rooftop; 140 people, including 48 cops, were injured, and 520 were arrested. The total cost in property damage and theft was yet to be determined, but it would certainly run into hundreds of thousands of dollars; more than 500 cases of property damage alone were reported.

President Johnson ordered 200 FBI agents into the Negro districts to investigate. There was little doubt that they would find evidence of Communist agitation behind the riots, but it was a mistake to assume that the week's violent handiwork was just a plot ordered by leftists and fire-eating Black Nationalists. The disorders were an outward symptom of a condition that runs so deep—through a maze of confused and ancient feelings—that even the most understanding hearts and minds find a solution difficult.

A Negro woman tried to explain her impulsive participation.

"I clean the white man's dirt all the time," she said. "I work for four families and some I don't care for, and some I like. And Saturday I worked for some I like. And when I got home and later when the trouble began, something happened to me. I went on the roof to see what was going on. I don't know what it was, but hearing the guns I felt like something was crawling in me, like the whole damn world was no good, and the little kids and the big ones and all of us was going to get killed because we don't know what to do. And I see the cops are white and I was crying. Dear God, I am crying! And I took this pop bottle and it was empty and I threw it down on the cops, and I was crying and laughing."

No Place Like Home

(See Cover)

At the height of Harlem's nighttime fury, a white police officer stood in the litter of glass and garbage that had come crashing down from the darkened rooftops and raised a bull horn to his mouth. "Go home," he pleaded with the glowering Negro mobs that clustered along Seventh Avenue and atop the shabby tenements. "Go home. Go home." From a man in the mob came a shout: "We *are* home, baby."

There was both defiance and despair in that cry, for Central Harlem is no place like home. It occupies only a 3.5-sq.-mi. wedge of upper Manhattan, but 232,000 people are packed into it, 94% of them black. Its worst streets are so crowded that if the same density prevailed throughout New York City the entire population of the U.S. could be jammed into just three of its five boroughs. It seethes with life and frequently boils over in violence. Its drug addiction rate is ten times higher than New York City's, twelve times higher than the nation's. Its murder rate is six times higher than the city's. "This is the jungle," says a Harlem woman, "the very heart of it."

Rats & Roaches. The jungle is, above all, inexorably and everlastingly dreary. There is no fun, no glamour here. There is little excitement even in the violence and sin. There are, of course, a few clearings. In the handsome residences up on Sugar Hill and the comfortable Riverton Apartments along the Harlem River, the black *bourgeoisie* live much as their middle-class white counterparts do. Dozens of such project apartment buildings rise above Harlem's slums like so many monoliths, changing the section's skyline as drastically as they have changed lower Manhattan's.

But there are also the tenements where the mortar is so fatigued with age that hoodlums had merely to peel the bricks from crumbling chimneys last week for ammunition to heave at the cops. Half of Harlem's buildings are officially classified as "deteriorating" or "dilapidated," but no classification—official or otherwise—can adequately describe their garbage-strewn hallways and rotting, rickety staircases, their rat-infested rooms and grease-caked stoves where the roaches fight one another for space, their crumbling plaster and Swiss-cheese ceilings.

On some streets, men who cannot find jobs sit on stoops playing pinochle and coon can and Georgia skin, or drinking "Dirty Bird" wine at 60¢ a pint from bottles hidden in brown paper bags. Buzzing around them are children who frolic unsupervised far into the night, wearing latchkeys on strings around their necks because there is nobody at home to care for them. Half of Harlem's children under 18 live with only one parent or none, and it is small wonder that the juvenile delinquency rate is more than double New York's

CC-0. In Public Domain

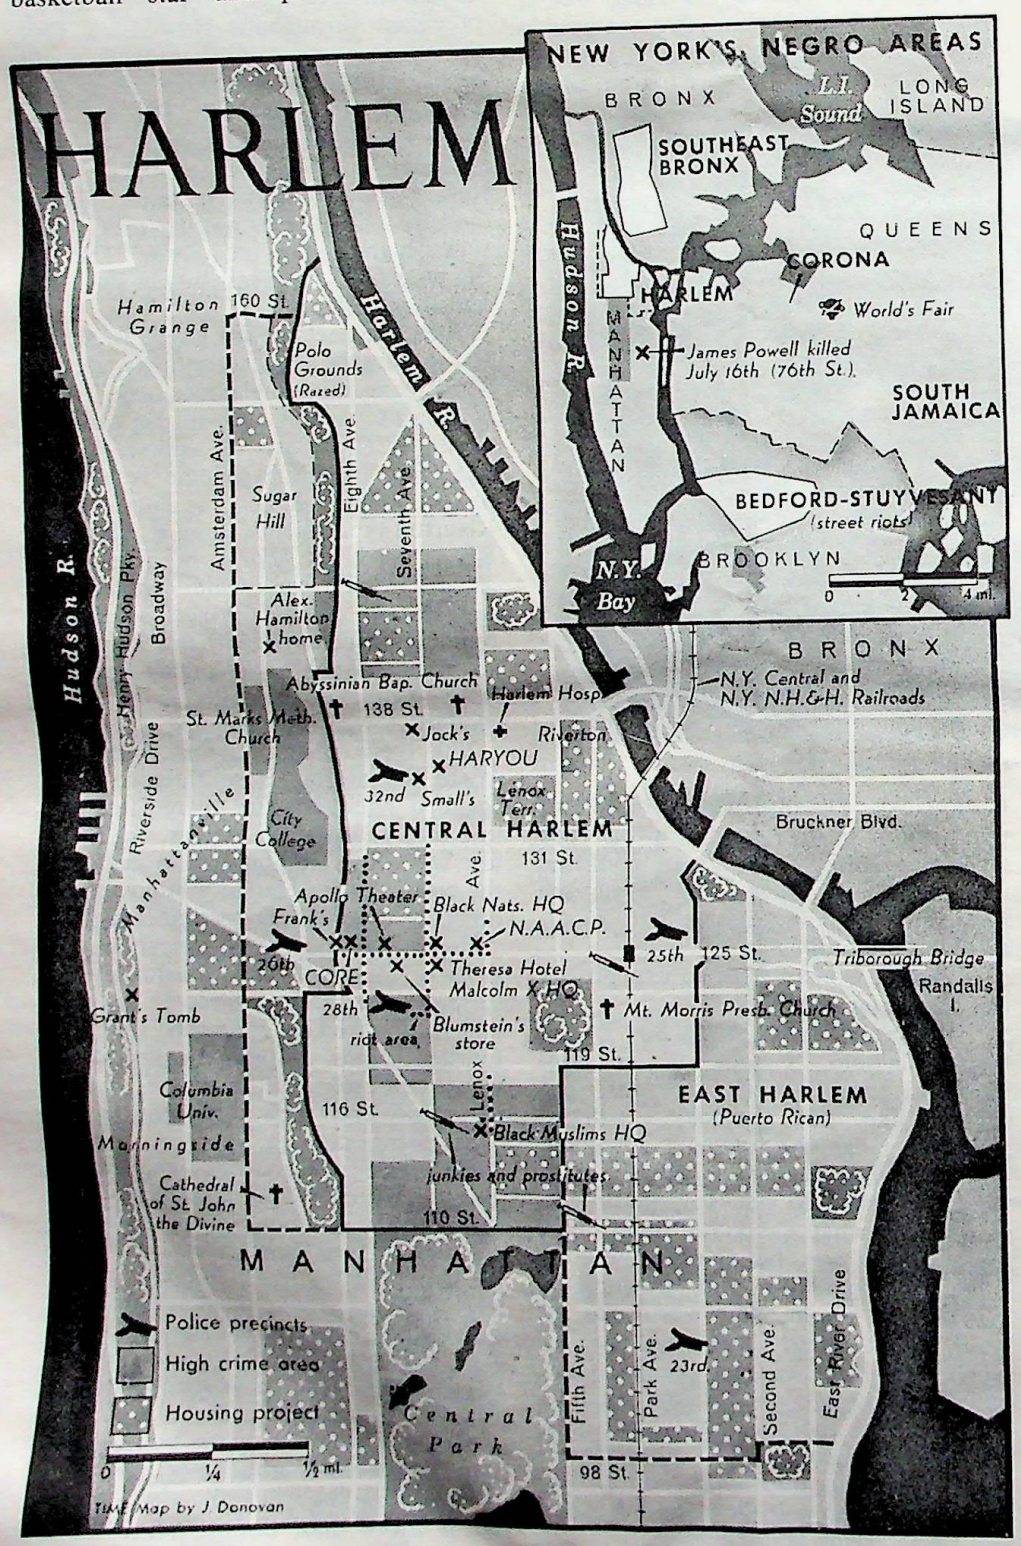
Digitized by Arya Samaj Foundation Chennai and eGangotri

or that the venereal disease rate among Harlem's youth is six times higher than in the rest of the city. Harlem is a mother lode of such statistics, but no footnoted chart on child neglect could reveal as much about the place as the story of the lost little girl of three who was not able to tell the police where she was from, and knew her mother only by the name she had heard around the house: "Bitch."

C.P.T. Harlem, wrote Negro Novelist Ralph (*The Invisible Man*) Ellison in a 1948 essay, is "the scene and symbol of the Negro's perpetual alienation in the land of his birth." It is the archetypal Negro ghetto, and to some it is the black capital of the world. Says Wilt ("The Stilt") Chamberlain, pro basketball star and part owner of Small's Paradise, one of Harlem's remaining handful of clubs with live entertainment: "A Negro here is different from a Negro in Philly or Frisco because he belongs."

No walls surround the ghetto except the invisible ones that can be the hardest of all to surmount. Harlem's Negroes have withdrawn behind the invisible walls, almost out of necessity, into a world of their own, complete with its own pride, its own lingo, and even its own time. In Harlem, C.P.T. means "Colored People's Time," and it runs one full hour behind white people's time.

The nether border of the Negro's world is Central Park. From just one block north, the fresh breezes and greenery seem a planet distant. Here



is 111th Street, between Fifth and ison Avenues, infested with pro and dope addicts. Up a ways, at and Lenox Avenue, is "junkie's co and at the New York Central pass at 125th Street, over which urban commuters ride every day tween air-conditioned offices and kept homes, Negro prostitutes wa white johns who know the spot drive by in their cars.

"You Can't Get No Place." Har is three classes: middle, working deprived. It is where the middle or what is left of it, joins the Jack Jill Club to insulate its children, sends them to prep schools and them on vacation to the Caribbea Europe or Sag Harbor—but al never to Miami. It is where the mi class disdains interracial marriage bristles when a Harry Belafonte ries a white woman. "We've got the colors in the rainbow," said a tor's wife. "What do we need to *them* for?"

Harlem is where Negroes refer one another as "nigger" and "brot "spook" and "hardhead," but wo the white man who uses the same pression. It is where the white ma no longer the "ofay" (pig Latin foe), but "Mr. Charlie" or "the m and mostly "whitey," derived from Black Nationalist talk of "the b eyed white devil." It is where a c mon laborer mutters to himself corner bar: "You don't come u Harlem and whip my head, white You can whip me somewhere else not here, white man." It is where Negro's next-door neighbor, the P to Rican, is eyed with suspicion he ventures over from his East H slum.

Harlem is also composed of s merchants and peddlers hawking "ic cups of ice drenched with sickly s syrup. Its shops sell second-rate st berries for half again as much as rate ones cost in Greenwich Vi and men can buy clothing for s $1.99 in "dump shops." Everywhe the smell of cooking grease and sizzle from all-night fry shops that porgie fish or pig's knuckles or chi (hog intestines).

Black Times Square. Harlem is noise of Congo drums from a window and a throbbing twist bea a transistor radio. It is street-co churches and spired temples, all, always going full blast under guidance of Holy Rollers and thun voiced spiritualists, some of whom new Cadillacs and live in the su It is a woman complaining: "Wh ever you have a lot of preachers ing on their head and rolling on floor like hogs, I tell you, you can no place like that. You see P foaming, your women with their es up over their heads. My God can't get no place like that." But as numerous as the churches

dy bars and the liquor stores, and
can't get no place like that either.
Harlem is the corner of 125th Street
d Seventh Avenue, the black Times
quare, where orators on soapboxes
folding chairs harangue passersby
buy black" or "get whitey." In the
adow of the Theresa Hotel, where
del Castro plucked his chickens and
assius Clay celebrated the feathering
his nest, Lewis Michaux composes
ck Nationalist doggerel:

If you're black get back
If you're red be afraid
If you're white you're perfectly right.

This is Harlem's heart, and 125th
eet is its aorta. Here is Frank's Res-
rant, crowded with white merchants
lunchtime, but thronged at dinner-
e with middle-class Negroes, who are
ved with unctuous concern by white
iters. Here is Blumstein's, the only
al department store in Harlem, but
dly a match for a midtown five and
me. And here is the Baby Grand,
ere Nipsey Russell's successor, Co-
edian Ray Scott, folds his hands,
oses his eyes and beseeches:

"Let Goldwater have a seven-car ac-
dent with a gasoline truck that's been
by a match wagon over the Grand
anyon. If he should survive, let the
mbulance that's taking him to the hos-
al have four flat tires and run into a
ick wall that's holding nuclear war-
ads and TNT. And if he should sur-
e that, let him be thrown into a
ch of wild dogs that's suffering from
-itis and may he scratch himself in-
ne. When he gets to the hospital, let
e doctor be a junkie with a gorilla on
s back and an orangoutang in his
om. Let the hospital catch on fire,
d every fire hydrant from Nova Sco-
a to wherever he was born be froze
. Let muddy water run in his grave.
t lightning strike in his heart and
ake him so ugly that he'll resemble a
orilla sucking hot Chinese mustard ly-
g across a railroad track with freight
ains running across his kneecaps. And
that's not bad enough, let him wake
p tomorrow morning—black like me."

Happy Valley. Above all, Harlem is, as
e man said, home. "You couldn't pay
e to live anywhere else," says a Negro
gh school dropout. "A white man, he's
t a mark on him if he comes up here.
got a mark on me if I go down there."
ill some Negroes would live almost
ywhere else just to get out of the
etto. "I felt caged, like an animal,"
d Writer James Baldwin, who fled to
reenwich Village and then to Europe.
felt if I didn't get out I would slowly
angle." Poet Claude McKay put it
nother way 40-odd years ago when he
scribed the Negro as feeling

Hunted and penned in an inglorious spot
While round us bark the mad and hungry dogs,
Making their mock at our accursed lot.

Once this inglorious spot was one of the glories of New York, and a 19th century sightseer described it as a place of "little velvety islands and silvery rivers, sublimely picturesque in vernal bloom." Established in 1658 by Peter Stuyvesant, Nieuw Haarlem lay in a lush bottomland dotted with farms like "Happy Valley" and "Quiet Vale." At first it was connected to the rest of Manhattan by a single road built with Negro labor along an Indian footpath that is now part of Broadway.

When the elevated railway was extended to Harlem in 1880, land values boomed. It was obvious, said the *Harlem Monthly Magazine* in 1893, that "the center of fashion, wealth, culture and intelligence must, in the near future, be found in the ancient and honorable village of Harlem."

A Bridge of Green. Harlem became a place of brownstone fronts and Saratoga trunks. Oscar Hammerstein built the Harlem Opera House; it now houses a bowling alley. William Waldorf Astor put up a $500,000 apartment house on Seventh Avenue. Commodore Vanderbilt showed off his trotters on Lenox Avenue. The rich flocked up to Harlem for the summer.

Then the Negroes began pressing to get in. After the bloody Civil War draft riots in New York, when rampaging whites lynched 18 Negroes, drowned five others, and burned down a Negro orphan asylum, the black colony began an exodus to remote uptown areas, first the upper West Side and after the turn of the century to Harlem. White real estate dealers formed "protective" associations to prevent block-busting, hung "White Only" signs in windows.

But economics played a hand, perhaps proving the validity of the current cliché that ultimately the bridge between black and white will be green—the color of money. The land speculation collapsed. Apartments went empty, even after rent cuts. Finally, a group of Negroes got into a house on 134th Street. Later, the Equitable Life Assurance Society gave in and sold "Strivers' Row," a magnificent row of brownstones on 139th Street that had been designed by Stanford White. The houses had 14 rooms and two baths, French doors and hardwood floors, but Equitable unloaded them for $8,000 apiece.

"Let Me Off Uptown." The Negro migration was on, and the Northern labor shortages created by World War I sharply accelerated it. From 1915 to 1925 more than 1,000,000 Southern Negroes moved North.

Harlem's Golden Age began. "Meat was cheap and home brew was strong," wrote Historian Lerone Bennett. "Duke Ellington was at the Cotton Club and Satchmo was at the Sunset, God was in heaven and Father Divine was in Harlem." Those were the days of speakeasies with names like Glory Hole and Basement Brownie's Coal Bed, of stompin' at the Savoy and vaudeville at the Apollo, of "rent parties" where guests paid 50¢ or $1 to help the host pay his rent and get all the food and drink—and sometimes sex—that they could manage. It was the time when Jazz Singer Anita O'Day told her audiences:

If it's pleasure you're about,
And you feel like steppin' out,
All you've got to do is shout:
Let me off Uptown.

But Uptown was growing more and more crowded, and lurking just beneath the throbbing, wild surface that white merrymakers saw on their Saturday night outings lay serious trouble. In Novelist Carl Van Vechten's *Nigger Heaven*, a Negro character says of the New Yorkers who live below Harlem: "It never seems to occur to them that Nigger Heaven is crowded, that there isn't another seat, that something has to be done. It doesn't seem to occur to them, either, that we sit above them, that we can drop things down on them and crush them, that we can swoop down from this Nigger Heaven and take their seats."

Fresh Inflow. In 1935 the coiled tension of Harlem lashed out in a riot that began when a 16-year-old boy was

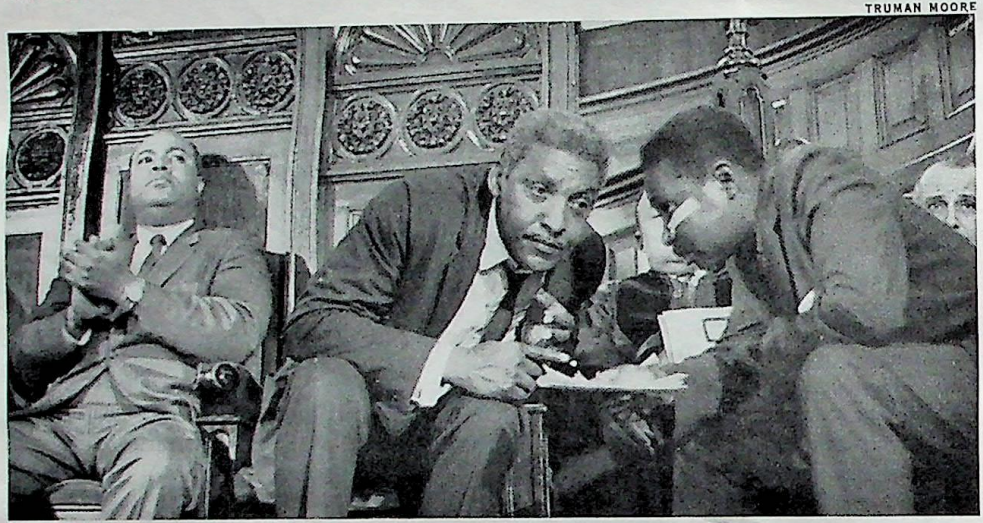
seized stealing a cheap penknife in a white-owned variety store. This was the height of the Depression, and for months Negroes had been mesmerized by the nationalistic "buy black" speeches of a Philadelphia Negro who called himself Sufi Abdul Hamid (real name: Eugene Brown). The rumor spread that the boy had been beaten to death, and though it was false, the mobs left four dead, 100 injured and $1,000,000 in property damage, largely to white stores.

Eight years later, a white policeman trying to arrest a woman for disorderly conduct shot and wounded a Negro G.I. for interfering. Rumors flashed through the ghetto that the soldier was dead, and this time the toll was five dead, 500 injured, $5,000,000 in damage.

During World War II still another inflow of blacks to New York began. In the last 20 years, the city's Negro population has increased 2½ times, now

TRUMAN MOORE



LEADERSHIP RIVALS FARMER, RUSTIN & GRAY

Exploitation and exhaustion breed justifiable fury.

stands at 1,200,000, or 15% of the total. More than half the new arrivals spilled over into ghettos in the other boroughs, creating huge new Harlems: Brooklyn's Bedford-Stuyvesant, whose population has trebled since 1940 and is soon expected to pass Harlem itself; South Jamaica-St. Albans in Queens, where the Negro population has trebled in a single decade; Morrisania in the Southeast Bronx. Together with Harlem, the four ghettos house 80% of New York's Negroes.

Three Strikes. In the '50s, Harlem's population actually declined by 27,000 because of the construction of vast housing projects. The outflow relieved the ghetto's congestion somewhat, but it also damaged Harlem's future almost beyond repair, for 41,000 middle class Negroes in their 20s and 30s got out, making Harlem more of a slum than ever and leaving it with no core to build on.

Today, Harlem's three precincts, patrolled by 1,200 police, about 85% of them white, are the city's busiest. Narcotics is the top problem. Of New York's 30,000 junkies, 15,000 to 20,000 live in Harlem. "I was just born black, poor and uneducated, and you only need three strikes all over the world to be out, and I have nothing to live for but this shot of dope," says one addict. But the habit is costly: $1 for a marijuana "reefer," $3 for a "bag" (a single grain of heroin), $5 for a "deck" (three grains). A heavy user may need up to $75 a day, and that often means mugging people and sometimes killing them for the wherewithal.

"Numbers?" sneers a white police detective. "Hell, that's a game. Narcotics is something else. Me and my partner, we pick up junkies, and sometimes we even get a pusher. We want to go further, get to the wholesaler. Well, mister, we can't move one inch more. If I move in, I may get busted to patrolman. You push too hard in narcotics, you can get to be DOA, which is dead on arrival."

Fast Payoff. "Numbers" is the poor Negroes' reach for the pot of gold, and 100,000 of them slip nickels and dimes to "runners" each day in the hope that their three-digit number will come up for a 600-to-1 payoff. Otherwise known as the policy racket, the numbers game drains Harlem of $50 million a year, but it also provides a living for 15,000 runners and controllers. Negro stores abound with code books advising that if you have dreamed about the police you should bet the number 782; about cats, 578; about adultery, 900.

Once, Negroes controlled Harlem's numbers racket. But, so the story goes, one Harlem policy banker was hit hard during the 1930s and went to Racketeer Dutch Schultz to borrow $5,000. So quickly did he pay it back that Schultz became interested, and before long the big-time mobsters moved in. Now Negroes complain that Italian and Jewish racketeers, protected by the police, control the game, and a Black Nationalist has drawn cheers by calling for "black control of the numbers."

Most Harlemites are convinced that the cops turn their backs on such rackets for a price. And this conviction vastly complicates the problem of policing Harlem. What happened last week, said the Rev. Richard A. [illegible] brand, head of New York's N.A.A.C.P. chapter, was "the explosion of a community resentment, deeply [illegible] in the absence of respect on the [illegible] of Harlem citizens for the cop on [illegible] beat, whom they see in far too many compromising situations."

One of the major demands [illegible] by Negro leaders last week was [illegible] more Negro cops in Harlem—the [illegible] is 1 Negro policeman to 6 white. [illegible] cally, the proportion of Negroes [illegible] once much higher, but civil rights [illegible] ers complained that if white police [illegible] patrol Harlem, Negro police ought [illegible] patrol white neighborhoods, and [illegible] York's civil-righteously sensitive Dem[illegible] cratic city fathers dutifully scattered [illegible] Negro cops around the city.

Unbreakable Cycle. The cops a[illegible] the cloudy issue of "police brutal[illegible] were last week's headline material. [illegible] Harlem's problems go much deep[illegible] "The most dangerous creation of [illegible] society is that man who has nothing [illegible] lose," wrote James Baldwin in *The F[illegible] Next Time*, and Harlem abounds [illegible] such men. They have neither jobs, [illegible] homes worth living in, nor an ed[illegible] tion. The tragedy of Harlem is that [illegible] another generation of such men is be[illegible] bred because they cannot break out [illegible] the vicious cycle of the ghetto: [illegible] schooling, leading to a low-paying [illegible] or no job at all, leading to housing [illegible] a rundown neighborhood, leading [illegible] to poor schooling for the children.

There are 50,000 Negroes on [illegible] York City's civil service rolls, and [illegible] city has one out of every nine work[illegible] Negroes on its payroll. But Negro [illegible] employment runs twice as high in [illegible] lem as elsewhere, and most of the [illegible] that are open pay bare subsist[illegible] wages. "You go down to the emp[illegible] ment agency, and you can't get a job," says one Negro. "They don't have a job for you." Automation heightens the problem, throwing thousands of [illegible] vator operators, ditchdiggers and [illegible] termen out of work.

Negro politicians stir passions [illegible] they point out that 80% of Harlem [illegible] businesses are owned by whites [illegible] do not live there. Most of them [illegible] Jews, and here are the sparks of [illegible] lem's blazing anti-Semitism. The [illegible] is that some of Harlem's most flo[illegible] ishing enterprises are run by black [illegible] lionaires who don't live there [illegible] but at least they are black. "If we [illegible] unable to bring about an orderly tra[illegible] fer of business from whites to Negr[illegible] in Harlem, it will be done one way [illegible] the other," thunders James Law[illegible] president of the United African [illegible] tionalist Movement, head of the H[illegible] lem Council for Economic Deve[illegible] ment and a thoroughgoing demagog[illegible] What Lawson means is clear. Last [illegible] half a dozen Negro punks [illegible] a husband-and-wife clothing store [illegible] 125th Street, got into an argument [illegible] stabbed the wife, Mrs. Magit [illegible]

death with a double-edged dirk. Law- said that the store, once worth ,000, could now be bought from dis- solate Frank Sugar, a Hungarian ...ge, for $150. Similar "expropria- ...," he predicts, will take place if ...ies do not sell out to Negroes.

Relief Pets. Anger over Harlem's ...sing took concrete shape last fall, rabble-rousing Jesse Gray's "rent ...ike." All told, Gray claimed that ...0 tenants from 325 buildings re- ...ed to pay their rent because their ...lords had failed to rout the rats, ...in the swampy basements and plug ... holes in the walls and ceilings. ...ayor Wagner lent his support by or- ...ing a new drive against "slumlords," ...the Buildings Department, with a ...cklog of 250,000 complaints, is still ...owed under.

While the tenements steadily decay, ...arlem's housing situation is looking ...e in other ways. The city, hoping to ...erse the middle-class exodus by of- ...ing more attractive quarters, has ...opted a three-pronged program of ...unicipal loans for rehabilitating ex- ...ing houses, public projects and pri- ...te developments. Under the rehabili- ...ion program, it has handed out ...,000,000 in 20-year, 4% loans since ...e beginning of the year to help land- ...rds to save whatever is worth saving, ...ecially the solidly built brownstones ...ttered throughout the area. Another ...,000,000 will flow in the near future. ...ith these loans," says Herbert B. ...ans, Negro vice chairman of the ...y's Housing and Redevelopment ...ard, "we can go into the lousiest ...rned area in the city and do some- ...ing. Some of these landlords have just ...t, and we've got to move in."

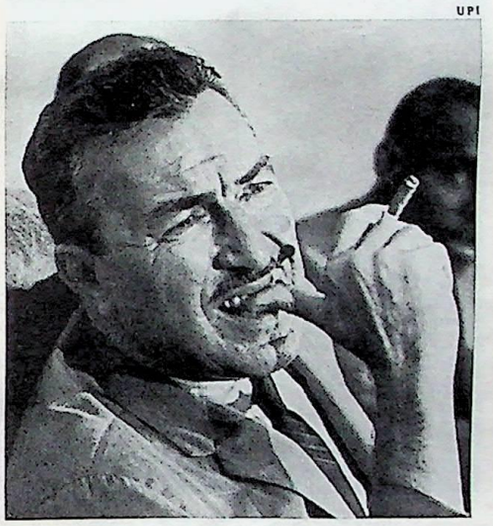
Not Near Enough. In the last 15 ...rs, some 25 public and private proj- ...s have been launched in Harlem at a ...st of $370 million, providing space ...r 84,000 people. Some are in the ...nning stage, such as a $30 million ...velopment for 7,440 people on the ...e of the Polo Grounds, which started ...n as a playground for Manhattan's ...my set and later became one for ...seball's horsehide set. But this is still ...where near enough. For all the gripes ...y Negro intellectuals about the esthetic ...tcomings of the projects, applica- ...ns outnumber acceptances 9 to 1, and ...n in costlier developments like Len- ... Terrace, a $40-a-room private ven- ..., there is a long waiting list.

Critics complain that the projects ...e out small businessmen, leave slum ...llers with nowhere to go, and per- ...ate the ghetto by "packaging" peo- ...e in huge, blocky buildings. While ...re is something to their complaint, ...e fact is that the projects are the best ...pe of luring back the professional ...ople, whose escape to the other bor- ...ghs and to the suburbs has robbed ...rlem of its middle-class backbone. ...ys Evans: "Harlem must have middle- ...come housing to hold its productive people. Too many have left for other areas. But it needs good buildings to hold its people. We've got to put something back into Harlem."

But that will take time, and the city's short-range solution for the Negro who is snared in the ghetto cycle is public assistance. Nearly a fourth of Harlem's people are on welfare, many under the Aid to Dependent Children program. Critics complain that the program encourages loose women to increase the monthly check by reproducing as often as possible. Whether this is true or not, there is certainly some chiseling. Some men leave home or are sent packing by their women so their families can qualify for ADC support.

Gang-Busters. New York City Welfare Commissioner James R. Dumpson, 52, a Philadelphia-born Negro, claims that only 275 cases of fraud were unearthed in 1963. Once, he said, welfare workers could not tell one Negro child from another and all the kids in the neighborhood ran from house to house, a few steps ahead of the social worker, to pad the rolls. But now his department workers demand birth certificates and school records.

UPI



CONGRESSMAN POWELL
Keeping whitey angry.

Dumpson also uses what he calls the Early Morning Visit, in which investigators charge into a woman's flat at 5 a.m. like gang-busters and, if a man is present, try to find out whether he is filching welfare money or dodging child support. Not surprisingly, some welfare workers object to the technique.

To many officials, the best hope of breaking the self-renewing jobs-housing-education cycle lies in the schools. By the time they reach sixth grade, Harlem's children are nearly two full years behind their classmates downtown. The dropout rate is 55%, and the children often as not wind up on the streets, for the unemployment rate among Negro teen-agers is 40%. These youths are the despair of Harlem, for they are, in a sense, living proof of its failure. "Look at those damned kids," snapped a Negro man as packs of teen-agers ran wild last week. "They won't listen to nobody. They won't listen to no damned thing."

Even so, says the Rev. Dr. M. Moran Weston, rector of St. Philip's Episcopal Church in Harlem, "there are a lot of natural leaders out on those streets. Somebody just needs to help them." Weston's church, for one, is helping by offering basketball and music, field trips and job placement services to 500 children a day. Some 150 social services are also at work in Harlem, spending as much as $10 million a year.

Into the Honey Pot. The most ambitious project of all is the three-year, $110 million HARYOU-ACT* program, partly supported with federal funds. It is the brainchild of Kenneth Clark, 50, a City College professor whose brief on the effects of discrimination helped shape the Supreme Court's 1954 school desegregation decision. It envisions a network of community councils and organizations dedicated to fighting poverty and helping the ghetto's youngsters by setting up half a dozen businesses that will be run by some 3,000 teen-agers, after-school study centers for those with nowhere to go, job information and training centers handling 2,300 youths a year, preschool academies to get toddlers out of fetid tenements, and a crash remedial reading program for Harlem schools. "We've got to show them that hard work does pay off," says Clark, "even for Negroes."

There is a lot of honey in the HARYOU-ACT pot, though, and the politicians are already buzzing around it like bumblebees. Buzzing loudest is Congressman Adam Clayton Powell, who threatens to hamstring the venture unless he is given veto power over the choice of its executive director. The issue remains to be settled, but even if the program is not pork-barreled dry, it will be a long time in producing tangible results.

Uncle Tom. Among its many calamities, one of Harlem's severest is its politicians. "To get elected in Harlem," said New York State Assembly Candidate Percy Sutton, 43, "you have to prove you can talk tougher with the downtown whites than your opponent does. And you got to holler 'Uncle Tom' and a lot of other things." The result is a lot of noise and little of value to Harlem.

Where, for example, were Harlem's leaders last week? Its hero, its Congressman, and pastor of its huge, 10,000-member Abyssinian Baptist Church, Adam Clayton Powell, was in Switzerland and Washington, but not Harlem. "There's one good thing about Adam Clayton Powell," says one Negro. "He seems to make the Caucasians very angry." Harlem's only city councilman, J. Raymond Jones, was fresh back from

* Standing for Harlem Youth Opportunities Unlimited and the Associated Community Teams, a sort of Peace Corps for Harlem.

CC-0. In Public Domain

Digitized by Arya Samaj Foundation Chennai and eGangotri

his Virgin Islands retreat, but he saw no reason to comment on the situation.

Fragmented Leadership. Even when they are on the scene, Harlem's leaders are quarrelsome and grasping. A few weeks ago, the Rev. Robert M. Kinloch, head of a largely paper outfit called the Independent Community Improvement Association, turned up to picket a 125th Street cafeteria to protest "the lack of a black face behind the counter." Suddenly the Rev. Nelson Dukes turned up to "mediate" in his capacity as head of the Blue Ribbon Organization for Equal Opportunity Now. The pickets shouted "Uncle Tom" at Dukes, and Kinloch complained, "This is *my* demonstration and *my* pickets."

The Black Nationalists, too, are split every which way. Spiritual heirs of that flamboyant fake Marcus Garvey, the Jamaican Negro who paraded through Harlem under a banner with a black star in the 1920s calling for a return to Africa, scores of outfits exist. There are Elijah Muhammad's Black Muslims and Malcolm X's offshoot Organization of Afro-American Unity, the Ethiopia Coptic Orthodox Mission and the House of Common Sense and Home of Proper Propaganda, which displays a sign advertising the book *The God Damn White Man*. All told, they probably have no more than 5,000 members.

Knocking at the Door. In every way Harlem is a used community. It is used by its leaders. It is exhausted by its few pleasures and impoverished by its vices. Hustlers, black and white, catch its people coming and going.

Black slumlords shout about the iniquity of white slumlords, and nobody knows that they themselves own tenements. Black runners collect numbers for white bankers, and black pushers sell dope for white gangsters. Black nationalists preach "buy black," then get drunk on whisky from a white man's store. Black preachers damn Jewish shopkeepers for overcharging black customers, then milk the blacks dry over the collection plate. Black Communists weep over the Negro's condition, then stir up riots in the hope that they will furnish a dead Negro martyr or two.

So it goes in Harlem, and so it will continue to go unless a stable and sensible leadership develops. There is justifiable fury in Harlem, but so many charlatans are scrambling to harness it to their own ends that it has become blurred and diffused. Should Harlem ever develop a selfless, home-grown leader, this much is certain: that fury will be aimed against whatever barriers of discrimination still exist, and it will take some costly resistance to keep them from falling. As a Negro patrolman on 125th Street put it, "You have to keep knocking on the door. If you don't knock, they won't hear you." In the long, hot summer of 1964, the question for New York and for every U.S. city with a Harlem of its own was: How hard would Harlem knock next time?

THE CONGRESS

Daily Double

Prosperity, especially if it really exists, is a splendid theme for an incumbent President to stress in his campaign for re-election. But how much nicer if he can also run against poverty, even if it's found only in pockets.

That prosperity *cum* poverty parlay is, of course, the election-year daily double that President Johnson hopes to have pay off, and last week he took a substantive stride in the direction of the cashier's window. After two days of stormy debate, the Senate cut Johnson's anti-poverty program by only $15 million, to $947.5 million, and passed it by a resounding roll-call vote of 62 to 33. Fifty-two Democrats and ten

UPI

SENATORS GOLDWATER & TOWER
Some people can't read English.

liberal Republicans voted for the measure, while eleven Democrats, mostly Southern, and 22 Republicans, led by Barry Goldwater, cried no.

As approved by the Senate, the Economic Opportunity Act of 1964, under the proposed aegis of Peace Corps Director Sargent Shriver, provides for a work-training program aimed at stemming the growing school-dropout population, a work-study program to help needy college students, a $340 million fund to aid localities in their own anti-poverty schemes, and money for rural-poverty loans and small-business loans. The only major Senate amendment was one introduced by Florida's Democratic Senator George Smathers. It was a sort of concession to states' rights forces, and gave Governors the power to veto youth-camp programs within their borders. Next action will come from the House, which is scheduled to report the Administration bill out of the Rules Committee this week. The prognosis was for much tougher going there than in the Senate.

In a spurt of uncommon activity, the Congress last week also:

▶ Passed, in the Senate, a $207 million pay increase for military perso... Most servicemen will get 2.5% ... hikes, but officers with less than ... years of service will get an 8.5% ... House passage is virtually certain.

▶ Passed, in the House, the most ... reaching land- and water-conserva... bill devised since the establishmen... the National Park Service in 1916. ... program provides the states with ... million annually for ten years. Mos... the money would be used for matchi... grants to encourage development ... outdoor recreational facilities. The ... now goes to the Senate, which may ... get around to it before adjournment.

▶ Passed, in the House, a $287.6 ... lion program to remedy the shortage ... trained nurses, of which the nation ... only 550,000. The money will go ... training schools and nursing stud... in need of scholarships or loans, in ... hope that the number of nurses ... thereby be increased to 680,000 ... 1970. The Senate will probably appro... the bill.

REPUBLICANS

Ozward & Onward

Like any other Sunday ham, Ne... nee Goldwater sat before the radio ... in his Phoenix home, chatting amia... with people across the nation. Fin... he signed off reluctantly, explaining ... he had to "go back to the Land of O... Washington, D.C."

His first post-convention vica... breather was over, and indeed th... was much campaign wizardry to b... brewed before November. Oz-bou... early last week, Barry's plane stop... at Chicago, and in a press confere... Goldwater defended his controver... quote: "Extremism in the defense ... liberty is no vice."

It did not, he said, mean he condon... extremist groups that worked towa... "the overthrow of the Government" ... and, in fact, "did not apply to politica... philosophy at all." Insisted Goldwate... "It's the plainest English I ever used. ... I just think some people can't read th... English language, and I feel sorry fo... them when they can't see the fence ... around that sentence."

Blaming Bobby. When someo... asked about the John Birch Soci... Barry retorted, "Cite me one exam... of extremism by the Birch Society." ... Barry was reminded that the soci... had adopted the thesis of its founde... president, Robert Welch, who wrote ... his book, *The Politician*, that Dwight ... Eisenhower was either a "mere stoog... or was "consciously serving the Co... munist conspiracy."

Barry fired right back. "I would ... that ignorant," he said, "but it certai... was within their constitutional rights ... do it." Well, not really. The Consti... tion guarantees no one the right to ... another individual—and if Eisenho... had chosen to, he could have ... Candymaker Welch with a libel ...

...would have melted him down to ...anuts.

As for the summer's outbreak of civil ...hts street fights, Barry put the blame ...Bobby Kennedy. "We would not be ...ving the trouble we are having today ...the cities if we had an Attorney ...eneral who was not always trying to ...moderate and would go on and ap... ...the law," he said. Asked if he didn't ...k that civil rights leaders were right ...their militant—and nonmoderate— ...suit of justice, Goldwater said: "No, ...use you see we have a law on the ...oks, and if it were adequately en... ...ced, a solution to the civil rights ...blem would be forthcoming."

Once in Washington, he found 500 ...ited fans waiting at the rain-swept ...port. But as Barry began to speak, ...ht leather-lunged clods from George ...incoln Rockwell's American Nazi Par... ...set up a howl. Goldwater's fans ...warmed around the agitators from ...ockwell's zoo and a fist fight broke ...ut. Goldwater cried: "Let them go! ...s really pitiful what young people ...an do in this country if they have ...othing else to do—but it's their con...stitutional right."

Welcome Assaults. The next day Bar... ...drew another assault that might yet ...elp him. In Warsaw to celebrate the ...th anniversary of Communism in Po...land, Nikita Khrushchev said that Bar... ...was trying "to enter the White House ...nder the slogans of anti-Communism ...nd belligerent threats."

Goldwater turned up on Capitol Hill ...r only one session during the week ...nd surprised no one by voting against ...e Johnson Administration's poverty ...ill. He was already on record in a ...ashing Senate Labor and Public Wel...fare Committee minority report, draft... ...d in tandem with Texas Republican ...ohn Tower that labeled the poverty ...ill "an attempt to reap political re...wards," and he accused Johnson of ...ying to sell "almost exact replicas of ...programs that were tried by the New ...Deal during the Depression."

Barry spent most of his week at his ...Washington apartment, where he began ...o tinker with the machinery that would ...propel his $15 million campaign for the ...Presidency. Among other things, he de... ...ided to kick off the campaign with a ...mid-August speech in his "lucky town" ...Prescott, Ariz., where he launched ...oth of his successful Senate campaigns.

Breakaways from Barry

In San Francisco, Barry Goldwater ...drew out a dare to his party's dissi...dents. "Anyone who joins us in all sin...cerity, we welcome," said Goldwater ...in his acceptance speech. "Those who ...do not care for our cause we do not ...expect to enter our ranks in any case."

By last week there was a fair number ...of Republicans who obviously had mis...laid their credentials of sincerity for ...Barry's cause. Among them:

▶ New York's Republican Senators Kenneth Keating, who is up for re-election this year, and Jacob Javits, whose term lasts until 1969. Warning of "ominous indications" that Goldwater would "exploit the 'white backlash' in the North and appeal to the dying old social order of segregation in the South," Javits said: "I am and will remain a Republican, and will not bolt the party, and will not support President Johnson—but I must in conscience withhold my support from the national Republican ticket." Keating, who is running scared even though the Democrats have not yet named his opponent, said: "I'm going to campaign on my own issues and avoid attacking other people on the ticket." But both Javits and Keating left the door open for supporting their party's nominee if he "satisfactorily" explains his views to them.

AP

SENATORS DIRKSEN & KEATING
Some would come to the milk pan.

▶ Maryland's Senator J. Glenn Beall, 70, who is up for re-election, and Baltimore's Mayor Theodore McKeldin, whose term runs until 1967. Beall wants Goldwater's interpretation "from his own lips" of "our party's platform"; McKeldin wants him to do something "to modify the widespread interpretation of his stands."

▶ Maine's Governor John Reed, along with the state's second-term Representative Stanley Tupper who, after a denunciation of extremism, said: "I feel relieved I've taken this stand. At least I can live with myself."

▶ Pennsylvania's ten-term Representative James G. Fulton, who comes from a labor-heavy south Pittsburgh district, who said: "I am taking my stand because I have to shave myself every morning."

Hearing of the dissidents, Goldwater himself reacted in casual fashion. Said he: "That's their own choice to make. I'm sorry they feel that way." Other Goldwater supporters seemed even less worried. Old Ev Dirksen, for one, talked about a "healing process," predicted that the breakaways would eventually "come to the milk pan." Concluded he: "These things have come and gone in our political history. You're bound to lose some, but I don't *think* it means much."

DEMOCRATS

"I Was the Instrument"

Alabama's Governor George Wallace for weeks has been bursting with tall talk. After his surprising performances in presidential primaries in Wisconsin, Indiana and Maryland, Segregationist Wallace announced that his name would be entered on the ballots of at least 16 states in the November election. He hoped that he might win enough electoral votes to force a sort of "coalition" government with one of the major parties—one in which he would be given power of review over Supreme Court appointments and assurance that never again would civil rights leaders "set foot in the White House." But last week, as abruptly as he had entered, Wallace withdrew as a presidential candidate.

Still he stayed as cheeky as ever. "My mission has been accomplished," he said in a television interview. "My purpose was to help conservatize both national parties. Today we hear more talk of states' rights than we have heard in the past quarter-century. I was the instrument through which the message was sent to the high councils of the parties."

Actually, when faced with a choice between Barry Goldwater, a conservative with a chance, and George Wallace, a racist with none, Wallace's supporters had started deserting him in droves. In Atlanta, where 100,000 had been expected to hear him speak, only 10,000 turned out. Even good friends joined in jumping the sinking ship. Georgia's ex-Governor Marvin Griffin, who had been helping to organize the Wallace-for-President campaign, now announced he would vote for Goldwater.

As for Goldwater, he insisted that there had been no deal with Wallace. But Barry could hardly be anything but cheerful about Wallace's withdrawal. In San Francisco, he had already admitted that the Wallace campaign was "something to be concerned about." If the Republican nominee "can't get his foot in the door in the South," said Barry, "he is not going anyplace." Wallace, he said, "has strength where I have strength."

In the wake of the Wallace withdrawal, Alabama Republicans claimed, with some justification, that Goldwater would not only carry the state but would carry some Republican Congressmen along with him. In Mississippi, Tom Garrott, a longtime member of the state Democratic executive committee, began cranking up a Democrats-for-Goldwater movement. Throughout the South, Gallup and Harris polls agreed, a Wallace candidacy would have cost Goldwater 12% of the vote, Johnson 7%.

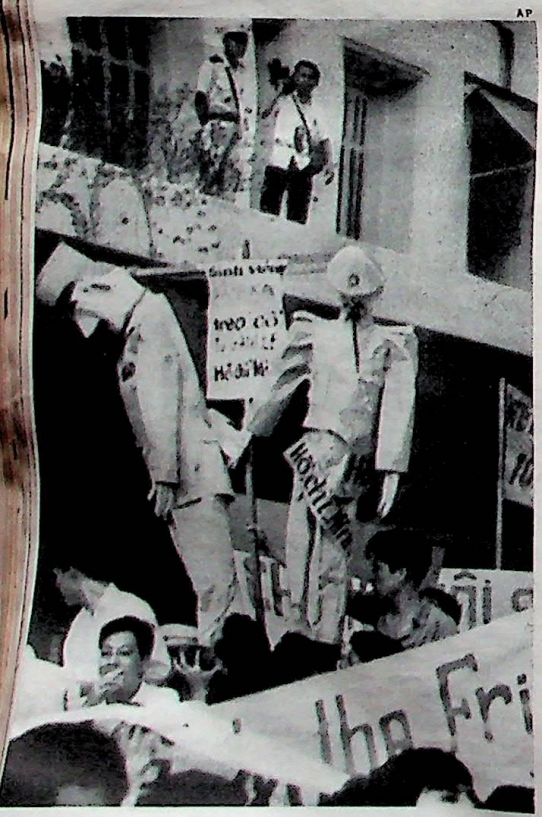
FRANCE

The Prophet Heard From

A De Gaulle press conference has been described as a series of answers to which reporters are supposed to think up the questions. Even when the presidential monologue fails to offer any new "answers," the world has learned to listen. De Gaulle's latest appearance before the assembled press at the Elysée Palace, his first in six months, was as usual full of imperious generalities, lofty self-justification, and barbs for friend and foe. Since De Gaulle wears history well, and knows it, the occasion also offered some fairly startling historical silhouettes.

• U.S. ROLE. World War II, said De-Gaulle, had produced two superpowers, the U.S. and Russia. But America's sole conduct of Western policy was now a thing of the past, for, with economic and military reconstruction, "Europe emerges as an entity capable of living its own life." Naturally, he went on, "it must preserve an alliance with America. But the reasons which made Europe less an ally than a subordinate are disappearing one after another." Europe must now assume its share of responsibility; this should only please the U.S., for, the implication was clear, things were just getting too much for the Americans. "Whatever America's wealth, its power, its good intentions, the multiplicity and complexity of the problems are such that henceforth they outstrip, perhaps dangerously, its means and capacity."

AP



DE GAULLE EFFIGY HANGED IN SAIGON
Down with neutralism!

• EUROPE. With the two superpowers no longer so super, Europe "should have an independent policy . . . Gauls, Germans, Latins, many of them cry: 'Let us create Europe.' But which Europe? For us French, the Europe should be a European Europe." That tautologous definition turned out to be a label for De Gaulle's familiar vision of a loose assemblage of nationalist states. Sarcastically he dismissed the more ambitious hopes of European federalists for a European executive and parliament. Then De Gaulle fixed an accusing eye on West Germany because it "does not yet believe that Europe's policy should be European and independent"—meaning that Chancellor Ludwig Erhard is tied too tightly to U.S. apron strings.

• DETERRENT. De Gaulle was happy to bring the world up to date on the state of France's fledgling atomic air force: "The first unit will be operational this year. In 1966 we will have sufficient Mirage IV planes and refueling aircraft to be able to transport over several thousand kilometers projectiles whose total explosive power is greater than 150 Hiroshima bombs." He did not add that all this would be impossible without airborne refueling tankers that are to be supplied by the U.S., nor that, as an air force staff colonel disclosed last week, the primitive French bomb will crowd the Mirage considerably: it is more than half as long as the plane's fuselage.

• VIET NAM. De Gaulle was at his most annoying on the subject of Southeast Asia, for which he once again proposed neutralization. He reviewed some background in particularly acid terms. When the French left Indo-China in 1954, "the Americans arrived with their aid, their policy. At that time the Americans were offering themselves everywhere in the world, considering themselves invested with the burden of defense against Communism. I believe that one can add, without hurting our American friends, that their sense of vocation, and also their aversion to all colonial activity which was not theirs, led them to take the place of France in Indo-China."

De Gaulle made it sound as if Americans had wanted to move into the Indo-Chinese mess—and not, as was really the case, that the U.S. entered the scene with great reluctance to salvage something from the mess left behind by the disastrously defeated French. In any case, "it does not appear there can be a military solution in South Viet Nam," declared De Gaulle, and the best thing the U.S. could do would be to sit down with France, Red China and Russia, and work out a political deal for the whole area.

President Johnson promptly and firmly rejected the notion: "We do not

REPORTERS ASSOCIES

DE GAULLE AT PRESS CONFERENCE
Down with the superpowers?

believe in a conference called to ra terror." A few days before, a Sai crowd had anticipated that answer, mob of angry students invaded French embassy in Saigon, smash furniture and ripping the official from the entrance. "Down with Fra Down with De Gaulle! Down w neutralism!" they shouted. Then t hanged De Gaulle in effigy, alongsi figure representing North Viet Na Ho Chi Minh.

SOUTH VIET NAM

To the North?

"He is getting to be a puppet pulls its own strings." So runs the joke in Saigon. South Viet Nam's mier Nguyen Khanh, not exactly American puppet, certainly is the N namese leader in whom the U.S. shown its greatest confidence, and whom it has placed its highest hop Last week, Khanh moved well ahead official U.S. policy by saying, in effe that the war against the Reds cannot won so long as it is restricted to south, that the only solution is to m against North Viet Nam.

At a rally marking the "Day of N tional Shame," the tenth anniversary the Geneva accords partitioning Nam, Khanh told 60,000 of his coun men: "This is not only an urgent peal of a million refugees from north, nourishing the dream of liber ing their native land. This is not the ardent wish of thousands of fam in the south with relatives who went the north. This is also the fervent of the religious sects, and of the dents . . . The push northward [is] appropriate means of fulfilling our tional history." Then the little gene led the throng in loud shouts of *tien!*" ("To the north!")

Tough Talk. Lower-echelon offic took up the cry. A government decla tion urged that the war be pressed til total victory liberates our whole tional territory." Toughest talk of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

from Khanh's air force command-mustachioed Commodore Nguyen Ky, who packs a bone-handled six-ter in a Texas-style holster. At a conference, Ky embarrassed his advisers by openly confirming that three years South Vietnamese sabo-teams have been slipping into the on the ground and by air. "I my-dropped special-forces units into th Viet Nam," boasted Ky. Actual-his disclosures added little to what already known. The raids were be-under Diem, with U.S. approval, apparently are continuing sporadi-but with scant success.

Ky also argued that his air force ld be allowed to "attack the north even Communist China," claimed 30 of his pilots are getting jet train-although the Vietnamese air force not yet have any jet aircraft. Said "We are ready. We could go this rnoon. I cannot assure that all North t Nam would be destroyed, but Ha-would certainly be destroyed."

One flustered American adviser at the s conference hastily suggested that haps Ky did not have a complete mand of English. But Ky's words e clear enough, as were Khanh's.

Brass to Brass. Surprised and uneasy, U.S. Ambassador General Maxwell Taylor paid a brass-to-brass call on nh, firmly reminded him that he s out of line with American policy. nh, in effect, replied that he was ciating South Vietnamese policy, U.S. policy—a specious argument, e no South Vietnamese thrust rward could possibly succeed with-massive U.S. involvement.

was, of course, the U.S. itself that months ago started making threat-g noises about moving north. But n U.S. military men in South Viet consider this possibility, they usu-think of limited air strikes against efully chosen targets. U.S. officers still convinced that there simply no easy, dramatic formulas for ory in Viet Nam. The primary ef-t must be to win in the south, they and Khanh must drastically im-ve his army's fighting ability before posing a contest with Ho Chi Minh's midable northern battalions.

That point was well illustrated last k when the Viet Cong guerrillas k punishingly across the Mekong a. For the umpteenth time, an y battalion hurrying to relieve an ost under attack—this time 120 s south of Saigon—walked into an ush in broad daylight.

Open Flanks. From a U.S. Army pi-who was flying a spotter plane over e scene came a chilling account of t Cong proficiency. According to geant Ben Munsey of Manchester, H., the guerrillas were so well hid-n that he flew 30 feet over their s without seeing them. "Suddenly foliage seemed to get up and run, aling Viet Cong in black pajamas camouflaged helmets running across soggy paddies," said Munsey. In five minutes the Viet Cong dashed nearly 1,100 yards, cut off the road. The army troops dispersed into a swamp, but as they did, another guerrilla column turned up at their rear. The government toll: 26 dead, 60 wounded, 136 missing, including a U.S. Army sergeant.

Privately, U.S. advisers bitterly complained that the Vietnamese often just won't post sufficient flank guards to avert ambush. In the Mekong River village of Caibe, the Reds attacked a military dependents' compound, and 16 women and 24 children were killed in the crossfire—one of the worst tolls of civilians thus far in the war.

Against this kind of enemy, argue the Americans in Saigon, an even greater military effort must be made in the south, including a more effective draft: thousands of able-bodied civilians are still lounging about Saigon. But Khanh can reply that, no matter what he tries to do in the south, the war can hardly be won so long as the north not only infiltrates men and matériel into his country, but provides ideological and strategic guidance to the guerrillas.

CIVILIAN DEAD IN VILLAGE OF CAIBE
Up came the foliage.

ITALY

Till the Next Crisis

If it hadn't been so hot, Italians might have noticed that a new government—their 25th since 1943—had been sworn in somewhere in the middle of last week. If it had been a new government, that is. As it was, *Dio mio*, there wasn't much to notice except the hottest summer in a decade. And storm warnings that a full-scale political crisis might be on the way.

Christian Democrat Aldo Moro, 47, the patient bureaucrat, was Prime Minister again. Socialist Pietro Nenni, 73, was Deputy Prime Minister again. In fact, all but two of the 26 Cabinet ministers were back in office, the same four-party center-left coalition still controlled the Cabinet, the same battles were still being fought among the coalition partners. So what else is new?

The Christian Democrats and Socialists who dominate the coalition had still not resolved the differences that kept them split during the previous six-month center-left government. The Christian Democrats want to pull out all stops to check Italy's 6% inflation, with tight wage and credit controls. The Socialists want to combine a milder anti-inflation program with a five-year economic development plan and an urban land-expropriation scheme to halt speculation and build low-cost housing. Unable to resolve the differences, the two parties buried the alternatives: essentially, the new government's program provides for neither sweeping stabilization nor foreseeable development and reform.

Ideology & Ambitions. Moreover, in the 26 days between Cabinets, neither Moro nor Nenni had been able to heal the internal breaches that weakened their parties. Nenni, once a dogmatic Marxist and longtime partner of the Communists, in recent years has been leading his Socialist Party toward the social democracy espoused by Britain's Labor Party. But the way was bitterly blocked by the hard-line Marxist minority in the party's far left. In recent weeks Nenni, as party president, decided to crack the whip, managed to isolate his leftist opposition, even got control of Avanti, the party newspaper —and last week wrote a boldly anti-Communist editorial. But this courageous move cost him heavily: seven

CC-0. In Public Domain

Digitized by Arya Samaj Foundation Chennai and eGangotri

party leaders bolted, more threatened to bolt.

As for Prime Minister Moro, who leads one of the most insignificant factions of the Christian Democratic Party —and is Prime Minister only because he represents the most inoffensive compromise between the others—got absolutely nowhere in his battle to control the whole party. Just the reverse. Because the Christian Democrats' factions are split by ambitions rather than ideology, several top party members are gunning for him. Among them: ex-Premier Armintore Fanfani, Treasury Minister Emilio Colombo, who heads the faction that includes President Antonio Segni.

40 Factions. Moro could not resolve even the relatively minor issue—Parliament's rejection of his proposed $238,000 aid package to private schools—which brought down his last harried government. Still divided, the new government has handed the project over to technicians for "comprehensive" study.

In fact, the only reason Moro's new government was returned to power was that, in the intricate scheme of Italy's nine political parties and the 40 factions boiling within them, no other coalition seemed possible. The only other alternative, calling new nationwide elections, was dismissed for two reasons: most parties are still broke from last year's campaign, and with both inflation and unemployment rising, the democratic parties are afraid that elections might lead to dangerous Communist gains.

But new elections may be coming anyway. Some economists believe that Italy will be hit by a major crisis around Christmastime unless Moro gets a firm hold on the economy. Such a crisis, or even a minor crisis like a school-aid bill, could well topple the Cabinet again, and might force President Segni to call the elections no one (except possibly the Reds) really wants.

AFRICA

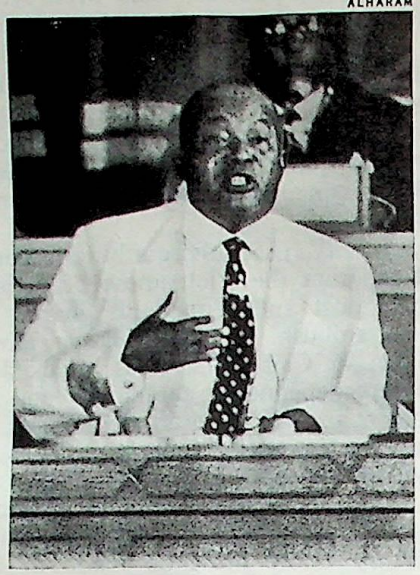
Devil's Advocates

What were those noises emanating from the upper right-hand corner of Africa last week? To the aligned, non-African ear, they sounded suspiciously like self-criticism. The chiefs of state, gathered in Cairo for the second annual summit of the Organization of African Unity, laid their doubts on the line in a manner that would have done credit to a convention of devil's advocates.

Timely Reference. Most forthright was chunky, acerbic Philibert Tsiranana, rightist President of the Malagasy Republic (formerly Madagascar). "All I hear," he told his uneasy listeners, "is blah, blah, blah. We all talk too much, and we must purge ourselves of this disease." In the course of his own 85-minute harangue, President Tsiranana offered purgatives for a few other African diseases.

"Beware of raising armies," Tsiranana

ALHARAM



MADAGASCAR'S TSIRANANA
"Blah, blah, blah!"

warned, "for they can overthrow us. Beware of visiting African delegations that come to enjoy your hospitality and praise you to your face, but stir up insurrection behind your back." To the nervous titters of such practitioners of insurrection as Algeria's Ahmed ben Bella and Egypt's Gamal Abdel Nasser, he took a cut at that African holy of holies, nonalignment. "We all say we are neutral, but we all favor anybody who helps us," Tsiranana said. "If you ask me the truth, I'll say *mais oui,* I am allied." Then he hit home with a telling blow: "We all regret Patrice Lumumba's death, but who amongst us has not executed opponents? Have you never signed an order to execute one of your rivals?" The reference was particularly timely, for vociferous objections advanced by some O.A.U. members had prevented the Congo's embattled Premier Moise Tshombe from attending the Cairo conference, partly on the

GEORGE DE CARVALHO

TANGANYIKA'S NYERERE
"Petty peevishness!"

grounds that he had acquiesced in the murder of Lumumba.

Balkanized Continent. Tsiranana, of course, was denounced as a neocolonialist stooge. Next on the list of outraged orators was Ghana's leftist Kwame Nkrumah. In a two-hour [illegible] through his customary wood [illegible] Redeemer threw some insights into Africa's darker thickets. As it now exists, he said, Africa consists of "economically unviable states, which bear no possibility of real development." Nkrumah warned against the continent's "Balkanized nationalism." All true enough, but Nkrumah's solution was his usual panacea—a union government with guess who as President.

The delegates easily dismissed the Nkrumah proposal of instant unification as wholly unrealistic. They reacted more strongly when Nkrumah struck out at the O.A.U.'s "liberation committee," a nine-man group that coordinates and finances the activities of some 16 separate "freedom fighter" organizations aimed at freeing the African nations still controlled by white minorities. Blasting the committee for its "inexcusable" failure to make effective use of Egyptian and Algerian military experience, Nkrumah cried: "We have watched the plight of our kinsmen in Angola, Mozambique, Southern Rhodesia and South Africa. We have frightened the imperialists sufficiently to strengthen their defenses, but not enough to make them abandon *apartheid* and white supremacy."

For the present at least, Kwame Nkrumah was right: Angola's tiny rebels have been fought to a standstill during three years by a tough Portuguese force of 40,000 men who are not reluctant to plant mines in manioc fields. South Africa's large, bristling army and hard-handed Special Branch cops make any anti-*apartheid* activity tantamount to a career in jail. Only in the peanut-rich enclave of Portuguese Guinea is a black nationalist rebellion doing well, but not one really believes that this matters a great deal.

More Practice. Still, Nkrumah's words were fighting words, and they drew the wrath of Tanganyika's Julius Nyerere. Reading in clipped English, his head snapping in angry gestures, Nyerere wondered at the "curious imagination of "the Great Redeemer." Ghana, he pointed out, had paid nothing to the liberation committee. Yet Nkrumah budgets $5,600,000 a year for "African affairs," which is nothing more than a slush fund to finance opposition groups in other African countries. Nkrumah, charged Nyerere, was acting out of "petty peevishness," because Ghana had not been invited to join the liberation committee. Moreover, Nkrumah's grandiose union scheme merely was a device to block anyone else's more modest but more realistic plans. Delegates began to applaud, and soon Nkrumah himself started clapping.

Bliss helps make the world a little safer

Life's a little safer the world over because of Bliss equipment. Bliss-Eagle Signal systems smooth traffic in cities like Sydney, Australia; Santiago, Chile and Tokyo, Japan, while Bliss-Rockwood foam equipment protects the world's great airports and helps make landings safer for crippled transports. Bliss arrestors now stop military jet overruns. Tomorrow, they'll do the same for commercial airliners. And when fire strikes there's the familiar Bliss-Gamewell firebox on the corner, ready to transmit an instantaneous alarm. Wherever cities are growing and modernizing, you're likely to find Bliss technicians helping solve public safety problems. There are resident Bliss representatives in 54 countries, and manufacturing plants in the United States, Canada, England, France, Israel and Australia. Wherever you are, you're not far from Bliss.

kept it up while being tongue-lashed by the Tanganyikan.

In the end, the O.A.U. made a few practical decisions: Addis Ababa, where the organization was founded a year ago, was named as its permanent headquarters, and delegates settled on Guinea's U.N. ambassador, Diallo Telli Boubacar, as their first secretary-general. It was a modest underlining of the conference's most persistent theme. As Nyerere put it: "What we need is not more preaching about unity, but more practicing of unity."

THE CONGO

The Black Eagle & Other Birds

It was homecoming week for the hawks of the Congo. On foot and on bicycles, in rickety lorries or astride crimson farm tractors, some 6,000 of Moise Tshombe's former secessionist gendarmes came swarming out of their hideouts in the bush to march triumphantly through East Katanga's capital of Elisabethville. Another 2,000—still armed and under the command of white mercenary officers—waited in Angola, just on the other side of the Congolese border, for orders from the Congo's new Premier.

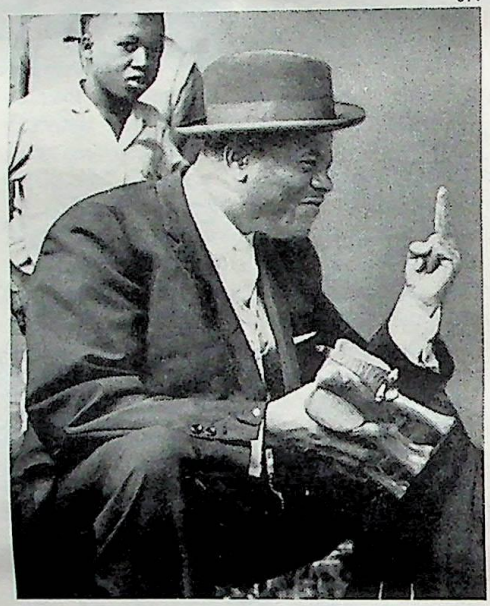
During the 13 months of his exile, Tshombe kept in close touch with his tough Katanga cops, paying those in Angola regularly and the boys in the bush when he could. It was well that he did, for he needs them now to stiffen the spine of the demoralized Congolese national army, which has been totally unable to quell Communist-encouraged tribal revolts in the eastern Congo. All it really takes to win a town is a long-distance telephone call. Usually when a rebel leader rings up his next target, the Congolese army contingent on hand flees before the rebels arrive.

Back to the Hospital. Meanwhile Tshombe received support of another kind. Into Leopoldville last week swooped a raptor well known to the gunrunners of the world: Colonel Hubert Fauntleroy Julian, 66, "the Black Eagle of Harlem." A dandified, fast-talking Negro of West Indian birth and U.S. citizenship, Julian first became involved in African military causes in 1930 when he personally destroyed one-third of the Ethiopian air force. Of course, it consisted of only three airplanes, one of which the Black Eagle managed to crash at the feet of Emperor Haile Selassie. After serving as an arms buyer for various Latin American countries, the Black Eagle showed up in the Congo, only to be arrested in 1962, then expelled by the United Nations for allegedly smuggling arms to Tshombe.

This time he brought something less dangerous: a set of goose-down pillows, "worth $75 apiece," for Tshombe's uneasy head. Explained the Eagle: "My wife didn't want his head resting on the same pillows as Adoula's." He also brought a mysterious offer of $500 million to help resuscitate the economy, and a due bill of $24,000, which he claims Tshombe owes him for "services of an undisclosed nature" in 1962. But before he could either collect or deliver, Julian had to check into the very place where the U.N. detained him two years ago: a hospital now run by the Danes. As the colonel explained, rolling up the leg of his elegant grey trousers: "I go through five wars without a scratch. But coming down here in the plane a Coke bottle falls off the stewardess' tray and wrecks my knee. If I weren't a darky, you'd notice the discoloration."

Task for a Prophet. While the Black Eagle treated his bruises, Moise Tshombe was busy inspecting more serious wounds. Off he flew to Central Kivu province where rebel tribesmen dominate an Iowa-sized area and threaten to spread even farther. Tshombe assured himself of a wild reception in the capital of Bukavu by lifting the "state of exception" and the tight 11 p.m. curfew. He responded to the enthusiasm by painting the future possibilities of Kivu tourism: "Many foreigners are waiting for peace to return here so that they can come to admire your flora and fauna."

UPI



JULIAN IN KATANGA (1962)
Hello, Moise!

More realistically, he conferred with a rebel lieutenant and promised to send a delegation to talk with the leader of the Kivu revolt, Leftist Emile Soumialot. But such are the petty rivalries among the rebel leadership that even if Soumialot were to sign a cease-fire, many doubt that he could make it stick. For all the hope Tshombe's appearance inspired in Kivu, an ominous mood underlay the superficially triumphant tour. One Kivu official bluntly warned Tshombe: "If you do not succeed, you are a false prophet." The Premier's bright grin disappeared for a moment. "You are so right," he said. "After me there is nothing."

ernment will actually go into com-
tion with rice merchants by estab-
ing a state trading corporation that
buy up huge portions of the crop,
them at "fair" prices directly to re-
outlets.

Such bureaucratic tinkering, of
rse, will not get at the root of the
blem: the need to raise agricultural
ds through modern methods. The
's Ford Foundation and the Agency
International Development (AID)
begun pilot programs designed to
farmers better techniques. These
grams have increased production
matically in several small areas,
ly through the use of fertilizer, im-
ved seed, pesticides, credit and bet-
implements. But it will be years be-
e such programs can have national
pact in a country that doggedly re-
s change. Meanwhile, Delhi leans
rily on purchases of surplus wheat
m the U.S., which under the Public
w 480 program, has averaged 300,-
0 tons per month since 1960.

MALAYSIA

ok But Not Asunder

It was the Prophet's 1,394th year to
ven, and the Malay Silat of Singa-
re were bursting with birthday fervor.
e Silat are Moslem warriors who
r black sarongs and practice a
ce-like form of combat. About 100
them brought up the rear of a pro-
sion as it made its way last week
m Singapore's rambling old cricket
d through the center of town, when
Chinese traffic cop ordered them to
ten their ranks so as not to obstruct
ic. A few of the Silat knocked him
t, and in an instant the rest of the
lay crowd reminded everyone that
ok is a Malay word.

Quick Retaliation. Screaming *"Pukul
ina!"* ("Strike the Chinese!"), the
lays descended thousands strong into
ngapore's Chinese neighborhoods,
ring cars, hurling motor scooters
into drainage ditches, smashing shop windows, and trying the keen edges of their parangs on Chinese throats.

The Chinese were quick to retaliate. Abetted by members of the Triad Society, an illegal but ill-contained gang of Chinese extortionists, pimps, gunmen and gamblers, they took advantage of a break in the hastily imposed curfew to murder a few Malays. One had his head shattered by a hammer, another was scalped by the ragged edge of a broken bottle, and an Indian photographer was found with a cargo hook in his forehead. Before the week was out, 21 Chinese and Malays were dead, 454 injured, and the handsome, prosperous city itself had temporarily become a ghost town. Armored cars carrying cops and troops whispered through Singapore's old colonial arcades over streets covered by a snowfall of broken glass.

***Rumahs* Were Rife.** Singapore's violence has its roots in old racial antagonisms. When Sir Stamford Raffles founded the colony in 1819, there were virtually no Chinese on the sultry island. But since the native Malays were indolent, the British encouraged diligent, apolitical Chinese to come aboard, and today the city-state's population is 74% Chinese. The Malays kept to themselves in their rustic kampongs (villages), jammed into smelly, unlighted thatch-roofed *rumahs,* which were rife with disease.

Wealthy Chinese, on the other hand, built villas, staffed them with servants and concubines, and took charge of Singapore's economy with little opposition. With an annual per capita income of $450, Singapore today is the wealthiest city in Southeast Asia. But the Malays simply said *"Tida apa"* ("It doesn't matter"), and rationalized their lowly condition with the help of the Koran, which they interpret as condemning commercial endeavor. As a result, the Malays are largely chauffeurs, street cleaners, firemen and cops, while the bulk of the Chinese are shopkeepers or larger entrepreneurs.

CHINESE & MALAYS CLASHING IN SINGAPORE
Potentially, more dangerous than Sukarno.

AP

THE TUNKU AT WASHINGTON MOSQUE
Wanted, more than sergeants.

Out of Control. When the Federation of Malaysia, consisting of Singapore, Malaya, North Borneo, Sarawak and Brunei, was formed last September, the new nation gave a slight numerical edge to the Malays—42% of the 10 million population as opposed to 38% Chinese. The leader of Singapore's Chinese community, Lee Kuan Yew, was a firm backer of the multiracial federation. As Prime Minister (in effect, mayor) of Singapore, "Harry" Lee, though nominally a socialist, had kept Singapore wide open to free enterprise, and fought the Communists hard. At the same time, he did much to help the city's Malay minority. He became so popular in Singapore that in last fall's city elections his People's Action Party won handily over the Malay-dominated United Malaysia National Organization, the party of the federation's Prime Minister, Tunku Abdul Rahman.

Lee also challenged the Tunku's U.M.N.O. in national policies; while he did not get very far, the Malays resented it. Party polemicists, who were not encouraged by the Tunku but not sufficiently curbed by him either, falsely charged that Lee was pro-Communist, demanded his arrest, burned him in effigy. One leaflet distributed in Singapore bluntly advised: "Before Malay blood flows in Singapore, it is best to flood the state with Chinese blood." It was this sort of racist prodding that contributed to last week's violence.

Anything You Like. As Singapore's rioting subsided into sullen, sporadic outbursts, Prime Minister Abdul Rahman was still busy in Washington. To counter Indonesia's threat that it will "crush Malaysia"—which it probably

CC-0. In Public Domain

Digitized by Arya Samaj Foundation Chennai and eGangotri

could do, thanks to Soviet aid in arms and training—the Tunku was seeking U.S. military assistance. Sukarno, said the Tunku, "is to us what Hitler was to Europe."

The U.S. is still determined not to bring about a complete break with Sukarno, and moreover believes that the defense of Malaysia is primarily a British responsibility, but President Johnson promised "anything you like from sergeants on up" in the way of military training. Moreover, he agreed to consider the Tunku's request for U.S. jets and helicopters.

But if Singapore's racial split widens to include the whole federation, not even airplanes will be any help. The feud between Malays and Chinese could then become a greater threat to the federation than Sukarno. To prevent all Malaysia from running amok, Lee and the Tunku called on all Malaysians to cooperate with the central government. "The first phase of the rioting is over," Lee said. "Our business now is to restore confidence. If order isn't restored, we'll all go mad."

COMMUNISTS

My Daddy Can Beat Your Daddy Several Centuries from Now

The ideological issue between Moscow and Peking, once so murky, was assuming an almost dazzling clarity.

Out last week were the latest statistics for Soviet industrial production, showing a 7¼% increase in the first half of 1964. Many Western experts suspect the real figure to be about 5%, but even if correct, it would be the smallest percentage increase claimed since 1942. The usual claim in recent years has been closer to 10%. The lag appears to be caused by crop setbacks, which affected the food production industry, and a sharp drop in the increase in productivity. To cope with this, Khrushchev talks more and more about providing greater incentives, only recently announced a 20% to 40% wage increase for some 18 million doctors, white-collar workers, teachers.

This is the kind of thing Nikita's rivals in Red China watch with growing suspicion. As Peking put it in its latest blast, a 24,000-word article in People's Daily: "A privileged bourgeois stratum has emerged in Soviet society." In fact, Khrushchev's "phony Communism" is restoring the "forces of capitalism" and substituting for the class struggle "the struggle for a good dish of goulash." It is the "Communism of the American way of life, and Communism seeking credits from the devil."

Western Russia- and China-watchers are carefully studying the attack, and Berlin Kremlinologist Richard Lowenthal concludes that, far from being merely another anti-Russian blast, it is in effect "Mao Tse-tung's ideological testament." For the document warns that the same sort of wicked reversion to capitalism that is happening in the Soviet Union could also happen in China. The Chinese party has had some cases of "degeneration," says the article, and there must be ceaseless vigilance to keep the newer generation of Chinese leaders from going soft, as the West hopes they will. Concluded Mao's testament: "A very long period of time is needed to decide who will win the struggle between socialism and capitalism. Several decades won't do it. Success requires anywhere from one to several centuries."

RED CHINA

Tourism for Ugly Imperialists

Every Friday morning, Pakistan International Airlines flight 750, a Boeing 720 jet, takes off from Dacca in East Pakistan and heads for Shanghai—the only major flight by a non-Communist airline into Red China. PIA has been making the run for three months, charging $428 for economy class round trip, and so profitable has it turned out to be that the airline is adding a second weekly flight. The Chinese Communists are using the Pakistani planes to open the door, at least a tantalizing crack, to Western business and tourist dollars.

Kits promoting the tourist pleasures of Forbidden China have been sent to thousands of travel agents. Chinese consulates now grant tourist visas in a startlingly quick three days. The result has been an increasing flow of travelers and fellow travelers from almost everywhere except the U.S. (neither Washington nor Peking will permit Americans to enter).

Kindergarten Quacks. Those who do get in are allowed to see only the carefully polished edges of China. For $30 a day, not including transportation, they are chaperoned by official guides over a neatly policed route that takes in six cities, including Peking, a few selected communes, schools, factories for those who are interested. The visits can be deceiving: one kindergarten class began a quacking song for the benefit of a French tourist. he recalls it, " 'How charming,' I thought, 'a song about ducks.' But then I learned they were singing something that sounded like *quan quoat quoat*, which means, more or less, 'Ugly imperialists, go home!' "

The London Daily Mail's Alan Macpherson, who went in on the first PIA flight, described the New China as "a land of spacious loveliness, cultivated down to the last inch, and criss-crossed with power lines." To tourists, the most vivid first impression is cleanliness—the result of a Communist Party drive to shame, cajole and organize the people into cleanup squads that left everything shining.

Bare Subsistence. Kitchens may be clean, but they are also bare. The people still subsist on cabbage and rice, although good harvests have ended the near famine of the early '60s. Soybeans and wheat are still rationed, but butter, cream and cakes are plentiful and cheap, and the stalls at the central markets are banked high with ornamental heaps of vegetables, meat, tiny eggs and fish. "China has not forgotten how to eat," one tourist was told by his guide. "Why has it forgotten how to cook—for those who can pay for it. The once-great cuisine of Peking has slipped badly." French TV Commentator Marcel Werther, who traveled 10,000 miles during six weeks in China, would not give even tourist-hotel tables a two-star rating in *Michelin*.

China's big city hotels are fairly good for tourists with hard currency, inexpensive (about $6 for a single room with bath). Most of the time the plumbing works, the hot water is

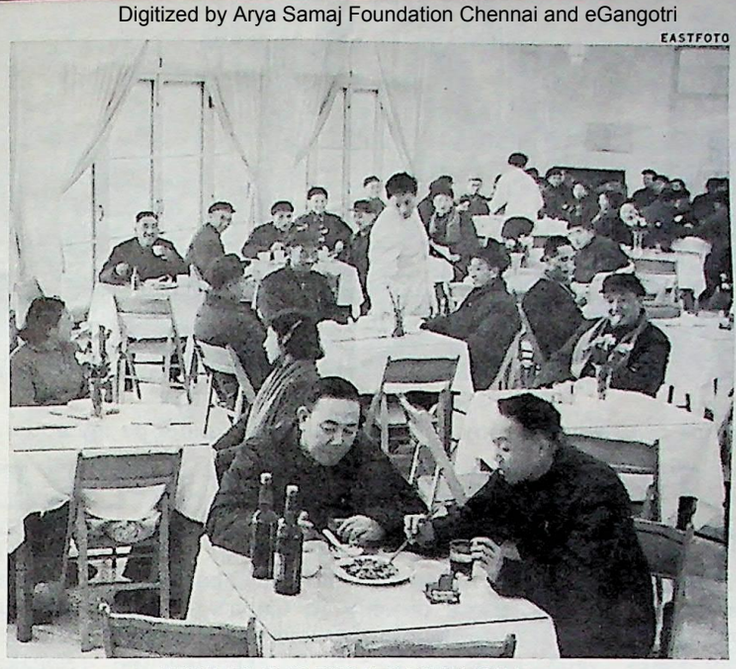
NANKING STREET SCENE

EASTFOTO



HOTEL DINING ROOM IN SHANGHAI

BOY & GIRL IN HANGCHOW*

Pasteurized prostitutes in a vast, songless plain.

t in winter, hotels in South China e poorly heated, and those in the rth are so overheated that guests ve to keep their windows wide open. the summer, only Canton's Yang- ng Hotel has air conditioning—and is turned on only between 5 and 10 m. Other hotels usually supply elec- c fans, but cut off all power every ght. Still, the service is excellent, and o scrupulously honest that most trav- ers never bother to lock their hotel om doors. In fact, it becomes almost ossible to get rid of anything. One rson tried to lose a hotel towel he d borrowed in Karachi, but it kept ppearing, wet and reproachful, at every departure from every Chinese otel. Finally, he claims, he had to rry it back to Karachi.

Rooftop Exercise. Despite China's ny wonders, Western visitors find the mosphere depressing. The cleanup mpaigns wiped out not only dirt but the rds, thereby turning China into a vast nonless plain beyond the worst dream the late Rachel Carson. News from e outside world is silenced, too, and ne lonely visitor said he felt as if he ere on a ship at sea without a radio. In the streets the Chinese are uni- rmly clad and often regimented; even e children usually march in ranks of ree or four. Early every morning, dio Peking broadcasts 15 minutes of ysthenics, and Chinese rush to parks, blic squares or their own rooftops follow the exercises. The physical ness cult is so strong that one trav- er reports watching a woman doctor t lowbox down a crowded street with- arousing even an inquiring glance. Night life is virtually nonexistent. ople is dancing until 11 p.m. at Pe- g's International Club, where a ll-loved bandleader leads the reeds rough *Red Sails in the Sunset* and oth- period pieces. Otherwise, there is y a handful of dreary hotel bars, ir offerings all home brews, includ- g several poisonous brands of "whis- ky." The Communists claim, with apparent truth, to have "re-educated" all prostitutes into other callings—to the extreme discomfort of hot-blooded Cuban delegations. A distressed Frenchman reports that once-bawdy Shanghai has been "almost pasteurized," its palatial *Grand Monde* brothel remodeled into an all-purpose amusement center in which ten operas are performed, simultaneously, in ten separate theaters.

"I often wondered how there could be a population problem," says French TV-man Werther. "One can see a boy and a girl walking side by side, but rarely arm in arm and never hand in hand." Some tourists can't even tell the boys from the girls: both sexes wear mannish haircuts and high-necked coveralls. One Pakistani visitor reports that bosoms are being "ruthlessly suppressed" to de-emphasize sex. Complains Werther: "I saw a woman's leg only twice. Nothing but pants."

Current Attractions. Propaganda, now directed almost as much against Russia as the West, is a constant nagging companion. Pamphlets in every major language are strategically placed in every hotel; from glass boxes on the streets stare the pictures and life stories of the latest Communist Heroes and Model Workers, and giant wall posters admonish the masses to "Meet Production Quotas Ahead of Schedule." Moviegoers see almost nothing but Chinese films, heavily propagandized. And China's ancient, superbly gaudy folk opera has been turned into the hardest of all Communist Party sells. Sample playbills during one recent Peking opera week:

People's Theater: *Busybody Li*, the story of an overeager woman on a commune.

People's Art Theater: *After the Bumper Harvest.*

Labor Theater: *Sentry Under the Neon Lights*, the story of how the "Good Eight Company" stood firm against the temptations of big city life in evil, immoral old Shanghai.

MONACO

Big Deal on Casino Street

The job took only three minutes. At 10:30 a.m., a *tiny grey Citroën delivery* truck double-parked in front of Clerc's jewelry shop, on the Place du Casino across from Monte Carlo's tourist-draped Hôtel de Paris. Three men in smocks, mountaineer hoods and submachine guns jumped out; one took station at the door. Inside the store, the smaller hood yanked the telephone wire and smacked an employee while the larger hood snapped a burst of bullets through the window of a display case.

As alarm bells rang, the two men coolly ladled a stream of gems into a black bag. "They heard the signal go off," said the shop's manager later, "but they didn't lose their *sang-froid*. They took only diamonds, emeralds and really precious necklaces. They chose well."

When a cop turned up, another of the gunmen cut him down *with two shots.* An onlooker intervened to help the wounded policeman, and one of the hoods said: "*Fous le camp* (Buzz off)." He did, and they did too. Several hours later, police found the stolen Citroën. In it were two Tommy guns, five pistols, two lead pipes, a grenade, and a lingering air of smug satisfaction.

Clerc clerks stayed up most of the night taking inventory of the stolen jewels—a task that was becoming routine, since this was the fourth time in a decade that the store had been hit. This time, though, the take was more than $2,000,000. That made the Monte Carlo jewel robbery the biggest ever pulled off in Europe. But the thieves would probably clear no more than $300,000 after breaking up the gems and paying commissions to middlemen. In Europe as elsewhere, good fences rarely make good neighbors.

PICTORIAL PARADE

FOREIGN MINISTERS IN WASHINGTON

"Is there any one of us who can say with assurance, 'It cannot be my country tomorrow'?"

THE HEMISPHERE

CUBA

"Stop, & Stop Now!"

The Organization of American States had rarely heard Secretary of State Dean Rusk speak in such urgent tones. "Today," he told the assembled foreign ministers in Washington, "it is Venezuela which is under attack. Is there any one of us who can say with assurance, 'It cannot be my country tomorrow'? So let us say to the Castro regime: 'Your interference in the affairs of other countries in this hemisphere must stop, and stop now!' "

Last week, the OAS issued precisely that warning. By a vote of 15 to 4 (Mexico, Chile, Uruguay and Bolivia voting against), the foreign ministers approved mandatory diplomatic and economic sanctions against Communist Cuba and passed a crucial resolution defining any future Castro subversion as outright "aggression." Henceforth, under the Inter-American Treaty of Reciprocal Assistance, no OAS member nation may maintain diplomatic relations with Cuba. All trade between Cuba and OAS members is banned, with the exception of basic foodstuffs and medicine. And any hemisphere nation that is threatened by Castro subversion is free to take up arms in self-defense against Cuba while summoning the other OAS states to come to its assistance.

Behind the Scenes. It was tough talk, and it wrote an end to a long, often exasperating campaign that has stretched over five years and five separate conferences. Latin Americans have been well aware of Castroite subversion and gun running. Yet if given a choice, they looked the other way, talked interminably about non-intervention, and administered only the mildest of wrist-slaps. This time, Cuba's Communists had been caught red-handed: a three-ton terrorist arms cache uncovered on a Venezuelan beach and traced directly to Cuban arsenals. The angry Venezuelans demanded strong action. The U.S. worked quietly behind the scenes to see that they got it.

Even so, it took weeks of patient negotiations to line up the required two-thirds majority to impose sanctions. Central American and Caribbean nations, those directly in Cuba's line of fire, were firmly for spiking Castro's guns once and for all. As expected, the unswitchable holdouts were the four countries still maintaining at least minimal economic and diplomatic relations with Cuba—Bolivia, Chile, Mexico and Uruguay.

Of them all, Mexico was the most adamant in its stand against sanctions and the most determined to vote against —even when 5,000 Cuban exiles staged a march down Washington's Constitution Avenue, shouting, chanting and waving placards ("OAS! Alert! Alert!" "Stop Playing with Cuban Blood"). Though the Mexicans have no love for Castro, Mexico is fiercely independent of anything that hints of U.S. pressure. Not only did Mexico refuse to give in, it even wangled an important concession; the Havana-Mexico City air route will remain open. "It exists mainly for humanitarian purposes," said Delegate Vincente Sánchez Gavito. "It is a way out of Cuba." Uruguay opposed a break for the same reason—to maintain its Havana embassy where some two dozen anti-Castro Cubans are currently in asylum. Chile's problem was its nip-and-tuck September 4 presidential election; a vote for sanctions might hand the presidency to a far leftist. As for Bolivia, President Víctor Paz Estenssoro has been winning his fight against his country's far leftists, but still did not feel strong enough to go along with the majority.

"Even on the Moon." When to sever relations, and how to police the trade embargo, were left up to each individual nation. It may be months before the four get around to giving Castro's diplomats their walking papers. Chile certainly will do nothing before the September elections; the Mexicans may refuse altogether. Nevertheless, the decisive vote was the first strong, clear action the OAS has ever taken on Cuba, and it is bound to do Castro incalculable harm around the hemisphere.

The bearded revolutionary obviously recognizes that fact, and all through the OAS meetings he did his best to soften the blow. For weeks a felicitous Fidel has been humming a sweet reconciliation tune to the U.S. Last week his violent little brother Raúl, boss of Cuba's armed forces, joined the chorus. Speaking to several U.S. newsmen invited over to view the July 26 celebrations, Raúl crooned that Cuba was ready to sit down and talk with the U.S. "anywhere, any time—even on the moon."

In the eastern city of Santiago, where Castro started his revolution, the visiting newsmen were treated to the kind of is-everybody-happy circus that Communists specialize in. Though the Cuban economy goes from bad to worse (this year's sugar crop may not equal last year's 3,800,000 tons, only half the record Castro harvest), Santiago restaurants were filled with food; bands played and carnival crowds were on parade. In good humor, Castro drove through the streets, chatted with local officials, even sidearmed a few baseballs to two of the reporters in a local stadium.

This week some 300,000 Cubans will obediently pledge allegiance to the Communist dictator. But that will be small gain now that he stands condemned as an aggressor and on sufferance notice to keep his revolution at home.

ARGENTINA

Mocking the Turtle

"Don't dust off that statue!" went the cartoon in an Argentine magazine. "That's the President himself!" Bitter jokes are beginning to revolve around President Arturo Illia, 63, the gentle country doctor who took office nine months ago. Illia's prescription was to sit back and hope that the rich land, wheat and beef would heal itself after 18 months of frenetic military rule. In the beginning most Argentines heartily agreed. Now, it seems, nothing is fast enough.

Business for *Cambios*. Government statistics are months behind, and are politically doctored to boot. Respected private economists, from whom Argentines often get their information, are alarmed at the way much of the economy is being allowed to deteriorate. Inflation is zooming in the country; the cost of living is up 25.6% in 1964, 5% last month. Unchecked bureau-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

featherbedding and other government spending is expected to leave the treasury with a gargantuan $800 million debt by the end of the year, highest in Argentine history. The official peso rate is still 83 to the dollar, but only because of heavy government support; Buenos Aires black market *cambios* are doing a booming business at 175 to the dollar.

Oil is ill, too. Shortly after his election, Illia annulled the contracts of 13 private companies (mostly U.S.), and since then the companies have cut back production while lawyers argue the case in court. Oil supplies have been maintained by uncapping state-owned reserve wells, and some experts predict that Argentina will be forced to import oil before December. The beef industry is worse off. With herds decimated by two years of drought, cattlemen are holding back stock, hoping to rebuild. Monday and Tuesday have been declared meatless days, and Argentines have been faced with the ignominy of importing beef from neighboring Uruguay for the first time ever.

Looking for Leadership. In answer to all this, Illia remains placidly in his Casa Rosada office, seeing all who come to call, but issuing few orders. As head of a government that includes everyone from right to left, he remains the one possible unifying figure, but he does little to fulfill the role. His opposition is beginning to score by labeling his regime the government of the turtle; one group recently released 200 tortoises in downtown Buenos Aires with the slogan LONG LIVE THE GOVERNMENT on their backs. Illia's response to that was: "Turtle? Fine. Slow but sure." He did not say whether he remembered that turtles have a way of ending up in the soup.

TRANSPORTATION

Lifeline in the Air

Highways and railroads are primary lifelines in most parts of the world. But in the jungles and towering mountains of Latin America, the highways are few, and millions of people have never seen a railroad. The ties that bind are the air lanes. In Santiago, Chile, last week, 30 Latin American and U.S. aviation officials, including FAA Head Najeeb Halaby and CAB Chief Alan Boyd, gathered for a five-day discussion of ways to strengthen Latin America's aerial lifeline. Out of the meeting came an astonishing picture of aviation in a developing continent of only 220 million people.

Last year no fewer than 19 foreign and 66 scheduled domestic airlines were serving Latin America, one of the greatest proliferations of aviation service anywhere in the world. All told, the lines traveled some 5 billion passenger-miles, carried over 94 million ton-miles of cargo and could point to some impressive traffic growth: 175% in the past ten years, v. 117% for the rest of the world. Argentina, Chile and Colombia have all more than tripled their passenger traffic since 1954; Uruguay is up almost 400%, while Brazil ranks third in the free world (after the U.S. and Canada) in the number of daily domestic flights. In the U.S., Eastern Air Lines' low-cost Boston-New York-Washington shuttle was considered a remarkable innovation when it was started in 1961. The Brazilians have been doing it since 1959, with three airlines shuttling between Rio and São Paulo at the rate of one flight every 20 minutes during rush hours.

Wing & a Prayer. Latin Americans have been air-minded almost from the first days of flight. The airplane smoothed over the continent's fractured geography, knitted together its scattered populations and—most important of all—proved a far cheaper means of transport than building highways or laying track. In 1919, Chile was the first country outside the U.S. to launch an airmail service; one year later, Colombia licensed the first commercial airline this side of the Atlantic; in 1934, Brazil established the first transatlantic air route with Germany—five years before Pan American connected the U.S. with Europe.

"In those days, we knew when the departure was, but the return was always uncertain," recalls Arturo Costa, a retired pilot with Uruguay's Pluna Airline. "Sometimes we had to leave the copilot behind to make room for an extra passenger." The flying is still often on a wing and a prayer. A few Latin American airlines have jets and turboprops. But most of them make do with aged DC-3s and hand-me-down DC-6s and Constellations, rigged to haul everything from cattle to *campesino* settlers on colonization projects.

Five times a week, Aerolineas Argentinas braves gale-force winds—often 70 m.p.h.—to deliver passengers and cargo to Ushuaia, the world's southernmost city, on the tip of the continent. More fearsome are the 20,000-ft. Andes, stretching the length of Latin America. On the 30-minute hop from La Paz to one remote mountain town, pilots of Bolivia's Lloyd Aéreo line regularly thread their way through clouded-in peaks with the copilot calling out seconds on his trusty wristwatch. And then, there are the airports. More than 80% of Latin America's 1,085 airports lack permanent night landing lights; some 75% have no control towers, radios or paved runways; and only five fields on the entire continent boast a complete instrument-landing system.

The Coming Market. Under the Alliance for Progress, the U.S. has given Latin American nations some $85 million to improve airports and navigational facilities. The way things are growing, many more millions will be needed. At last week's Santiago meeting, the experts recommended the preparation of more and better statistics on Latin American passenger and cargo traffic, a bigger push for tourists and a stronger bid for more *Alianza* funds.

Douglas and Boeing, the two big U.S. jetmakers, regard Latin America as one of the biggest potential markets anywhere. Both have sales teams touring Latin America making a hard pitch for their new DC-9 and 727 medium-to-short-range jets. Last month Boeing sent one of its three-engined 727s to strut its stuff on a 14-day tour of five South American countries. It was the first jet ever to land at La Paz (elevation: 13,358 ft.). As bowler-hatted Indian women gaped at the sight, the silvery 727 howled down the runway and took off—using only two of its three engines. No less impressed were the Peruvians, chief among them President Fernando Belaunde Terry, an amateur pilot with considerable time in light planes. Flying out from Lima for a demonstration ride over the Andes, Belaunde was soon in the cockpit and edging into the copilot's seat to see for himself how the big jet handled.

CHORINE MILLS
From Disneyland, with bumps.

. . .

To paraphrase the grammar school boff, what are they going to eat in the House of Lords? They won't be able to eat the Sandwiches there any more, because the tenth earl and great-great-great-great-grandnephew of the 18th century titleholder who invented layered lunch has renounced his lordship, like other Tory leaders. He will seek election to the House of Commons as just plain **Alexander Victor Edward Paulet Montagu**, 58.

. . .

They say that the recipe for a Hungarian omelet begins, "First, you steal a dozen eggs," and when **Marlene Dietrich** came on to sing at the Cannes Palm Beach Casino, the world's most professional Hungarian was sitting at a ringside table with her photographer. The world's sexiest sexagenarian had on a skin-tight, flesh-colored gown so diaphanous that her contract forbade pictures during the performance, but as **Zsa Zsa Gabor** told it, "My cameraman was so overcome by Marlene's beauty that he asked if I thought she would mind being photographed. I told him to carry on." After the show, when it developed that Marlene did mind, Zsa Zsa was forced to yield the film. "All right, we'll give it to you," ran her stormy response. "What do you think he could do with it? He couldn't sell it for a *pengö*." *Nem?*

. . .

Clark Kent could have slipped into Peru peaceably enough, but as **Superman** he'd have had to make like a bird. The Education Ministry banned him and 14 other comics because "their illogical and immoral actions contribute to unsettle children's imagination." Fortunately, Lima beansprouts love him almost as much as does Metropolis. Protests mushroomed, and the prestigious El Correo thundered, "Is this the first step toward censorship of the press?" It was, for sure. And two days later the ministry back-stepped faster than a herd of crooks downed by a supersock.

. . .

Three devoted fans would be thinking of her at curtain time, read the telegram, and it was signed "Mother, Daddy and Lynda." But they needn't have worried. For each of her two drawling but nonchalant narrations of Prokofiev's *Peter and the Wolf* at Michigan's Interlochen Music Camp, **Luci Baines Johnson**, 17, drew three curtain calls when she performed with Pianist **Van Cliburn**, 30, who conducted the camp's 150-member student orchestra. Whatever criticism Luci Baines is going to get (and under the circumstances, it will scarcely be fanged), will come when her version of the Russian fairy tale is beamed back whence it came, via the Voice of America.

JOHNSON & CLIBURN
To Russia, with curtain calls.

. . .

The Old Indian was one of history's great athletes, excelling at football, pentathlon, decathlon, golf, bowling, hockey, lacrosse, swimming, rifle, squash, handball and horsemanship. So when he died in 1953, the Pennsylvania coal town of Mauch Chunk (pop. 5,5[illegible]), not far from Carlisle, where he went to college, welcomed his corpse with a $10,500 mausoleum, and renamed itself **Jim Thorpe**, Pa., in his honor. The town fathers figured he would be a great tourist draw. But disillusionment has set in, and John H. Otto, chairman of the County Water and Sewer Authority, is now leading a campaign to change the town's name back again: "You mention you're from Jim Thorpe, and nobody knows what you're talking about."

. . .

Ill lay: Britain's **Prince Charles**, 15, at an Aberdeen nursing home with a mild case of pneumonia caught while camping out with fellow Gordonstoun rovers on the grounds of the family's Balmoral Castle; California Governor **Pat Brown**, 59, at his Sacramento mansion with a fibula fractured by stepping in a hole at a golf course, an accident that will keep him on crutches for six weeks ("But he wouldn't miss the Democratic Convention," said an aide, "if he had to crawl"); *Oldtime Cinema* comedian **Stan Laurel**, 74, at Los Angeles' Valley Doctors Hospital, where he has been receiving hundreds of letters from his ever-faithful fans while undergoing treatment for chronic diabetes.

COLLEGES

A Way to Finish Earlier

In September a group of high school graduates entering American University will come on campus in Washington, D.C., with a third of their college work already behind them. Getting these credits required just two days—the time it took to undergo a new series of tests that make it possible, for those who score satisfactorily, to save as much as two years of campus time and thousands in tuition and living costs.

Advanced Standing. College equivalency tests were first tried in 1943 by the U.S. armed forces, but they were never widely used and as the years passed they became obsolete. In 1961 Princeton's Educational Testing Service set out anew to devise a test designed for students who were entering college for the first time.

E.T.S. is the author of the familiar College Board tests and the somewhat less familiar Advanced Placement Examinations, which let able high school students skip certain required freshman courses. An advanced placement student still has to earn all of his credit hours for graduation on campus, which means that he has to work harder than his fellows. Now E.T.S. has worked out an exam that tests knowledge and achievement gained in modern, college-like high schools (or any other way) and determines its worth in terms of credit hours. The examination is based on nationwide tests of 2,600 students completing the second year of college in 1963 and 1964.

The questions, all multiple-choice, are aimed at ferreting out how well the student has assimilated a broad spectrum of knowledge. One question from the sample testing asked the student to identify a quotation "In a flash it came upon me that there was a reason for advancing poverty with advancing wealth ..." as coming from John Jacob Astor, William Jennings Bryan, Thorstein Veblen, Lincoln Steffens or Henry George. The answer is Henry George, and research showed that more than half the students in the top one-fifth of those taking the test got it right, compared with only 8% of those in the bottom one-fifth.

Defining the Line. E.T.S. still has not publicly offered the test for general use, and American University heard about it only by an informal contact. In mailing out 1,000 acceptances for admission this spring, the university casually and undramatically offered "to recognize the achievements of well-prepared students" by giving them a chance to take the test for credit. Only 96 were sufficiently sharp-eyed to see the opportunity. American University will give as many as 39 undergraduate credit hours in English composition, history, social sciences, humanities, mathematics, and physical sciences, leaving only 82 more credit hours (two full years of study) to get a B.A.

Too few college administrators have yet heard of the tests to make the idea an open target for criticism. Some teachers are sure to say that construing education so narrowly as a matter of credits is to miss the point of the college experience. But the new test is only part of the continuing process of defining the line between colleges and ever-better high schools, and major curriculum changes are bound to take place. Some colleges will drop certain courses because they will find that freshmen are showing significantly higher levels of preparation than had been realized. Others will put more muscle into admission standards in particular fields.

E.T.S.'s Dr. K. Patricia Cross, head of the project, feels that one result of the Comprehensive College Tests will be a gradual de-emphasis on credit hours as a way of measuring knowledge. "Europeans measure knowledge in terms of what the student knows," she says. "This will offer a new flexibility for the student who can demonstrate that he has knowledge by giving him credit regardless of how he got it."

Summer Scholars

Across the U.S., summer schools were buzzing like clover patches. Gone is the concept of the summer-camp campus, peopled by bored schoolteachers and hostile flunkees; in their place are ambitious students who are turning the *dolce far niente* of the hot months into a time of busy—and sometimes oddball—learning.

Out in the Arizona desert, University of Maryland Senior Eileen Van Tassell is using $2,000 worth of transistorized tape-recording equipment to eavesdrop on water beetles and classify their sounds. At Stanford Arthur Bleich, 27, is studying film production by making a 7½-minute documentary called *The Rise and Fall of the American Breast*—"a serious critique of America's fetish about female bosoms." Stanford is also giving eight-week crash courses in Chinese and Japanese, in which students are required to converse, eat and drink in the style of the language they are studying—or at least try. "I'm going to *hwei-jya*, change my *yi-shang*, jump in my *chi-che* and pick up my *syau-jye* for the *dyan-yingr*," said a beginner in Chinese. ("I'm going back to my house, change my clothes, jump in my car and pick up my girl friend for the movies.")

Radcliffe is teaching a "Publishing Procedures" course to 43 men and 13 women, who hear authors and editors, and learn, in the words of a girl who took the course last year, that "the purlieus of publishing contain powerful people for whom English is a vestigial appendage." Students at Syracuse University are working with Painter Kenneth Callahan on a mural for a new dormitory, are painting smaller murals of their own. Says Thomas E. Black, 27, a painting major: "Being together and talking together is a kind of rubbing-off process; he comes in here and I'm working here. I go in there, and he's working there."

At U.C.L.A., a class is taking the nation's only college course in Berber. In a symposium offered by the University of Minnesota, Tennessee Williams and Actor Douglas Campbell are lecturing drama students aboard the university's air-conditioned showboat afloat on the Mississippi. And in the desert of southwestern Utah, 74 U.C.L.A. anthropology students and their professor are poking about the remnants of Pueblo villages and digging in mounds for arrowheads, bones and pottery. Edith Sanders, 17, from Beverly Hills, admits that she signed for Anthrop. 197 on a whim, but now she is enjoying it. "It's just fascinating to think that I am handling things that are 900 years old," she says.

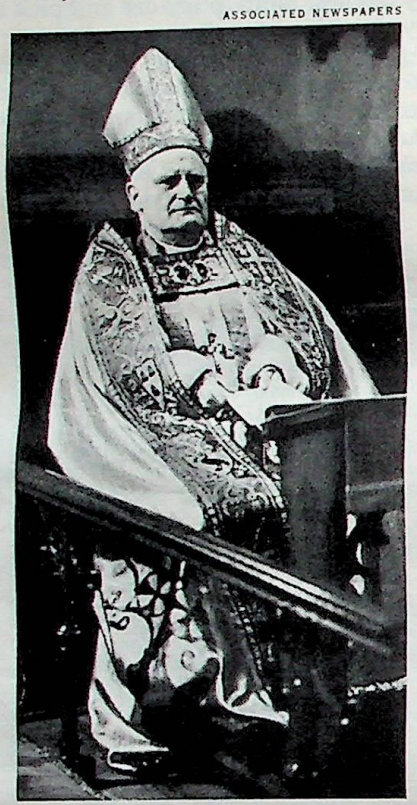
ANGLICANS

The Archbishop Is a Protestant

"Are you a Protestant?" Earl Alexander of Hillsborough, a Baptist, demanded of the Archbishop of Canterbury during debate in the House of Lords on a measure to permit more elaborate priestly vestments at Communion services. "I am a Protestant precisely in the way the Prayer Book

ASSOCIATED NEWSPAPERS



CANTERBURY
Nothing but a scarf.

and the Anglican formularies use that term," replied the Most Rev. Arthur Michael Ramsey.

The answer did not satisfy Lord Alexander. As far as he is concerned, Anglican Communion already resembles too closely the Roman Catholic Mass; and the measure to permit the use of the alb (a long-sleeved white tunic), the chasuble (a poncholike garment), the amice (a linen neckcloth) and the maniple (a band of cloth worn on the left arm) would strengthen what the London Times called a "drift toward the Roman Catholic form of service."

Nevertheless, the measure was approved by the Lords 86 to 15, and now heads for stormy debate in the Commons. One of two reforms approved by the Church Assembly of bishops, clergy and laity, it stirred heated passion because it touches on issues that have long caused strains within the Church of England.

Since the 17th century, the Church of England has been divided between High Church Anglo-Catholicism and Low Church Evangelicals. Low churchmen oppose any changes in Anglican canon law, last codified in 1604, and not much altered since, that would permit more "Popish" vestments and ceremonies. But though considered illegal, the alb and the chasuble are worn by priests in a fourth of the Anglican churches in Britain. The intent of the vestments measure is to make legal, though optional, practices that have been widespread since Victorian days.

Many Anglican clergymen, High and Low, felt that the vestments issue had been blown up beyond proportion. Canterbury himself said: "In some churches, I wear no more than a black scarf"—leading *Punch* to take gleeful note that the archbishop had also called for understanding and forbearance for wearers of topless bathing suits. The Rev. Nicolas Stacey, rector of Woolwich, strongly deplored the concern with trivialities. "Our work is hopelessly undermined when our fellow churchmen, claiming to speak in the name of Christ, make issues about clerical vesture. It confirms people's suspicion that when the crunch comes, the church doesn't care a damn about the things that matter. I would celebrate the Holy Communion service in my pajamas if I thought it would help someone to find faith."

ROMAN CATHOLICS

Gadfly

Among the 2,500 mostly learned and lordly Roman Catholic bishops around the world, English Archbishop Thomas d'Esterre Roberts, 71, is an independent spirit who feels free to put churchly propositions up to the measure of his own reason. He has no use for pomp, and to discourage people from kissing his episcopal ring, he jokes, "I carry it in my back pocket."

Last week he was at Seattle University, wreathed in a cloud of Salem smoke, sitting at a desk littered with matchbooks, letters and Agatha Christie novels. He would rather have been in Southern California. But the arch-conservative Archbishop of Los Angeles, James Francis Cardinal McIntyre, banned the liberal Roberts from lecturing there. Roberts took it philosophically: "Cardinal McIntyre is in charge and is entitled to his own views as to what is expedient and what isn't."

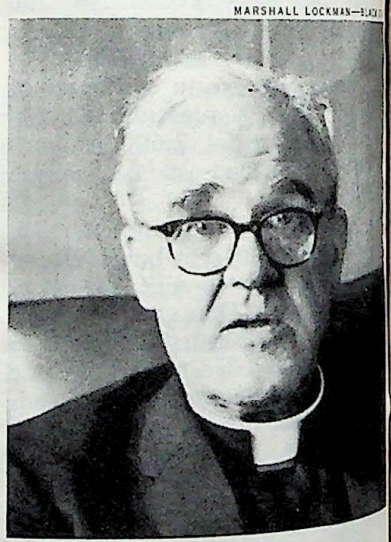
"Please Confirm." A Jesuit priest born of English parents in Le Havre, Roberts once headed an archdiocese —but gave it up. In 1937, while teaching in Liverpool, he was told by a reporter of his appointment as Archbishop of Bombay. Tongue in cheek, he wired Rome to "please confirm" the appointment. Thirteen years later, having become convinced that India's principal see ought to be occupied by an Indian, he resigned in favor of Valerian Gracias, and settled down at the Farm Street church in London's Mayfair.

Now titular Bishop of Sygdea in Crimea,* Roberts goes at a fast clip ... turing, traveling, writing, and ba... for causes unpopular with most ... bers of the church hierarchy. He ... to recall that in 1950 he advised P... Pius XII against defining the dogma ... Mary's assumption. He plugs away ... a bigger voice for the laity in ... affairs: "I would hope to see the apo... tolic tradition restored to where ... laity had a voice, especially in matters ... concerning marriage, to advise a bod... entirely celibate."

He believes the church ought to amend its stand on birth control. "Pra... tically all Protestant bodies today re... diate the position that contraception ... forbidden by natural law. Moreover ... great numbers of Catholics, perha... even the great majority, are either d... regarding the law altogether or the... marriages are in serious trouble ... breaking up." He feels that cumbe... some marriage annulment procedure... which sometimes take several years ... ought to be expedited. He militant... presses his church to support the ba... the-bomb movement, drawing a com... parison between the church's concer... for the lives of babies not conceived b... cause of birth control and the appare... lack of the same solicitude for adu... who might be killed in nuclear war.

"Ladies' Underwear." At the meet... ings of the Vatican Council, Roberts ... likely to be found at the coffee bar...

MARSHALL LOCKMAN—BLACK...



SYGDEA
And a ring in his pocket.

LAWYERS

...and So to Court

San Francisco Attorney Melvin Belli is no admirer of the American Bar Association to which he belongs, or of its president, Walter E. Craig. Self-styled defender of unpopular causes, Belli has double and repetitive contempt for lawyers who prefer corporate problems to legal work, and as he sees it, Craig exemplifies the prosperous defenders of vested interests.

Belli has finally taken his case against Craig and his colleagues to court. What brought things to a head was his verbal exchange with the A.B.A. president after Jack Ruby's trial in Dallas last March. After the jury found Belli's client guilty of the murder of Lee Harvey Oswald, the King of Torts exploded in a torrent of comment on the judge, the jury and the city of Dallas. He charged that Ruby had been convicted by "the biggest kangaroo-court disgrace in the history of American law"; he called the verdict "a victory for bigotry and injustice." Craig complained publicly that Belli "should so flagrantly disregard the code of professional ethics and his oath as an attorney." He also suggested that Belli's membership in the A.B.A. might be revoked. Such statements, Belli decided, were defamatory and prejudicial to his professional standing. They would cut into his income. Last week he filed suit against Craig and 25 co-defendants and asked for $5,000,000 in damages.

The defendants, said Belli in his complaint, belong to "a small coterie of individuals devoted to perpetuating ancient and customary injustices and Dickensian practices in law against individuals, seamen, railroad workers, union members, pedestrians, motorists, and those belonging to minority groups and unpopular causes." Craig himself had acted "willfully and wantonly and maliciously and viciously and with ill will and in spite and in an attempt to obstruct justice and deter the orderly administration of law."

Not content merely to sue Craig and the co-defendants (to be named later) for slander and defamation of character, Belli also offered his opinion as to their effect on American law. If the leaders of the American Bar Association have their way, he argued, they will "make of the magnificent American trial lawyer a suckling Bugs Bunny or a John Birch athletic supporter for certain insurance companies and economic interests."

"Melvin M. Belli," concluded the complaint, "is practicing law and intends to continue to practice his profession and against Defendant Walter E. Craig and other defendants and their clients and insurance companies, for individuals and unpopular causes into the far future, God, not the American Bar Association, willing."

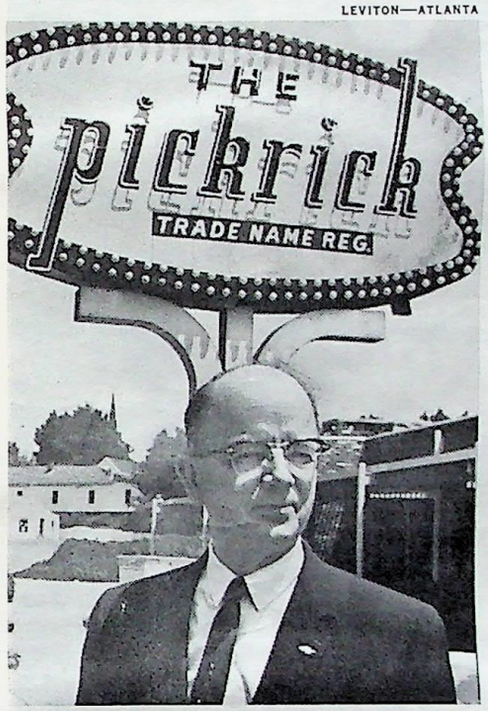
THE COURTS

The Pickrick Capers

The most vociferously disputed part of the new federal Civil Rights Act concerns the public accommodations title. It is based on the Constitution's commerce clause and says, in effect, that any public place of business that relates in any way to interstate commerce may not discriminate against Negroes. Last week the public accommodations title got its first major test in a federal court, and it passed handsomely.

The argument was heard before a three-judge panel in Atlanta, where Government attorneys sought injunctions against two local establishments,

LEVITON—ATLANTA



RESTAURATEUR MADDOX
Food is inescapably interstate.

the Heart of Atlanta Motel, and the Pickrick restaurant, a fried-chicken emporium. It was at the Pickrick, on the day after President Johnson signed the civil rights bill into law, that Owner Lester Maddox ordered three Negro ministerial students away from the place at gunpoint.

The two cases were tried at the same time, but it was the Pickrick caper that drew the greatest interest.

Surprise. Maddox's lawyers argued that it is unconstitutional to anchor the public accommodations title to the commerce clause. Furthermore, they reasoned, while Pickrick does discriminate against Negroes, the restaurant's policy legally does not have anything to do with interstate commerce, as specified in the bill. Even Pickrick's food, though it "once moved" in interstate commerce, is purchased nowadays from local wholesale brokers, the lawyers insisted, and thus is no longer an interstate transaction.

Moreover, Pickrick does not solicit business from interstate travelers, does not advertise in out-of-state publications, is not recommended by any motor associations or national groups (such as Duncan Hines). Said Pickrick Attorney William McRae: "The power of the Congress under the commerce clause has been almost as broad as the plan of Salvation. If you can compel a restaurant owner to sell to whoever calls on him, you can compel him to buy 10% of his food from a company owned by Negroes." Added McRae, in what surely must be one of the most surprising statements ever offered before a federal court: "A fellow eats some food at the Pickrick and then evacuates it, and it'll go into the Chattahoochee River [separating Georgia and Alabama] as waste, and there's no more commerce in that than there is in the food coming to the Pickrick in the first place."

Justice Department Lawyers Burke Marshall and St. John Barrett brought in 27 witnesses to testify that Pickrick is indeed involved in business on an interstate scale. Half a dozen surveys of Pickrick's parking lot showed that 2% or 3% of the cars parked there carried out-of-state plates. The Government also showed that Pickrick perforce depends on foods that flow through interstate commerce. Maddox's fish comes from Virginia's and Florida's coasts, his braunschweiger and beef ribs from Iowa, his catchup from California, his green beans from Oregon, his Tabasco sauce from Louisiana, his lettuce from Texas, his hams and bologna from Tennessee.

The Limit. His headaches will now come from Washington—wholesale. In a 15-page ruling, the judges did not decide on the constitutionality of the civil rights law itself, but granted temporary injunctions—requiring the defendants to admit Negroes within 20 days—based solely on the question of whether Congress had the right to employ the commerce clause in writing the public accommodations title. "This is the limit of the case," wrote the judges. "Congress has the right to go this far."

Predictably, the Heart of Atlanta Motel and Pickrick will take the cases to the U.S. Supreme Court. Vowed Pickrick's Maddox: "I'm not going to integrate. I've made my pledge. They won't ever get any of that chicken!"

Other legal skirmishes along the civil rights front:

▶ The FBI in Greenwood, Miss., made its first arrests on the basis of the new civil rights law. Three white men were picked up on the complaint of a Negro who accused them of beating him up after he disregarded their threats and attended a whites-only movie.

▶ The Rev. Martin Luther King's Southern Christian Leadership Conference discovered that 22 out of 25 public places in the South that had desegregated their facilities after the civil rights law was passed, have since reverted and closed their doors to Negroes.

AUTO RACING

Zinging in the Rain

Some people race because they feel that they can make easy money at it. Others race because it is the "done thing," or because it might make them more attractive to girls. With me, the motive is curiosity.

Jimmy Clark's curiosity takes an awful lot of satisfying. At 28, he is the youngest Grand Prix champion in history, and his income runs to $140,000 a year. Yet there he was last week, seeing how fast he could drive an untested car on a rain-drenched track outside Stuttgart, Germany—in something called the Solitude Grand Prix. The prize was far from grand—no championship points, no money to speak of (winner's purse: $1,500)—but Scotland's Clark still turned the afternoon into a breath-taking demonstration of his driving genius.

E. BAUMANN

CLARK (LEFT) AT START IN GERMANY
After an awesome finish, "God Save the Queen."

Drops Like Dimes. Even when it is dry, the 7.1-mile Solitude course is one of Europe's hairiest: the road twists through four tortuous hairpins, uncurling finally into a long "straightaway" that is an assortment of dips, hills and fast curves that are taken at upwards of 150 m.p.h. But last week Solitude was downright dangerous. A cloudburst turned the asphalt slick as ice; and it was still pouring dime-sized drops when 18 Formula I cars roared away from the grid, roostertails of spray streaming in their wake.

Within seconds, the field was cut by more than one-third, and $140,000 worth of machinery was reduced mostly to junk. On the long straight, Italy's Lorenzo Bandini hit a puddle, skidded and lost control; trying to dodge his wildly spinning Ferrari, four other racers piled up. Still another ran off the track and wrapped his car around a pole; a seventh scattered the hay bales on a bend. Miraculously, none of the drivers was seriously injured.

Clark escaped mostly because his car was too slow. Driving a new model Lotus-Climax that had been wrecked last April and practically rebuilt from scratch, Jimmy was having engine trouble, was running on only seven cylinders. After four sputtering laps, a mechanic waved a message board that read "Surt −20." With 16 laps to go, Ferrari's John Surtees already had a 20-sec. lead.

In Full Lock. It seemed hopeless But now the Lotus was firing on all eight cylinders, and Clark was zinging flat out down the slippery track as if the championship depended on it, touching 155 m.p.h. on the straight. Power-sliding through one glassy corner in full opposite lock (with the front wheels turned against the direction of the turn), Clark nonchalantly flashed a thumb-up victory sign to a friend on the infield grass. "My God," breathed a mechanic in the Lotus pit as Clark cut huge chunks out of Surtees' lead: 5 sec. on the fifth lap, 7 sec. on the sixth.

By the ninth lap, Clark was only a car length behind. Seconds later, he had the lead. The rain had stopped and the track was drying now. Surtees wrung a few more r.p.m. from his Ferrari, bypassed Clark and opened a 3-sec. gap. Unable to beat Surtees on the straights, Clark fell in behind the faster Ferrari, waiting for opportu... to knock again. None came, so C... made his own—with an astonishing ... neuver that only a handful of driv... would dare attempt: he simply ... around Surtees on the outside of a ... pin turn.

Surtees, brilliant in his own ri... could only watch in awe. At the ... Clark was 10.4 sec. ahead. F... streaked with mud, he stood stiffly ... attention for *God Save the Queen*, ... then dived into a car to escape ... of autograph hunters. "This post-... hullabaloo really kills me," he ... "My stomach gets all knotted up."

GOLF

With the Help of St. Jude

Things have come to a pretty p... when betting on golf gets as risky ... betting on horses. It used to be that ... anyone had to do was book both Arn... Palmer and Jack Nicklaus to win th... big tournaments; one or the other ... most always did. Not this year, thou... Palmer won the Masters. But who co... have figured Ken Venturi to win th... U.S. Open? Or Tony Lema to rattle o... four victories in six weeks, including th... British Open? Or Bobby Nichols to be... them all in the Professional Golf... Association championship?

If ever a tournament looked like ... lock for the Big Two, it was the P.G.... It is the only major title Palmer ha... never won, and he took a week's hol... day just to work himself up to prop... er pitch. Nicklaus was the defending ... champion, and he figured to know the ... Columbus (Ohio) Country Club ... the back of his chubby hand—being ... as how he has lived most of his 24 ye... in Columbus.

Long on Trash. Nichols, 28, did... figure at all. He was lucky to be alive, ... let alone playing golf. A onetime cadet ... from Louisville, he was nearly killed in ... 1952 when a car in which he was riding ... went off the road at 107 m.p.h., putting ... him in the hospital for 96 days with a ... broken pelvis, a spine injury, a concus... sion and assorted internal injuries. That ... ruled out such sports as football and ... basketball. But he could still play golf, ... and after college he turned pro, with ... so-so results: in five years, he won three ... tournaments, created his biggest splash ... in 1962 when he wound up third behind ... Nicklaus and Palmer in the U.S. Open.

A husky six-footer who hits one of ... the game's longest balls (he once won a ... driving contest with measured drives ... of 347, 352 and 367 yds.), Nichols is ... known as a "trash player," a scrambler, who sprays his shots like a ... bler, who sprays his shots like a ... handicapper, plays best when he is in ... deepest trouble. Last week he out-did ... himself. On the first round, he drove ... into the rough four times—and each ... time got a birdie, with miraculous re... coveries, for a six-under-par 64, the ... lowest score ever shot in a P.G.A. ... championship. A second-day 71 ...

Digitized by Arya Samaj Foundation Chennai and eGangotri

od enough to keep him out front, one roke ahead of Palmer. Then came the ird round, and not even Nichols was repared for what happened.

Carbon Copy. Teeing off at the start, e pulled his drive into rough, hit s second shot into a trap, somehow assed out to within 10 ft. of the pin r a par four. The second hole was ractically a carbon copy of the first: s drive landed behind a tree, his sec- nd shot found a trap—and he still got ear. On and on he went, playing as if e had taken lessons from Rube Gold- erg—straying down an adjoining fair- ay on the eighth, bouncing his ball off ree on the 15th, dumping his drive nto loose sod on the 16th. Scores: two ars and a birdie. On the par-three 17th ole, Nichols "squirreled" his No. 2 on tee shot off to his right and overhit is wedge recovery. So what happened? The ball hit the top of the pin and ropped dead 1½ ft. from the hole. Dazed, Bobby added up his day's score —a one-under 69—and headed for a ress conference. "Fellows," he sighed, 'You'll never believe this, but . . ."

Still a stroke behind at the start of the final round, Arnold Palmer shot a 69 that was good, but not nearly good enough. Nicklaus matched Nich- ols' first-round record with a magnifi- cent 64. But that only got him a 274, and a tie with Palmer for second place. Nichols had his game under control now. He only hit one tree in 18 holes, sank putts of 15, 18, 35 and 51 ft. for a three-under 67 and a 72-hole total of 271. "All week long, I've been praying to St. Jude, the patron saint of hopeless causes," said Nichols, whose previous earnings on the tour this year amounted to $15,745. The victory was worth $18,- 000, plus another $22,500 in bonuses. It also gave Nichols a shot (along with Palmer, Venturi and Lema) at the big- gest bonanza of all: the $50,000 first prize in September's World Series of Golf at Akron, Ohio.

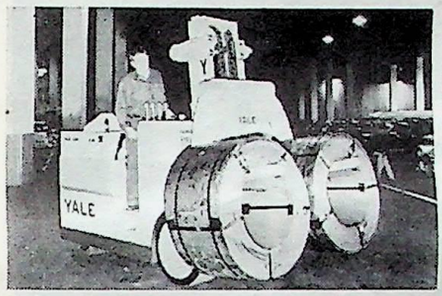
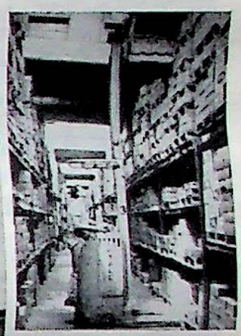
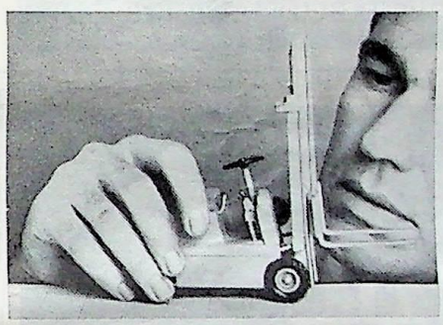
It takes 2 to get your goods to market on time

1. The right equipment





2. Intelligent application



Improperly applied, the best materials handling equipment can do only half a job, may well cost you time and money. That's where your local Yale representative comes in. His thorough knowledge of how goods can be handled most efficiently is half the purchase when you buy Yale® lift trucks and hoists. He protects your investment by helping you make the most out of every engineering advantage built into the Yale lift trucks.

At your request, this Yale expert will look over your entire materials handling program and help you select the truck best suited to your needs. (You'll find a wide choice in 1,000 to 200,000 pound capacities, with attachments to handle any size, shape or type load.) And then he'll see to it that the truck is properly installed, show your people how it can best be employed to increase your output and cut costs. He also provides complete maintenance services.

Remember, it takes a team to deliver the goods—a Yale truck and your Yale representative who stays on the job after the sale.

For additional information, write: Dept. G34, Yale & Towne International, Inc., Postfach 26, Zug 1, Switzerland; or Box 30, Maxwell Road Post Office, Singapore; or 1519 Ponce de Leon Ave., Santurce, Puerto Rico.

"We Too Are People" proclaimed the sign carried by a demonstrating student. TIME reported this incident and the full story when African students staged a mammoth protest march in Moscow. In reporting world news, TIME spans oceans and continents—ferreting out fact from fiction—to bring its readers a clear, concise picture of important events. A demonstration in Moscow. An election in Europe. A crisis in the Middle East. Each no farther away than the pages of TIME for the millions of families who read its worldwide editions each week.

BASEBALL

The One Small Difference

Take a world championship base team. Subtract one starting pitch Substitute a .270 hitter for a .330 ter. Drop some flies, fumble grounders, miss some bunts, leave ners all over the bases. What you then is the Los Angeles Dodgers, seventh-place team in baseball.

The 1964 Dodgers may well go in history as one of the game's ing mysteries. On paper, they are tically the same club that won the tional League pennant last year swept four straight from the New Yankees in the World Series. Koufax is still the slickest pitch around, and Don Drysdale may be runner-up; between them, they already won 27 games this year. Shortstop Maury Wills is the same electrifying base runner who stole a record bases in 1962 (he has 31 so far). Catcher John Roseboro, whose lifetime average is .240, was batting .310 before he cut a finger on a foul tip. But still the Dodgers lose: two straight to the sixth-place Chicago Cubs last week, two out of four to the ninth-place Houston Colts. Then those hated San Francisco Giants inflicted an 11-3 thrashing, scoring nine runs in one nightmarish inning.

Injuries have hurt, of course. Roseboro will be out of action for a week and Pitcher Johnny Podres has been idle since May because of a bone chip in his elbow. Outfielder Tommy Davis was hampered early in the season by a shoulder injury—but that scarcely explains how a man who led the National League in batting for two years in a row can be hitting .272 now. Moans Dodger Coach Pete Reiser: "There were at least nine ball games we would have won if Davis could just have hit a long fly."

Last week Manager Walter Alston watched unhappily while the Dodgers lost 1-0 to the Colts—their 19th loss in 30 one-run games this season. Alston was as baffled as everybody else. "You start with the idea that you score so many runs and allow your opponents to score so many," he said. "Last year at this time, we had 23 more runs than we had allowed, and we were 1½ games ahead in first place. This year we have scored 29 more runs than we have scored against us. The only difference is that we're not winning."

The One Who Beats Them

"I hope you live to be 500, because if anything happens to you, I'll be the ugliest man in the world."

Few baseball players get away with talking to their manager like that. But when the player is Mickey Mantle, Yogi Berra will take all the lip he hands out. At 32 Mantle is at least a couple of steps slower than when he broke into the American League 13 seasons ago. He has a chronically weak right shoe-

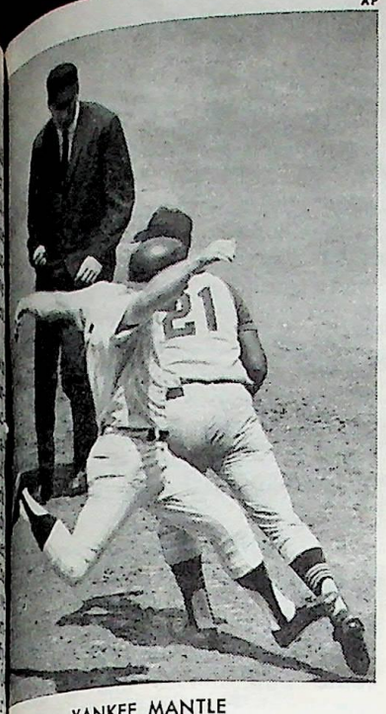
AP



YANKEE MANTLE
Lip for Yogi.

and his knees are crosshatched with
rs from cartilage operations—the
st recent of them last winter. He
ns as if he were on stilts, and he
ces every time he swings a bat. But
ickey Mantle is still the most valuable
yer around.

Last week the Yankees were trailing
e American League-leading Baltimore
oles by only .006 points, and the
son, in a word, was Mantle. Mickey's
batting average was the second
st in the league. He had hit one out
every five Yankee home runs so far
is year (with 19), led the team in
.315 (61) and, naturally, in walks
9. In two crucial games last week,
e demonstrated why, in case anybody
d forgotten, the Yankees pay him
0,000 a year. Against the Orioles,
ickey beat out an infield hit, moved
second when Tom Tresh walked and
en set sail, aching legs and all, for
rd. He slid under the tag with a
ken base; Tresh, playing follow the
ader, dashed to second. When Joe
pitone singled, both runners scored
—and the Yankees beat the Orioles 2-0.
Washington Pitcher Alan Koch was
Mantle's next victim. In the Yankee
with two on, two out, and the
nators leading 3-1, Mantle stepped up
the plate. First base was open, and
ch was in no mood to take unnec-
ary chances. His first three pitches
re off the plate, and Mickey took
em all. "You can't let Mantle beat
," Koch said. "He's the wheel. Even
a 3-0 count on Mickey, I didn't
nt to let him beat me." So Koch
ew another ball, low and inside. Only
Mantle did not take this one. He
reamed it 295 ft. to right field for a
uble that tied up the game. Once
re Pepitone followed with a hit—
use, an hour later, poor Koch was
ll muttering: "You can't let Mantle
eat you."

FASHION

More's the Pitti

If Paris designers never look back, it may be because they have a feeling something is gaining on them. If something is, it is probably Italian designers, every one of whom is aware that he can make up some yardage only by being even a little more daring than the French.

Suspenders, No Straps. Thus it was naturally Italy's Emilio Pucci, lightweight sportswear champion of the world, who predicted that it would not be long before bikini wearers, dissatisfied with halfway measures and interrupted suntans, would drop their modest pretensions along with the tops of their suits. And though the U.S.'s Rudi Gernreich was the first to snatch the idea off the rack and get it on the market (TIME, June 26), the evidence presented at the fall fashion collections in Florence last week showed that the Italians were not prepared to let the U.S. run off with the topless suit honors.

Paraded on the temporary runway installed in the staid old Pitti Palace, where Florence's fashionmakers stage their shows, bosoms were bared in a multitude of styles and shapes. Some designs were legitimate, some looked more like gags: Micia tore holes that left a knitted overblouse looking like supersized Swiss cheese, showed a G-string bikini beneath to any mouse man enough to peep. Glans left only two prim pockets on an otherwise totally transparent shirt. Veneziani attached five-inch-wide suspenders to the waist of a party skirt and called it an evening gown; Princess Irene Galitzine cut a V that kept going, fore and aft, out of a sleek leopard-printed swimsuit. Baldini decorated a perfectly modest little bathing suit with two prominent painted breasts. And Frederico Forquet untopped them all with a full-length strapless dress that was minus more than straps, leaving the bosom up in the air and out in it.

Coveralls, No Show. But Pucci, who had started it all, was not about to yield the field. First to be bold, last to be undone by fellows who had followed the leader and left him behind, could only retreat or fight. In a display of fashion theatrics, he to do both, for a starter wrapped pretty Negro mannequins in hood long silk burnooses that whipped without warning, to show patch scanty bikinis underneath.

The topless suit? With a shrug a yawn, Pucci turned gentleman traitor, offered women wary of or of catching a cold, a grand cover up. It is a one-piece coverall fit that fastens down the front, be stepped into, and is so diffic get out of that the sun is bound down before it does, leaving a be of spectators ogling in the dark.

CEDAR RAPIDS' CAMEL

...er to A.D. 644, when the Proph-...Mohammed's son-in-law, Kalif Alee ...ose name be praised!), founded a ...gilance committee" to dole out pun-...ment for crimes not already covered ...existing laws. The committee be-...e a select group of noblemen, pre-...ably above reproach and therefore ...monstrably better than other men. ...ey evolved elaborate rituals and cer-...monies. As luck would have it, a copy ...the ritual (in translation) wandered ...ly across the vast Near Eastern ...erts to America, where it fell, like ...ana from heaven (Mecca, anyway), ...to the hands of the first Imperial Po-...tate, Dr. Walter M. Fleming. For ...s part, Fleming dropped some of the ...ma, amended the purposes to stress ...e exercise of charity and the im-...ement of the mind" rather than ...e gaining of all possible power and ...e purification of base elements from ...e land," but was careful to hang onto ...at mattered.

And what mattered were the symbols ...exotica that attended the organiza-...n, such as the jewel of the order and ...Arabic motto, *Kuwat wa Ghadab* ...rength and Fury), and the special ...ramural greeting, *"Es selamu alei-...m"* ("Peace be with you").

Prestige from Rank. Neither strong ...r furious, except occasionally with ...r wives, most Shriners seemed less ...e noble pranksters than a mobilized ...ss section of middle-class Americans. ...ey claim an unrestricted membership ...ough Negroes would be welcome, ...e have tested the claim, prefer-...a similar, separate-but-equal Negro ...ine). The organization does include ...bstantial number of Jews, who are ...parently more interested in what one ...perial Potentate called "the oppor-...nity for fun and play and mirth on ...ruly magnificent scale" than in the ...riners' proud Arabic ancestry.

At week's end, Manhattan had found ...e cause to grumble about the Shriner invasion. The nobles had spent freely on liquor, nightclubs and souvenirs, but had remained the orderly, decent citizens they are back home. In between the public displays of high jinks, the Shriners found time to entertain children in hospitals, mounted an eight-hour display-cum-parade at Shea Stadium, where some 30,000 spectators shelled out $2 to watch wheeling formations of huge men driving miniature cars and a motorized ferris wheel that dunked its four riders in an oversize tub of soapy water every twelve seconds. More somberly, they jammed into Radio City Music Hall for prayer services, and elected a new leader.

Imperial Potentate Omar Carlyle Brock, 64, an Erie, Pa., businessman and 43-year member of the Masons, took the fearsome honor with due solemnity. He is a zealous worker in the Shrine's child-welfare program, which has built and maintains 17 children's hospitals and has just raised $10,000,000 to build and staff three specialized institutions for the treatment of burns (the most common of childhood's accidents) in Galveston, Boston, and Cincinnati. He succeeds to an office once held by Actor Harold Lloyd, assumes leadership of more than three-quarters of a million men, currently including Chief Justice Earl Warren, former President Harry S. Truman, Thomas E. Dewey, Irving Berlin, and, quite naturally, Senator Barry Goldwater. Past members include Ty Cobb and Franklin D. Roosevelt; Astronauts L. Gordon Cooper and Virgil Grissom are new recruits. Omar Brock neither smokes nor (unlike his Persian namesake) drinks, has no superstitions. "You learn to live and you learn to die," he says.

As for the Shriners themselves, their fezzes askew and damp with humidity, their throats hoarse from laughter, by the end of last week they were plumb out of invisible thread as well. But all that was small fish compared to the whale of a time they had.

THE MARKETPLACE

New Products

Every summer manufacturers make it easier and more seductive for a man to go down to the sea and beach again. Some of their newest lures to a life in the midday sun:

▶ A chaise longue, powered by a small gasoline engine and equipped with polystyrene foam pontoons, will carry a chap out to sea in semisubmerged comfort. Basic cost: $179.50 at Abercrombie & Fitch.

▶ If racing is the game, there is the water-bomb Aquakart, a modified fiberglass hydroplane capable of 35 m.p.h. to 50 m.p.h., weighing only 125 lbs. and available for $745 at Hammacher Schlemmer.

▶ Fall out of a hydroplane or a chaise longue and what do you do? Inflate an Aqua Aid, worn on the wrist or on the waist in a tiny packet and available to the prudent for only $4.95. It will float a man in prime condition for several lonely hours.
